When, however, the debate actually began, a statement was made by Sir CHARLES DILKE, which in one sense took all the interest out of it, and in another added to that interest very considerably. Sir CHARLES informs us that the new CZAR has recalled General SKOBELEFF to St. Petersburg, and has put a stop to all those operations which have recently occupied Russia in Central Asia. Cavillers may wish that the statement were made in a more precise and definite manner; they may remember that General KAUFMANN is a very hard man to put a stop to, and that he has survived not a few discouragements; they may inquire whether this putting a stop means the relinquishment of the Akhal oasis, as well as of all designs on Merv. If it means this, *cadit questio*, at least to a very great extent. If it does not, the arguments remain as before. Yet those arguments, as usual, were handled with entire one-sidedness in the discussion. We shall take leave to pass over Mr. P. J. SMYTH's eloquent but unpractical disquisition on ethics, which had besides been amply answered beforehand in the House of Lords. The remaining advocates of abandonment rested their case for the most part on the old untenable grounds. Sir CHARLES DILKE manifested his fitness for the office he holds by saying that nothing had changed in the situation since the Treaty of Gandamak. Mr. BUXTON echoed Lord DERBY's contention *populus locutus est causa finita est*. Mr. HERBERT GLADSTONE obeyed an impulse pardonable in a young speaker fresh from his studies by talking about the fall of Rome. Unfortunately for his argument, the fall of Rome was preceded by withdrawals, not advances, and he himself showed that he was entirely unacquainted with the actual wishes even of the most forward of the forward Indian school. Mr. STANHOPE from the practical and Mr. GIBSON from the political side had no difficulty in making good their case, and the discussion of the financial question by the former was in particular complete. But Sir CHARLES DILKE's statement, if it can be accepted in its full sense, at once took the point out of his own arguments and gave a practical victory to his opponents. If the Russian conquest of South-Eastern Turkistan is really given up, if the troops are withdrawn—say to Kizil Arvat—the Akhal Tekkes restored to their independence, all attempts at rectification of frontier abandoned, and the pioneering zeal of the Transcaspian officials in one direction and the Transoxian officials in the other restrained, the main argument for the retention of Candahar at the present moment will be gone. There will remain not a few arguments of weight drawn from the internal condition and recent history of Afghanistan, but they are of less importance. Accepting Sir CHARLES's statement as an accurate and frank one, we at least have no difficulty in admitting that the case for abandonment and for retention becomes so even that it hardly matters on which side the balance inclines. Quetta did very well as a post of observation while the Russians were on the Caspian Littoral and behind the Oxus; it will do very well when they return to that position. But all depends on that; and if that is the case, the Opposition and the opponents of the abandonment of Candahar have gained a virtual victory far more gratifying, because more nationally beneficial, than a party triumph in Parliament.

It may seem that this is allowing too much to the single point of Russian operations and designs. But, in truth, the nearest approach which has been made by any opponent of the retention of Candahar to a statement of the actual position is that made by the *Times* on the morning of the debate. "To retain Candahar is frankly to declare

"to have begun to prepare for it." The words adumbrate the truth, but in so doing, after the manner of shadows, they disfigure it. "To retain Candahar," it would be fairer to say, "is to declare to Russia that we have at last begun to prepare for the struggle, and so to hint to her that she had better not attempt it." We are not of those who regard the earth as a hunting-ground from which it were good and pleasant to chase the CZAR. On the contrary, we believe that the interests of Russia and England in Asia, at any rate, can only actually clash if aggression on the one side is tempted by cowardice or ostrich-like blindness on the other. But, so long as statesmen like the Duke of ARGYLL affect to ignore the facts of Russian advance; so long as the preposterous doctrine that the further that advance is continued the further ought Great Britain to draw back finds utterance outside of Colney Hatch or the Eleans Club, so long will this very temptation exist. There can be no doubt at all in the mind of any one who knows geography and military history that, while the Russian possessions on the south-eastern Caspian shore were confined to a fringe of coast, as they were but the other day, Quetta was as good an outpost as we needed. But the circumstances have been entirely changed by the advance which has brought the Russian arms, not indeed to Merv—Merv, as has been more than once pointed out, is a place of comparatively small importance to us—but to the neighbourhood, as by hardly an exaggeration it may be called, of Herat. Some partisans may exclaim at this expression; but if, as is stated, the Russians are at Tejend, they are, in reference to Herat, much as an army on the Lower Danube is to Vienna, with the difference that the obstacles in their way are fewer. In one sense, of course, their presence in the last corner of Turkestan is indifferent to England, inasmuch as England has not the slightest wish to go there herself. We have nothing to do beyond the Hindu Koosh; the point is to recognize that Russia has nothing to do on this side of it. In theory, English statesmen of all parties recognize this fact; in practice, the leaves of the artichoke are allowed to be eaten one by one. Perhaps, if any one chooses to advance the argument, the invasion of Afghanistan was especially unfortunate in determining Russia to recover her lost prestige by overwhelming the Tekkes, and in giving occasion to AYUB's expedition, which showed the astonishing ease with which Afghanistan itself can be traversed. But, if it be so, a sensible man does not abstain from attempts to put his burning house out because he disapproves of the conduct of the person who sets it on fire. It would be as reasonable to do this as to decline to recognize the fact that the Cossack horses have actually drunk of the stream which flows past Herat, and that from Herat to the border of India a hostile force has marched with guns and baggage almost before our troops, then all but on the spot, could get ready to meet it.

CRETE AND THE PORTE.

THE accounts of the negotiations at Constantinople are not encouraging. According to a not improbable conjecture, the personal fears of the SULTAN have been revived by the assassination of the Emperor of Russia. There are not, as far as is known, any Nihilists in Turkey; but religious or political fanaticism may be equally dangerous. It is possible that zealous Mahometans might resent and revenge the voluntary transfer of territory containing a population of true believers to the dominion of infidels; yet it appears that the Turkish Ministers have lately proposed a similar surrender. The suggestion that Crete should be substituted for a part of the disputed territory on the mainland seems to have been a grave mistake. The Turks have weakened their title to a possession which was for the time undisputed, without displacing any argument which had recommended to the European Powers the arrangement which was approved at Berlin. The reason for giving Thessaly and Epirus to Greece was not so much the expediency of enlarging a petty kingdom, as the justice of emancipating a Greek and Christian population from an alien and obnoxious sovereignty. It follows that the annexation of Crete or of all the islands in the Archipelago to the Greek kingdom would not invalidate the claim of Thessaly and of a part of Epirus to liberation. If the annexation is not now effected by

diplomatic or forcible methods, the demand will be repeated again and again until it is finally conceded. It is difficult to understand the obstinate refusal of a sacrifice which would be far more tolerable than the almost certain consequences of a rupture. The majority of the Powers would have agreed to exclude Janina and Metzovo from the territory to be surrendered, though some of them reserved the alleged right of Greece to insist on the frontier defined at Berlin in default of an immediate settlement. According to the latest accounts, the Ambassadors had suspended the negotiations, although they still left to the Turks the option of a voluntary overture.

The conditional willingness of the SULTAN to surrender Crete may probably be explained by the limited nature of the sovereign rights which he still retains in the island, and also perhaps by the belief of his advisers that the Greeks would not find Crete a desirable possession. The Mahometans there form a minority of the population, and they no longer retain exceptional privileges. Their Christian neighbours, who are as warlike as themselves, have, since the establishment of local administrative independence, taken advantage of their superior numbers to affront and perhaps to oppress the once dominant race. The Governor, though he is a Greek Christian, is unpopular because he is supposed to be loyal to the SULTAN; and it is said that the Cretan Assembly intends to punish him for the discharge of his duty by reducing his salary. The prospect of a war between Turkey and Greece has caused disturbances in parts of the island, which may probably expand into civil war. It may have been thought at Constantinople that so insubordinate a dependency was not worth keeping, or at least that the loss of the island would not compromise the interests of the SULTAN so directly as the curtailment of his continental dominions. It was strange that the Turks should expect the European Powers at the last moment to abandon their claims for the purpose of engaging in a fresh negotiation. The Greek Government and its friends and patrons will take note of the admission that the possession of Crete is not indispensable to the safety or greatness of the Turkish Empire; and at a more convenient season they will proceed to draw the practical conclusion that an island with a considerable Greek population ought to be annexed to the kingdom. Not many years have passed since an obstinate insurrection in Crete was openly promoted and favoured by the Government of Athens, which was fitfully encouraged or at other times checked by the capricious policy of NAPOLEON III. It is remarkable that since that time the Greek Government has advanced no claim to the acquisition of the island.

Travellers and residents who have studied the petty politics of Crete attribute to the Christian inhabitants a desire of local independence, combined, as usually happens in such cases, with a dislike of the continental Greeks. Little communities are in proportion to their isolated circumstances almost always jealous of their neighbours, even if they are not inclined to affect superiority to strangers. The inhabitants of the Isle of Wight contumeliously stigmatize as "overers" visitors or immigrants from the Hampshire coast. The people of Crete are not fully conscious of their own insignificance, or of the precarious position of small Republics among the great military States of the present day. For the moment they are content if only they are allowed to treat as inferiors the Mahometans of the island; and they are not certain that the Government of Athens would leave them as completely to themselves as the lax and careless rulers to whom they now pay a nominal allegiance. In the event of a war which may perhaps spread over the Levant, the Cretans, if they succeed in conquering the Mahometan population of the island, will necessarily ally themselves with Greece; and on the conclusion of peace they may find it prudent to submit to annexation; but there is no reason to suppose that they are at present anxious for the change. Their civilization is perhaps more backward than that of the Greek kingdom, but they share the commercial and maritime tastes which have raised their countrymen to prosperity in all parts of Europe. The cession of the Ionian Islands to Greece proved, as might have been expected, disadvantageous, at least in the first instance, to the population which was ostensibly liberated from foreign supremacy. The Cretans would certainly lose nothing by severance of their slight connexion with Turkey, and they might perhaps ultimately form part of a considerable

and flourishing State. It is evident that their fortunes could furnish no consolation to Greeks of Thessaly or Epirus for the continuance of their subjection to Turkish rule.

While the SULTAN'S Ministers persist in haggling for doubtful advantages, the danger of war becomes every day more imminent. The Greeks cannot afford a prolongation of doubtful peace, and the Turks have taken advantage of the delay to improve their preparations for defence. The season is now favourable to military operations, and a decision can scarcely be postponed beyond the end of March. It cannot be denied that irresistible force, combined with helpless acquiescence in the course of events, presents an unsatisfactory and undignified spectacle. The Powers, if they were only united in policy and in action, might command where they vainly entreat; but reciprocal jealousies and conflicting wishes leave them at the mercy of two such Governments as those of Turkey and Greece. The concert of Europe on which Mr. GLADSTONE has often relied would fully justify his confidence if only it happened to exist. In present circumstances his Government has been forced to content itself with a verbal or Platonic co-operation which is fully understood or despised by the principals in the quarrel. The English Government have from the first been consistent in a policy which has proved to be impracticable. French policy, on the other hand, has veered into an opposite quarter since the beginning of the negotiations. Germany and Austria have probably never varied in the intention which Mr. GLADSTONE and Lord GRANVILLE ought to have in the first instance ascertained and taken into consideration. It would have been right to coerce Turkey by the united determination of Europe; and in the presence of insuperable differences of opinion and of policy, it would have been judicious to restrain the warlike propensities of Greece. The present condition of affairs, unless the negotiations should in spite of probability succeed, is not creditable to European statesmanship; but it is a hard and unprofitable task to distribute the responsibility among the several Governments. It was assuredly not the business of England to make war on Turkey either alone or in concert with Russia. If implied threats have not been carried into execution, the error was not in final inaction, but in premature menace. It seems that the Turkish Ministers have, with characteristic obtuseness, taken the present occasion to inflict on the Governments of Bulgaria and East Roumelia affronts or slights which, though of little intrinsic importance, might serve as pretexts for a quarrel. The neighbouring provinces will not move without the permission of Russia, but it is possible that the Slavs may be let loose at the time of the Greek invasion of Turkey. If a general struggle begins, it will be difficult for Austria to abstain from an intervention which might produce grave results.

AGRICULTURAL DISTRESS.

THE evidence collected by the Duke of RICHMOND'S Commission forms a very large but a very interesting volume. The witnesses were, for the most part, well chosen, knew the business of farming and the condition of agriculture thoroughly, and said what they had to say in a direct and intelligent way. The questions put to them were generally pertinent, and had the effect of making them state what they knew, and think out their thoughts. What have been the causes and extent of agricultural distress? whether legislation can do anything to help the agricultural interest? and what is the probable future of English agriculture? were the three prominent enquiries to which the Commissioners had to address themselves. The information they sought was principally obtained from those who were conversant with the districts where the distress has been greatest, and what is chiefly remarkable in the testimony given is the unanimity with which the most competent observers pronounced that the distress was in the main attributable to the weather. Some portion must be attributed to defective systems of cultivation, and another portion to foreign competition, but these portions are altogether insignificant as compared to the mass of distress caused by four wet seasons, of which the fourth was the wettest. It is most important to bear this in mind. On land where the soil is of a kind to be much injured by rain, English agriculture in a period of long-continued soaking rain broke down. English land laws may be bad or good,

the English system of tenure may be bad or good, American competition may be dangerous, or not so very dangerous after all, but what has caused seven-tenths of the present distress is not bad land laws or a bad system of tenure, but excessive rain. This definite calculation of seven-tenths is to be found in the evidence of Mr. HUSKINSON, a land-agent, landowner, and farmer in Nottinghamshire, one of the counties which notoriously has been one of the chief scenes of recent distress. He had taken much pains to justify the conclusion at which he arrived. He has 500 acres under cultivation, and during the four wet years he had an annual loss of 600*l.* In quantity and quality his wheat and barley were short to that amount. After deducting what he lost through the price of his produce being lowered by foreign competition, he estimated the loss caused by the weather at seven-tenths of his whole loss. Other witnesses who had not gone into so accurate a calculation found even greater fault with the weather. They all agreed that the farmers in the districts of which they were speaking had little grain to take to market; that this little was bad in quality; that the cattle would not put on flesh; and that the rain did it all, or almost all. Rents had previously gone up; but during the bad time there was a general abatement of rent. Rates had gone up; but the witnesses were fully aware that in the long run rates fall on the landlord. The losses, too, of the cultivator were so enormous that rents and rates hardly entered into his calculation. An Essex farmer stated that on a farm of 500 acres he lost 1,500*l.* in 1879, and 1,250*l.* in 1878. The price of meat was high, but the cattle could not thrive in such constant wet. The pay of the labourer has advanced, and he now gets an average of a pound a week in many parts of the country; but the total cost of labour to the cultivator has not increased, as the use of machinery makes the employment of fewer hands necessary. There remained no other great cause of distress but the weather, and the weather was in the opinion of these experts bad enough to account for anything.

It must, of course, be understood that the witnesses did not say that even if the sun shone as brightly and as continuously as it ever shines in England, there might not be a point at which foreign competition would cause agricultural distress. All they said was that in the particular instance of distress under consideration the primary cause of suffering had been rain and not competition. If American competition brought down wheat to 40*s.* a quarter and beef to sixpence a pound, then they allowed that the sun could not save the farmer. Whether American competition is likely to have so much of success they, for the most part, forbore to speculate. So far as they ventured to give an opinion they evidently lean to the view that, with a decent amount of sunshine, the British farmer would, after a time and under certain conditions, be able to get a fair living. Time as well as sunshine must come to his aid. The bad effects of rain do not cease when the rain stops. The land is sour, and the character of pasture is deteriorated. There is an enemy of farmers known as blue or razor grass which stifles good grass in wet times, and one witness, when asked whether it had not made its appearance, replied that it had not only made its appearance, but had put everything else on one side. But much more serious than this state of the land is the loss of the farmers' capital. During the wet weather the farmers lost and lost, the banks got frightened, lessened their accommodation, called in their advances, and the farmers were cleaned out. There are exceptions to everything, and some farmers, no doubt, have started with ample capital, but witnesses acquainted with large tracts of country agreed that farmers, as a rule, begin with no more than 4*l.* an acre. Very often this modicum is diminished by the payment of heavy compensation to the outgoing tenant; but, apart from this, many farmers have lost during the four wet years an average of 1*l.* per acre, so that they must have got to the end of their capital. To find new persons who are willing to embark fresh capital in what has just been shown to be a losing business is a difficult thing; and banks that have saved themselves, or very often have not saved themselves, by calling in their advances will be shy of running new risks. And the difficulty of finding new farmers with new capital, which must have been felt even if sunshine would put things right again, is much enhanced by the farmer having now to farm under new conditions. He must be, if he is to succeed, a different sort of man, and he must work in a different way.

Before, however, the farmer can get a fair start he must have a good landlord. By a good landlord, as a very intelligent witness observed, must be understood a landlord who contributes his proper share towards getting the greatest possible amount of produce out of the land. The worst landlord, if these witnesses are to be trusted, that a farmer can have is himself; the best is a great proprietor. Peasant proprietorship, so far as present experience goes, does not answer in England. There is more of it than is commonly supposed. There are many small farmers in Lincolnshire. In one division there were a few years ago 3,000 owners of less than 30 acres. They are, said a Lincolnshire witness, a hard-working and hard-living class, but are entirely dependent on good seasons, and in bad times die rapidly away. Great proprietors are the best landlords, not only because they can afford not to press the tenant in bad times, but because they can put proper buildings on the land, and still more because they can keep experienced resident agents who see that what is done by the landlord is done properly. Nothing is more sad in the volume than the experience offered by one witness after another that an almost endless amount of money has been wasted in draining, because landlords have not been willing, or have not been able, to afford the expense of an agent competent to see that the drainage has been properly carried out. Where such agents cannot be afforded, landlordism will become a business which young proprietors, present or future, will have to learn, and Sir BALDWIN LEIGHTON was so penetrated with this truth that he proposed to the Commission that the surplus revenues of Oxford and Cambridge, instead of being wasted on useless professorships, should be devoted to the technical education of the coming landowners of England. When a farmer has got a good landlord he must show himself a good farmer. As a rule, if these experienced witnesses are to be trusted, English farming has not been good in recent years. The tendency, as one of them said, of farmers within the last few years has been to take as little trouble as they can and get as large a return as they can for it. This will not do in the future. What is wanted is that the farmer shall be more alive than he has been. He must go into his business as other traders go into their businesses. He must think of one thing and of one only—what it will pay him to produce and what it will not. He must be inventive and ready to turn his hand to anything. The keeping of poultry is very anxious and troublesome work, but he must keep poultry. Market-gardening requires some skill and involves some risk, but he must do his bit of market-gardening with a confident and light heart. If he goes in for milk, he must calculate to a nicety whether it will pay him best to contribute to the winter or the summer supply. He must be a better buyer than he is now, and not waste his money on the wrong sort of cattle or on adulterated manures. Probably in the course of time such a race of farmers may grow up, but at present a diffident man may hesitate as to whether he is really the kind of paragon who is qualified to put his money into this difficult, venturesome, and lately unsuccessful business. But, fortunately, most men, especially if they have a little wholesome ignorance of affairs, entertain such a good opinion of themselves that, if the sun will but give a proper amount of encouragement, there may be before long an adequate supply of farmers who have much courage and some little money, and who will persuade themselves to think of the four wet years as of an evil dream.

M. GRÉVY AND HIS CABINET.

FRENCH politicians are certainly to be complimented on the ingenuity with which they manufacture new varieties of crisis. The discussions which have been going on in the Cabinet during the past week, and the result which has finally been reached, are of an entirely original type. The Bill for substituting the *Scrutin de liste* for the *Scrutin d'arrondissement* has been under consideration by the Committee to which in the French Chambers all Bills are referred as a matter of course. One of the forms which this Committee has to observe is the examination of a Minister with a view of ascertaining the view of the Government on the proposed legislation, and the Cabinet had accordingly to decide what should be said in its name

with regard to the change in the size of the constituencies. As soon as the subject was thus brought formally before them, it appeared that, as occasionally happens with a jury, there was not the slightest chance of their coming to an agreement. M. FERRY prefers the *Scrutin d'arrondissement*, M. CONSTANS prefers the *Scrutin de liste*, and the other Ministers range themselves under one or other of these leaders. There can be no doubt as to the importance of the question whichever happens to be the view taken of it. Even from a strictly party standpoint, there is a unanimous belief that it will have very grave results, though alike among Republicans and reactionists the most opposite opinions are held as to what these results will be. Consequently it seemed almost necessary that the Cabinet should make up its mind one way or the other. What is the use of a Government which has no collective opinion on a measure which everybody is agreed will effect a very great change in the composition of the only one of the public powers which is directly elected by universal suffrage? In the first instance, M. FERRY seems to have had no answer to give to this inquiry, and M. GRÉVY is understood not to see an answer to it yet. But, then, the process of arriving at a collective opinion was not a pleasant one. If M. GRÉVY had himself been in favour of the *Scrutin de liste*, all would have gone smoothly. He would then have been in agreement with M. GAMBETTA, and when this is secured nothing else is of much moment. But M. GRÉVY is strongly opposed to the *Scrutin de liste*, and he was not at all inclined to dismiss the Ministers who took the same view as himself, in order to fill their places by Ministers who take the same view as M. GAMBETTA.

There was another course open to him had he chosen to adopt it. Under the Constitution the President has the power of appointing and dismissing his Ministers, though, as in other constitutional countries, he has to exercise this power in deference to the declared wishes of the Chamber of Deputies. But in this case the Chamber of Deputies has not made known its wishes. No one can positively say beforehand whether those wishes, when they come to be expressed in a vote, will be in favour of the *Scrutin de liste* or the *Scrutin d'arrondissement*. Therefore the President of the REPUBLIC was at liberty to say that it was necessary to reconstruct the Cabinet in one sense or the other, and that, in the absence of any guidance from the Chamber, he intended to reconstruct it in the sense with which he himself agreed. Nor is it at all obvious what harm could have come of his so doing. M. CONSTANS and those who think with him would have resigned their offices, and M. FERRY would have met the Chamber at the head of a homogeneous Cabinet. If he had succeeded in defeating M. BARDoux's Bill, the approaching general election would have determined whether upon this point the existing Chamber represents the country. If M. BARDoux's Bill had been carried against the Cabinet, M. FERRY and his colleagues would have made way for Ministers more in accord with the mind of the deputies. Instead of this, long and fierce discussions seem to have been held, not on the question which side the Cabinet should take, but on the question whether it was necessary for the Cabinet to take any side at all. Strange to say, this question has been answered in the negative. The Cabinet have come to a compromise, and have agreed to remain silent during the debate. What makes this decision the more remarkable is that it has apparently been come to against the will of M. GRÉVY. The President of the REPUBLIC so far condescends to the ideas of common men that he keeps a newspaper. In France almost every politician has an organ of his own, and M. GRÉVY may not have chosen to be less well equipped than his neighbours. The objection to the plan is that it shows the serene and irresponsible PRESIDENT to be a man of like passions with his storm-tossed and responsible Ministers. It is evidently not at all the same thing to M. GRÉVY whether his ideas or M. GAMBETTA's upon the relative merits of the two *Scrutins* are adopted. Within certain well-defined limits he had every right to give effect to his own ideas rather than to M. GAMBETTA's. It rested with him to choose whether the *Scrutin de liste* should be presented to the Chamber with the seal of Cabinet acceptance or with the stamp of Cabinet disapproval. It is not likely that M. FERRY would have rejected a commission to form a Ministry on the basis of opposition to the *Scrutin de liste*; but, if he had been unwilling to run the risk, M. GRÉVY might easily have found some

one else who was willing to take his place. Or, if this was too bold a course for M. GRÉVY to decide upon, there was another alternative open to him. There is no doubt that the President of the REPUBLIC, so long as the Constitution remains unchanged in title and spirit, must in the end take Ministers from the Chamber, and not seek to impose Ministers on it; and M. GRÉVY might, if he liked, have dismissed M. FERRY, and commissioned M. CONSTANS to form a Cabinet on the basis of opposition to the *Scrutin d'arrondissement*. The PRESIDENT would then have done at first what he will have to do at last; and the Chamber would have been saved from the danger which now awaits it, of approaching a subject of great moment and great difficulty without any authorized guidance.

Supposing that neither of these alternatives recommended themselves to M. GRÉVY, a third remained. He might have tolerated the ridiculous compromise to which Ministers have given their consent, and have taken pains not to let it be seen that he either cared what opinion they had or wanted them to have any. Instead of this, M. GRÉVY has done the exact opposite. The newspaper which is understood to represent his views has been quite unable to leave the subject alone. It has returned to it again and again, and always in the same strain of contemptuous exclusion of the possibility of a persistent maintenance of neutrality on the part of the Cabinet. Unless there are reasons for what he has done which are not apparent on the surface, M. GRÉVY has simply courted defeat. The Constitution puts him beyond the reach of party conflicts, though in the present instance he had accidentally a right to take part in them. What he has done is to show quite plainly that he wishes to take his share in this particular controversy, but that he has allowed himself to be shut out from it by Ministers whom he has the power of dismissing. There were abundant reasons why M. GRÉVY should have resisted the temptation to descend into the arena of political strife, but none why he should remain outside it and yet allow the journal which he is understood to inspire to lament that he has been unable to persuade M. FERRY to descend into it with him. After the remarkable exhibition which it has pleased the friends of the *Scrutin d'arrondissement* to make of themselves, it is hardly likely that the Chamber of Deputies will display much enthusiasm in defence of it. M. GRÉVY may have many virtues, but he is not a match for M. GAMBETTA.

MEXICO.

GENERAL GRANT, it is announced, has given up the presidency of the World's Fair Commission, partly because he finds that no one takes any interest in the World's Fair, and partly because he is going to Mexico. No one at present wants another huge Exhibition, and flagging interest in such an enterprise cannot be whipped up by calling a huge Exhibition a World's Fair or by putting General GRANT at its head. Experience has shown that very big Exhibitions can only come off with success if a considerable interval of time elapses between one period of large shows and another. Philadelphia and Paris have used up for the present such sensations of delight as World's Fairs can give. It is now the period for comparative repose, and for little countries to have little shows. Spain proposes to take the lead in these minor spectacles, and to have next year an Exhibition at Madrid. She has quite as good a title as any other country of the second rank to send out her modest invitations to the world. She can offer travellers a country worth travelling in, she has a capital where works of art of the first class are to be seen, and she has special products of her own which show very high perfection of workmanship. Her only drawback is that at the time of year when alone most people have leisure to go to an Exhibition her climate will bake her guests until they will wish they were anywhere out of the sun. Those, however, who can stand being baked will have an opportunity of observing how much and how little there is of real progress in Spain. There is now a settled Government; there is a beginning of activity; there is a disposition, which used not to exist, to deal with foreigners. On the other hand, Spain is still very backward, and her backwardness is due partly to the character of the people and partly to its social condition. And what is true of Spain is true of Spanish colonies. Spain is at the head of the Spanish world, and all the

Spanish world resembles Spain. General GRANT gives up an American Exhibition and goes to Mexico. Others, released from the terrors of a new American Exhibition, are invited to go to Spain. All will do what is really the same thing. They will get away from the atmosphere of the most go-ahead of modern societies to the atmosphere of societies which are just beginning to go ahead after their own peculiar fashion. What is happening in Spain is happening in Mexico. What may be expected of Spain may be expected, although in a less degree, of Mexico. What cannot be expected of Spain can still less be expected of Mexico; for Mexico is not only a colony, and a colony is as a rule inferior to the home country, but it is a ruined colony. It is a second-rate Spain which has allowed itself to tumble into ruins, and is only very slowly and partially beginning to get out of its ruined state. A Mexican town is generally a collection of hovels, which show where the Indians are, and of ruined palaces, which show where the Spaniards have been. And the aspect of the towns reflects the condition of the country. Mexico has to be re-made, and even if it could be re-made it would be, at the best, what Spain was thirty years ago, and would have to tread the difficult path of gradual progress to be, in time, what Spain is now.

A little more than a year ago General GRANT paid his first visit to Mexico. He was then a very great man for Mexico to welcome, and Mexico treated him as a very great man. He had been received in Europe on a footing almost equal to that of royalty, partly because he had been twice President of the United States, and partly because he was the conqueror of the South. When he got to Mexico, he had not only this flavour of royalty about him, but his greatness was expected to continue and increase, and he was looked on as the coming President for a third term of office. While in Mexico he did much to stimulate the interest of Americans in Mexico as a field of enterprise, and the disposition of Mexicans to think that American money was worth having, even at the risk of some amount of political danger. During the past year American money has flown freely into Mexico, and the flow of much more has been promised. General GRANT goes back with the prestige of having done something to promote this flow, but without the prestige of a coming Presidency. He has not been re-elected, and in the United States men who have been prominent and have ceased to be so are soon forgotten. The political influence of General GRANT is now probably very small, if he can be said to have any. He returns as connected with the flow of money, and not as in any way representing the authority of the United States. And the flow of money into Mexico must be pronounced wise or unwise entirely on its own merits. It will either answer to pour capital into Mexico or it will not. Time alone can show the prudence or imprudence of American schemes for developing the resources of Mexico, but there can be no doubt at all as to their vastness. Nor are they mere paper schemes. They are schemes for which a considerable amount of money has been subscribed and on which work is actually being done. Of these schemes there are two that may be called comparatively small and two that are very large indeed. The two smaller schemes are a railway from the American border to the port of Guaymas, and a railway across the Isthmus of Tehuantepec. The first supplies a real want. It gives a fairly good port much to the south of San Francisco to a system of American railways which at present have no outlet in the Pacific except San Francisco. The second is the Panama railway over again, except that on the one hand it is longer, while on the other hand it is very much to the northward, and offers a route at least two thousand miles shorter to San Francisco than the Panama route. If, however, the Panama railway is destined to be killed by M. DE LESSERS's canal, a Tehuantepec railway could scarcely hope to escape a similar fate. To save it from its too probable destiny Captain EDE, who has gained fame by his very successful and ingenious work in opening the mouth of the Mississippi, proposes to revive an idea not unfamiliar to Honduras bondholders, and to transport ships bodily across the Tehuantepec Isthmus. It is a magnificent idea, and one that most people would be glad to see other people subscribing to test practically. Captain EDE hoped to get assistance from the United States Government, and obtained a report from a Committee in his favour, but his hopes were dashed when a vote was taken. The larger schemes are two systems of railway from the city of Mexico to the American border, one with the gauge of our English railways and the other with a

metre gauge, each being connected when it gets to the border with American systems of its own gauge. The line with the broader gauge, which is known as the Central Railway, has a distance of about twelve hundred miles to traverse in order to reach the border. For a third of the distance its course takes it to towns which for Mexico are populous and thriving, and to districts which for Mexico are naturally rich. It then goes off into the wild. The narrow-gauge line would have a distance of about a thousand miles to traverse to get to the border; but it may, if it pleases, abridge the distance by using its rival for a part of the way. Both schemes are in the hands of influential Americans. Both have real money behind them, both have the promises of handsome subventions from the Mexican Government, and both have authority to branch off in a vague way and go to some undetermined port on the Pacific. In addition, the Central Railway proposes to make a connexion between San Luis Potosi and the port of Tampico to the north of Vera Cruz, which would greatly abridge the distance between the sea and the interior of Mexico, and divert in a corresponding degree the traffic that now goes to the interior by Vera Cruz and the city of Mexico.

These railways have their drawbacks. Purely Mexican traffic is shown by experience to be of a small volume. It grows, but it starts from a very humble beginning, and it grows as slowly as everything must grow in a ruined Spanish colony. The social condition of Mexico puts, and must long put, a bar to everything like rapid progress, the land being held for the most part in large tracts by absentee proprietors, who cultivate it most imperfectly, and have neither the money nor the wish for improvements. The second drawback of these railways is that they go for a long part of their course over a barren and almost uninhabited plateau. The third drawback is that, although they are promised handsome subventions by the Government, it is at present impossible for the Government to pay them. It has not got, and cannot get, the money to make good its promises. In order to meet these three drawbacks, it has been proposed that tracts of land on each side of the line shall be given to the railways, and that this way of getting railways made, which has been successfully adopted in the United States, shall be employed in Mexico. These tracts of land will, it is supposed, be occupied by American settlers. There will then be a traffic other than a purely Mexican traffic; the lines will go not through a desert, but through the homes of thriving immigrants. The Government will give land which it has got instead of money which it has not got. The scheme, if it could be carried out, would be in a merely financial point of view of great advantage to Mexico; but there are many serious practical difficulties in the way of carrying it out. The Government, where the land is decently good, has not got land to give. The land that is worth having is in the hands of private proprietors who would have to be bought out. And, taken as a whole, the land is not at all good. It is not like the rich plains of the Mississippi and its tributaries, of which newcomers were enabled by railways to utilize the natural wealth. It has been explored centuries ago by the Spaniards, and has been left barren because the Spaniards decided that it would not pay to work it. Politically, if the scheme were carried out, the occupation by Americans of the land on each side of the chief means of communication would give the United States a dominating influence which would almost amount to annexation. But this would only happen when the scheme was carried out. While it was being carried out the settlers would have to cultivate their sterile holdings in the midst of a jealous, hostile, and, for a great part, lawless population; they would be under foreign laws; and, so far as they were protected, they would have to appeal for protection to a scanty foreign army. There seems no very clear reason why enterprising Americans should migrate to bad land when they can migrate to good land; why they should come under laws which they do not understand, instead of remaining under laws which they do understand; or why they should trust to Mexican warriors to keep off enemies whom they have created for themselves. No doubt all these difficulties may be overcome in some way that is not now discoverable; but the question for the moment is whether they really exist or not, and whether, if they do exist, General GRANT, or any one else, can overcome them.

MR. CHAPLIN'S MOTION.

THE debate on Mr. CHAPLIN'S Resolution was needlessly confused by Mr. MUNDELLA'S desire to convict the mover of inconsistency. Mr. CHAPLIN spoke in high praise of the Act of 1878, and Mr. MUNDELLA tried to show that this view was incompatible with a wish to substitute total prohibition of the landing of live animals for compulsory slaughter at the port of landing. The answer to this is obvious. Mr. CHAPLIN admires the Act of 1878 because it went a long way in the direction of prohibition. But he would have admired it still more if it had gone all the way, and he now proposes that, in view of recent facts, it should be made to go all the way. There is no real inconsistency between the two positions. The man who admits that half a loaf is better than no bread is not debarred from contending that the whole loaf would be better than the half, and that something which has happened since the half loaf was conceded has proved that the whole ought now to be given. Mr. MUNDELLA would have done better to argue, as was done by another speaker, that the Act of 1878 was a compromise, and that those who seek to disturb a compromise must not wonder if the effect of their effort is to reopen the whole question. It would hardly be to the advantage of cattle-producers that the policy assented to by the last Parliament should be reviewed by the present. In this sense the Government may be said to have befriended the farmer by meeting Mr. CHAPLIN'S motion with a direct negative.

The facts of the recent outbreak of foot-and-mouth disease were not disputed by Mr. MUNDELLA, and though Mr. CHAMBERLAIN preferred to speak of Mr. CHAPLIN'S "assumptions," he made no serious attempt to set up a counter theory. At the beginning of last September the foot-and-mouth disease scarcely existed in this country. In the course of that month it broke out in the North of France, and shortly afterwards a cargo of live beasts coming from the infected district, and suffering severely from the disease, was landed at Deptford. They were slaughtered at the port of landing, but within three days the disease made its appearance in the London dairies, where it had been absolutely unknown for nine months. It is maintained by Mr. CHAPLIN, and not denied by Mr. MUNDELLA, that it was almost certainly conveyed from Deptford to London by some of the drovers employed about the diseased beasts. Upon the case as thus stated Mr. CHAPLIN founds his prayer, that in future live cattle should not be imported from countries as to whose freedom from disease the Privy Council are not satisfied. Very little was said in the debate upon a point which to those who are not experts seems of considerable importance. What guarantee is there that, if the importation of live animals from infected countries were forbidden, the exclusion of the disease would be complete? If it could only be communicated from one animal to another, the question would answer itself; but disease which can equally be conveyed by human beings may presumably lurk even in dead carcasses, and from thence be communicated by those who handle them to living cattle. On Tuesday Mr. CHAPLIN was all for the importation of dead meat. If he had been chairman of an Australian Meat Preserving Company, or the patentee of a new freezing process, he could not have shown more enthusiasm in the cause. But, if the exclusion of live cattle is not a specific against the introduction of the foot-and-mouth disease—and so far no one appears to have said that it is—he might be equally ardent the year after such exclusion in favour of the exclusion of dead meat. In that case consumers would no doubt be saved from the rise in price which may conceivably accompany any serious destruction of English cattle; but they would be saved from it at the cost of the entire extinction of foreign competition. It would not be wonderful if, like DAVID, they preferred the pestilence to being thus delivered into the hands of their natural enemies. According to Mr. MUNDELLA, the value of the living animals imported into the United Kingdom in 1879 was 7,000,000*l.*, while in 1880 it rose to 10,000,000*l.* That is a very rapid increase, and, as it is accompanied by a great improvement in the quality of the cattle sent, it seems to show that the conditions of the English meat supply are undergoing a remarkable change. As we have often pointed out, the whole question of restriction of importation turns in the end upon one point. Will the meat consumer gain more by the exclusion of disease than he will lose by the exclusion of meat? If foreign meat formed merely a

fraction of the total supply, and if there were no reason to suppose that this proportion would be materially increased, the argument for whatever measure of prohibition that seemed necessary to keep out disease would be unanswerable. It would be poor comfort to the consumer who found 95 per cent. of his meat supply disappearing by disease to hear that no restriction would be placed on the import of the remaining five per cent. The rapid increase of importation deprives this reasoning of much of its value. If the importation of foreign cattle is playing every year a larger part in the mechanism by which the food supply of the country is regulated, it would be exceedingly rash to interfere with it to an extent which might permanently divert it from our shores. It would be bad policy to sacrifice the next generation of consumers to the interests of the present generation, and a measure of prohibition which left us nothing but the trade in dead meat to look to as the alternative to our own herds might in the end have this result. The Legislature has to guard against two coequal dangers. On the one hand, there is the risk that the home-grown meat, which at present forms by far the larger part of our supply, may be lessened in quantity, and consequently raised in price, by the importation of disease from abroad. On the other hand, there is the risk that the foreign trade, which, in virtue of its unascertained capacity of development, may eventually give us the larger part of our meat supply, may be hampered by injudicious restrictions. The only means by which these alternative evils can be escaped is by steering a middle course between them, and the compromise which Mr. CHAPLIN seeks to upset does on the whole provide us with this middle course. Slaughter at the port of landing is not a universal and infallible remedy against the importation of disease, but it makes the danger very much less. When the Act of 1878 was under discussion, it was contended that even this amount of interference with importation would be extremely injurious to the foreign cattle trade. The experiment has been tried, and it has been found that compulsory slaughter has not prevented a very large increase in the value of the cattle imported. Mr. CHAPLIN would have us carry the experiment further in the hope that it will again be successful. But the conditions under which it would be tried would be widely different. It has been found that restriction on the importation of live cattle has had the effect of increasing the trade in them. Mr. CHAPLIN asks Parliament to prohibit the importation of cattle from infected countries, in the hope that the consequent growth of the trade in dead meat would fill up the gap. It is possible that the advance of scientific discovery may some day originate a method of preserving dead meat which shall make us independent of the importation of cattle. But until that day comes Parliament cannot in the interest of the consumer consent to a measure of entire prohibition which might conceivably have to be applied to all countries at once.

Fortunately it has not been shown that the facts as stated by Mr. CHAPLIN require such stringent treatment. The ground of his argument is that the disease which is brought to the port of landing by cattle may be carried inland by the human beings who have to tend them, even though the cattle themselves are not allowed to leave the market alive. It appears from Mr. MUNDELLA'S speech that several important precautions which the Privy Council has now ordered to be taken were not in use in September last. It is certainly possible to ensure that no one who has been in the neighbourhood of diseased cattle should be allowed to leave the market until his person and clothes have been properly disinfected. At the worst, it costs less to keep drovers in quarantine than to exclude foreign cattle from the English market. What has been done successfully in the diseases of human beings can hardly be beyond reach in the diseases of animals.

THE BISHOPS' BIBLE.

II.

IN describing some of the earlier editions of the Bishops' Bible we had occasion to notice the remarkable variations in the Old Testament of 1569, as compared with that of the first edition of 1568, and we called attention to the fact, hitherto unnoticed either by critics or bibliographers, of the recurrence in the second folio of 1572 to all, or nearly all, the inferior readings of the first edition. The only account of this singular anomaly that we can suggest is the following. We suppose that the second folio was printed

as far as the end of the Old Testament before the 4to. of 1569 was published, that certain critics had called attention to the numerous errors of a serious kind, as well as minor blemishes, which disfigure the first edition almost as soon as it was published, and that a thorough revision was immediately made of the historical books of the Old Testament, the results of which appear in the alteration of several hundred passages in the smaller-sized volume issued in the following year. As these were adopted in subsequent editions of both sizes, it is plain that some accident must have prevented their being incorporated in the second large folio of 1572, intended for use in churches. Little or no exception seems to have been taken to the renderings of the New Testament, for these are very little altered in the 4to. of 1569; but when we come to compare the two large folios of 1568 and 1572, the differences in the New Testament are very striking. They may be counted by hundreds, some changes having been made in every book, and we believe we may say in every chapter, though we do not profess to have examined them so minutely as definitely to assert this as a fact. With regard to these alterations, which certainly are for the most part improvements, and were adopted in subsequent issues of the book, we have something more than conjecture to guide us. Strype, in his Life of Archbishop Parker, has given us a list of several corrections supplied by a Greek scholar of the day named Laurence, of whom little is known, but who at least was a far better scholar than any of the bishops employed upon this part of the work. It may be that Parker had asked him for criticisms on his own portion of the work, which consisted, as far as the Gospels and Acts are concerned, of the first two Gospels, and that Laurence travelled a little beyond his brief and introduced two or three additional remarks on passages which he had casually noticed in the rest of the volume. It is quite incredible that so good a scholar would not have found many more equally astounding blunders in other books if he had critically examined them. In point of fact, some one must have done so, for the changes made in accordance with Laurence's criticism do not amount to one hundredth of the whole number of those that were made in the new edition of the New Testament in 1572. So much misapprehension has prevailed as regards these notes that we will say at once that it is certain Laurence was referring to the first edition of the Bishops' Bible and to no other; and that all his suggestions were adopted in the second folio edition of 1572, without a thought apparently having been given to what he really meant, while in one case at least a most absurd blunder was made in attempting to introduce the correction proposed by him. It occurs in the 21st chapter of St. Matthew, v. 38, where *κατασχεμεν* had been rendered somewhat freely *Let us enjoy*. Laurence objected to this translation, remarking that the word meant "Let us take possession or seizin." The editor of this second folio edition, not understanding that the word "seizin" is a substantive governed by the word *take*, made a verb of it, and altered it into *season*, and printed the clause "*Let us season upon his inheritance*," and in this form the verse appears in every subsequent edition of the Bishops' Bible that we have seen from 1572 to 1602 inclusive. We cannot speak of the edition of 1606, as we have never seen it, and we believe that there is only one copy in existence.

We have hitherto spoken principally of the changes introduced into the second and third editions of this Bishops' Bible, and that with the special object of showing how carelessly the whole affair was designed and executed. We ought perhaps to have observed in our preceding article that the first edition of this Bible was so carelessly set up that it seems to have been corrected after some of the sheets had been struck off. We have observed at least thirty leaves in which there are variations, and yet it is otherwise certain that there was only one edition of the date 1568. Under the circumstances, it was scarcely likely that, even after all the improvements in the Old Testament in the second edition and of the New Testament in the third, that a tolerable translation of the Bible should have been produced. But any criticism that would be fair and just must be made upon some edition subsequent to 1572. Probably the fairest test to take, except for the Psalms, would be that of 1602, which there is very good evidence to show is the edition used by the compilers of the Authorized Version in the comparison of the existing translations which they made with a view to rendering their own version as perfect as possible. We believe, however, that this edition does not differ from the folio of 1585, which bears on its first title "Authorized and appointed to be read in Churches," and on the title of the New Testament "Perused and diligently corrected," except as regards the version of the Psalms, which in this edition alone of all those subsequent to 1572 contains the Bishops' version. Another specimen of careless editing is shown in this edition in that it notices the psalms appointed for morning and evening prayer respectively without making any allusion to the day of the month to which they belong. Setting aside, then, any consideration of the corrections made of serious mistakes, as well as of inferior renderings of words and phrases, which cannot be estimated at much less than four thousand in the New Testament alone, it must still be pronounced a very poor production. The scholarship of its translators was far inferior to that of their predecessors who laboured at the Genevan Bible, and as regards command of the English language it is decidedly inferior both to the Genevan and to that which is commonly called The Great Bible of 1539. Dr. Westcott seems to have been unwilling to prosecute his inquiries in the Old Testament part for fear of what he might discover to the disparagement of the scholarship and learning of the translators; whilst Dr. Eadie

has criticized several passages both of the Old and the New Testament with considerable leniency. He has not, for instance, noticed that sometimes in the Old Testament the version is utterly unintelligible. We quote a single instance of this. The 11th verse of the 12th chapter of Ecclesiastes is thus rendered:—

For the wordes of the wyse are like prickes and nayles that go thorowe, of the auctoures of gatheringes [which] are geveyn of one shep-herde.

But when Dr. Eadie speaks of the Bishops' version as being more stately than precise, he is scarcely happy, we think, in his illustration when he selects 2 Cor. ix. 5 as an instance:—

Prepare your prepromised beneficence, that it might be ready as a beneficence and not as an extortion.

Another instance of absurdity, in this case apparently the result of mere ignorance, occurs in Hosea ix. 11:—

Ephraim their glorie shall flee away like a bird: for birth, for wombe and conception.

It is, however, due to the translators to say that this was altered in 1569, though the same mistake was reproduced in 1572. We could give many more instances to show that the bishops of Elizabeth's time had but a faint perception of that single step which is said to distinguish the sublime from the ridiculous; but we must utilize the space that remains to us in giving some account of the notes which have been added to this translation.

These are few in number, and such as there are are strikingly contrasted with the business-like tone of those of the Genevan Bible. The instructions given to the translators were "To make no bitter notes upon any text, or yet to set down any determination in places of controversy." And to this they strictly adhered, with the one exception of a few most ridiculous side blows at the Pope and the doctrine of the Mass. The doctrine of the Trinity was not considered to be in controversy, and so attention is sometimes called to the texts adduced in proof of that doctrine. Neither was it considered an open question that sacraments are nothing more than seals of a grace previously bestowed; and, though the translators left out many of the more strongly expressed Calvinistic notes of the Genevan, yet some suggesting the same doctrine were retained, and others implying it were added. This is most remarkable in the Acts, done by Cox, Bishop of Ely, who, in Queen Mary's reign, had been living among the exiles in Germany. He is especially careful in the nineteenth chapter to explain away the doctrine of baptismal grace in three different notes, much after the fashion of the notes in Tyndale's Testament of 1550 and the Genevan Bible; and this not in the way of controversy, but as if it were, as it really was, the received doctrine of the Church of England at that time. The Calvinistic doctrines of election and reprobation are also stated by this writer in a note to Rom. ix. These perhaps are the passages where controversial notes are most apparent. In the rest of the Bible the character of the notes is puerile and trivial in the extreme. There is no evidence to show that Parker was specially addicted to Calvinism, and it must be admitted that in the parts of the Bible translated by him there is little or no doctrine of any kind insinuated. But notes are very sparingly added to the portions of the Bible which he himself translated. Those on Genesis and Exodus were extensively altered in the second edition, and in one instance—Gen. iv. 7—the explanation given is absolutely contradictory to that of the first edition. They are for the most part of the most puerile description. Short specimens are as follows:—In Gen. xxxii. 20, on Jacob's preparing a present for Esau, the marginal note is, "All giving and receiving of presents is not evil." On Exodus xv. 20, *à propos* to Miriam's dancing, we have introduced newly into the edition of 1569, and retained, we believe, in all subsequent editions, "which ought not to be a cloke for our wanton dances." Neither is the tone of the notes on the New Testament such as to give a very exalted idea of the intellectual power of the Archbishop. We extract the whole of the annotations on St. Matthew as a specimen.

- Gospel.*—*Gospel*, that is, tydynges of our salvation by Christe.
- Matthew i. 1. *the booke.*—That is, the rehearsal of Christe's lineage and life.
25. *and knewe her not.*—This phrase doth not import that he knew her afterward, as the lyke phrase used, Mat. 5. 18 d. and Psal. xxi. or that she had any mo children.
- ii. 13. *his mother.*—Joseph was not the father of Christ, els the angel woulde not have said, Take y^e childe and his mother, but rather Take thy chylde.
- iii. 2. *Repent y^e.*—This worde is, after a faulte to be wyse, with a munde to amende.
- vi. 34. *Sufficient unto the day is the evyl therof.*—That is, the present day hath enough of her own grief or affliction.
- ix. 15. *Chyldren of the bryde chamber.*—That is, ministers attending in the bryde chamber.
- x. 11. *there abyde.*—Shut not your lodging untill y^e go out of the cite.
39. *he that feedeth his life.*—That is, he that wyll save his lyfe.
- xxii. 15. *one proselyte.*—One brought from gentilitie to his religion.
16. *A detter.*—Both to God and to man for to performe it.
- xxvii. 54. *A centurion.*—A captaine of one hundred men.

Our account of the notes to the Bishops' Bible would not be complete if we failed to notice the one point in which the translators neglected to comply with their instructions. They followed them to a ridiculous extent in adopting the readings of the Great Bible, when manifest improvements had been made by the Genevan translators, but they either forgot them or else voluntarily ignored them when there was an opportunity of giving a hit at the Pope and the Roman system. Perhaps the most striking

instance of this occurs in the note to the words *make marchandize* in 2 Peter ii. 3. It is as follows:—

That is evidently seen in the Pope and his priestes, which by Hes and Hatteries well men's souls: so that it is certayne that he is not the successour of Simon Peter but of Simon Magus.

In conclusion, we may observe that the same careless editing which we noticed as regards the first three editions of this book seems to have followed it to the end. Even in the editions of 1585 and 1602, which may be pronounced to contain the final improvements made by the Elizabethan bishops, the marginal notes were cut down to the dimensions of those of the small 4to. of 1569, where frequently notes were left out simply for want of room in the margin of the page, so that in this one respect these editions are inferior to the first two folios of 1568 and 1572.

We shall add no more than this, that we think the book was worthy of the bishops who occupied the English sees in the reign of Elizabeth.

We have said that there was no attempt after 1606 to revive this version, and in a previous article on the Geneva Bible we observed that that version was finally suppressed by Laud. It remains, therefore, for us to notice that there was a large folio family Bible with notes, and plates, printed by M. Lewis, and issued in 1775, which is described by Lowndes as a Geneva, and has sometimes passed off for a Bishops', because it has on its title-page the words "By the Archbishops and Bishops," &c., followed by Parker's preface. It is really a Geneva as far as the Old Testament is concerned, and a Tison of the New, there being no variations that we have detected worth notice, except the substitution of "aprons" for "brooches" in the 3rd Chapter of Genesis. We suppose it may be classed by itself as the single specimen of a Geneva Bible which is not also a Breeches Bible.

THE COURSE OF BUSINESS.

THE master of a sufficient majority in Parliament enjoys the immunities of *rex Romanus*, and is, if not *super grammaticam* (though, in the matter of Queen's Speeches, he is frequently this also), at any rate above feeling any awkwardness which may arise from unfulfilled prophecies and mistakes in generalship. It is probable, therefore, that Mr. Gladstone felt but little annoyance at having to make on Monday last a statement about the course and prospects of business the tenor of which was at singular variance with the tone of his demand for urgency in Supply. When making this demand he had drawn the most gloomy picture of the state of things should it not be granted. He also, with rather characteristic impatience of defeat, remarked after the division that the House had put the direction of its affairs in the hands of the minority, and he reserved a mysterious power to the Government of seriously considering the situation. Accepting Mr. Gladstone's version of the vote on Monday week, it can only be said that it is rather a pity that the affairs of the House are not always in the direction of those who, according to the Prime Minister, have directed them during the last fortnight. Last week was a week of quiet and orderly progress, and the present week has not been behindhand in the dispatch of business. The Candahar debate, for which the Government, despite their eagerness, could not before find room, or definite promise of room, got itself fixed on Monday. Mr. Chaplin had the greater part of a night for his foot-and-mouth disease motion, which enabled the Government to show that they have no intention of unequally benefiting farmers unless there is a possibility of injuring landlords at the same time. The long-promised Land Bill has at last had itself put down definitely for the seventh of next month, the eve of the adjournment for Easter. This adjournment, as is proper after so abnormally early a Spring Session, is to extend over a longer time than usual—a time, however, which will be hardly a holiday time for politicians, inasmuch as it will doubtless be taken up with warm discussion of the Land Bill itself, which will come on for second reading immediately the House reassembles. Between the Candahar debate and the adjournment, the Mutiny Bill and Mr. Gladstone's financial statement occupy the most prominent position. The latter will, no doubt, afford its maker an opportunity of showing the remarkable dexterity with which he manipulates finance, a dexterity not denied even by the malcontents who say that it is easy to distribute surpluses which have been previously created by unnecessary taxation. The programme before Easter is thus of the most orderly and inviting character. The most urgent votes in Supply secured, grumbling private members propitiated by at least an apparent dedication of some little time to their concerns, a safe party triumph on an important question of foreign policy secured by the ingenious *mot d'ordre*, not to attend to any argument in which the word Candahar occurs—all these good things have been given to Mr. Gladstone by the action of the Opposition which so greatly disturbed him last week.

The substantial advantages secured by this action of the Opposition doubtless consoled Mr. Gladstone for the non-fulfilment of his forebodings of evil. Another incident of the same night possessed more than the disagreeables of this non-fulfilment without its corresponding advantages. It has been pointed out before that the conduct of the Chairman of Committees in refusing to allow Mr. O'Donnell even to finish the sentence in which he wished to put a point of order was highly inconvenient, and the inconvenience turned out to be exactly what was expected. The

member for Dungarvan brought up the matter on a question of privilege, and showed that the remarks he had been going to make were entirely in order and had nothing to do with the previous ruling of the Chairman. Dr. Playfair could only make the very lame excuse that he feared Mr. O'Donnell was going to do what it seems Mr. O'Donnell was not going to do. The Chairman of Committees might perhaps with advantage have spared a sneer in which he indulged as to the inner consciousness of the member for Dungarvan. The awkward thing on the occasion seems to have been the inner consciousness of Dr. Playfair, which informed the Chairman of Committees of the tenor of a yet unspoken sentence of Mr. O'Donnell's. It was natural and characteristic that the Home Secretary should hint a doubt whether Mr. O'Donnell's explanation was not invented as an afterthought; but here, too, the insinuation was unfortunate. For, so long as Chairmen of Committees refuse to allow members to finish their sentences, so long will it always be possible for them to invent plausible explanations afterwards. Dr. Playfair's haste in deciding on this occasion is particularly to be regretted when it is remembered that his remarkable reluctance to decide on the famous night which brought about urgency was the original *causa malorum*. To refuse to advance at the right time, and to rush on headlong at the wrong one, may be proceedings not altogether inconsistent; but the one can hardly be considered as atoning for the other. The incident placed the Government in this awkward position—that their officer had exceeded his duty, thereby bringing upon a person, at least technically guiltless, immediate punishment and the chance of still heavier punishment in future; for it must be remembered that the next time Dr. Playfair interprets a half sentence of Mr. O'Donnell's unfavourably, Dungarvan will cease for the time, perhaps for some considerable time, to be represented. There may, of course, be different estimates of the exact loss which the House and the country would in that case sustain; but these estimates cannot affect the question of the improper use which has been made of the rather arbitrary powers granted by the House to its officer. Probably Mr. Gladstone was right in thinking that a formal censure of the Chairman of Committees was to be deprecated, though it is not easy to see how his position was strengthened by the exposure of the over-haste with which he acted.

This incident, as well as the whole course of Parliamentary history for the last three months, tends to support the view of those who hold that the due progress of business in the House of Commons depends much more on the hands that manage it than on the weapons with which those hands are armed. Despite a certain very hackneyed quotation, it is by no means certain that any one can govern with a state of siege, and it is certain that a state of siege results in demoralization of the governed, and in not a few acts of injustice to individuals which had much better not be committed. It is felt that the powers entrusted to Speaker and Chairman by urgency ought to be used, and used they are accordingly. No one denies that obstruction is a great evil; the only question is whether urgency is not a greater. For the present, at any rate, it may be hoped that we have heard the last of it, though even before Easter difficulties may still arise. The Mutiny Bill has not infrequently been a devil's bowling-green in the Parliamentary sea; and the introduction of the Land Bill, unless the unexpected happens with singular unexpectedness, will be the signal for discussion which must necessarily be long and minute, and which may in all probability be acrimonious. Hitherto the restrictions which Sir Stafford Northcote succeeded in placing upon the granting and using of urgency have worked very well. Mr. Gladstone's hint, uttered with characteristic petulance on the first occasion when they worked against him, to the effect that they would have to be reconsidered, may have been nothing more than a passing ebullition of temper at the check. So long as these restrictions subsist, the Opposition are at least so far masters of the situation that they can resist any attempt to stifle discussion or to "rush" a Bill through any of its stages. In the case of renewal of actual disturbance and mere filibustering there is no doubt that the Government will receive the support to which it is entitled. But it is earnestly to be wished that in such a case the means which might have been tried, and which almost certainly would have been effectual a few weeks ago, may be preferred to future *coups d'état* of however mild a kind, and even to premature declarations of urgency. A walking match of divisions on undiscussed amendments is not a dignified spectacle, nor is it creditable to the reputation of the House as a place of free debate, where the vote is at least by courtesy supposed to follow the conscience and the judgment. It is not impossible that some private members may follow Mr. Dillwyn's example in drawing up for their own amusement and the edification of their colleagues fancy codes of projected measures for reducing the present gap between the ordinary and extraordinary conduct of business, and facilitating the former. Such codes are harmless; they are even useful in their way, but they cannot be said to be very practical. No alteration of importance in the conduct of business can proceed from any source but the Government of the day, and it would be a misfortune if any such alteration proceeded even from the Government of the day without the full concurrence of the responsible Opposition.

A FRENCHWOMAN'S REMINISCENCES OF SOME FAMOUS FRENCHMEN.

AMONG the various volumes of memoirs, correspondences, and reminiscences which just at present are following one another in such haste from the French press, the *Souvenirs de Madame Jaubert* certainly occupy a place in the front rank. Mme. Jaubert, who is still living, knew almost every one who was worth knowing thirty or forty years ago, and has here collected her reminiscences of Berryer, Musset, Lanfroy, and Heine. The book has its faults, the primary one being that it is not simple and straightforward enough. Mme. Jaubert gives lengthy reports of detailed conversations in which several persons took part. Thus we are introduced to a whole circle of more or less brilliant talkers at Berryer's château, and in the reminiscences of Musset the poet's figure is set against a background of less conspicuous personalities, all revolving round Mme. Jaubert in that lady's drawing-room. The reader never knows how far he is to take the conversations seriously. Obviously they cannot be taken as an authoritative report of what actually was said; and there is quite enough internal evidence to show that Mme. Jaubert's first preoccupation has been to make her puppets talk smartly and well, her second to give us the substance of what men like Berryer or Musset actually said. The company is not one of men and women who talk always sensibly and now and then brilliantly. The strain at smartness is unceasing and perpetual; there is no relief, no light and shade; and the want of simplicity and naturalness in the dialogue not only prevents the reader from being greatly amused, but inclines him to yawn. These ingenious persons are all, as represented by Mme. Jaubert, too clever by half; and, moreover, their conversation is now and then singularly unedifying. This last is a feature of the book which cannot well be illustrated by quotation, but which certainly is highly curious. Despite its interest, however, in this and other respects, it would hardly have excited the considerable interest it has in France if it had nothing to rely upon but reports published in 1881 of conversations held between 1840 and 1850. But substance is given to it by a number of letters from Berryer, Musset, Lanfroy, and others which have not hitherto been printed, and of which some are in a high degree interesting or characteristic. Moreover, the faults which make the three first sections of the book on the whole an unsatisfactory piece of reading do not apply to the reminiscences of Lanfroy and Heine. Here Mme. Jaubert's memory has not had to travel so far back as in the earlier part of the book; and the circumstances under which she knew the two men—Lanfroy, a recluse, and detesting intellectual gymnastics above all things, and Heine a paralytic—do not lend themselves to anything but a simple and straightforward record of her intercourse with both.

The account of Berryer so largely consists either of the unedifying reminiscences of which we have spoken, or of lengthy reports of impossible conversations, that there is not much left to quote. A noticeable point, however, is Berryer's almost physical repulsion towards Protestantism. He loved the pomp and ceremony of Catholicism, and used to say, "At the very idea of being in Protestant Geneva, with M. de Broglie on one hand and M. Guizot on the other, I suffer a physical oppression, I feel myself stifling." His views of the political feeling of his country are noticeable as uttered forty years ago. Prince Belgiojoso, a Milanese high in favour with Mme. Jaubert, had asked Berryer whether he thought the old aristocracy of France could possibly become again what it had been before the Revolution. Berryer said, "No, Prince, all is changed in France. At the time of my candidature, in traversing the South I have been able to convince myself how entirely that part of France, though remaining Royalist, had lost all trace of the aristocratic hierarchy. That is what Henry V. must understand, if he ever comes to his own again; otherwise he will only pass and disappear. Since all is changed in France, the form of government must change as well." Later on, when the Empire had been re-established in France, and seemed solidly planted there, Berryer's previous were not less sagacious:—"Poor France, dear country!" he used to say to his friend Ernest Picard; "I shall not live to see the end of the Empire; but you, my dear Picard, you are young, you will be present at the catastrophe, the degradation, the ruin, the shame. We are walking into it, running into it. What blindness! what blindness!" The only good story told in the chapter on Berryer has nothing to do with Berryer. It is Prince Belgiojoso's account of the way in which Rossini's *Tancred* was written:—"The opera was written in six days at my house near Milan, and that in the intervals of a hunting party. When we got back in the evenings, wearied out by ten hours' hunting in the forest, Rossini would take a seat at the corner of the table, in the interval before the dinner that was to recruit our energies was served, and cover some sheets of paper with notes. Then, with the dessert, installing himself at a piano placed there on purpose, 'Come, Emilio,' he said to me, 'and thou, too, Pompeo' (my cousin, endowed with a splendid bass voice), 'come, my children, let us try that!' And you should have seen us deciphering this close scribble, the master taking to himself all the parts as yet wanting. As to the choruses, we attacked them with the full force of our lungs, thinking thus to give ourselves an idea of the effect on the stage. Then Rossini would return to his corner to alter and add other sheets. The interest we took in the business kept us awake. Why, we thought at last that we were ourselves composing! Bed-time at last. At six in the morning, a blast from Pompeo's horn awoke us

all, and we set to our hunting again, without giving another thought till the evening to this famous *Tancred*, of which I have the original manuscript in my house at Milan." Berryer here took up the conversation, and told the following anecdote in reference to this same Pompeo:—"I was present one evening at a very droll dispute between Rossini and him. Pompeo had sung the first air of the *Barber* miraculously well, accompanied by the composer on the piano. At the finish the latter, delighted, rises from his seat and embraces the singer with the words, 'Admirable, my dearest Pompeo, thou hast understood me!' 'Understood!' cries the indignant amateur; 'I believe you! better than you understand yourself! You have made a masterpiece without suspecting it. All that there is in it of imagination, talent, truth, all that is inimitable, is a sealed book to you! I could teach you a thousand things about this composition, but I won't,' he concluded, with a dignified air, 'I keep it for myself.' 'Povero me!' said the composer, 'how he maltreats me!' And he laughed till the tears came."

In the pages on Alfred de Musset the chief feature of interest is constituted by some very curious and characteristic letters from Musset himself. In one of these he explains and apologizes for certain faults of manner with which his "marraine," as he used to call Mme. Jaubert, had reproached him. "Every one," he writes, "is agreed on the unpleasantness of my manner in a drawing-room. Not only do I agree with everybody, but this unpleasantness is more unpleasant to me than it can be to any one else. Whence comes it? From two main causes, pride and shyness. Such are the charming principles on which I have to base my sublimary existence. One does not change his nature; needs must then to make the best terms with it one can. I have been doing my best for some time past, that you must allow. . . . You tell me of people who would willingly express to me now and then the pleasure my writings have been able to give them. I pledge you my word that, of any ten compliments, nine are absolutely intolerable to me; I don't mean that they offend me, or that I find them false; they simply give me a consuming desire to take myself off. Explain that if you can. . . . There is a phrase in your letter which is very true, very just, and it is a melancholy one for me. 'You estrange men of head and heart who feel themselves moved to desire your friendship.' Yes, it is true; and do you suppose that I do not perceive it? that I do not regret it now and then?" The subject-matter of these letters is not always merely of a personal kind. Sometimes Musset asks his correspondent's opinion on a literary matter, generally on some point in his own poems. Thus he writes:—

What do you think of these three verses?

Lorsque ma bien aimée entr'ouvre sa paupière
Sombre comme la nuit, pur comme la lumière,
Sur l'émail de ses yeux brille un diamant noir.

I am anxious to know if that pleases you. I have written it with two good things, a little saying of yours and the remembrance of Pauline. I warn you that some people have found it bold, but it is certain that boldness is a fault?

The greater part of the correspondence is, however, taken up with the history of Musset's love affair with the Princess Belgiojoso. The Princess was glad to have Musset for a friend, but would hear nothing of love. The poet, however, would have a grand passion or nothing, and reviled the Princess to Mme. Jaubert as the most heartless of coquettes. This is one of his letters to his confidante, which is characteristic both of Musset's weakness of fibre and also of the queer humour of which he possessed so large a share:—

Godmother,—Your godson is done for!!! Do you know what this poor wretch has done? He has written a letter with his heart upon the page, no reserves, no embellishments, no wrappings up, no triflings, no nothing. And he has been hit over the head for it. He has received a reply—O godmother! a reply which should be printed in capitals. Yes, Madame, y—e—s, that reply might, and perhaps ought, to be committed to the press. The noble disdain in it falls to about 80 degrees (not centigrade) below zero; its perfect calm is 120 degrees below that point; the whole representing a 200 horse-power or thereabouts.

And now, can you imagine what this poor wretch first did on receiving this immortal reply? He (that is, I) began by weeping like a calf for a good half-hour. Yes, godmother, hot tears, such as I have shed in my best days, my head in my hands, my two elbows on my bed, my cravat under foot, and my knees on my best coat. There I sobbed like a child that its nurse is washing, and had besides the advantage of sufficing like a dog that is being sewn up (metaphor from the chase).

As you may imagine, after this I was in such a state of vexation that I could swim in it.

My room was a perfect ocean of bitterness, as people say, and I took headers in the water, one after another. Vli! Vlan! flau! pagu! &c.

After this exercise I became prodigiously angry. I can't tell you with what; but very angry I was, and that lasted two good hours. Thank heaven, I didn't break anything.

Then I began to feel somewhat tired, and I began to cry again, but only a little, by way of refreshment.

After that I ate four eggs. They were fried. And then (which means now) I felt tired again. I am quite worn out by all I have been through, which is why I am writing you all this trash.

You would die with laughing if you could see me: my hair like a forest; my left eye starting from my head, my right still unswelling and half-closed and very black, my nose as red as a carrot, and my face pulled out like an old mask that has got wet at a fair.

Ah, Jove! These are thy little games! The devil take them; for they are worse than games of hazard.

Sacre bleu, godmother, these little jokes are painful enough in their way.

Now, seriously, henceforth I shall abstain from all correspondence or connexion whatsoever with her most Serene Highness; I won't play any more, under any pretext whatever.

There are plenty of similar letters in the collection; but a sample is quite sufficient to illustrate Musset's strange and very faulty character. There can, however, be no question that, in dealing almost solely with his love affairs, Mme. Jaubert has presented the poet from an unfavourable point of view. As if by way of contrast, her next chapter of reminiscences is devoted to Pierre Lanfrey, the historian of the Empire, the first feature of whose character was uncompromising rectitude and an almost austere sense of personal dignity. He remained unmarried, though by no means unsusceptible to the attractions of feminine society, partly for the sake of his work and partly for the sake of his independence. He refused, though poor and even comparatively obscure at the time, the post of first leader-writer on the *Journal des Débats*, because the Orleanist leanings of the paper did not exactly square with his personal convictions. He conquered fame and an honourable position among men of letters simply by the rare qualities of his work, without any attempt to make himself popular or even particularly agreeable as a person, and he not only had every intention of winning this position, but knew he should do so. Yet there was nothing disagreeably self-assertive about the man. He would not be the tump cat of Mme. Jaubert's or any other Parisian drawing-room; but he was quite capable of a kindly and playful humour in his dealings with those whom he loved and trusted. Mme. Jaubert told him on one occasion that, so far from calling him "rosebud," as a pretty Englishwoman with whom they were both acquainted had done, in reference to the extreme youthfulness and ruddiness of his personal appearance, she would call him by the far apter name of Ferocino. Lanfrey accepted the implied rebuke, promised that he would suppress his satirical vein in conversation in future, and ever afterwards in writing to her signed himself Ferocino. The jest pleased him, and on one occasion he left a little bronze Japanese tiger cat, which he had expressly purchased, at Mme. Jaubert's door by way of a *carte de visite*. Of the many interesting passages in her reminiscences of this most notable man, perhaps the best is the account of their long railway journey together from Paris to Switzerland, in company with Mme. Jaubert's niece. Lanfrey became effusive and confidential in the small hours of the morning, and told his friend a good deal that he had never told any one else about his early life. He was expelled from the Jesuit College at Chambéry, where he received his education, at the age of fifteen, for the following reason. Lanfrey had already developed a strong taste for history, and made an audacious Jesuit pamphlet, which he had found in the college library, the basis for an historical essay in refutation of all its assertions. He was watched and suspected, and ordered to appear before the Father Superior:—

Then began a singular contest between a boy just fifteen and a chief who united to the authority of his position all that the Jesuitical quinquennium of a trained intellect could summon to its aid to overcome the pupil's strength of resistance. When the competitive examinations came round, the college used to be very proud of my numerous nominations. This time was drawing near, and the Superior did his best therefore to draw a confession of crime from me along with sufficient expression of contrition to justify indulgence. Irritated by my obstinacy, he tried threats. I should be sent back to my mother. Ah, that was a tender point. I knew all the sacrifices that this would involve. To keep myself from giving in, I kept repeating to myself that, Roman matron as she was, my mother would approve of my conduct. Once more persuasive mildness replaced threats. "My child, you must think of the future. Your brilliant studies would be continued here." . . . Then suddenly the chief's anger burst out at the continued obstinacy of the pupil. Calling to one of the minor brothers, he ordered him to fetch a couple of the college servants, and turning to me he said, "You have concealed about you, placed on your chest, the wicked document I demand. If you don't give it up at once, I shall have it taken from you by force. Now choose!"

I could not come out conqueror from such a struggle; a contest on such terms was too ignominious. "I yield to brute force," said I, giving the manuscript. . . . What has become of it, I wonder? Some day it may turn up perhaps.

Such was the boy who was to become the most uncompromising of historians, and such he remained through life. Of the history itself Mme. Jaubert does not tell us much that is new. Very interesting, however, is Lanfrey's account, given to her, of a too brief conversation with Thiers. Mme. Jaubert asked Lanfrey one day, jokingly:—

"Have you really forgiven him your terrible dissection of his work on the Empire? Thiers, I am sure, owes you no grudge for it. The incapacity for rancour is one of his most precious qualities as a statesman. But I should like to know whether, when you are together, the historian never makes his appearance?" "Your question, my dear friend," replied Lanfrey, "is singularly *à propos*. Three weeks ago I happened to be next him at the dinner table. All at once he leant over to me, and for the first and only time he said: 'Ah, mon cher! if I had only known you when I wrote my History of Napoleon.' He continued speaking, but I could not distinguish the words. 'Of Napoleon,' said I, to induce him to repeat what he had been saying. I saw the lips move, but not a sound passed them. Painfully moved by this melancholy symptom of the approaching end, I pretended to have heard. Divining from his expressive pantomime that he was trying to say something which would have the effect of surprising me, I articulated a 'C'est fort curieux!' proposing to myself to resume the subject another day. Another day! but his hours were numbered; once more only he came to my house, and that was the last time."

THE BURDEN OF FURNITURE.

THE heavy and the weary weight of modern furniture is beginning to be something more than a minor misery. Twenty years ago, when people took a house, the man left the furnishing to the woman, much as rustic and savage persons leave the cares

of agriculture and of work in general to the other sex. The lady had what she considered a good time, she passed many hours in shops, she bought just what she liked. She never dreamed of going to a series of lectures on tables, chairs, and "horres" for towels. She was not made unhappy by the difficulty of reconciling usefulness and art in an umbrella-stand. She never read books on furniture, like one by Mr. Edis (*Decoration and Furniture of Town Houses*. Kegan Paul and Co.) which we have been studying with feelings of extreme depression. A lady got what she liked, and what her neighbours had. Her only doubt about a coal-scuttle was whether it should be adorned with a coloured copy of one of Landseer's big dogs, or with an equally brilliant study of a pretty girl with a pink parasol. Her dining-room carpet was "roses, roses all the way," like the triumphant career of Mr. Browning's patriot, before he came to grief at the next general election. Her drawing-room carpet was adorned with lilies of the valley on a green ground. The curtains were green, too, and hung from a very thick gilt beam, not unlike a large model of a Roman battering-ram. Her chimney-pieces were of plain black or white marble, and on these she arranged vases of pink and white glass, the gifts of her excellent friends. In the middle of the drawing-room was a large round rosewood table, on which illustrated Christmas books were arranged in a circle. Most of the drawing-room chairs were tiny gilt ones, on which large men invariably sat down, with ruinous results. The mirrors were big enough to have practised figure-skating upon if they could have been laid down on the floor. The walls were usually papered either with a velvety kind of "flock" paper or with a light lavender tissue, on which roses and blue dahlias were repeated regardless of expense. The fenders were made of shining steel contorted into patterns. When these arrangements had been rapidly completed people settled down among their effects and thought no more about the matter. Men never gave the subject a thought from first to last.

Since those early days we have survived several revolutions in furniture. First the Gothic business came in. Our tables were to be of oak, with little things like small church windows in the legs. Our chairs were like those of the end of the twelfth century. Everything was "pointed" to the last degree. We were instructed to have our crests and bearings emblazoned and embroidered on our curtains. Small houses were made as far as possible to resemble baronial halls about the date of *Front de lauf*. Coal-scuttles were huge oak chests with brazen joints and fittings. Whatever was not oak was brass, *robur et æs triplex*, in the domestic furniture of an advanced person, say fifteen years ago. Then came that great and sacred movement, the Renaissance of Queen Anne. Probably Mr. Thackeray and *Diamond* were the great unconscious causes of this revival. It was natural that a writer who knew the Augustan age by heart should admire its architecture, furniture, and plate. But people less well acquainted with the nymphs Kneller drew, and the books Bentley read, went in for Queen Anne. They produced such a mixture of dates and styles, as Mr. Thackeray described in the account of Buttons's Coffee-house, in *George de Barnwell*. "Queen Anne" was a general term for any furniture remotely resembling what was produced between the death of King William and the accession of the Regent. The influence of Mr. Morris then made itself felt, an influence which combines much beauty and careful workmanship, with a suspicion of melancholy and mildew. This was exaggerated by "the Passionate Intense," if we may coin a double term on the model of "the Fair Impertinent." Then the cheap upholsterers rushed into the field, and flooded the market with flimsy things in black wood and sham Japanese drawing, which they styled "Queen Anne," or "High Art," or "Early English" furniture, at random. People now buy a brass coal scuttle, and an ebonyed what-not, and think themselves authorities on the decorative arts. The whole affair is over-done, and too much talked about. There is nothing natural or spontaneous in taste. Mr. Du Maurier, aided by some heavy moralists, and some imbecile fribbles, male and female, has made household furniture almost the leading question in modern ethics. If a man or woman prefers to be surrounded by walls and floors that are not glaring in colour, or shares Charles Lamb's liking for china, or for prints, or for old books, he or she is apt to be spoken of as an "æsthete," and reviled as a kind of stealthily corrupt person. On the other hand, people who are either destitute of taste, or who conceal their possession of that quality, give themselves insufferable airs of moral robustness. They are always feeling their moral biceps, and thanking heaven that they are not as other men, even as these æsthetic characters.

The great thing in these purely domestic and personal matters surely is that people should leave each other alone. At present a sensible person who has arranged his house as he likes to have it is subjected to a double annoyance. He is claimed as an ally by the die-away dowdies of the mouldy school, or by the gaudy frumps who boast of their own indifference to taste. It seems a most absurd and puerile thing that people should go to books and lecturers to learn how to buy chairs and tables, curtains, and wall-papers. There can be no natural taste while these topics are debated with the ardour of religious controversy. Buy what you like, what you can afford, what will last, as good workmanship should do, and what you can easily carry away with you when you change your house, is the only advice that is worth offering. Mr. Edis says that a great many people do not know what they like. This is because they have been so disturbed and worried by the exaggerated earnestness of artistic affectation on one side,

and of pharisaical morality on the other. The consequence of this want of naturalness and certainty of taste is a demand for "Cantor Lectures" on furnishing, which Mr. Edis has delivered, and of books on decoration and furniture, like that in which he has embodied his lectures. His book may do some people good—the rich ignorant people who put themselves in the hands of an expensive fashionable upholsterer. The tradesman is sure to fill their houses with all the newest rubbish in the way of sham Japanese work and sham antiquities. But perhaps his victims are beyond hope, even from books. They generally belong to the large class which is incapable of reading at all; and, as they like to be deceived, deceived let them be. They are the born prey of upholsterers.

Mr. Edis adopts a tone of moderation in his book, and is righteously severe on all the sham black-and-gold and flimsy tawdry painting of the shops. He tries to show how furniture may be both pretty and cheap, and often recommends simple deal. Unluckily that wood is too often unseasoned, and splits after it has been a week in a house. The designs of furniture and decoration in Mr. Edis's book too often threaten his readers with the nervous affliction known to Americans as "the jumps." "A Drawing-Room Corner," which forms the frontispiece, seems to us "a dread and grimly thing," as the poets say. Beginning at the top, you have a cornice which is inoffensive. A large space is then occupied by a painted frieze. On the right hand is a low wall, with a peacock sitting thereon, and a number of tall plants sprawling around. A big, buxom lass, with bare arms, is watering the plants, and looking round towards the door, where a swain is perhaps about to enter. On the left-hand corner of the frieze we make out a lady, apparently of Japanese origin, a garden, two common tubs of the well-known saucer shape, and a pitcher. Beneath the frieze the wall is papered "with fruits and flowers, and other winged things," if we may quote a poet now rarely read. Many pictures are hung on the wall. There is also a kind of *armoire*, full of porcelain, and the panels are decorated with pictures of young ladies' faces. Beneath are some very big books, "Liddell and Scott," and atlases, we should say at a guess. There is a mirror, very deeply framed in decorative brass-work; there is a sconce with candles, a table with books and flowers, and a few chairs. Mr. Edis himself is the designer. Now, as a matter of taste, we cannot pretend to like this drawing-room corner. The young ladies, and flowers, and pitchers, and tubs, and the peacock, and garden-wall would continually fret and distract us. The other young women on the panels seem no less pertinacious and annoying. But this is purely a question of taste, and we do not see how morality comes into it. Let a moralist of the press come into the room, and his desire would be to break all the porcelain. But it seems very nice porcelain, and can be moved when the owners change their house. We do not know whether the painting is a fixture, but we hope so, because the next tenants will certainly paper it over when they come into the house.

Mr. Edis has a picture of a dining-room which is not more congenial to us. The tenant has found the abomination of desolation—namely, "an ordinary mantelpiece" in the room. This shows us "how a common mantelpiece may be treated" or converted. You run a light rod beneath the shelf on which you hang curtains to hide its ordinary sides. You crowd the shelf with china (what will the moral critic say?), and add three other shelves also rich in porcelain. Above the shelves is another frieze. "After fashioning this, never another may he fashion, whoso stored in his craft this device," as Homer says about the belt of Hercules. Four mediæval characters, headed by a rather bald man, are being welcomed by a mediæval host, reinforced by an elderly lady, a child, a greyhound, and so forth. The word "Welcome" is blazoned in the middle, and a text from Shakespeare is printed on the wall. In the arrangements of the study mantelpiece Mr. Edis redeems his character in the eyes of the moral censor. Here there is comparatively little blue china. Two old corselets are propped on the top of little cupboards. In one cupboard stand two "double-shot scatter guns," in the other are a sabre, a bill (we think) and something not unlike an assegai. In these rough times the householder needs this shining store. There is an alarm of burglars; he steals into his study, braces on his corselet, takes his two loaded guns, a sabre, and an assegai, and boldly confronts the furtive intruders. For less capital occasions, a range of sticks and whips is visible beneath a row of plates. The pipe of peace is kept in a small cupboard above the shelf of the mantelpiece.

It will be seen that Mr. Edis is not the advocate of a life devoted to constant worship of porcelain alone. If people want advice about furniture, his is generally sound and simple, and he always insists on the necessity of honest workmanship. His affection for painted mural decorations is one with which we cannot sympathize, but his book will interest, and possibly instruct, readers who do not know what they like in matters of household taste. Mr. Edis thinks they are the majority of mankind.

SOCIALIST JOURNALISM.

FROM the horrible, like the sublime, to the ridiculous is but a step, and were it not for the stern reality of the attendant circumstances, the manifesto just issued by the Socialists in London on the occasion of the assassination of the Czar would

be almost amusing. The document in question appears in a German paper, entitled *Freiheit*, which is the organ of the extreme Socialist party, which is published in London every Friday, and which is now in its third year of existence. The number to which we refer is ornamented with a bright red border in honour of the dastardly deed which is extolled in the pages of *Freiheit* in the coarsest and most brutal strains. The leading article is entitled "Endlich," and is headed by a quotation in verse:—

Though thou seize on this or that one,
One of them at length will reach thee—

It begins with exclamations of triumph that the words of the poet have been fulfilled, and the Emperor of Russia, "one of the most horrible tyrants in Europe, whose destruction had long been sworn, is *no more*." The italics are in the original. It was, says the *Freiheit*, "as the monster was returning from one of the usual amusements which the blind hordes of blood and iron slaves provide for him, and which are called 'military parades'—that the death-doom long pronounced reached him and did for him." "Five times," it goes on to say, "had it been granted to this Canaille to touch the boundary line between Here and Yonder, and to prate about the finger of God having saved his accursed life, when the hand of the people stopped his mouth for ever!" Throughout the document the Imperial victim is always the "tyrant," the "monster," the "canaille," and the like, while the assassin is "one of those dauntless young men whom the social revolutionary movement in Russia has brought to the front"; the ghastly details of the injuries inflicted on the Czar are gloated over with savage sarcasm, and even the death and wounds spread amongst the harmless bystanders are made the subject of congratulation. But the chief source of joy to the amiable writers is the "manifold and drastic" effect of the news upon the princes and ruling classes throughout the world, "those guilt-laden ones who have long a thousand times merited a like fate." The German Emperor—we omit the qualifying epithets which are not only unpleasant but monotonous—"was thrown into convulsions through excitement; similar things took place at other Courts, and howling and gnashing of teeth reigned in every capital." Then comes the moral of the event. "The ruling classes see in the recent annihilation of a tyrant *more* than the mere act; they stand face to face with a significant attack on authority *as such*." This frank avowal is almost refreshing; it reduces the principles of the party to a simple and intelligible form, and appeals to the members nearly in the words which a well-known writer of burlesque puts into the mouth of one of his revolutionary heroes:—

But we must post things!

Vive la Republique! ha, ha! down with most things.

All who are guilty of the unpardonable crime of respectability and order are doomed, and "long-forfeited heads tremble from Constantinople to Washington." Society, at any rate, need be in no doubt about the real nature of the Socialist programme. The remainder of the article is conceived in a similar spirit; it laments that regicide is so seldom practised, "For if at least one crowned scamp were destroyed per month, there would be less desire to play at monarchy." The suggestion is a somewhat unsportsmanlike wish, as the game would become too scarce if killed in this wholesale way, and where would then be the opportunity of the "dauntless young men" who throw bombshells? Great Titchfield Street should really consider the advisableness of a "close time" for tyrants. The whole concludes with the prayer that "the dauntless deed, which—we repeat it—has our full sympathy, may animate the revolution far and wide with fresh courage."

The next article in this pleasant little paper glorifies the Paris Commune, the outbreak of which is to be held, it appears, as a Socialist holy day by the workmen of all countries. But what is most to be admired is the business-like manner and magisterial impartiality with which the powers whose seat is in Great Titchfield Street dispose of the fate of the world. The case of each country is taken in turn, and of course the wrongs of Ireland are not forgotten; after devoting a column to this subject and to the distribution of lands in the country amongst the aristocracy by various monarchs, the *Freiheit* thus pronounces sentence:—"We declare that private proprietorship in land shall never be recognized; least of all, that proprietorship which has been only won through royal plundering and royal favouritism." This is good news for the Land League. The Thunderer of Great Titchfield Street has pronounced the doom of "landlordism," and we shall look forward with interest to future articles in *Freiheit* upon some of those "dauntless young men whom the social revolutionary movement" in Ireland has brought to the front, and who fearlessly fire into bedrooms where babies of the tyrant class are sleeping. It is true that England and its Queen are not openly or specially attacked in this number; nor is the reader counselled to introduce bomb-practice in London or Windsor for the present. Possibly the contempt of the *redaction* for "authority as such" is modified by the knowledge that there is a policeman to be found upon the beat outside the office door: and that a too ardent patriot is here less likely to earn the crown of political martyrdom than to be bound over to keep the peace and be locked up in default. The recent mean and clumsy attempt upon the Mansion House is, however, noticed; and there is evidently a feeling of regretful sadness that the particular "executor of the people's justice" concerned, to quote the *Freiheit's* favourite phrase, cannot be claimed as a comrade. There is, certainly, a show of mysterious wisdom in speaking of the powder-box as

being placed upon the spot where it was found by an "unknown hand" in quotation marks; but the fact that the writer is obliged to confess that he could suggest no motive for the stupid outrage, and hints at the "international police" being at the bottom of it, seems to show that it has no connexion with the Socialist movement. It is significant, however, that the incident is chosen as the only piece of news concerning England worthy of insertion in the paper. It was "a significant attack upon authority as such," a piece of "pure cussedness," in fact, which recommends itself strongly to the apostles of the revolution. It is enough that there should be a person of position, and that an unknown should, so to speak, "heave half a brick at him," to earn the "fullest sympathy" of Great Titchfield Street. All police are "international" with the *Freiheit's* writers; they are all unworthy minions of the same tyrant band who dare to assert that folks have a right to the enjoyment of their own lives and property. The news from America is more apposite, and a greater cause for rejoicing. There a great and glorious assembly of the champions of freedom was held; a classical or historical scholar had even been found to supply them with an appropriate motto, "Sic semper tyrannis," and "after the Russian General Klemenko had expressed his joy at the successful deed, General Hasselman took up the debate and said, 'Alexander is not the only bloodhound in Europe. The Emperor William is not one whit better, and the whole family deserves to be rooted out.'" After this amiable sentiment the meeting telegraphed to the Russian Committee the following encouraging message:—"Brothers, we approve your good example. Kill, destroy, make *tabula rasa* [classical again], till all your enemies are annihilated!" We are not told if the message reached the Committee in Russia without any official hindrance.

Coarse and ignorant bombast is like a bad engraving; so long as it offends only against good taste it may be let alone; but when either offends against common decency and the first principles of morality, the case is altered, and the interference of the law becomes a duty. The liberty of the press is one of our most cherished privileges, and Englishmen can point with pride to the fact that English journalism, unfettered as it is, has been ever on the side of true freedom and progress. The very responsibility which liberty of action confers has always proved a safeguard against license, and it may be laid down as an axiom that no popular outbreak or disturbance of society has ever been traced, in this country at least, to the freedom with which opinions are allowed to be expressed. When, however, alien agitators in our midst openly assail the very groundwork of society, and preach murder and sedition, it becomes a question, not of curtailing these privileges, but of considering the advisableness of applying existing remedies against immorality and crime. What must strike every one in reading such literature as this journal which assumes the name of "Freedom" is the obstinate stand which it makes against freedom itself. The very basis of society is the fact that it is an organization for ensuring the exercise of freedom by its members, limiting that exercise only where individual liberty of action would act prejudicially to the interests of the rest. The Socialist, at least as he allows himself to be represented in such publications, by endeavouring to uproot society is aiming the deadliest blow at personal liberty. England, in providing an asylum to refugees of all sects and opinions, acknowledges the existence of possible political grievances, and offers unlimited freedom to those who either cannot, or believe that they cannot, obtain it in their own country. It is scarcely fair to repay this hospitality by so gross an abuse of it as that contained in the Socialist organ to which we have called attention; but we will not do the many strangers who have sought and found a home amongst us the wrong of believing that the base, criminal, and bloodthirsty sentiments which unscrupulous agitators utter in their name represent the opinions even of social democrats. Jealous as the country naturally is of the privilege of asylum to political offenders, it has never been proposed to extend the privilege to mere vulgar criminals, who commit outrages against the common law; and it may be as well to remind the writers of this miserable but pernicious sheet that incitement to murder is a criminal offence even in this country. The unrestrained publication of the *Freiheit* is a disgrace to the community and an insult to our neighbours; it probably owes its continued existence hitherto to its obscurity, like some forgotten fever-breeding sewer; but, in the interests of moral sanitation, we have felt it our duty to call attention to the nuisance.

THE CLOSING OF SURREY CHAPEL.

WE may hardly perhaps be disposed to endorse the somewhat enthusiastic declaration of the Chairman of the last public gathering assembled in Surrey Chapel, on Monday evening, that "this is one of the most hallowed and sacred spots in South London." But the series of valedictory services and meetings which have been held during the last fortnight to celebrate what is almost the centenary, as well as the closing, of the Chapel—for it was opened in June 1783—do not lack a plausible justification. What Westminster Abbey is to the National Church, and Moorfields Chapel—the scene of Lord George Gordon's incendiary zeal and afterwards Cardinal Wiseman's pro-Cathedral—the Roman Communion in England, Surrey Chapel is to the Nonconformists. It is certainly not the oldest Dissent-

ing place of worship extant but it is the one which has the best claim to be considered historical. And curiously enough it is not altogether Nonconformist either, for its ministers and congregations would have claimed, we believe—it is necessary now to use the past tense—to be Dissenting members of the Church of England. From first to last the English Prayer-book, with certain adaptations, was used there, and, if we are not mistaken, the surplice was worn by those who conducted its services. Rowland Hill the founder was himself in deacon's orders, and among those who occasionally assisted him in his ministrations were not only eminent Dissenting preachers like Parsons and Jay but two of the personages chronicled by Sir James Stephen as "the four great Evangelical Fathers of the Church of England," Thomas Scott, and Henry Venn, who were like himself, disciples of Whitfield. Surrey Chapel indeed was never attached to any particular denomination, but was a kind of neutral ground where in former days moderate Dissenters and Evangelical Churchmen were supposed to be able to meet for mutual edification. For many years past it has been chiefly associated with the name of Mr. Newman Hall, but he and his followers in fact left it five years ago, to migrate to the more pretentious fane of "Christ Church" in the Westminster Bridge Road, which they still occupy. Since then it has been in the hands of the Primitive Methodists, but has now at the expiry of the long lease reverted to the freeholders, and will most likely be pulled down. But its interest is mainly an historical one, from its connexion with Rowland Hill and the religious movement a peculiar phase of which he represented. And in order to perpetuate this historical memory the edifice attached to the new "Christ Church" is named Hawkstone Hall from the ancestral mansion near Shrewsbury, where Rowland Hill was born. There are probably few even now who have not heard of the great preacher, though to most men of the present generation the name of Rowland Hill would more naturally suggest the founder of the penny post. Fifty years ago, or less, there were few who had not heard him, for he only died in 1833, and he went on preaching till within a fortnight of his death.

Rowland Hill was born in 1744, when the Wesleyan movement was already making itself felt as a power in the country, and the Evangelical revival, which followed in its wake, and claims Whitfield rather than Wesley as its patriarch, was as yet in its first youth. He was of good family, and was educated at Eton and Oxford, and two of his brothers held preferment in the Church. Of the two others the eldest represented his county in parliament, while Sir Richard Hill distinguished himself in the army and won the rank of General. Rowland from an early age, manifested signs of the religious enthusiasm which was then in the air, and he began to preach at Cambridge and in Dissenting Chapels in London while still a very young man. He was in fact, together with some of his chosen associates, sent away from Oxford on account of his "Methodism"—a charge as serious in those days as "Puseyism" at a later date—and is said to have applied several times for ordination before his request was granted, nor does he appear ever to have received priest's orders. But so great was his reputation as a preacher that, on Whitfield's death in 1770, there was a very general wish that Rowland Hill should take his place. The plan seems to have fallen through owing to the opposition of his family to his occupying so prominent a position in a sect that was everywhere spoken against. He continued however to make preaching tours in various parts of England till in 1782 the first stone was laid of Surrey Chapel, which was opened for service in June of the following year. Of this chapel he held the incumbency for fifty years, but this did not prevent his still devoting the summers to his missionary peregrinations throughout England and Wales, and even sometimes Scotland and Ireland, nor was he ever without an admiring and zealous audience. It is said of Whitfield that he had cultivated the histrionic art to a perfection which has rarely been obtained even by professional actors, and Foote and Garrick, who used frequently to hear him, observed that "his oratory was not at its height till he had repeated a discourse forty times." This may help to explain the remarkable contrast between the marvellous effect produced by the delivery of his sermons, and the dulness to an ordinary reader of the seventy-five discourses of his still extant, which a sympathetic critic has compared to "a sermon by one of the preachers distinguished as Evangelical, with a little added to its length and a good deal subtracted from its point." Yet he could boast, after his famous trial of strength with the Merry-Andrew at Moortfields, of "350 awakened souls received in one day, and I believe the number of notes [from other persons 'brought under concern'] exceeded a thousand." He was indeed quite ready to meet the Merry-Andrew on his own ground, for a natural propensity to mirth enabled him to adapt the comic as well as the tragic muse to devotional, or at least, predicatorial, purposes, as when, on seeing Shuter, the comedian, during the run of his popular performance of "Kamblé" among his hearers, he exclaimed, "And thou, poor Kamblé, who hast so long rambled from Hill, come thou also. Oh, end thy ramblings, and come to Christ."

We have dwelt on Whitfield's comic vein because Rowland Hill certainly emulated in this respect the methods as well as the teaching of his master. His quaint and abrupt sallies of wit undoubtedly added much to the popularity, if not to the dignity, of his preaching, as when he dropped a heavy Bible from the pulpit on the head of his stertorous clerk in the desk below, with the awakening admonition, "If you won't

hear the Word of God, you shall feel it." On another occasion he looked at his congregation through a large hole in his pocket handkerchief, observing, "There's a nice housewife for you," and pointing to his wife who sat in her pew below. It has been said of him by a French critic that his innumerable homilies had the piquancy "of a pamphlet, a proverb, and almost of a caricature." This critic adds the somewhat perplexing comment that, "as regards what is called 'the dignity of the pulpit,' one understands that in the country of the Shakspearian tragedy this expression has little force," especially in "a sect which shuns the pomps of the Anglican Church." In our own day the City Temple has a name for jocosity quite as broad as Rowland Hill's, but not, if report speaks true, so uniformly subordinated to the ends of Evangelical edification. In later years his style was graver, as is not wonderful, when we recollect that he went on preaching regularly till his death in his eighty-ninth year. As he always preached extempore very few of his discourses were published. His chief work, the *Village Dialogues*, ran through six editions the last of which appeared in 1809. None of the other writings he left behind him can be said to possess any permanent value. One of them, in which all kinds of theatrical amusements, balls, concerts, soirées, horse-races, and the like, are vehemently denounced as incompatible with the spirit of Christianity, passed rapidly through three editions. In another he criticizes with some asperity the various religious bodies in Scotland, which evidently looked with no favour on his vagrant apostolate in that country. The General Assembly indeed went so far as to issue a *Pastoral Admonition* against him, which proves that the influence he acquired there must have been considerable. English readers would be more interested in a brochure which touches on what is still a burning question in the Established Church, the sale of livings. It is entitled *Spiritual Characteristics, represented in an Account of a most Curious Sale of Cures*, and was published anonymously on occasion of an Act of Parliament requiring beneficed clergymen to reside. It is full of anecdote, pleasantry, and sarcasm, and is described by a perhaps too partial biographer as combining the vigour of Cobbett with the humour of Swift, the logic of Bentham, and the eloquence of Fox. It may at least serve to explain why he made for himself so purely independent a position, and was so little in sympathy with the authorities and actual working of the Church of his own day. Yet his relations can hardly have been very intimate with his Dissenting brethren in the ministry, who would look with suspicion on his modified Anglicanism and his aristocratic connexions. When he was buried under the pulpit of his own Chapel, his nephew Lord Hill, then Commander in Chief, was the chief mourner.

It is sometimes asked whether, in this age of universal education and a cheap press, the pulpit still retains the power it formerly possessed. The fundamental distinction between a hearing and a reading age, due to the invention of printing, must of course at once be allowed to affect materially the exclusive force of oratory, whether secular or sacred, as an engine of popular influence. No political party in these days would "set on the orators" against a powerful rival, as did the opponents of Alcibiades. Nor would a modern usurper, like Richard III., consider the sermon of a favourite preacher at Paul's Cross the most effective means of impressing his claims on the general public, or a modern sovereign care, like Elizabeth, to "tune the pulpits"; they would prefer to "hire the press." In the graphic account Thucydides has left us of the arrival at Athens of the news of the seizure of Elateia the centre of interest is the market place, and the fatal tidings of the destruction of the Athenian army in Sicily was first promulgated in a barber's shop, but the Chelsea pensioners in the picture are reading the news of the battle of Waterloo in the Gazette. The early Fathers and the leading Reformers—for the press was then still in its infancy—were great preachers as well as theologians, but religious convictions are propagated now by other means than the pulpit. And it must further be admitted that the mere spread of knowledge and opening out of new lines of thought has of itself limited the unique supremacy once exercised over men's minds by religious ideas: the scientific lecturer and Parliamentary speaker dispute the monopoly once enjoyed by the preacher. But, after making full allowance for these obvious and inevitable changes, it may fairly be questioned if the influence of the pulpit within its own sphere, when the right man can be found to wield it, is at all less than it was a century ago. There is indeed one notable difference, for whereas at that period the Anglican clergy were commonly reproached, not wholly without cause, with being "dumb dogs that could not bark," and the pious Philistine, who "went where he could get most good," as the phrase ran, was pretty sure to go to Zion or Ebenezer, now it is just the reverse. Angel James, Robert Hall, Rowland Hill, and Edward Irving have passed away, and have left no successors. If we look back over the last fifty years the names that most readily occur to us are such as Melville, Simeon, Newman, Robertson, Liddon, names of different calibre and recalling very different schools of thought, but all belonging to preachers of unquestioned power who have delivered their message from the pulpits of the English Church. Wherever, and in so far as, our modern pulpits have really lost their charm, it is not, we suspect, because men refuse to hear the voice of the charmer, but *carent quia vate sacro*. Preachers like Robert Hall were listened to for this reason above all that they believed firmly in their own mission. They spoke, not because they had to say something, but

because they had something to say, and were resolved to leave their hearers, whether friendly or unfriendly, no excuse for mistaking what it was. *Possunt quia posse videntur* is in other things besides a boat-race the true secret of success.

GUARDIANS OF THE POOR.

TO-DAY the nomination of candidates for the unpleasant but important post of Poor Law Guardians will be completed, and in about a fortnight the votes will be collected. As a class the London Guardians have greatly improved. There is still much to be amended in the administration of some Unions, but the gross scandals which were formerly common have been abated, and an approach has been made to a uniform treatment of the London paupers. There are two opposite temptations to which Guardians of the Poor are necessarily open. They have to stand between the pauper and the ratepayer, and it is not always an easy matter to apportion their respective claims. The advocates of the two extreme views are largely responsible for one another's excesses. The brutality which has sometimes been shown to the inmates of workhouses and to the recipients of out-door relief has naturally excited the indignation of philanthropists; while the disregard to all considerations savouring of economy which has occasionally marked the reaction against undue parsimony has been extremely irritating to the large class to whom the amount of the rates is a serious matter. There is really no antagonism whatever between economy and good administration, but nowhere is it more difficult to get this fact recognized than in the relief of the poor. Charitable people do not always remember that the Guardians are not dealing with their own money, and needy ratepayers sometimes forget that relief which is neither adequate nor appropriate may be more costly in the end than a larger outlay undertaken with more judgment, and a larger view of consequences. Nothing is gained by denying that the motives which lead men to become Guardians of the Poor have sometimes very little to do either with the poor themselves or with the ratepayers at whose cost they are relieved. A candidate comes forward with many protestations of his desire to save money and of the identity of interest which unites him with the mass of the electors. The persons with whom his interests are really identified are the various contractors who hope to profit by his good word. More than three-quarters of a million was spent last year on the relief of the poor in London, and to those who have a strong belief that where so much money passes through the Guardians' hands some of it is sure to stick, there is something inspiring in the sound of such a total. Contractors are seldom ungrateful, and the tradesman who is chosen to supply a workhouse with the article in which he deals will certainly desire that the Guardian at whose instance his tender has been accepted shall be something the richer for his intervention. Any one who has had much to do with Committees which have to lay out money will remember how honestly convinced each member may be that his own friend is the man who can best be entrusted with whatever it is that has to be done, and it would be idle to look for any special delicacy on this head among Boards of Guardians. The skin is nearer than the shirt, and the friend whom he has seen has more claim upon a Guardian than the ratepayers whom he has merely canvassed. A Guardian whose conscience is not quite easy upon the question of favouritism is likely to be especially scrupulous upon other points. If he feels that the price paid for the workhouse supplies has been a little high, he will be all the more anxious that they shall be dispensed with strict frugality. Extravagance from which neither he nor his friends can derive any benefit is peculiarly distasteful to him.

The really extravagant type of Guardian is not often met with, though a larger outlay is constantly urged upon the authorities by amateur Guardians outside. The explanation of this is probably to be found in the peculiar character of a Guardian's work. That work is both uninviting and enlightening—uninviting because it deals almost entirely with the unattractive side of poverty; enlightening because it brings those who do it into contact with the poor as they are, and not as they wish to be thought by those who befriend them. Unfortunately the ratepayers are not always careful enough to distinguish between real and apparent economy. The man who is constantly in want of pence cannot easily be brought to believe that an expenditure of pounds may in the end be a saving of them. The truth of this is often seen in other branches of the public service, but in none perhaps is it so conspicuous as in the administration of poor relief. The two great heads to which it applies are education and sickness, because the judicious outlay of money in those two directions greatly helps to lessen the number of permanent paupers. In every Union in the kingdom there is a certain percentage of orphan or deserted children who are really dependent on the Guardians for their chance of making a livelihood for themselves. According as they are well or ill taught, and as care is or is not taken in putting them out into life, will be the probability that they will do well or ill when the start has once been made. Their training in the workhouse school will determine the degree in which they escape the taint of pauperism when they leave it, and the degree in which they escape it will in its turn determine whether they do decently well for themselves or come

back as adults to the workhouse which they left as children. Yet upon nothing has there been more difficulty in inducing Boards of Guardians to spend money than upon the education of the children who have only the Guardians to look to. The dislike of the poor ratepayers to paying for giving a workhouse child advantages which they can barely secure for their own children is at the bottom of this. It is, after all, a natural feeling—a mere application to a particular case of the maxim that charity begins at home. Only by very slow degrees is it possible to convince those who thus reason that, if they want to escape future outlay, they had better consent to present outlay. The child of the poor ratepayer will suffer for want of proper schooling, but he will not suffer so much as the child who has been brought up in a workhouse. To the latter pauperism is the natural and accepted order of things; “the house” is his only notion of home. Consequently, unless education has given him a better ambition, it is to “the house” that he returns as a matter of course whenever he is in difficulties. There is scarcely any expenditure which would not be cheap to incur in order to break this pauperizing habit. The case of the sick is closely parallel to the case of the children. The one thing that true economy demands is that they should be got rid of as speedily as may be, and with the least possible chance of their having to return to the workhouse infirmary. This is a harsh-sounding but perfectly true way of describing the process of complete cure. As neither law nor public opinion will allow of sick paupers being killed off, they can only be got rid of by making them well. Great advances have been made of late years towards the recognition of this truth; but it is so easy for a workhouse infirmary to fall back into its old unsatisfactory state, that constant care needs to be taken in the choice of the Guardians with whom it practically rests to say whether it shall be suited or unsuited to the purpose it has to fulfil.

It is impossible, of course, when dealing with so large an area as London to offer any specific suggestions as to the candidates who best deserve to be supported. But there is one piece of advice which may safely be given, and which, if it were generally followed, would exert a most beneficial influence on the composition of Boards of Guardians. It is simply to take some pains to distinguish between the candidates between whom the ratepayer has to make his choice, and then to vote for the candidates picked out. The great enemy to good local administration of all kinds is indifference. When a Board of Guardians is bad, the cause, nine times out of ten, is that no one has taken the trouble to make it better. The right men will not come forward as candidates because they feel no certainty that they will be supported even by the ratepayers who languidly wish for reforms, and when the list of candidates appears, the same ratepayers complain that there is no one in it whose name they know, and so it is not worth while to vote. It never occurs to them that among these unknown candidates there are at the worst some who are better than the rest, and that by taking some trouble to make inquiries it would be perfectly possible to discriminate between them. It is hard to say how much improvement might not be effected in local administration if the ratepayers would make a point of voting at every election. Their natural dislike to support men of whose policy they know nothing would soon cure their ignorance. It would matter little for whom they voted on the first or second occasion. As the habit became confirmed they would exercise their franchise more intelligently, and from taking a part in the voting to taking a part in the selection of candidates would be but a short and inevitable step.

THE LAMOUREUX CONCERTS.

M. CHARLES LAMOUREUX, the late conductor of the Grand Opera at Paris, has given two orchestral concerts at St. James's Hall which have been the cause of no little excitement in musical circles. It was understood that the conductor's aim was to introduce to the English public the works of French composers as yet unknown or but little known in England. We were told that we were as yet ignorant of the French school of music in the higher branches of the art, and that heretofore we had only heard the less artistic, though vastly pleasing, light music of Opéra Bouffe. It is a fact that there was an impression amongst the British musical public that the really thoughtful and artistic works performed at concerts were, with a few exceptions, principally of Teutonic origin, and that the symphonies of Beethoven, Mozart, and Schubert were works which had no equal in the French school; and, although we are not quite ready to abandon our opinion on the subject, we are quite willing to believe that French music is capable of giving something that really would rank with that class of music just referred to. With these feelings we hailed the advent of M. Lamoureux, with his works unknown to the English public, with an eager curiosity. The interest in the works of Berlioz, with which we sympathize completely, is now, it may be said, at its height, and, therefore, there is no wonder that more music of the same school should be welcome to the English musical public. M. Lamoureux had chosen an orchestra which numbered amongst its members some of the highest talent in England, and, from what we have heard of its performance, he had evidently given his best attention to the rehearsals and produced an effect which was completely satisfactory. With a fine orchestra, and a strong and accomplished

art was placed before us with every advantage. One thing, however, was wanting. M. Lamoureux was unfortunate in the choice of the works which he introduced in his programmes. The names of the composers were certainly sufficiently unknown in England to excite curiosity; but we regret to say that their works failed to create that interest which would have been accorded to them had they been of the value they were said to be. M. Lamoureux, in spite of his admirable orchestra and his efficient conductorship, can hardly be said to have advanced the cause which he had at heart. A glance at the programmes of the two concerts will show us that, with the exception of Berlioz and Saint-Saëns, M. Lamoureux has excluded those composers who would at least have been at once accepted as representatives of French music. We do not find in either programme the names of Gounod, Thomas, or Bizet, composers we should have been delighted to hear, and whose works have by no means been exhausted in England, and those works of the two other masters, Berlioz and Saint-Saëns, which M. Lamoureux has given, and which were of any value, have already been produced in England, and have met with the success which they deserved. Another mistake which M. Lamoureux, in common with many other French conductors, has fallen into, is that of exercising his discretion in cutting out certain portions of a work of a composer. We cannot speak with certainty, for we do not know whether the discretion was judiciously exercised in the particular instances which came under our notice at these concerts; but we cannot help thinking that it is hardly fair to a composer to excise one of the movements in his work as was done by M. Lamoureux in Lalo's *Symphonie Espagnole* in the case of the intermezzo, and in Massenet's *Nouvelle Suite d'Orchestre*, which was composed expressly for M. Lamoureux's concerts, in the case of the ballet. With these exceptions, however, the concerts, as far as performance was concerned, were a decided success, and M. Lamoureux deserves great praise for the admirable manner in which he conducted his excellent orchestra.

The first of these concerts began with Berlioz's second overture to his opera of *Benvenuto Cellini*, entitled “Carnaval Romain.” In his Memoirs Berlioz tells us that during the rehearsals of the *Benvenuto* under Habeneck the *saltarello* which is contained in the *allegro* of this overture was not played fast enough by the orchestra. “Quicker! quicker!” urged Berlioz; until the distracted conductor, striking the desk in his anxiety, broke his violin-bow. “Mon Dieu, monsieur,” said Berlioz, coolly; “you may break fifty bows, but that will not prevent the movement from being too slow. This is a *saltarello*.” Habeneck, in a huff, dismissed the orchestra for that day. The Symphony in F by T. Gouvy, which followed, was a masterly composition, but seemed far from being a great work. This composer, who has met with a fair amount of success in Germany, cannot be said to rank amongst those musicians which we have already named as representative of French music in England at present, although it is evident from this work that he has studied to some purpose in the higher branches of his art. Lalo's *Symphonie Espagnole* is not a composition of the highest class, and, as we have said before, it was not given in its entirety. This work has already been given in England at the Crystal Palace Concerts, when Señor Sarasate was the soloist. “Aurore,” *morceau* for contralto and orchestra, by M. B. Godard, though admirably sung by Mme. Patey, was nevertheless but a dull production; and the “*Réverie du Soir*,” from the *Suite Algérienne* of M. Saint-Saëns, in spite of the excellent playing of Mr. Doyle in the viola solo, was far from interesting. This may have arisen from the fact that the other parts of the work were denied us and the “*Réverie du Soir*” when heard with its surroundings may perhaps be of value as a musical work. Some further “*Fragments*” from a work of Massenet's entitled “*Les Erinnyes*” followed, and the concert closed with the Hungarian march from Berlioz's *Faust*. There were three vocal works in the programme sustained by Mme. Brunet-Lafleur and Mme. Patey, the most noticeable of which was the charming duo “*Béatrice et Bénédict*,” by Berlioz.

The second concert began with the *Nouvelle Suite d'Orchestre*, by Massenet, already mentioned, which calls for no further notice. It was followed by an air from Spontini's opera *Fernand de Cortez*, sung by Mme. Brunet-Lafleur, and this was succeeded by the *Ouverture de Sigurd*, an unpublished opera by E. Reyer. This is gloomy and quasi-Wagnerian production and did not excite much attention. A Concerto in F Minor by Ch. M. Widor, which was the next piece, was to a certain degree interesting on account of the excellent playing of Mme. Montigny-Remaury, who overcame difficulties of no ordinary kind as far as the execution of the work was concerned with a facility that was worthy of all praise. Of the work itself we cannot say that it ranks in the first class of composition of its kind, and we must protest against the absurd effects produced in the “*Andante religioso*.” The principal subject is a chorale, each phrase of which is succeeded by a recitative-like passage in the orchestra, the effect being somewhat quaint; but when the orchestra take up the chorale with mutes on the stringed instruments, accompanied by the most florid and commonplace bravura on the pianoforte, the effect is incongruous, not to say absurd. In a concerto mutes are out of place as a rule, and in this particular instance the use they are put to is almost ludicrous. An air from Gluck's *Armide* followed, sung by Mme. Brunet-Lafleur, the grand composition of which served to place the wild extravagance of Saint-Saëns's remarkable *Dances Macabres* in strange relief. This *Dances Macabres*, the most important piece of either concert, is a work already well known in

England, but it has, we venture to say, never been better interpreted than at M. Lamoureux's concert.

The author of the analytical programme, which seems, by the by, to be becoming in these days of programme music a most important item at a concert, ventures to give us "the lines" written by Henri Cazalis, "which M. Saint-Saëns has sought to illustrate," and which, he says, "may be thus freely rendered in English:—

Zig, zig, zig. Death keeping time strikes a tomb with his fist, and at midnight plays a dance, zig, zig, zig, on his fiddle.

The winter wind whistles, and the night is dark. Sighs are heard in the lindens, while skeletons gleam through the shadows, running and leaping in their shrouds.

Zig, zig, zig. Each frisks about. We hear the rattle of the dancers' bones.

But presto! all at once the circle is empty. They hurry, they fly—the cock has crowed.

In this we have, says the analyst, the "poetic" basis of M. Saint-Saëns's *Poème Symphonique*, and a sufficiently grim one it is. We cannot say what object the analyst had in view in translating the words of M. Henri Cazalis into the bald version that he has given us; but certainly the *Danse Macabre* does not give us the impression that any words, especially these, are required to explain the music. This strange and original production is written for the orchestra and solo violin, whose first string is tuned to E flat instead of E natural, giving an unusually weird effect to the whole work. After a curiously extravagant use of his flat fifth, Death, the solo violin, leads off on a theme suggestive of the song in Boito's *Meftiste*, "Son lo spirito che nega," which is utilized in a very masterly manner to the end of the piece, the orchestra acting as chorus to the solo violin, which was ably played by M. Sainton. The cock-crowing episode is used most delicately, and the whole of this remarkable piece is brought to an end with a few bars of plaintive wail from the solo violin.

After Mme. Montigny-Remaury had played three pieces for the pianoforte in admirable style, the concert closed with some detached portions from a ballet by Leo Delibes of an unimportant kind. The vocalists at these concerts were Mme. Brunet-Lafleur and Mme. Patey. Of the former it is only necessary to say that, though possessing a fine voice, she is prone to the pernicious habit of the *vibrato*. Mme. Patey's *sostenuto* was a welcome relief, and of her singing generally there is no necessity to speak here. M. Lamoureux, in spite of his fine orchestra and masterly conductorship, has not yet, we fear, attained the object which we understood he came to England to accomplish. He must give us a yet higher class of music before we can concede the fact that French music has as yet been unrepresented in England. In fact, not one of the pieces as yet given by him is to be compared to those of French musicians which have already been produced and acknowledged as works of merit by us.

The performance of the Quintet in C Major, Op. 163, by Schubert, and the rendering of Beethoven's Sonata, Op. 101, by Mme. Schumann, have attracted notice at the Monday Popular Concerts. The Quintet, which was performed by Messrs. Joachim, Rias, Zerbini, Pezzo, and Piatii, was, as might be expected, given in the most masterly manner. Mme. Schumann, who was recalled after her performance of the Beethoven Sonata, played one of her husband's *Fantasien-stücke*, to the delight of her audience. The vocalist was Miss Santley, whose rendering of Mendelssohn's "Auf flügeln des Gesanges" was worthy of all praise.

THE FRENCH LOAN.

THE French loan has been a great success. According to the statement made by the Finance Minister in the Chamber on Monday, it has been covered fifteen times over. In other words, France asked for a loan of a milliard of francs, or 40 millions sterling, and she was offered 600 millions sterling. Furthermore, there were actually lodged as a guarantee that whatever instalments fell due would be paid up, 100 millions sterling. It is true that the latter sum was not paid in cash. To prevent pressure upon the money market, and to facilitate large subscriptions, the French Finance Minister permitted bonds to be lodged instead of money in France; and, although that permission was not extended to England, the banks here which received the subscriptions readily paid the deposit when there was lodged with them sufficient security. In reality, therefore, the deposits consisted, either directly or indirectly, of bonds, and not of cash. Still, the fact remains that money's worth to the amount of 100 millions sterling was deposited as a guarantee that the subscriptions were made in good faith. M. Maguin described the loan as an electoral success, and in a sense no doubt it was. The French Government has been extremely anxious for a demonstration by the monied classes in favour of the Republic. It would seem that Republicans have been so often taunted by Monarchists and Imperialists with their isolation, and with the suspicion with which they are regarded by the propertied classes, that they had come to believe partially in the taunts themselves, and as a final disproof of them they eagerly invited a demonstration in favour of the Republic from the capitalist and speculative classes. The very conditions attached to the loan showed that this was their aim. When the late Emperor Napoleon borrowed, he took subscriptions as low as 4%, his object being to win over small investors to the institutions he had established. But the Republican Government fixed the minimum subscription as high

as 20%, apparently either because it is sure of the small investor, or is more desirous at present of attaching the capitalist and speculative classes. Again, it declared that all subscriptions, whatever the amount, would have to submit to a proportionate reduction if the amount applied for exceeded the sum required. Furthermore, instead of inviting tenders, the price of the loan was fixed at 83½ per cent. We saw here in London in the case both of the Metropolitan Board of Works loan and of the last Indian loan, how much the actual price may exceed the minimum, when a loan is put up to tender. The French Government deliberately deprived itself of such an advantage, and by fixing the minimum at a low price offered a premium to all subscribers. No doubt, this offer was to the benefit of all subscribers, but it redounded most to the benefit of the speculative and the capitalist classes. Lastly, subscribers were permitted, as we said above, to deposit any kind of security of the French Government instead of cash, as a guarantee that they would pay up the instalments of the loan as they fell due. At the same time those deposits were fixed as high as one-sixth of the nominal amount applied for. It was obviously much easier for a person in good credit or with large investments to lodge bonds than for a small investor, as the latter, if without bonds, would either have to remain out of the use of his money while it was on deposit, or would have to borrow and pay interest upon it.

The conditions fully answered the object with which they were framed, and the loan has shown that the capitalist and speculative classes have full confidence in the credit of France. But we confess, for our own part, we do not see the value of the demonstration. Whatever doubt may have existed formerly on the subject, the great Indemnity Loans proved once for all to the satisfaction of the whole world the high credit in which France stands. Those loans, it will be remembered, were raised at a time when no settled form of government had been decided upon in France. M. Thiers did not take the title of President of the Republic, but that of Chief of the State, and the majority of the Assembly then sitting was unquestionably Royalist. What form the government would ultimately take was still doubtful. In addition, the German armies were in possession of a large portion of the soil. And, finally, the Communist insurrection had only just been put down. The future of France was thus uncertain in the extreme, and yet the success of the great Indemnity Loans was unquestionable and unquestioned. The truth is that, whatever institutions France may please to give herself, her resources are so vast, her wealth so great, and the honesty and good faith of her people so well proved, that she will always be able to borrow any amount she may require. And this new demonstration—if it is so to be called—is really not a demonstration in favour of the Republic or of any other institution, but a proof, hardly needed, that the credit of France stands extremely high in the money markets of the world.

But, in fact, the largeness of the subscriptions is, to a considerable extent, fictitious. The eagerness of the Government for a demonstration in favour of the Republic was well known, and all the great houses and leading capitalists who wished to stand well with the powers that be understood that they were expected to apply for much more than they were likely to obtain. The very fact that the subscriptions would be large, too, encouraged, and indeed induced, subscribers to apply for more than they wished to get. Those who judged, for example, that the subscriptions would cover the loan ten or fifteen times over, applied for ten or fifteen times more than they wished to get; so that, in fact, the vastness of the applications is illusory. But it has been said by the *Times* that, however this may be, nobody can question the fact that 100 millions sterling were deposited with the French Government or its agents as a guarantee that the subscribers would pay up whatever amount was allotted to them. And this has been put forward as a proof both of the high credit of France and the vast amount of money that is "going a-begging," as the phrase is—that is to say, that is waiting for eligible investment. But we have just been explaining that all, or nearly all, of those deposits were made in bonds. The French Government itself, as we have just explained, took any of its securities instead of cash on deposit, and the great French banks advertised that they would make subscription for their shareholders and their customers on very easy terms. Even here in London the banker of the French Financial Agency lent money on all kinds of securities to those who wished to apply for the loan. The amount of actual cash, then, that was lodged with the French Government and its agents was very small. And it is a complete mistake to suppose that those who lodged bonds were willing to sell these to take the new Redeemable Rentes. On the contrary they expected to get only a fifteenth or a twentieth part of the amount they applied for; and most of them would have been very much disappointed, and indeed very much inconvenienced, if they had been taken at their word, and required to accept the full amount for which they had applied. None know better than the subscribers that if securities to anything like the amount that was deposited had to be thrown upon the market in order to pay up the instalments, the depreciation of those securities would have been enormous. And they were very unlikely, therefore, to risk such depreciation. In real truth, the amount intended to be subscribed did not very greatly exceed the amount asked for by the French Government. That does not mean, of course, that the French Government could not have obtained 100 or 200 millions sterling, if it had asked for so much. Of course the terms would have had to be better than those offered last week, but the credit of France, as we have already observed,

is good enough to obtain any amount of money she may need. What we are now concerned with, however, is not what France could obtain under other circumstances, but what, as a matter of fact, was offered to her the other day. And the fact is that that amount is not measured by the value of the deposits, nor by anything like it. The deposits exceed very greatly the amount which the subscribers were prepared to lend.

And this explains why the loan has had so much smaller an effect upon the money market than was apprehended. If the French Government had required the deposits to be paid in actual cash, the gathering together of such vast amounts, and their lock-up even for a few days in the Treasury and its agencies, would have caused a severe pressure on the money market. But, as we have just been explaining, the money was not so locked up. In France very little money, indeed, was even asked for. And here in London it was just the same. Professedly the French Government required subscriptions in London to be accompanied by cash deposits. But as it designated one of the greatest of the joint-stock banks as its agent, that bank advanced to all persons in good credit who applied to it the amounts required, and the advances so made were merely book entries. An intending subscriber applied to the bank for a loan, let us say, of 10,000*l.* upon railway shares or debentures. The loan was credited to him in the books of the bank, and then the amount was transferred to the credit of the French Government. No money, in fact, passed to one or the other. In this way the surprise that has been excited by the extremely small influence of the loan upon the London money market is explained.

As regards the conditions imposed by the French Government we cannot think them wise in the interests of France. The loan is issued in the form of Redeemable Rentes, or, as we should call them, Terminable Annuities, and the interest is fixed as low as 3 per cent. But the credit of France, high though it be, is not yet good enough to enable her to borrow at par at 3 per cent. As we have just seen, she had, in fact, to fix the price as low as 83½ per cent. It seems to us that it would have been much wiser to have offered a higher rate of interest, let us say 3½ per cent., and to have borrowed at par. In this way she would in reality have been paying not more than she is paying now; and, if peace is preserved, and wealth continues to grow, and she does not add too rapidly to her debt, she would be able by and by to refund the loan at a lower rate of interest. As it is, she will have to go on paying nearly 3½ per cent. as interest, and when the bonds are redeemed she will have to add a premium of 16½ per cent. It further appears to us that it would have been better to have fixed a minimum price and allowed the applicants to bid as much higher as they pleased. In this way the State would certainly have obtained more money than it has now got, and at the same rate of interest. This, however, would not suit the Bourse. The loan would, no doubt, have been taken up by a powerful syndicate, and would have been gradually placed by them. The profit would thus have been divided between the Government and two or three very great capitalists. Under the present circumstances the Government loses, and nearly all the subscribers gain. No doubt there is a better feeling distributed over a larger proportion; but the Treasury, nevertheless, is a loser. In other words, political considerations have outweighed financial. Lastly, it seems to us that it would have been far better to have followed more closely the Bonapartist example, and to have appealed more directly to the small investors—to have allowed, that is, subscriptions as low as 4*l.*, and to have exempted such small subscriptions from all reduction. The moneyed classes, of course, would have grumbled, but the loan would have been placed amongst the lower classes, who would have been still more directly interested than they are at present in the stability of the institutions of the country. We have all seen within the last few years how wise the Napoleonic policy was in this respect; how an appeal to the small investors really did interest the mass of the people in the government of the country, and how enormously it has helped to create a conservative interest. In departing from this example we cannot but think that the Republican Government has made a false step.

THE THEATRES.

MR. BOOTH'S engagement at the Princess's comes to an end to-night. We have recorded the opinion formed from studying all his performances during this engagement that he is an actor of the very highest rank, and to us his poetical and powerful Othello seemed to rank with the best of his performances. The representations of Shylock and Petruchio which he has been giving during the past week are in some ways less satisfactory than what he has done before. To begin with, the plays have both to be somewhat ruthlessly cut down in order to admit of their being presented on the same evening. In the case of *The Merchant of Venice* much of the underplot, in the case of *The Taming of the Shrew* all of it, has to be sacrificed; and with the underplot goes of course the "induction" and interlude of Sly. It is very difficult to guess what might be the precise effect of the presentation of *The Taming of the Shrew* with Sly retained, and with no more excision elsewhere than might be absolutely necessary. We have seen it played on the German stage in five acts, the Sly business being omitted, but the underplot, or rather the underplots, being retained. Here and there

the result was, it must be confessed, a little tedious, but the tedium might have been avoided by a more judicious use of the pruning-knife; and, but for the passages which could have been easily excised, it was proved that the play was no less interesting and amusing to see upon the stage than it is to read. The comedy was duly insisted upon but was not exaggerated as it is in the somewhat over-farical version given at the Princess's; while the general performance at the Dresden Hoftheater was, it need hardly be said, of a somewhat different calibre. The same thing may be said of the performance of *The Merchant of Venice* at the same house, in which Herr Jaffé—now, if we remember rightly, at the Vienna Theatre—played Shylock with the same intention which Mr. Booth seems to adopt.

This intention is, if we are not mistaken, more in accord with the ancient than with the modern views of Shylock's character. It is not improbable that the savage and grotesque version of the part is more like that which was originally handed down from Shakspeare's time than is the rendering which lends Shylock the fine dignity of an outraged member of an oppressed race. Nor can there be much doubt, as we have pointed out on former occasions, that there is a great deal to be said for the newer reading, which seems to us to have the merit of giving more attraction and interest to the play. It was observed by that fine critic the late Mr. James Spedding that according to his view, which inclined to the older reading, it is not Shylock, but Portia, who is, or ought to be, the central figure of the play. In the version presented at the Princess's the impression conveyed is that, if the other characters were played by first-rate actors, this view as to the non-supremacy of Shylock in the motion of the drama might be illustrated in an exceptionally interesting way, inasmuch as Shylock, while ceasing to enlist the sympathy of the audience, is yet played by an actor of the highest accomplishments and power. Unfortunately these conditions are not fulfilled, and the interest of the play is of course diminished. One has no right to be disappointed at Mr. Booth's taking deliberately, as the result of the thought and study which he evidently gives to all he undertakes, a view of Shylock's character which happens to be different from one's own. One has a right, however, to be disappointed at the effect of Mr. Booth's thought and study being marred by his surroundings. Correct intonation, or at least correct aspirating, of the English language may fairly be demanded in the performance of a Shakspearian play in a large London theatre; and it is unpleasant to note that in the matter of aspirating more than one performer of an important part in *The Merchant of Venice* was painfully at fault. But as to the whole representation of the play, apart from Mr. Booth himself, there is little to be said but "non ragionam di lor." Mr. Booth's performance of the Jew, granting all that we have suggested as to varying views of the character, seemed to us to show less of the genius which to our thinking he undoubtedly possesses than might perhaps have been expected; but much allowance may be made for an actor upon whom such a strain has been put by constant changes of parts, and by the playing of two such parts as Shylock and Petruchio on the same night. Frequent changes of part were in themselves common enough within the memory of man, and we have always protested against the evil effects which may result from an actor's playing the same part night after night for six months or more. But in the old days when *Hamlet*, *Macbeth*, *Richard III.*, *The Merchant of Venice*, and *Othello* were played in more or less rapid alternation, the leading actor did not appear every night in the week, and it is an inevitably dangerous experiment to combine the old and the new system.

The production at the Princess's of *The Merchant of Venice* has been made the occasion of a protest which seems to us a little exaggerated against the traditional business assigned to Lancelot Gobbo; and the critic of "the leading journal" joining in this has made a rather amusing slip in exclaiming against Lancelot's presenting the back of his head instead of his chin to his "more than sand-blind, high-gravel-blind" father. The text runs thus. Gobbo the elder says, "Lord! worshipping might he be! what a beard hast thou got; thou hast got more hair on thy chin than Dobbin my fill-horse has on his tail." To which Lancelot replies, "It should seem then that Dobbin's tail grows backward; I am sure he had more hair of his tail than I have of my face when I last saw him." If these words do not point directly to the condemned "business," it would be instructive to learn what else they can mean.

In the two-act version of *The Taming of the Shrew* which follows *The Merchant of Venice*, Mr. Booth's success as Petruchio is, from his own point of view, complete. The grace, vivacity, and fine force of his acting can hardly be surpassed; and his performance is charged with a humour and wit which are at once strong and delicate. It may be doubted, however, whether the conception—adopted by the late Herr Detmer among others—of Petruchio as a more burly person, a person whose sheer masculine strength, both of will and of body, overpowers Katherine, is not to be preferred to Mr. Booth's presentation of a witty, bustling, wilful cavalier, whose mastery is almost entirely a piece of accomplished acting. However this may be, Mr. Booth's assumption of the character is certainly amusing and attractive in a marked degree, and is, it need hardly be said, distinguished by the singular grace of attitude and gesture which he has displayed in almost every part he has undertaken during this engagement. In the case of this play we willingly endorse the protests which have been made against the over-pantomimic business introduced,

which, especially in the case of the blackened leg of mutton, is manifestly absurd, although it is not perhaps altogether inconsistent with Mr. Booth's rendering as opposed to the one we have suggested. If Petruchio's behaviour is throughout more a piece of tact than a serious resolve to outwit Katherine with her own weapons, he may just as well be excusably, if excessively, violent as so about all his extravagances in pure unreason. We look forward with the greatest interest to Mr. Booth's appearance in *Othello* with Mr. Irving, and we may add a hope that the conjunction of two such actors will not be confined to one play.

The production of *Michael Strogoff* has been looked forward to with a certain curiosity by the public, but possibly the piece may not command in London the same success that attended it in Paris. It is a mere spectacular melodrama of the most invertebrate kind, a series of scenes that sometimes descend into mere dioramas, and which are scarcely connected together at all. The improbabilities of the plot surpass all that is possible, even in melodrama. An aged mother is shot down before our eyes, reappears in the next act only to die in full daylight at the end of it, and finally is restored safe and sound to the bosom of her family. The hero is deprived of his eyesight with red-hot irons, but can see well enough when a little free rifle-shooting has to be done in a future scene. Rivers of naphtha are set on fire, and turned on, as from a tap, upon beleaguered cities. Special correspondents "interview" potentates of Central Asia at a moment's warning, and find the curse of Iblak happily removed. But, in spite of all this, the piece might be a good melodrama, might lead breathlessly from one romantic extravagance to another, and might at least progress in one unflagging stream of interest. It does nothing of the kind, but in the absence of these things we are given gorgeous spectacle, a profusion of magnificent dances, processions, and bright garments, and a certain amount of good acting. The part of Michael Strogoff, the Imperial Messenger, who contrives, in the face of a thousand fantastic impossibilities, to bring the good news to Irkutsk, suits Mr. Charles Warner much better than some more ambitious and less sensational parts which he has lately attempted. Although much impeded by the results of his late accident, he acts with very considerable firmness and martial dignity of bearing, but is a little needlessly stiff at times, and not always careful to secure grace of pose. There is much that is careful and interesting in his acting, and the scenes between him and his mother were sometimes affecting. Mr. Fernandez is capital as the traitor. The mother was played with great spirit by Mrs. Hermann Vezin, who rallied the cowardly inhabitants of Kolyvan around her in the telegraph-office in a very admirable way. Mrs. Bernard-Beere, who acted Sangare, the gipsy spy, looked exceedingly handsome in a gold-and-black dress, and threw a great deal of feeling and vivacity into a poor part. The comic characters, the two special correspondents, John Blunt and Jolivet, were taken by Mr. H. J. Byron and Mr. F. W. Irish, both of them being exceedingly diverting, and the difference of character being accentuated in the mode which Mr. Byron loves in his original comedies. Mr. Irish made a pleasing point by arriving at the post-house at the frontier on the back of a live donkey, which smiled at the audience as only a donkey can. The decorations of the piece, it is needless to say, are magnificent. The battle-field of Kolyvan, crowded with the bodies of the dead and wounded, and with a large "property" horse slain in the fore-ground, was little to our taste; but, on the other hand, the raft-scene on the river Angara is one of the most attractive and original pieces of landscape that have been seen on the English stage.

REVIEWS.

BENGALI AND CINGALESE VILLAGES.*

CONTRIBUTIONS to the stock of Indian knowledge made by barristers elevated to the Anglo-Indian Bench have hitherto mostly referred to some department of Hindu or Mohammedan law. Sir W. Jones, besides writing elegantly on poetry and the drama, translated the Code of Manu and an Arabic Commentary on the Law of Inheritance. Sir Thomas Strange, once Chief Justice of Madras, compiled a very useful treatise on Hindu Law. Sir Francis Macnaghten, who must not be confounded with Sir William the unfortunate Envoy at Cabul, has left us his considerations on Hindu Law as current in Bengal. Sir Hyde East took another line, pleaded the cause of English education, and was one of the promoters of the Hindu College at Calcutta. The late Sir James Colville was the first Vice-Chancellor of the University of the same city; and one of the best works on Mortgages in the local Courts is the production of an ex-judge now living. But Sir John Phear is, we think, the first barrister-judge who has endeavoured to appropriate to himself some portion of a field generally considered as the exclusive inheritance of civilians or of independent Englishmen familiar with agricultural and rural life, owing to long residence in the interior. And we are bound to say that the late Chief Justice of Ceylon shows a clear apprehension of the various interests existing in the soil; of the nature of real, or, in Anglo-Indian phrase, of *immovable*, property; of

leases, occupancy rights, partitions, shares and inheritances, and all the bewildering technicality which misleads pamphleteers into thinking that the Bengal rent laws could be imported bodily into Ireland and would appease the Land League. Nor has the author shown himself unequal to the task of describing the prominent features of the social life of a Bengali peasant, as it appears, not to the judge on the Bench, plunged into the mysteries of a law-suit about the diluvion of a fine estate, or the truth or falsehood of a case of adoption, but to the tourist or sportsman who wanders, gun in hand, through the dense foliage and the narrow and clayey paths of the Aminabad and Dowlatpore villages. In truth, the amount of local knowledge picked up, either in the court-houses, or in walks and drives, or at second-hand from native correspondents, is abundant and generally accurate. The vernacular terms are not distorted and mangled, and, with few exceptions, they might have been incorporated in the exhaustive report of the Commissioner of a crack division about agriculture, tenant-rights, settlements, and the prevention of famine. And the analogies as well as the differences between Ceylon and Bengal are clearly and concisely drawn.

But the work might have been improved by some excisions. The introductory chapter only serves to demonstrate that the author has some acquaintance with geology and science. Remarks on stone implements, cave men, river-drift men, the neolithic pre-Kelts, and the non-Aryan peoples, can only by the most ingenious special pleading be connected with the villages of Eastern or Central Bengal. It is a notorious fact that village communities such as Thomason consolidated and Sir H. Maine describes have not been found on the Lower Ganges during the last hundred years and more. Whether they ever existed in the shape in which we find them in the Doab of Hindostan, and, if they did, how they were disintegrated, are questions which speculative writers may love to discuss. But, for all practical purposes, the co-parcenary tenures of the village had ceased to exist before Hastings, or Shore, or Cornwallis took the settlement of the Bengal revenue in hand. Men of the same caste and occupation very naturally crowd together in Bengal. In some places the population is exclusively Mohammedan; other villages are occupied by the pure Hindu agricultural castes, the *Kopulis*, *Kairvats*, and *Tears*: now and then *Chamars* or leather-cutters, and the *Chaudals* or men of no caste at all, occupy the whole land; and in some villages there are the separate quarters of the Brahmans, of the weavers, of the fishermen; *Bamon bustee*, *Tanti-para*, and *Selty-para*. Traces of village organization also survive. There may be, at the service of the whole village, a barber and a blacksmith, a potter, a schoolmaster, and a priest. Possibly, too, there is a headman, known as *mandal*, or *miriddha*, who is appealed to in social or family squabbles, who gets up active or passive resistance to any advance of rents, and on whose advice the police are either sent for or kept at a distance, according as it may be politic to detect or to conceal crime. But it would be impossible out of these *disjecta membra* even in theory to constitute an ideal community of co-parcenary tenants. Then, apart from the author's profitless excursions into ancient rocks and glaciers in connexion with such a modern formation as the silt and mud of Bengal, we regret to notice a most unjust aspersion on the departmental knowledge and the linguistic attainments of the modern race of civilians. "It is a very exceptional thing," we are told, "for one of them to possess a real command of the colloquial vernacular"; and again, "Scarcely any one, thus, is able to converse easily with the ordinary ranks of the people"; and then we are warned about the awkwardness, coldness, and abruptness of the Englishman. "He really knows next to nothing of the habits, standpoints, and modes of thought of the mass of the people." Now, we have often been told that English barristers think little of the legal attainments of a civilian magistrate or Sessions judge, and that the latter retort, as they are entitled to do, by telling the barrister that he knows nothing of the facts and feelings to which he is desirous of applying his ordinary English law. But this is almost the first time we have ever known a judge of the class and rank to which Sir J. Phear belongs, impute to the governing body an absolute ignorance of one of the primary qualifications for executive and judicial office. The author of this hasty criticism in reality owes one-half of his own knowledge to the labours of civilians who, while he was sitting in appeal, have, in courts of first instance, unravelled complicated family feuds, tracked crime through masses of deceit and dishonesty to its authors, given the pith and point of quaint social customs, explained the relative position of superior landlords, of middlemen, and of tenant proprietors, and, without the aid of dictionary or interpreter, afforded judicial sanction to the resistance of Nabob against the unjust usurpations of Abab. A score of times, we will venture to say, must Mr. Justice Phear have been indebted to his civilian colleagues on the same Bench for the exact significance of a term which was quite beyond the experience of a young native advocate fresh from the Calcutta University, or for the precise value of a piece of evidence which was meaningless or perplexing to a judge trained at Westminster. Then Sir John Phear is surely not ignorant of the strict vernacular tests which have long been imposed on all candidates, even after their active service has commenced, and which are indispensable conditions to their investment with higher powers and independent action. It is really lamentable to find a gentleman of obvious experience and high attainments lending himself to the reproduction of these stale and exploded calumnies. What would have been his own feelings on the perusal of "Life in the Mofussil" or "Paddling in the Paddy-fields," written by a civilian

* *The Aryan Village in India and Ceylon*. By Sir J. B. Phear. London: Macmillan & Co. 1880.

or staff officer in civil employ, in which every ludicrous or malicious anecdote of the credulity or ignorance of English barristers and judges had been reproduced. We can assure him that there are still plenty such to be picked up in Anglo-Indian circles, beginning with the hope expressed by Elijah Impey and his colleagues on landing at Colvin's Ghaut, that the coolies of Calcutta would be clothed in shoes and stockings six months after the establishment of the old Supreme Court. Even in the comprehensive and well-reasoned judgments of the Privy Council there occur expressions at which collectors or magistrates may lawfully smile. We are, however, ready to concede to Sir John Phear that it would require "a real command of the colloquial vernacular" to render into correct and idiomatic Urdu or Bengali such a sentence as the following:—"The differentiation of the property-less worker from the leisured capitalist commenced."

We are glad to turn from making these necessary strictures to the worthier portions of the book. In one of Marryat's novels a conceited midshipman is told by a rough captain of the old school that a youngster has no business with "fine feelings," and that he had better get rid of a cartload of these incumbrances at the mast-head. In the same strain we should suggest to any English barrister appointed to high office on the Bench or in Council in India, that he should commence work by throwing overboard all his English notions about devolution, settlement, entail, leases with conditions and limits, and absolute and unqualified ownership in the soil. And this, we are glad to admit, Sir John Phear has effectively done. After a brief sketch of the Cornwallis Settlement and the legislation of 1793, he gives forcible expression to opinions which are the texts and canons of every experienced administrator—that absolute and unqualified ownership in landed property is very rarely found; that a Zemindar in Nuddea has no analogy with an English squire; that half-a-dozen middlemen have rights under a Zemindar or superior holder which are perfectly capable of definition; and that, if real ownership is to be sought for anywhere, it is in the holding of the *Jotedar* or *Ryot*, though it is not very easy to draw the exact line of separation. Equally clear and forcible is the explanation about the division of shares in any great Hindu property. Every member of an undivided family is born with a right to some portion of the patrimonial estate. But as families grow and spread, domestic causes of quarrel multiply, and patriarchal rule becomes unbearable. Then separation takes place. First, the various shares of the rental are collected, not by one general manager but by the heads of the various branches. This is productive of more disagreements, and is a constant source of perplexity to the actual cultivator, who may pay 7½ annas of the whole rupee to one proprietor, 4½ annas to another, and 2 annas to a third, making up sixteen annas in all; or, as we should put it, the twenty shillings in the pound. Lastly, when everybody's patience is exhausted, and the shareholders and their tenants may have gone the round of the criminal, revenue, and civil courts, a final partition in the land takes place. And the same process of joint collection, separate collection, and ultimate division of the diminished inheritance, takes place in each succeeding generation. It is not surprising that, in the absence of mineral wealth and manufactures, the fertility of the Gangetic Delta, the more than Irish attachment of the Hindu to paternal acres, and the fecundity of the races, should lead to over-population and to a rate of seven hundred to eight hundred inhabitants in one square mile. We remark, by the way, that the author is fond of using the term *mouzah* to express a village in Bengal. *Mouzah*, we must remind him, is a term of revenue and law. The popular and vernacular term for the actual village is *gram* or *ganw*, and it is the same as *gama*, which the author found in Ceylon. An Indian peasant in the field or bazaar, if questioned about his *mouzah* as a place of residence, would be as amazed as a modern gamekeeper who might be told that his young master was to be taken out to shoot conies instead of rabbits. Again, *Ryots* are scarcely in the habit of eating "tiffin," which is a meal almost peculiar to Anglo-Indians. What *Ryots* do eat on a journey, or about 4 o'clock p.m., or when they have no time to make a fire-place and cook their rice, is *jalpin*, or a snack of some sort of sweetmeats or parched rice. A halfpenny-worth of these dainties and a whiff of tobacco will go a long way to satisfy a hungry boatman, palanquin-bearer, or beater. Occasionally, too, the author uses a local term with perfect accuracy, but neglects to bring it home to English ears. For instance, he describes a faction fight or rather a contest between the tenants of two Zemindars, one of whom had a right to the rents of ten annas, or not quite two-thirds of the whole, while the other had the right to the remaining six annas. We gather that, in this case, the division of the lands had actually taken place, and the dispute related, not to fractional shares of rents in the same acreage, but to distinct plots of land with their metes and bounds. And then comes a sentence clear as crystal to an active magistrate in Bengal, but a perfect enigma to an English landlord or legislator:—"A great effort had been made by the Raja's people to make Asan give up his *jote* to Kalidas or to enter into *simma* relations with the Raja." Asan and Kalidas are the two *Ryots* at feud. The *jote* is the tenancy of one of them, the subject of dispute; and the meaning of the last part of the sentence is that, if Asan would not surrender his actual tenancy to Kalidas, he might at least be brought round to acknowledge the Raja as his superior landlord, to pay rents to him and not to his proper owner, and to look to the Raja for protection and countenance. In other words, the landholder, rival of the Raja, was to be the loser either

by his own tenant ceding actual possession of his few acres to another man who was not his tenant, or else by his paying them to a rival superior to whom nothing was due. If there is no fixity of tenure in this, there is at least something not very far removed from "free and easy sale." The dispute ended, as so many of these agrarian disputes do, by Asan being wounded in the hand, and his brother, one Manick, losing his life. Various other incidents are recorded in these pages, showing how Bengal *Ryots* eat and dress, amuse themselves, are robbed and plundered, and die before their time. There is a sketch of the crime of Dacoity, or gang robbery, where men disguise their faces with ashes, just as they blacken them in Ireland, ransack the house, search the chests for jewels, dig up the floor for rupees, ill-treat the women, and make off with their booty. There is a story of the savage revenge taken by some Hindus on a young Mohammedan for tarnishing the family honour. And there is quite enough to remind us that there is still in India a large store of materials left which can be worked up into an interesting volume by men who will take the trouble to use their eyes and to collect something beyond stale stories about *hookahs* and *nautches*, days on elephants, and nights at mess.

No two tropical countries, physically, can be less alike than Bengal and Ceylon. Both countries certainly have abundance of rain and heat. Coconut trees and rice flourish in both. But in Ceylon the country undulates, to say nothing of high ranges of mountains; and huge tracts are one vast jungle on which the axe and the plough seem to make no impression. Yet the author selects similarities as well as differences in the land tenures. There is a headman in a Cingalese village just as in Bengal. There are village carpenters, blacksmiths, and washermen. Land is held by men who pay their quota of the produce, as well as by men who render some definite service to the chief. But, then, in Ceylon service is the usual tenure and payment of produce the exception, while in Bengal it is exactly the reverse. In Ceylon there are none of those sub-inequities which interpose half a dozen charges between the actual cultivator and the Zemindar. Population is scanty. During the dominion of the Portuguese money payments were unknown; and even in our own times men have been compelled, under old precedents, to give several days of unpaid labour to repair the roads. The author states distinctly that the hideous custom of polyandry, though discouraged by legislation, is still in force. We have besides all this the reprint of an ingenious lecture, showing how the joint Hindu family may have expanded into the village; and, if we can forget that Sir John Phear has gone out of his way to cast aspersions on the members of a service to which India is even more indebted than to its able and independent Bar, this volume does credit to experience acquired as Puisne Judge in the High Court of Calcutta and as Chief Justice in Ceylon.

EGYPTIAN METHOLOGY.*

SINCE the time of Moses, not to speak of Herodotus, the wisdom of the Egyptians has attracted the curiosity of all inquirers into early religion. The great age of Egyptian civilization, the imposing splendour of the temples and the ritual, the very grotesqueness of the mysteries, and the reticence of the priests, encouraged the belief that Egypt inherited some marvellous tradition, and was in possession of some intimate theosophic knowledge. These pretensions were partly destroyed when De Brosses published (1760) his little book, *Du Culte des Dieux Fétiches, ou Parallèle de l'ancienne Religion de l'Égypte avec la Religion actuelle de Nigritie*. De Brosses certainly introduced the word "Fétichisme" without attaching to it any very definite scientific signification. It has been so much abused, as Mr. Max Müller has pointed out, in recent speculations that we prefer not to use the term at all. But De Brosses established, as we venture to think, one essential fact. He showed that, among contemporary savage tribes a direct worship *sans figure*, as he says, without symbolism of any kind, was paid to animals and vegetables (*Du Culte des Dieux Fétiches*, p. 182). As to the origin of a practice which seems so strange to civilized men, he wrote in his style of vivacious common sense, "on n'est pas obligé de rendre raison d'une chose où il n'y en a point; et ce seroit, je pense, assez inutilement qu'on en chercheroit autre que la crainte et la folie dont l'esprit humain est susceptible; et que la facilité qu'il a dans de telles dispositions à enfanter des superstitions de toute espèce." De Brosses concluded that the Egyptian worship of plants and animals was also originally *sans figure* and direct, though an educated and mystic priesthood explained, by elaborate cosmical, moral, and spiritual allegories, the rude forms of worship which they inherited from a remote, a savage, and a childishly superstitious past. And this is the explanation of a great part of Egyptian mythology, to which modern anthropological science inclines. We have to distinguish, as far as possible, the wild early animal worship from the late allegorical interpretations, and from the symbolical additions to ritual.

This is the system of the anthropologist, of the historical inquirer; but mythologists of another school still reject the hint of De Brosses, and look everywhere for the *figure*, for the symbol, which they suppose to be, not the later priestly interpretation, but

* *Le Panthéon Égyptien*. Par Paul Pierrot, Conservateur du Musée Égyptien du Louvre. Paris: Ernest Le Roux. 1881.

A Book of the Beginnings. By Gerald Massey. London: Williams & Norgate. 1881.

the original essence of the Egyptian worship of animals and plants. This search for the *figure*, the symbol, is the method of M. Paul Pierret, the Keeper of Egyptian Antiquities at the Louvre. M. Pierret starts from the theory, which we think somewhat too neat and too superficial, that religion begins with "Fétichisme," with adoration of winds, seas, rivers, hills, and *ferocious* animals; passes to Sabôisme, worship of the heavenly host; and then reaches Polytheism. "Fétichisme, Sabôisme, Polytheisme, these are the three stages of religious thought." But, says M. Pierret, the Egyptians, though they doubtless started from Fétichisme (in which he includes the worship of animals), have left us no traces of their passage through this early stage of speculation:—"Malheureusement, les Égyptiens semblent s'être fait une loi de nous dérober leurs premiers fétichismes en toutes choses, et leurs monuments les plus anciens nous les montrent déjà parvenus à l'idée monothéiste. . . . Ils sont monothéistes sous une apparence polythéiste." And M. Pierret quotes Champollion Figéac, "C'était un monothéisme pur, so manifestant extérieurement par un polythéisme symbolique." The Egyptians undeniably worshipped a host of animals, and worshipped them, to Plutarch's surprise, directly and without disguise (*De Iside et Osiride*, 379, 30). "The Greeks assign certain animals to the Gods, but the people among the Egyptians worship the animals themselves." Plutarch gives the current explanations, such as the myth that the gods hid themselves in animal shapes in dread of Typhon; or, again, that Osiris divided the world into bands, each of which had an animal for its symbol. Now this very division of races into stocks of kinship, each of which has an animal or plant for its symbol, prevails at this moment among Thlinkets, Red Indians, such as the Dakotas, Bechuans, Ashantees, Australians—in fact, in Asia, Africa, America, and the great continental island. Further, Plutarch informs us that the Egyptians who worshipped this or that fish, or other animal, declined to eat it, exactly as the contemporary savages of the world refuse to make food of the animal which supplies their family badge. Thus only the Lycopolite (Wolves) would in Plutarch's time eat the sheep, which was a great god in Egypt, and while the Dogs (Cynopolite) ate the fish called Oxyrhynchus, the Fishes (people of the town named after the Oxyrhynchus) were in the habit of annoying the Cynopolite by sacrificing dogs and eating them with much solemnity. Here then we have, even in the Egypt of Plutarch's time, undeniable marks of the savage institution called "Totemism"—one aspect of direct animal worship. Juvenal and Virgil, like Plutarch, do not conceal their astonishment at practices familiar to the anthropological student as savage institutions. Among other sacred animals, in addition to those we have spoken of, Plutarch names the asp, the cat and the ibis, the ox and the ichneumon. These were worshipped especially in times of drought or pestilence; and, if rain and health did not return, the priests very secretly put the gods to death. He adds that the lion is directly worshipped (*De Iside et Osiride*, 363, 51), and that temples are adorned with the jaws of the animal. In the same way the modern Ainos worship the bear *sums figure*, and decorate their shrines with his skull.

In spite of all this evidence, which it really seems hard to misunderstand, M. Pierret persists in believing that the animal worship of Egypt was all pure symbolism. With M. Chabas, he remarks that "the innumerable gods of Egypt are only different aspects or attributes of the single type of godhead." He thinks it unreasonable to suppose, and contrary to the teaching of history to believe, that monotheism and direct animal worship could co-exist in the same country at the same time. He will not have it said "that the same people which looked on the divinity as inaccessible, invisible, of hidden name and form unknown, could adore hawks, crocodiles, lionesses, cats, and cows."

Now surely, if history has one certain lesson, it is that stages of thought do not abolish each other as they come on, but overlap and intermingle with each other. Only ten years ago certain Irish of the West coast were worshipping a certain formless stone idol. Practices which M. Pierret would call "fétichistic," or even polytheistic, have been common in the history of modern Scotch and English rural districts. Just as the age of iron does not abolish that of bronze, just as bronze does not abolish flint weapons, so the monotheism of philosophers, priests, and the educated classes coincides in time and space with copious survivals of ruder creeds among the people. Serpents are still sacrificed in Brittany on St. Anne's Day, and orthodoxy coexists in Russia with the most degraded forms of "fétichisme," including bear-worship.

M. Pierret, being unable to take this view of the evolution of religion, is obliged to maintain that animals appeared to be worshipped in Egypt merely as symbols of the various divine attributes:—"Ces animaux, employés comme symboles, sont devenus sacrés par ce seul fait, qu'ils ont eu l'honneur de servir de vêtement à la pensée religieuse." Nothing can be more explicit; but it would have been difficult to get the worshippers of the wolf, sheep, or oxyrhynchus to agree with M. Pierret, to eat their own Totems, and leave the Totems of their neighbours uneaten. The votes of M. Pierret might have been held by a highly-educated and refined Egyptian priest, a monotheist who was determined to take the articles of his Church in a non-natural sense, and who knew nothing of direct animal worship *sums figure* in Africa, Asia, America, Europe, and Australia. But we do not think that modern comparative students of religion will be convinced by M. Pierret's theory that monotheism, polytheism, and fétichisme cannot possibly coexist, and that the oxyrhynchus, cat, crocodile, and the rest, are and always were pure symbols of the attributes of one

omnipotent deity. That deity in M. Pierret's opinion is, as will have been anticipated, the sun:

Toute la mythologie égyptienne reside dans ce qu'on peut appeler le drame solaire.

A chaque acte de ce drame, le dieu change de nom sans rien perdre de son individualité et de sa toute-puissance.

All the local and other names of gods are (we presume) names of the sun. Possibly this may have been the contention of the priests. When the Brahmins want to convert a set of native animal-worshippers, they observe that Brahma once took the shape of their animal, and that the name of their animal is one name of Brahma. This ingenious device of "the same concern" was probably practised by the priests of Egypt. But even the ingenuity of the symbolic school of interpreters may be checked when they are asked to explain why the worshippers of the one god under a local name waged war with all the neighbouring local types of the god, sacrificed them, and ate them. Either the explanation is false, or it must be extended to similar practices among all savages. *Amus*, wombats, coyotes, tortoises, hares, ants, frogs, kangaroos, bears, toads, prairie dogs, reeds, bulrushes, crestless cockatoos, wolves, tobacco, maize, sardines, lizards, black snakes, grasshoppers, red deer (in Ireland), and, in short, almost all the beasts in the Zoological Gardens, must be "employés comme symboles, et devenus sacrés par ce seul fait qu'ils ont eu l'honneur de servir de vêtement à la pensée religieuse." But, then, these creatures are worshipped by races not yet in what M. Pierret calls the polytheistic stage of religion, still less in the monotheistic stage. This shows the difficulty of keeping one explanation for Egypt and another for the animal worship of the rest of the world.

M. Pierret has led us into serious matter, Mr. Massey helps the brow of austerity to unbend. In two huge quartos of twelve hundred pages we find him seeking the origin of all human things in Egypt. Extracts alone can do justice to Mr. Massey's method. He is an evolutionist, he says, and does not boggle at the animal descent of man. But the Egyptians got away with a long lead from the rest of humanity. "It we find that each road leads back from Egypt, we may safely infer that every road preceded from Egypt." Egypt is "the common model, the common kinship, and the common centre." Mr. Massey proves that Maori and English are connected with Egyptian, by philological arguments. Thus (English) *Meskins*, "By the Mass," mass wafer (Egyptian), *Meskin*, "place of new birth," *mes*, "kind of cake." (English), *Mobile*, "the mob"; (Egyptian), *Mhudi*, "humble." (English), *Monument*; (Egyptian), *Men*, "to fix." (English), *Mart*, "cow-fair"; (Egyptian), "Mer-cow." *Mart*, cow-fair, is about as good as anything in this scientific philological exercise of Mr. Massey's. But here is an example by no means bad. "*Linn* (Keltic), a deep still pool; Egyptian, *Reun*, virgin pure." *Linn* is generally used of a roaring waterfall; Burns's despairing lover "spuk o' leaping ower a linn." But how could Mr. Massey omit *Rein* (German), pure; Egyptian, *Reun*, virgin pure? That would have been much neater and closer than the Keltic, *linn*, and Mr. Massey is welcome to make future use of the suggestion. This, again, is not bad (English), *letter*; Egyptian, *Rel*, to "engrave, figure, write." But Mr. Massey (who seems not to care about Greek) will hardly beat this—(English), *pegmat*, "a moving pageant"; (Egyptian), *peh*, "glory," *Khema*, "shrine." He has another *pegmat*, "bill of advertisement fixed up at ancient pageants"; (Egyptian) *p-la-ma*, the call to come. But if we have a favourite, among Mr. Massey's philological diversions, if there is one splendid illustrious blunder, it is this:—"Atum in one character is the setting sun: he sets from the land of life. He is the sun of ATRUMS, to which season he has bequeathed his name." It is fair to say that Mr. Massey knows some of his words to be derived from Latin and Greek.

Perhaps enough has now been said about Mr. Gerald Massey. He finds in the "Tom-toddy," or tadpole, "an image of Tum"! Once more, "the cat being a type of Ked, and a name also of the fiddle, may have a serious bearing on the rhyme of

Hei, diddle diddle,
The Cat and the Fiddle,

and the Cow that jumped over the Moon may be the Cow-goddess of Ursa major, Ked, who was anterior to, and higher in heaven than, Luna." With a fine knowledge of Celtic (or Keltic), Mr. Massey hints that "the Khen, as seafarers, may also have had a special territory (Tir) in Cantyre, as well as in Kent and Segont." Quite as probable, we should say. Here is a passage full of fine promiscuous philology:—

In the Annals of Rameses III. amongst the bread offerings to the temple, are 441,800 buns called "Buns KALUSFA." The Egyptian Kalusta becomes the KALLISTES of the Greeks, a kind of cake or bread which they beautified. Apparently it was made of the finest ears of wheat (*καλλιστράγυς*). Rendered with the letter s, these buns are KALUSFA. Ta is bread, food, offering; KARAS denotes the dead, the corpse or mummy; Karas, a funeral. A Cornish word, CLUSTY, will enable us to determine the nature of the bread. Clusty means close, heavy, unfermented, dead; it is also applied to potatoes when they are not mealy.

By arguments of similar character and value, Mr. Massey connects the Maoris of New Zealand with the Egyptians. He prefaces his book with a rather short poem:—

One of the Mountain tops of Time,
Is left in Africa to climb.

Mr. Massey has "polished it off," like Mr. Whympier. He has

read very widely indeed, and this is the result of his reading. His book is simply stuffed full of scientific plums like these we have picked out. His volumes are beautifully printed, and Egypt never before produced a jest so monumental and colossal.

SWINTON'S INSECT VARIETY.*

IN no department of knowledge has a more conspicuous advance been witnessed by the present generation than in the scientific study of entomology. The discovery in unforeseen profusion and variety of fossil insects, extending to deposits of early date, has given to our ideas of insect organization a range, both in time and in geographical distribution, wholly undreamt of till within the last few years. It has also enabled us to determine the characteristics and the affinities of insect life at successive periods of development, and to show their connexion through unbroken sequence with the familiar forms of our own day. Concurrently with this calling up from the dead, if we may so speak, of a wholly unknown realm of life, there has been an unparalleled amount of microscopic work dealing with the anatomy, the histology, and the functional constitution of insects the most specifically distinct. The whole science has thus undergone little less than a revolution. No longer set in a corner as a study apart by itself, fitted only for minds as petty as the objects they potted over with pocket-lens and pill-box, it has established itself in organic contact, on the one hand with geology, and on the other with biology. The functions assigned to insects in forwarding the process of fertilization have made good the extent and significance of the debt incurred by the vegetable kingdom on the part of this minutest of the animal orders. And in regard to morphology, metamorphism, and other occult laws of the living organism, it is to insect life in its mysterious changes and its inexhaustible profusion that we have most hopefully to look if we would penetrate to the inner secrets of nature. Nor is it in their anatomical or muscular functions only that the various insect tribes are able to throw light upon the affinities of widely separate classes of animated beings; in their habits, their modes of intelligence and action, singly or in common, their kinds and degrees of instinct, they supply lessons for which the thoughtful naturalist is ever on the watch. In their modes of propagation and their geographical distribution, involving intricate questions of climate, vegetation, and other physical conditions, there is, above all, a field of boundless interest for every student of biology.

To make clear the path towards the full and thorough treatment of a subject so wide, the specialist must needs be called in as a pioneer. On his labours depend the facts upon which have to be raised the broad generalizations which constitute science. And to all who bring to this preparatory task the requisite skill, patience, and accuracy of observation, a degree of gratitude is due which may well make us tender towards shortcomings in regard to philosophical method, logical arrangement, and other qualities which bespeak the mind of the master. As a work of value in the secondary sense implied in this comparison we gladly instance Mr. A. H. Swinton's recent *Insect Variety: its Propagation and Distribution*. His investigations have been directed, as his title-page explains, to the "odours, dances, colours, and music in all grasshoppers, cicadæ, and moths; beetles, leaf-insects, bees and butterflies; bugs, flies and ephemera"; and he aims also at "exhibiting the bearing of the science of entomology on geology." The programme of study thus laid down is comprehensive enough to open up many of the problems most interesting to the entomologist. The author shows himself in every page a careful and indefatigable observer, having been urged on from boyhood by an intense devotion to the hunt for moths and butterflies—a pursuit "much fostered by the glow of charming colours, an inborn love of sport, and perfect rage for novelties." His imagination still glows with the reminiscences of the early mysteries of the butterfly-net, with its accompaniments of "caterpillar-rearing and chrysalis-digging, sallow beatings in the spring, and patient watchings at sugared tree trunks, ivy, flowers, and street lamps at autumn," with other expedients employed to obtain the delicate scale wings of Lepidoptera. Such keen and active sympathy with nature soon led to the discovery of novelties which brought him the thanks of correspondents at home and abroad. Summer tours to insect haunts in England and the Scottish Highlands enlarged and enriched his stores. Above all, a long-cherished dream of Northern Italy and the leafy gorges of the Tyrol and Rhône Valley was at length realized in a trip to that paradise of the insect fauna, poor only in comparison with the virgin bush of tropical lands. Whilst for others Italy has her sunny skies, her classic and mediæval memories, her treasures of painting, sculpture, poetry, and music, for him she brought forth the summer Cicadæ drumming among the boughs, the golden wasp (*Scotia hortorum*) lazily wheeling around the tufted fountain, the sacred *Scarabæi*, "yet rolling in the ravines their miniature globes, as the Egyptians imagined, to procreate." There were to be found ant-lions and trap-door spiders; fireflies flashed nightly along the rivers, florid species of butterflies, *Choræus* and *Danaïdæ*, fluttered in chosen spots, bespeaking in their birth somewhat of the warm breath of the African sirocco, and perpetuating the life of the heated Ter-

tiary time, which survives in numerous insect specimens in the palatial museum at Marseilles.

The first and most absorbing object of the author's eager quest was the Cicada. Primed full at starting with the poetic notices of this almost fabulous insect which abound, not in the Greek and Latin classics only, but in the poetry of all nations, his head seems to have been fairly turned as he drew near to the land of promise. His style of writing, deficient from the first in sobriety and self-control, here breaks into a strain of rhapsodical sound and fury which defies every effort to render it into sober prose. In the gardens of the Palazzo Giusti, in the land of Virgil and the city of Catullus, on the 5th of June, he "espied the first nymph of *Hematomæ* crossing his path, besmeared with the soil from whence it had just risen." Having learnt from his English classics to regard the Cicada as the herald and har-binger of spring, the lateness of this first birth was a puzzle to his mind. A fortnight later, fancying he heard a frog quacking in a bush on the banks of the Po, he found that the sound *pip! pip!* came from a drowsy Cicada sitting on a damp spray, who was attuning his lyre to the stray glints that crept in among the dense soft foliage:—

But can this be the Cicada of one's school days? I exclaimed. It is nothing like a "Grasshopper," as elegant writers such as Pope and Dryden maintain; nor does it seem as if it would "hop," as Wordsworth and Goethe would make out. No, it is not a "Tree Hopper." Cowley said it "danced." No, I don't think it dances. And it is not a Cricket, as another wiseacre, a German, has it! Nor a Leaf-cricket with a curly tail, as La Fontaine illustrates it! It used to turn its eyes and wink at St. Francis; but alas! its optics have become immovable. Well, here is my pocket Virgil and the explanation. "These insects differ essentially from our Grasshoppers; being found in warm climates alone, they have not, indeed, any English name. Their habit, noticed in the text, of sitting on trees, would alone make a distinction. In form they are more round and short than our Grasshopper; they make a much louder noise, which begins when the sun grows hot and continues till it sets. Their wings have silvery streaks, and are marked with brown; the inner pair of twice the length of the outer and more variegated." Well, but these are Lord Byron's "People of the pine, making their summer lives one ceaseless song." They are not a bit like the Cicada before me, pure and simple. I must describe it for our northern literati. Well, it carried itself, I think I may say, with somewhat the air of a gigantic bee, but in form it closely resembled the little froth insect of quickest hedge, to which it is near akin. In colour it was black, elegantly lined with blood-red on the body and wing-veins, or if Latin should be preferred, *Nigra abdominis incisuris alarumque nervis sanguinis*. Any way it was a Cicada, sometimes known as *hematomæ*, whose generic name is undecided. *Cicada hematomæ*, the Blood Cicada, satisfied Linnaeus; Fabricius baptised it *Tettigonia*; and lately it has been proposed to surname it *Melomnatha*, and christen it *Cicadetta*. But this is getting as bad as the poets.

After devoting to the nature and habits of this puzzling insect page after page of rambling notices from "the poets" and naturalists of ancient and modern times, our author seems as far as ever from settling the true place and affinities of the classic species of Italy in the family of the Cicadidæ, or its identity with the *terris* of the Greek bards and naturalists. Other vocal insects which he goes on to specify fed the Grecian ear. There were the leaf crickets, both diurnal and nightly. "The poet Moleger, to attune his lyre, sought the golden corn to capture the locust sounding his sweet-speaking wings with his feet. . . . The maiden sitting in sunshine, the rattle of the grasshopper commingling with the chant of the Cicada, forgets her lover and her tears; and one poet deems death itself unrepulsive should the cricket of the briar raise over him a monument of imperishable strophes." Not only poets, but musicians and men of science, have gone before our author in yielding to the spell excited by these strident insects:—

Nor is a music so full of poetry and so widely honoured wholly unknown to science. Many have been the attempts to render the songs of the Grasshoppers in music. Yersin, of the Vaudois valleys, who died young, was, I believe, one of the first to produce a score of the snatches heard among his Alps, and along the sunny Riviera. Brunelli, further back, was accustomed to keep a band of the Great Green Leaf Cricket in a cupboard, where they formed an orchestra, and whiled the day with recitative. The enterprising professor chirped a key-note, when at first a few of the boldest would answer, and gradually the whole choir struck in, and stridulated with all their might; refreshing interludes were obtained by a rap at the door. Recently a well-known author has testified to the pleading nature of a solo from a select male of this species, confined under a glass on the table, which, as his music is only a little less deafening, might be preferable and more enjoyable than a Canary's.

The science of phonetics may, he justly urges, be much indebted to the study of the sound-organs of insects. The physicist and the mechanician may be enabled hereby to throw light upon many a subtle problem of acoustics, upon the laws of vibration and intonation. The best part of his book is perhaps that which treats of the organs of sound and hearing in insects. The author's first original discovery from actual dissection of *Tettigæ* at Turin was that the part usually termed the mirror in these insects is in reality an organ of hearing. Five of his seven plates are devoted to the organs of stridulation and audition in the various orders, which are clearly drawn and as well defined as may be when actual motion, the phenomenon sought to be indicated, is the very thing necessarily lacking. Plate V. shows the abdomen of a male Cicada dissected from the thorax and magnified. The species (*Cicada Plebeja*, Oliv.) being cryptotympanous, or having its drum-covers concealed by a lap of the dermis, this skin has been cut away from the left drum, so as to expose the ribbed membrane. To the hinder point of this membrane the tendon of the motor muscle is attached, and by its action the membrane is drawn inward during the music, the sound resulting from its vibration on each rebound. The large internal air cavity is separated by a diaphragm, opposite to which are seen the mirrors of the cicada,

* *Insect Variety; its Propagation and Distribution, &c.* By A. H. Swinton, Member of the Entomological Society of London. London, Paris, and New York: Cassell & Co. 1880.

showing an iridescent spot of various colours, centrally to which a little styliform thickening proceeds from their margin. The internal aspect of this part, which has the essentials of an insect ear, is shown in Plate VI., the supposed acoustic nerve being connected with the mirror. The motion of the abdomen when emitting sound is indicated by a blur. In Plate IV. are drawn the organs of instrumental music in *Vanessa Io*, the peacock butterfly. A strong magnifying power shows the filed aspect of the under surface of the submedian or anal vein of the fore-wing, nearest its inner margin. This vein plays its lima or file over the costal vein of the hind wing, when the insect rubs its wings together in stridulation. A raised pucker at the base of the hind wing, devoid of scales, may serve, it is thought, in impressing the vibrations caused by the friction of these veins upon the surrounding air. In the death's-head moth (*Acherontia atropos*) the filing of the inner surface of the lower joint of the labial palpi corresponds with the adjacent surface of the proboscis, by the mutual friction of which its shriek is given forth. Plate VI. gives the organs of audition in Orthoptera and of stridulation in Coleoptera and Hymenoptera, the drum of Cicadidæ, the organ of smell in bees and gnats, and organs of circulation, variously magnified; and Plate VII. exhibits outlines of the nervous system in various orders of insects, including *Cicada tynis* and *Spaeromía thalassina* (grasshopper). These and other points of insect anatomy are treated in more ample detail in the body of the work, the author's minute and patient observations being combined with the results of wide and careful reading. Tables of great value have been compiled, enabling the reader to seize at a glance the general scheme of nature comprised within the scope of the entomologist. The most comprehensive of these tables gives an exhaustive list of the genera of insects that stridulate, admirably classified, the nature and function of the sound organs, with other details of their mechanism, being distinguished, and authorities referred to for evidence of their vocal qualities. Other tables refer to the secretion of larvæ or immature insects, the excretory ducts, the scent organs, with their position and adjuncts, an approximate scale of scent being added, in which the several odours of insect secretion are brought into comparison with scents well known in nature or common life, as musk, box-leaves, pine-apple or fennel, guano, vinegar, or rатаfia. The problem of the antennæ possessing the sense of smell as well as of hearing, together with the faculty of tact and mental communication, is discussed, and a list of authorities on both sides included in the bibliography of the subject. The conditions of reproduction and distribution under the laws of natural selection, specific evolution, and what are here classed as metaphysical incentives—the germs, i.e. of the passions implanted in these tiny forms—fear, rivalry, love, jealousy, and maternal care, with their varied modes of indication, come under our author's treatment, and testify to the wide grasp he has taken of his subject. With greater method in arrangement, and with the pruning knife applied unsparingly to his exuberant, and at times ridiculous, overgrowth of verbiage, his work would be entitled to a high place in the literature of insect life.

SCHOOLS AND TEACHING.*

WE have here two books either of which would by itself offer a good deal of matter for reflection. By coming before us together they give occasion for comparisons and contrasts not without importance for English society at large, and chiefly for English parents who have sons to bring up. In *Our Public Schools* we have a series of accounts of what the leading schools of England actually are. They are evidently by different and independent writers, and apparently in each case by a writer who was himself at the school described; and their testimony to the facts may be taken as competent and trustworthy. Mr. Fitch's Cambridge lectures are the exposition by a man whose known abilities and services give special weight to his opinion of what he considers school teaching and discipline ought to be. Such a man's ideal, subject to permissible differences of judgment in this or that detail, may be taken as fairly representing the mind of those competent persons who have given most thought to the subject. Thus, then, we may say that we have the actual and the ideal of English schools confronting one another. Between the two there is a gulf which it will take long to fill; not that we would for a moment disparage the good work that has already been and now is being done towards filling it, often under difficulties which outsiders, for want of knowledge or patience, wholly fail to understand. But first let us glance at the book of facts.

The foundations treated of in *Our Public Schools* are Eton, Harrow, Winchester, Rugby, Westminster, Marlborough, and the Charterhouse. It is hard to see on what principle these names were chosen or arranged. We can think of no reason why, if Marlborough is included, St. Paul's, Cheltenham, and Wellington should be left out. The order of the chapters is that in which we have given the names, and appears to be purely accidental. In one respect it is unfortunate, for the opening essay on Eton, though written with sufficient knowledge and in a lively style, is by far the worst in the volume. The lively style has been its bane. Instead of the serious and temperate kind of discussion required

by the occasion, the essayist has been tempted to adopt a smart leader-writing or even paragraph-writing manner; and the tone of his observations is flippant and capricious throughout. He is a partisan, and we cannot say that he is a fair one. Hardly any person or thing connected with Eton escapes without a sneer. His general point of view appears to be that public schools are, on the whole, of more than doubtful utility, and that Arnold (who comes in for a little sneer too) did more harm than good by reviving their credit among the well-to-do middle classes. Most public school men, and certainly most Eton men, will think this manifestly absurd. We do not think so ourselves, though the view suggested is not our own; and we the more regret that it has not been put forward in a manner free from offence. It is an arguable opinion that the system of Eton is wrong in itself, and that such attempts as have been made hitherto to mend it have been inadequate and half-hearted. But such opinions are not legitimately maintained by casting supercilious ridicule on men who, whatever their intellectual shortcomings may have been, strove honestly to do the best work they could, being what they were, and having the work laid upon them under such conditions as they found. There is something not only unfair, but ungenerous, in some of this writer's remarks on living persons whose only crime has been the want of that reforming genius which is as rare among schoolmasters as among statesmen. Nevertheless, there is good substance in many of his criticisms; but the form in which he has cast them is eminently fitted to prevent them from being attended to by the persons most concerned. As an account of Eton designed for the information of the public at large, the cynical bias of the essay makes it, in our judgment, altogether misleading.

A striking contrast is presented by the chapter on Winchester. The writer of this, while admitting that it is necessary to keep pace with the times, is fully persuaded that in the main all is for the best in the best of all possible public schools. What little we ourselves know about Winchester is good; but the high-pitched optimism of this essay seems to demand certain grains of salt to reduce it to anything like a common denomination with the others. "As for the masters," we are told, "they are a remarkably united body, and, in spite of variety of age, tastes, or opinions, there has never been any hint of disagreement among them." Let us hope that these things are indeed so. In the chapter on Rugby there is a good and temperately written account of Arnold's work. Rugby is, according to its describer, suffering just now from "the fault of being a little mechanical," the usual fate of systematic reforms when the inventing and guiding spirit of the first reformer is no more there. In point of substantial prosperity and success, however, there seems not to be much to complain of. The writer on Westminster strongly urges the removal of the school into the country as the only chance of giving it a new lease of life. Certainly the present results appear to be poor enough; but the question is a burning one among those who are nearly interested in Westminster and its fortune, and we do not presume to pass any judgment of our own upon it. The chapter of general remarks at the end on "Public School Education" is perhaps the most valuable in the book. Every part of it is worth attention, including the final suggestion (startling as it may seem at the first blush), "that our great public schools should frankly offer every facility for pupils arriving by train from the neighbouring towns, spending the whole day, dining at the school, and returning in the evening." Besides the reasons given by the essayist, it is quite possible that something of the kind may in the course of another generation, if not sooner, be forced on one or more of the great schools by mere pressure of numbers. Before leaving this book we must commend the outspokenness of more than one of the writers as to certain questions of moral discipline which it is difficult to speak of at all in public, but as much worse as it is much easier to ignore.

We pass on to Mr. Fitch's Lectures. He modestly describes them as of an "incomplete and provisional character." The incompleteness, however, is rather in the present state of the subject than in the author's command of it. Certainly there is nothing of haste or unripeness in his precepts. The lectures will be found most interesting, and deserve to be carefully studied, not only by persons directly concerned with instruction, but by parents who wish to be able to exercise an intelligent judgment in the choice of schools and teachers for their children. For ourselves, we could almost wish to be of school age again, to learn history and geography from some one who could teach them after the pattern set by Mr. Fitch to his audience. On the rational teaching of arithmetic, too, he gives excellent counsels not without their bearings, if people would see it, on higher mathematical teaching. For it is quite as possible to learn the differential calculus in a mechanical and unfruitful way as the extraction of square roots. But perhaps Mr. Fitch's observations on the general conditions of school-work are even more important than what he says on this or that branch of study. Such matters as light, arrangement of rooms, furniture, blackboards, maps, and so forth, have been till our own time very much left to chance. Here we may learn that in all these details the difference between the right and the wrong way is a serious one. There are good hints about taking notes and the use of books of reference; and we may add that even in higher instruction the art of using books is far too much supposed to come by nature. Our young students at the Universities must waste much time and lose many opportunities of extending their knowledge for want of hints which any one accustomed to work in libraries could give them in half an hour, but which, as things are, it is nobody's

* *Our Public Schools*. London: C. Kegan Paul & Co. 1881.

Lectures on Teaching, delivered in the University of Cambridge during the Lent Term, 1880. By J. G. Fitch, M.A., &c. Cambridge: University Press. 1881.

business to give them. We turn out—or did turn out until very lately—finished scholars who have simply read specific books they were told to read, and are helpless in a library or a museum.

On the head of discipline Mr. Fitch's cardinal maxim is that of all rational lawgivers, whether for boys or for men. Law should be above all things certain; and an inadequate law really enforced is better than a nominally adequate one which is not enforced. In punishments Mr. Fitch wholly disapproves many things that are still much in practice—for example, the clumsy and unjust makeshift of a "general punishment" imposed on a whole class. Corporal punishment he regards as a power to be kept in reserve, and most sparingly exercised, if at all, but not to be formally abrogated. The master of a singularly well-disciplined day-school examined by Mr. Fitch told him there had never been a case of corporal punishment in the school, but asked that this should not be published. "I do not mean to use it," he said; "but I do not want it to be in the power of the public or the parents to say I am precluded from using it." We need hardly say that in at least one or two of our great schools corporal punishment, instead of being appropriated to a few faults of exceptional gravity, is even at this day so familiar as to be in contempt. And indeed we think that the ordinary school system of punishments as a whole—we should have to use *penalty* in the sense of French publicists to give our exact meaning—contrives to get the least disciplinary value for the greatest expenditure of trouble and annoyance on both masters' and boys' part. Much of it is a survival of barbaric notions of justice which legislators have discarded for the last half-century in dealing with the worst of criminals; the chief of these is that the first thing needful is to punish somebody for every offence, the real offender by preference, but somebody at all events. We may add also that most, if not all, of our public schools have greatly erred in the multiplication of impracticable precepts, which naturally involved weightier matters in the disregard that was their inevitable portion. The climax of absurdity was reached by Eton, where within the last twenty years the common and virtually authorized pursuits of the school had to be carried on under cover of transparent fictions. The mysteries of bounds and "shirking" would require an article to themselves; but they are now happily abolished. Another precept of Mr. Fitch's used to be grievously broken at Eton (and doubtless elsewhere):—"It is of no value to learn a thing by heart unless it is learned so thoroughly that it can be recalled without the least mistake and at a moment's notice." A vision of many "saying lessons," half learnt and speedily forgotten, rises up to rebuke us. After this fashion the Sixth Form were deemed, by a presumption of law which there were no means of testing, to make a competent acquaintance with Ovid's *Fæsti*; a work feigned by long school tradition to be easy Latin poetry, as Cæsar's Commentaries are feigned to be easy Latin prose. Yet, by dint of much repetition of a process perfunctory in itself, Eton boys did and (we suppose) do get themselves in a manner saturated with Horace, whereby they never find out how difficult he is.

Mr. Fitch is no less instructive on the art of examinations and marking; but this we pass over as leading too far away, and go on to call attention to what he says of the teaching of science. This is so good that we prefer not to make extracts or attempt a summary, but simply advise the reading of the lecture as a whole. But we shall note the pregnant warning given towards the end, that science "does not mean knowledge, but knowledge obtained by right principles, and in a particular way. You may give a lesson on the future tense which shall be in the highest degree scientific, and you may give a lesson on the thermometer or on the antellites of Jupiter which shall not be science at all." One unlucky verbal slip occurs in this excellent chapter, the attribution of the saying *Hypotheses non fingo* to Bacon instead of Newton. Finally, there are some useful remarks on the limits of what schools can be expected to do. The schoolmaster's business is not to teach boys things which they can learn better out of school, but to make them apt learners both in school and out of it. Neither, again, should schools attempt the work of technical institutes.

A well-educated English gentleman does not, it is true, know so much about a steam engine as an engineer, nor so much about the rotation of crops as a farmer, nor so much about book-keeping as a city clerk, but he knows a great deal more about all three than either of them knows about the other two; and this is simply because his faculty of thinking and observing has been cultivated on subjects chosen for their fitness as instruments of development, and not on subjects chosen with the narrow purpose of turning them to immediate practical use.

One last word of explanation and warning seems needful. The British public listen complacently to the censures of educational reformers on the existing practice of schoolmasters, and think the schoolmasters have treated them shamefully. But the fault is at least half their own. After all, it is the boy's parents who pay the piper, and they have their own indulgence to blame if they will take no pains to call the tune. Education is much more than an article of commercial supply and demand; and how far it ought to have that character is an open question. But it is so to a great extent at present; and when for two or three centuries consumers have gone on paying the price without making, or qualifying themselves to make, the slightest effectual examination of the thing supplied, it is only astonishing that the result should be no worse than it is. No reform of school discipline or teaching can produce its full effect or end in much lasting improvement if it is not backed by the moral support of home influences. How are schoolmasters to inculcate industry on a boy whose father plainly gives him to understand that it is no matter whether he works or

not, or obedience on one whose friends at home teach him to escapades as rather creditable than otherwise? But, as our essayist on Public School Education truly says, "it is wonderful what the British parent will bear, and the evils he will allow his son to encounter, so long as he himself is not personally concerned." A material condition for the reform of British education, if not the first condition, is the reform of the British parent.

AN ENGLISH SQUIRE.*

WE have read *An English Squire* with much interest. It is by no means a faultless story, yet its merits are so largely in excess of its defects, that on the latter the reader will not be inclined, we feel sure, to dwell for any length of time. It is something in these days when the storyteller's art has become "soiled with all ignoble uses," to have a novel that is at once clever and innocent, that is lively and amusing, and at the same time sets up and maintains a high standard of morality. So well written, indeed, for the most part, are these three volumes, that we cannot but regret that, owing to a certain want of art, there are one or two great blunders. The author certainly overcrowds her canvas. At one time we were getting almost bewildered with the number of young ladies to whom in rapid succession we were introduced. We felt too much as a man does who for the first time visits a large family, and is ushered into a drawing-room in which are assembled the half-dozen daughters or so of his host, all dressed alike, and all with the same smile and hair and complexion. Not, indeed, that the three or four heroines of the story before us are alike in their persons. They have a becoming variety, and, what is not always the case in novels of the day, each keeps to her own eyes and hair from the first chapter to the last. She who starts with a pointed chin and a creamy complexion ends with a chin that is still pointed and a complexion that has not ceased to be creamy. She whose eyes glanced and gleamed and melted after a fashion wholly their own, did not live to see them glance and gleam and melt after a fashion that belonged wholly to some one else. There is no confusion of this kind to which we are only too much used in our reading. Nevertheless, as we have said, we do feel at times that the stage is inconveniently crowded; and we feel a little put out at seeing fresh characters pressing in, when with those who are already before us we are by no means so familiar as we could wish. Then, moreover, we must confess that it is by no means in heroines that Miss Coleridge's strength lies. Perhaps it is the knowledge of her weakness in this respect that leads her to double their number. We have before now, in the advertisement of a pantomime, seen a great deal made of the fact that there were two clowns, two pantaloons, and two harlequins. One of each kind used to be enough in our boyhood, and one heroine always satisfied our youth. In the present story this excess is altogether needless, for the real hero remains a bachelor to the end. No doubt he was, at one time, in love with one of the heroines, but unhappily he chose the wrong one, and she treated him very ill. This part of the story we feel sure could have been managed a great deal better, and probably all the young ladies whom Miss Coleridge may number among her readers and admirers will agree with us. They, at all events, will not approve of her leaving a hero a curate and a bachelor. It is a bad example for every parish in the kingdom, and one that must be severely censured. A hero—an English hero—may undoubtedly take orders, but he must get a wife and bring her to a rectory. A second fault in the story is the use that is made of a sudden death and of sick-beds to work great changes in the characters. No doubt by both one and the other great changes are wrought in real life. Nevertheless, in this part of the book Miss Coleridge is wanting in originality. She is following too much in a path that Miss Yonge and others of her class of novelists have trodden more than enough. We feel that she plays with the hero's health much as a man does with his puppets in a show. He is pulled on to his sick-bed and off it just as the moral nature—not of himself, but of some one else—requires that some influence shall be brought to bear on it from without. We are not at all content when we see a character who greatly pleases us afflicted with rheumatic fever or with a delicacy in the lungs, merely in order that another person, for whom we care very little, may be reformed. Heroes are not to be treated like the boy who of old shared in the studies of a young prince, and who was whipped each time that the future king neglected his task. If they are to be racked in their joints by rheumatism, or to be troubled with a bad cough, it should surely be for their own good that they suffer. Before we pass away from a consideration of the blemishes of this interesting story, we must exclaim against such barbarous English as "an unreliable vision." "Reliable" and "unreliable" never were good English, and never can be made good English. They are, indeed, only too popular with newspaper correspondents, but they seem sadly out of place when used by one who bears a name so honoured in literature as that of Coleridge.

Such faults as these, serious though they certainly are, may well be forgiven for the general interest of the story and the excellence of two or three of the characters. One of these characters is as original as it is cleverly drawn. The story opens in the hall of a Westmoreland squire. We at once take to the hearty old fellow—not indeed that he is very old, after all—and we take to him the more as, in spite of his strong frame and vigorous constitution,

* *An English Squire*. A Novel. By C. E. Coleridge, Author of "Lady Betty," "Hambury Mills," "Hugh Crichton's Romance," &c. 3 vols. London: Sampson Low & Co. 1882.

we see in five minutes or so that he is destined to die somewhere about the middle of the second volume. It is a melancholy matter to be the owner of an entailed estate and, at the same time, to be the father of two heroes—of three, we might say. As soon as the young fellows are old enough to fall in love and get engaged, the unhappy parent is sure to go out hunting, have a fall, and make a Christian of. Such was the fate of Squire Lester of Oakby. There was this consolation, that, though we had come to like him very much, yet we had all along, as we have said, been prepared for the blow that was to fall on him and on us. His sons, if they had been as deeply read in novels as we are, ought to have been prepared too. In that case, as most of them were very dutiful lads, they would have felt it their duty not to fall in love. In the Squire's family, as it is first presented to us, there is, with a due allowance of lovers of both sexes from without, an ample supply of interesting characters for a whole novel. The real hero is Cheriton Lester, the eldest son in the group that was gathered together in the old Hall one Christmas Eve. From first to last we like him, and are only vexed that he is wasted with illness, and rewarded with neither a rectory nor a wife. As the story opens we learn that, though he was the eldest among the children gathered in the Hall, he was not the heir to the estate. His father had been twice married. His first wife was a Spanish lady whom he had married when he was still a younger son. By his elder brother's death he had been suddenly summoned home; she had given birth to a son in his absence and had died. The child, whose name was Alvar, had been brought up in Seville by his grandfather, but as heir to an English estate he had, in accordance with his father's wishes, been educated as a Protestant, and had been taught to speak our tongue. The Squire had never seen him till after the story opens. All his affection was for the children of his second wife, and this heir to his estate he looked upon as the supplanter of his favourite son Cheriton. Alvar, on his side, nursed a deep sense of the wrong that had been done him in this long exclusion from his father's house. His half-brothers and sisters, with the exception of Cheriton, were full of the good old-fashioned English intolerance towards a foreigner, and, moreover, were prepared to dislike him as taking the place of their brother, who was so justly dear to them. Alvar's character, the perplexities that he is in through his entire ignorance of English ways of thought, the mistakes he makes, the absurdities into which he falls, the violence and sullenness that disgrace his conduct, the warm and tender kindness that redeems his faults—all these are described with great skill. They are cleverly contrasted with the virtues and the faults of his half-brothers and sisters, who had "an Oakby point of view" from which they regarded everything. In fact, any one who has been intimate with young Spaniards—especially with those who have lived any time in England—will acknowledge at once that, in delineating Alvar's character, Miss Coleridge has been very successful. We must admit, at the same time, that it is in the first half of the book that she succeeds best with him. The high merits of the delineation are not equally well kept up, when, by his father's death, he becomes squire. We fear, however, that the author does not hold the scales quite so impartially as she wishes between the English and Spanish systems of training. Certainly a squire's family in which, out of four sons, one takes a first-class at Oxford and another a double-first, shows an intelligence that is somewhat unusual. On the other hand, Alvar's indifference and absence of any active principle of conduct, though only too common in Spain, are most certainly by no means universal. In Seville these defects in his character may be only too true to nature. In the North-Eastern provinces there is commonly found, as is well known, real vigour and independence of mind. It would not be difficult for a Spanish writer to turn the tables by contrasting some of the best of his young countrymen with the Squire Westerns who still here and there survive beneath the varnish of the nineteenth century.

We shall not follow Miss Coleridge through the various scenes in which with much skill she brings the natures that were so strongly opposed into harmony. Cheriton, from the very first, with his natural sweetness of disposition, was the agent by which this good work was done. But, as we have said, he is made, poor fellow, to do good chiefly by suffering. He is indeed very hardly treated; but, as he really seems to be contented with the lot of a bachelor curate, in a parish, moreover, where there was an entire lack of young ladies, no one else, we suppose, has a right to complain. On principle, however, we protest against such a melancholy end to a hero.

There are two other very good characters in the book on which we can only touch. Cheriton's next brother, Jack, is a clever description of the radical Oxonian. At school he had been devoted to his young house-master, and wrote essays for his benefit, one of which was entitled "On the Evils inherent in every existing Form of Government." He had not been many months at the University before he had learnt, we are told, whenever he looked at pictures, to find fault correctly with what would have naturally been pleasing to him, and to admire much what a few months before he would have thought hideous. There are many touches of the same kind which we strongly recommend to the notice of the junior readers in the Union Society. Still better drawn is an old Westmoreland parson, who is very slowly brought into a state that made some approach to decent behaviour by his affection for his niece and the hero. She persuades him to let her start a Sunday school. Up to that time there had been no school of any kind in his parish. He went round to the cottages, and rapped at each door with his dog-whip, calling out, "Eh, Betty, there's a

grand new start in Eldarthaite. Here's Miss Virginia going to turn all the children into first-rate scholars. Wash them up, and send them over to my house on Sunday morning, and I'll give a penny to the cleanest, and a licking to any one that doesn't mind his manners." So pleased is he with the result, that at last he exclaims, "I must set about learning the Catechism myself." Herein, by the way, he reminds us of that benevolent ecclesiastic, Gil Perez, who undertook to teach his nephew, Gil Blas, to read; "ce qui ne lui fut pas moins utile qu'à moi; car, en me faisant connaître mes lettres, il se remit à la lecture, qu'il avait toujours fort négligée."

Had we more space at our command we could dwell on other characters in the book, which, though of less importance, are nevertheless cleverly drawn. As it is, we must be content with recommending these three volumes to the attention of all those who voluntarily read novels. We feel sure that, unless their taste has been spoiled by the corrupting literature that is too common, they will read them in spite of their faults, which are serious enough, with interest and pleasure.

THE HAMILTON PAPERS.*

TO none of its members is the Camden Society more indebted than to its present Director, Mr. S. R. Gardiner, for interesting additions to its series of publications. Nor will many students of English history be inclined to demur to any judgment which the highest living authority on the earlier Stuart and Civil War periods may offer or imply, concerning the value of documentary materials belonging to the times in question. The volume before us is nevertheless likely to disappoint readers who, in a collection of papers edited by Mr. Gardiner, might not unreasonably expect to find one of two things—some really new matter, or some really new light. The earlier half of this volume will be lucid enough to those who take the hint given in Mr. Gardiner's laconic preface, and compare with the letters of the Marquess of Hamilton, now first printed for the Camden Society, the letters of King Charles I., together with the other documents and the connecting observations, in Burnet's still most readable *Memoirs of the Duke of Hamilton*. But it will, we think, be found at the same time that little of importance is added by the publication of the original complaints of the unfortunate Iligh Commissioner to what was already known from Burnet, though the latter may as a biographer have had his own shrewd reasons for not printing too many papers "so full and so particular," as he says these are, "in the Advices and Advertisements" which they contain. In the middle of p. 106 of Mr. Gardiner's volume, however, his series of documents suddenly, and without more than a marginal note of warning, takes a leap of a whole lustrum; and we find ourselves in days when the question was no longer as to who would take the King's Covenant, but as to whether the King would take the Covenant himself. The large majority of the letters which follow belong to the year 1648—perhaps, on the whole, the year of English history of which it is at once the most difficult and the most interesting to study the various political transactions as a continuous whole. One might have hoped that, so far at least as his own documents are concerned, the editor of the *Hamilton Papers*, following the example set by himself as editor of the *Papers Concerning the Relations between England and Germany in 1618-19*, would supply a sufficient connecting thread, without, of course, anticipating the results of any more wide-spreading labours in which he is engaged. At all events, Mr. Gardiner and the Camden Society have accustomed us to rather more liberal notions of "editing" than this volume exemplifies. Instantaneous deciphering without a key is assuredly not to be expected even from experts; but what possible profit can result from the printing of such a passage as the following, even in the publications of the most learned of historical Societies?—

But I have had no hearing nor discourse but civillities, except a little in privat with 20, which was interrupted d 84, 107, y 22, 26, w 81, 22, 57, 9, 26 but I can give no certainty.

By the way, is "sergeants" a very hazardous conjecture for the queried "gerganes" in p. 74?

We used just now the epithet "unfortunate" in speaking of the first, and, so far at least as the vicissitudes of his career are concerned, the most memorable, of the Dukes of Hamilton. For, though we are strongly inclined to agree with Mr. Masson that Hamilton's ability was, "on the whole, chiefly of that kind which might come from mingling with men personally, with the advantage of being a Marquis and of the blood-royal," yet his ill-success and his calamities cannot but be in the main imputed to times which were too much out of joint to be set right even by a statesmanship of far larger calibre than his. He is doubly unfortunate in the peculiar difficulty which must at the present day beset any attempt to render justice both to the ability which he indisputably possessed and to the loyal spirit by which we believe him to have been at all times actuated. On the most critical occasion in the whole course of his ill-fated Commissionership, he conducted an utterly hopeless case with so much acumen, vigour, and dignity, as to elicit from an opponent of his policy the confession that, "if the King have many such men, he is a well-served prince." Yet

* *The Hamilton Papers; being Selections from Original Letters in the Possession of His Grace the Duke of Hamilton and Brandon, relating to the years 1638-1650.* Edited by S. R. Gardiner. Printed for the Camden Society. 1880.

he had never expected anything but utter failure at the Glasgow General Assembly, his account of which, written to King Charles on the day after its opening, is worth extracting from one of the most curious of the letters contained in Mr. Gardiner's connexion:—

MOST SACRED SOVEREIGN.

I came to this town on Saturday the 17, wher ther ar such a crue assembled togidder, and thatt in shuch equippage as I dare boldlie affirme neuer mett sines Christianitie was professed to treatt in ecclesiastick affaires. The sukses of this meeting can proufe no other than that uich I haue formerlie mentioned, and I will not trubill your Ma^{ty} with repetitions of that uich is so unpleasing.

Yesterday the 21 was the day apoynted for the dounfalling of the assemblie. Accordinglie we mett, and treulie Sir, my roule was neuer sader then to sit shuch a sight, not oune goune a mongst the wholl Companie, manie suords, but manie more daguers (most of them hauing left the guns and pistoles in ther lodgings); the number of the pretended members ar about 260, eache one of this bath tou, sume 3, sume 4 assessores, who pretend not to haue uoyce, but onlie ar come to argue and assiat the Commissioners, but the true rasoune is to mak upe a greatt and confused multitud, and I will ade a most ignorant on, for sume Commissioners ther ar, who can neather urytt nor read, the most part being totallie uoyd of learning, but resoluod to follou the opinion of thes few ministers who pretend to be learned, and thes be the most rigid and seditious puritanes thatt liueth. What then can be expected but a totall disobedience to authoritie, if not a present rebellion, yett this is no more then that uich your Ma^{ty} heath had just rasoune this longe tyme to loke for, uich I uould not so much apprehend if I did not find so greatt an inclination in the bodie of your Consaill to goe a longat ther uay, for belife me, Sir, ther is no puritan minister of them all who uould more uillinglie be fred of Episcopall gouernance then they uould, whoes fault [it is] that this unluckie busines is come to this height.

In general, however, he performed with no contemptible skill what may or may not be a morally contemptible task, but what at all events is one which most practical politicians are, at one stage or another of their career, called upon to execute. In other words, he contrived to gain time by negotiating, while all along convinced that his endeavours were perfectly useless for averting rebellion, and that no other means were left for teaching his countrymen "obedience" except the *ultima ratio* of "curbing them by force." Read under the light of such disclosures, the argument contained in another of Hamilton's letters certainly gains strength—that the Covenanters would interpret the prorogation of the Edinburgh Assembly as a proof that the King never intended any of the offers made in his proclamations and declarations to be really carried out; while the virtuous indignation of the following passage in the High Commissioner's opening speech at Glasgow, as printed by Burnet, becomes just a trifle theatrical:—

The next false, and indeed foul and devilish Surmise, wherewith His good Subjects have been misled, is, that nothing promised in His Majesties last most Gracious Proclamation (though most ungraciously received) was ever intended to be performed, nay, that the Assembly it self; but that only Time was to be gained, till His Majesty by Arms might oppress this His Own Native Kingdom; than which Report Hell it self could not have raised a blacker and falsier.

On the whole, his success in "holding off," as he calls it, for so long the inevitable outbreak, although in the meantime he had to "unk" even at the "uickett and accursed ministers" in whom he recognized the source of all the country's evils, proves him to have served his sovereign discreetly as well as loyally. Doubtless much of this success was attributable to a manner which must have well corresponded to the grandeur of his station—a station too near the throne to allow Charles I. in the days of his adversity to judge Hamilton with the generosity he had had to spare for him in better times. Clarendon has, with his usual effectiveness, described the mingled gravity, courtesy, and simplicity of Hamilton's manner; and Burnet takes occasion to contrast his self-restraint in speech with the volubility of the Earl of Lanerick, afterwards second Duke. It may at first sight seem strange, but it is of course perfectly natural, that in the first Duke's letters to the King we should lose sight of the diplomatic ability of the former in the midst of his complaints, certain to prove acceptable to his royal master, "of these people by me more heated" (*sic*) "then euer anie uas." If no representative of royalty has ever had greater difficulties to contend against, neither has any groaned more loudly to his master over the task imposed upon him, and thus himself more persistently contributed to widen the breach which it should have been the desire of both to fill. He thus contemptuously refers to what in his opinion is merely the *pretended* religious character of the Covenanters' movement, as if of set purpose to inflame the King's own religious prejudices:—

It is now to euident and apeires playnlie thatt ther hes beine sume what eales intendit more then the prseruation of religion; for God knoeth thatt heath onlie serued to blind the uiglar; for I cane assure your Ma^{ty} thatt this Couenant of thes is intended so to linke this uickett people togither as they meaine neuer to obey anie of your Ma^{ty}'s commanda nor of your successours but shuch as shall be plesing to them selves, and of what dangerous consequens this, is your Ma^{ty} can best judge.

And so, *ceterum censeo*:—

To find a remedie for this so great euill, I can see none, except itt be by force.

Perhaps the hardest of his trials was one which even Irish Viceroy and Chief Secretaries have never had to bear—namely, that he could find no native lawyers to do the work of the Crown on so all-important an occasion as that of the Glasgow General Assembly. The "Clerke Register" he considers "a uoorse instrument then anie Couenantier." Sir Lewis Stewart has declared that, though he is ready to keep his back-door open, any public appearance on his part in behalf of Episcopacy would

lose him the whole of his practice in Scotland; and another lawyer, "on Gilmaure," has used the same insupportable argument. The best man of all for the King's purpose would be Sir Thomas Nicolson; "bot euen he, the neuer till nou had anie religious, pretends scruples in conscience, nor can I with him in anie uay prsuade." It might perhaps have been well for Hamilton had it been possible for one who was like himself both a royalist and a patriot to abstain, after the attempt at force had twice collapsed, from seeking to hasten the reconciliation on which the King's visit to Scotland in 1641 was expected to set the seal. Though his loyalty was solemnly vindicated by Act of Parliament, it was no longer a loyalty altogether acceptable to King Charles—a prince who, as the history of his relations with Hamilton helps to show, found it even more difficult to be just than to be generous. But we have less need to dwell on the strange and obscure episode of the arrest of the Duke of Hamilton and his brother at Oxford in 1643, inasmuch as, naturally enough, no documents of that date occur in Mr. Gardiner's collection. We may add that, as might be expected, Hamilton's letters contain only a passing reference to the relations between the Covenanters and certain "English nobillmen" in the period between the first and second Scottish "wars." This reference is in a letter of May, 1639; not long after which date the sorely-tried statesman had the happiness of being allowed to withdraw for a time from public employment.

The interest of the latter part of this volume lies, we think, chiefly in the evidence once more furnished by it of the trickiness and insincerity of Charles I. at a time when, it is but fair to confess, few men would have held fast to what was noblest in their natures. It is easier for a king, especially when trained in the grand Spanish manners, to keep his countenance on the receipt of a fatal piece of news over a game of chess, than to deal fairly and candidly by rebels bidding against one another for the makeweight of his acceptance of their terms. And it must have been more especially difficult for Charles I., who sincerely believed in his mission, to think it at an end when the news reached him, as it reached the Earl of Lanerick in Scotland, that

the juncto of Independants have held thrice in priuate since Thursday last, but haue not, as I heare, concluded anything, only 'tis reported they haue amongst themselves voted for Monarchy, and then, the question being who should bee the Monarch, Martin sayd if wee must haue that gouernment wee had better haue this King and oblige him then to haue him obtruded on us by the Scotts, and owe his restitution to them.

Indeed time seemed very swiftly to have brought to Charles an opportunity of vengeance upon the Scots after their surrender, or betrayal, of his person—almost too swiftly, inasmuch as the very Cavaliers resented the participation in the so-called Second Civil War of "that perfidious mercenary nation." As is well known, the "rowtid naturall malice in the hartis" of Englishmen of all parties was abundantly satisfied by the result of the battle of Preston; and soon afterwards the first Duke of Hamilton was once more a prisoner, this time doomed to await the day on which he was to pay the last penalty of his much-doubted and much-enduring loyalty.

Some curious information concerning the fleet, together with a noticeable reference to "the business of the King's being *poysoned*," will be found in a letter dated June 24th, 1648, of which the greater part has been deciphered by Mr. Gardiner. There are other things in this collection of which he will no doubt make good use before he permits the crowning volumes of his important historical work to see the light of day. Meanwhile, we can only wish that he had found leisure and inclination to enhance the attraction which such a volume as these *Hamilton Papers* must possess for those who like to hear politicians of the past speaking and to see them writing for themselves. That they should spell for themselves likewise is a matter of course for writers of the Fantastic age. At the same time, we have rarely been so much diverted with any spelling as with that of the first Duke of Hamilton. Perhaps his principles of orthography, which Oxford had failed to regulate, had been hopelessly vitiated during his German campaign under Gustavus Adolphus, from which no man could have brought back any single language unmangled or unspoilt.

DIXON'S ENGLISH CHURCH HISTORY.*

WE said of the first volume of this work that its author is as yet but on the threshold of an enterprise which will contribute largely to our exact knowledge of English Church history from the Reformation downwards (*Saturday Review*, July 27, 1878). Mr. Dixon has spent nearly three years in preparing a second volume, which brings down his narrative only to an early period in Edward VI.'s reign—that is, from the year 1538 to 1548. Working at this rate we know not how to hope that he will live to complete the labour which he has boldly undertaken, and for the adequate completion of which he is well furnished with the most essential qualities—diligence, love of truth, habits of patient research, knowledge of human nature, and deep sympathy with it in its higher aspects. For impartiality Mr. Dixon would doubtless be loth to claim much credit, if by that term he meant the false liberality which, discerning how much might be said

* *History of the Church of England from the Abolition of the Roman Jurisdiction*. By Richard Watson Dixon, M.A., Vicar of Hayton, Honorary Canon of Carlisle. Vol. II. Henry VIII. A.D. 1548-1553; Edward VI. A.D. 1547-1548. London: Routledge & Sons. 1881.

on both sides of an important question, is slow to commit the writer to either of them without reserve. Beyond a doubt our author views his national Church from what in cant phraseology would be called "an Anglican standpoint." He is proud of her primitive independence, and not unwilling to pay a heavy price for the recovery of her liberties from the grasp of usurpation, whether exercised by a foreign prelate or a temporal ruler. The result of the English Reformation is with him little better than the exchange of one hard master for another; so that in Henry VIII., in Cromwell, in the courtiers of Edward VI., he finds no more to praise than in a Gregory VII. or Innocent III. But here we are glad to observe a marked improvement both in tone and spirit in this second volume as contrasted with the first. Passages there were in the former book, written with so much bitterness of feeling against the overbearing tyrants and timid slaves of Henry VIII.'s reign, that we could not help asking Mr. Dixon what useful end they were likely to answer; we even deemed them a little unbecoming the position of one who is the incumbent of a parish, and in some sort a dignitary of the Church. We do not imagine that he was moved by our remonstrances, but rather by his own sense of the fitness of things. Certain it is that in the second volume his tone is widely different, under provocations at least as great. Even when, in its sure but silent course, a just judgment had overtaken that great transgressor Thomas Cromwell; when in the net he had made for others—a Bill of Attainder—his own feet were at length taken; there is no undue exultation over the wretched man's fate, but rather a tinge of natural compassion for a fall so sudden and so terrible. "A revolutionist who is nothing but a revolutionist—like a conqueror who depends only on his sword—must go on or perish." Such is the sufficient moral of that unhappy career.

The special subject of the second volume is the suppression of the monastic houses, great and small. Mr. Dixon points out that the details of that momentous revolution have never yet been brought together, and he has had to collect his materials from many scattered sources, chiefly from unpublished State papers. Certainly the tale is monotonous and fraught with sadness, but it is right for us to realize the fact that those Leviathans of sacrilege—the Russells, the Audleys, the Seymours, and the Dudleys—only appropriated on a large scale spoils that were shared more or less by almost every gentle family in the kingdom. If, as has been sometimes observed, the houses of those who were enriched by the estates of the monasteries were soon made desolate, the punishment must have extended more widely than is usually supposed. Ecclesiastics, for the most part, kept their hands clean from this pollution. Kitchen of Llandaff stands pretty much alone under this evil imputation. Crommer made "a good pennyworth" of Kirkstall, the gem of the yet limpid Aire. Thirlby took a single manor from Westminster when he passed on from that short-lived see to Norwich. Most of the other exchanges (usually of gold for brass) were forced on the bishops at every vacancy up to the very close of Elizabeth's reign: so that before Bishop Andrews was preferred to Chichester in 1605, he had already thrice refused a bishopric on terms which his conscience abhorred. It is seasonable to be reminded by our author that what was popularly called the gift of an abbey from the king included not the lands, but only the site and so much of the monastic buildings as Cromwell's visitors left standing after they had seized the plate and jewels, and had sold the very lead from the roof. In some cases, however, even this was a noble gift, as, for example, the fields and gardens granted to Lord Russell, which extended from Covent Garden northward as far as what is now Euston Square; sometimes it was of but slight value. We commend to our readers the weary catalogue of spoils of the monasteries compiled by Mr. Dixon's care, and congratulate those who find no ancestor of their own on the inauspicious roll of these "new monastics."

The political and civil events of the times are touched with a light hand, and are fairly enough regarded as familiar to Mr. Dixon's readers. Thus a single clause despatches the sorry story of the King's fifth consort—"By this time Catherine Howard had avenged the former wives of Henry"; and nothing seems to tempt our author from this judicious parsimony save the desire to cast a dart at the very vulnerable armour of Mr. Froude, the only defender that Henry VIII. has found, or is likely to find, in our day. Mr. Dixon's summary of that monarch's character and its influence on those about him is written thoughtfully, and affords an adequate specimen of his style when at its best:—

Henry was indeed the man who was fittest to direct the revolution of the rich against the poor. His stupendous will was guided by certain primary and unfeeling instincts; his fierce temper would brook the domination of no human being. The subtlest flattery failed to insinuate itself into him; the haughtiest spirits got no hold upon him; arduous or splendid services awoke in him no sentiment of royal confidence. The proud Wolsey, the astute Cromwell, to whom in succession he seemed to have abdicated his kingship, found that they had no more power over him than the last dicier whom he had enriched. When he met with a conscience that resisted his enormities his resentment was implacable. . . . The well-known lineaments of this monarch expressed his character. That large and swelling brow, on which the clouds of wrath and the lines of hardness might come forth at any moment; those steep and ferocious eyes; that small, full mouth, close buttoned, as if to prevent the explosion of perpetual choler; these give the physiognomy of a remarkable man, but not of a great man. There is no noble history written in them; and though well formed, they lack the clearness of line which has often traced in a homelier visage the residence of a lofty intellect. A great tyrant tries the nature of men; nor have we the right, if we witness, to exult over the spectacle of the humiliations, the frailties, or the crimes of those whose fears, whose cupidity, whose arrogance were excited by such a sovereign as Henry. Under him all were distorted, all were made worse than they would have been. It is the last baseness of tyranny not to per-

ceive genius. Of Seneca and of Lucan the slaughterer was Nero. Henry the Eighth laid the foundations of his revolution in the English Erasmus, and set up the gates thereof in the English Petrarch.

This is good vigorous writing, but we fear that the gallant Surrey made a very English Petrarch indeed. Sir Thomas More lacked but the delicate grace of Erasmus to be his equal in wit and scholarship, as he infinitely surpassed Erasmus in courage and firmness of purpose.

We could more readily allow the benefit of the excuse suggested by Mr. Dixon in the above extract for Archbishop Cranmer, if he had maintained consistency and independence in the two succeeding reigns. But we fear that Dean Hook's picture of the man is far more exact than any that our author's tenderness would permit him to draw. Cranmer seems to have been the ever-ready tool of men far worse than himself—of the Protector Somerset and then of Dudley Duke of Northumberland, no less than of Cromwell and his master. Mr. Dixon clearly looks onward with dismay to the tale he will have hereafter to report of those recantations by the Primate at Oxford which so sorely tried Dean Hook's honest and robust temperament. While relating the terrible circumstances of Anne Askew's death, at which Shaxton, the degraded Bishop of Salisbury, had to preach a sermon which was to be his own public act of penance, we read that "he was the first English bishop that had ever made so pitiable a public figure"; would he had been the last! Not but that Cranmer could use brave words enough on safe occasions, but it must be to persons considerably his inferiors in rank. He had a dispute, for instance, with the prebendaries of the new foundation at Canterbury, and takes the opportunity, when writing to Cromwell, by way of whetting (if there were any need) the Vicegerent's insatiable greed, to advise the suppression of the whole order. "Experience has long shown that prebendaries are a set of men that spend their time in idleness. A prebendary is commonly neither a learner nor a teacher, but a good viander. The beginning of prebendaries was proposed for the maintenance of good learning and good conversation; and so were religious men [i.e. monks]. But the one state is as much abused as the other; they may perish together." Mr. Dixon's comment on this precious counsel is probably intended for members of the Cathedral Commission: "to a later age there was left the happy device of exploding the substance and retaining the name of the disputed dignity." Though prebendaries (now so called a *non prebendo*) can be no longer vianders, most of us know a few Cathedral precincts wherein sacred learning yet lingers, not as yet disendowed. Only, after such language as this, let us hear no more of Cranmer being an unwilling or appalled spectator of the Church robbery which he thus absolutely invites.

Stephen Gardiner appears, on the whole, to attract the largest share of our author's esteem, and that for a reason which none can deem inconsiderable. He believes that "wily Winchester" (Fox was great at alliteration, if at nothing else) was the only public man in that generation who knew his own mind and kept to it. Connected with Henry through Elizabeth of York his mother, in some sinister way, Gardiner grew up at Court as a sort of unrecognized cousin, and learnt early the art of walking warily on a slippery path. Being the elder man, and not the less able, he probably moulded Henry's mind when the rejection of the Pope's supremacy with him was transformed from a mere political convenience into a wholesome and necessary doctrine. It is hard to believe that any patriotic Englishman, whether priest or lay, could contemplate unmoved the tyrannical usurpations and intolerable exactions of the Papal see, which had never, save for less than five years (A.D. 1154-9), been filled by a native of our island. All orders of the clergy paid to Rome the first-fruits, which then really represented the first year's income. Every year (even the first, when they received nothing) the tenths went the same way; English bishoprics and great preferments were reserved, often in plurality, for foreign, chiefly for Italian, priests; all monastic houses, all friaries, were exempt from episcopal jurisdiction. No more popular act was ever carried out than the abrogation of these intolerable burdens; and in this work Gardiner went heartily with his royal master. The bitter enmity which had ever subsisted between the secular clergy and the regulars would make him indifferent to the fate of those who had long been thorns in the bishops' side; but a change in the doctrine of the Church he resisted to the uttermost; the denial of Transubstantiation in the sacred elements seemed to him nothing less than a formal renouncing of the whole Christian faith. For that faith, as understood by him, he endured imprisonment throughout Edward VI.'s reign, and, if the necessity had been laid upon him, he would not have refused to die. When we come to Mary's reign Mr. Dixon may find it harder to vindicate Gardiner's entire consistency. He had again to submit to the supremacy of Rome, and that not only as one of the chief prelates of England, but as Chancellor of the realm and virtually Prime Minister. Yet even then, it must be remembered, he opposed the Spanish match to the utmost of his power; and, so long as he lived, the demon of persecution was kept fast bound. The guilt of exciting the unhappy Queen to the deeds of blood which have made her name a byword of infamy rests, not with Gardiner, but with the Spanish counsellors who came over with Philip, and we fear we must add with Cardinal Pole, whose well-nigh unparalleled misfortunes have procured for his memory an indulgence which, on his own merits, he could hardly lay claim to.

Every page of this volume contains fresh materials for the history of the critical era of which it treats, and enhances our respect for the writer's industry and sound judgment. Among the latest

of the events recorded is the introduction into Parliament of the draft of the greatest by far of the productions of the English Reformation—the first Prayer-book of Edward VI., the work of a Commission sitting at Windsor Castle, consisting of six bishops and six doctors, with the Primate at their head. Of these divines Mr. Dixon truly says, "They had good models and good sources of principles, and the researches of the present great school of liturgical writers have proved that they neither feared nor were unable to ascend to the highest Christian antiquity in search of purity." To this most just conclusion he is led by a careful review of the ancient sources to which the Commissioners resorted, which were chiefly, though not exclusively, the liturgies of the Latin Church. From Leo the Great (A.D. 440-461), whose "Tome" did such good service at the Fourth General Council, and who seems to have first revised Collects of an earlier date, Mr. Dixon passes in review the Sacramentaries of Gelasius (A.D. 492-496) and of Gregory the Great (A.D. 590-604). Then from the Roman Service-book, as modified by Gregory VII. (A.D. 1073-1085), he comes to Cardinal Quignon's Breviary of 1535, purged as it was too thoroughly to be cordially accepted by the Church of Rome, and so at length to the Tridentine Breviary of 1568. Nothing can well be more instructive than Mr. Dixon's discussion of the whole subject, especially his clear contention that the Canonical Hours were from first to last a monastic arrangement, rather interfering with and confusing the order of public service in parish churches.

In our examination of his former volume we ventured to remonstrate with our author on certain mannerisms and tricks of style, which seemed incongruous in a serious work like the present. We cannot say that the second volume is quite free from this class of faults, yet they are less frequently met with than before. There is in Mr. Dixon a certain dry humour which tempers his natural indignation when he has to describe acts of flagrant wickedness, and which sometimes seems a little out of place. The exploits of London and Leigh and Layton, the tools of tyranny who visited the monasteries, their rapacity, their falsehood, their vile hypocrisy, are told in a mock-heroic strain which we could not quite enjoy. But the author is master of a species of irony so subtle that we hardly know at times whether he is in jest or earnest. At whom is he poking fun in the following passage? Not surely at Leland, to whom we are indebted for many a characteristic note of time or place which, but for his ill-requited zeal, would have been swept away from memory:—

No sooner were the monasteries destroyed and their libraries scattered to the winds than the great antiquarian age was begun. In the beginning of the year 1545 John Leland presented his New Year's Gift to the King. This unhappy man, a clergyman, one of that inexplicable race who haunt old libraries, crawl around mouldering walls, dwell among tombs, and for no earthly advantage lose their youth, their eyes, their nerves, in poring over the various relics of departed ages; who hold a life to be well spent in clearing an inscription or rectifying a date; who maintain that what is old is venerable; and who sometimes publish a book at the cost of their substance, that they may preserve some portion of the past from the devouring vitality of the present.

It is a little too bad to laugh at those harmless enthusiasts who supply the rough materials which are built up into a fabric such as this fair history. We observe that Mr. Dixon has appended an index, which might be made more complete, to serve both his volumes. It is to be hoped that so unusual a course is not designed to prepare us for much delay in bringing out future instalments of his work. We believe that Mr. Dixon is already well advanced in middle life, and his task is hard and tedious. It would be sad—we must say it once more—if his labours, like Macaulay's, should be broken off in the midst, through a miscalculation of the powers of human endurance, or wilful blindness to the flight of time.

A MODERN GREEK NOVEL.*

THE War of Liberation is to a Greek of to-day what the defeat of the Persians was to his forefathers—a reminiscence of glorious achievements and an incitement to further efforts in the cause of national freedom. An appeal to the memory of the brave men who fell at Marathon was a rhetorical device of sure and certain effect in ancient Athens, as we know from the speeches of their orators; and their modern descendants are equally safe in alluding to the massacre of Scio, the sieges of Missolonghi, or indeed to almost any of the events that marked the phases of the memorable struggle that lasted from 1821 to 1827. There is this difference, however, between the two cases. The speakers who decanted on Marathon in the days of Philip of Macedon appealed to memories which had become almost as vague and distant as those of the Spanish Armada are to Englishmen. Memories of the War of Liberation, however, are still as real to Greeks as those of the Napoleonic campaigns in Prussia are to Germans. There must be old men still living whose childish recollections recall the daily danger of death and outrage in which the whole nation lived for nearly seven years. We in England have totally forgotten the enthusiasm for Greece that was kindled during that period. We had then not long escaped from a threatened invasion of our own country; the inhabitants of the coasts of Kent and Sussex had actually seen the sails of the French men-of-war; and some, as we have heard an old lady relate, had even beheld the appalling spectacle of the crew of an English fishing-boat

transferred to the deck of a French frigate, defenders of the hamlet were running in all directions to find the key of the battery. In consequence, the cause of Greece had warm goodwill in England, and when, in 1823, Lord Milton, as chairman of the London Greek Committee, spoke of "the sublime spectacle of a nation awakening into light and freedom," he appealed to feelings born of an imminent peril at home that was still fresh in the minds of everybody. Byron, again, whose popularity was then at its height, had made the beauty and desolation of Greece, the bravery of her sons, and the cruelty of her oppressors, the theme of almost every poem that he had written, and probably did more than all the other Philhellenes put together in stirring up the interest of his countrymen. The result was an immense enthusiasm. At the present day, however, these affairs have become matters, not of personal recollection, but of history. It needs some little research to become acquainted with them. Even the poetry of Byron is not read or admired as it used to be; and the incidents of the last few months of his life, his unselfish sacrifice of such fortune as he had to give, the sound common-sense of his advice to the Greek Committee and their protégés, his own departure for Greece,

Où finir en héros son immortel annal ;

and his death at Missolonghi, make but little impression on the present generation. Moreover, the cause of suffering nationalities has become a little hackneyed since those days. The "revolutionary principle" which alarmed the plenipotentiaries at Verona in 1822, and made them refuse admission to the Greek envoys, has taken wider and wider sweeps, and our active sympathies have been enlisted by turns for Poles, Italians, Armenians, Syrians, and Bulgarians, so that we have well-nigh forgotten our first friends in that direction. The Greeks themselves, too, have done much to change our friendliness into indifference, if not into positive dislike. The spectacle of their internal dissensions has not been edifying, and the insecurity to life and property that once subsisted there, of which the most terrible instance was the murder of the English travellers at Marathon in 1870, has made us regard their attempt at self-government as something very like a failure, and has inclined us to accept the brilliant paradoxes of *Les Rois des Montagnes* and *La Grèce Contemporaine* as an impartial account of modern Greece.

M. Gennadius, the translator of *Loukis Laras*, has been too long resident in England not to be well aware of these sentiments; and he must have rejoiced greatly, as a Greek patriot, when the publication of M. Bikelas's work—which first saw the light in an Athenian serial called the *Hestia*—gave him an opportunity of putting the other side. For such a purpose nothing could have been selected better than "Reminiscences of a Chiote Merchant during the War of Independence." Such a subject takes the reader out of the noise and dust of modern politics into a period where sympathy is sure to be, as heretofore, on the side of the Greeks; and where, without fear of accusations of partiality, the writer can exhibit them at their best and the Turks at their worst. The form, too, is admirably suited to the end in view. An historical essay, or a controversial pamphlet, would have been far less effective than this simple story of suffering which suggests so much, while it says so little. The *Romans Nationaux* of MM. Erckmann-Chatrian have doubtless served as a model to M. Bikelas, as his translator admits. But he is no servile imitator. He tells his story with a natural freshness that is thoroughly original, and, by making his hero admit at the outset that personal bravery is not his strong point, he suggests very adroitly the cruelty of the Turks in persecuting such defenceless persons. Loukis thus excuses himself for not having borne arms in the struggle for independence:—

While thus narrating the ups and downs of my life, I owe it to you, my good reader, to make you more familiar with my own humble self. It is necessary I should confess to you, in all sincerity and humility, why and wherefore I was neither morally nor physically fit to act then as I should now expect that my children would act under similar circumstances. This confession will not exalt me in your eyes, but my intention is not to mislead you by making myself appear better than I was or am now.

I said both morally and physically. The sad truth is, that I am weakly in body, and I have never been able to forget, in the presence of either men or women, the smallness of my stature; being conscious of it, I labour constantly under the impression that others also remark it. Even now, although I enjoy the consideration of my fellow-countrymen, although I often preside at their meetings—perhaps because only of my advanced age, or because of their kindness towards me—I confess I can never get the better of the constraint which the sense of my diminutiveness begets within me. And, after all, I am now in good health; but, until I grew up into manhood, the infirmity of my constitution rendered my bodily appearance still more insignificant. Besides, boys were not then reared up as they are now. Neither at school nor afterwards had I any opportunity for bodily exercise.

Thus, being small in stature and feeble, while in Pappa Flouti's school I had become the butt of my schoolfellows' jokes, and later in the khan at Smyrna I passed by a nickname of Loukis the Mite. All this, coupled with my own humble appreciation of my powers, was surely not calculated to develop within me a heroic turn of mind.

The speaker is no doubt a real person, but the translator admits that the notes given by him to M. Bikelas were of the most meagre description. It is not improbable, therefore, that other narratives may have been used to supplement his, and that the incidents of the escape from Scio may have really occurred to some of the fugitives. The story begins in 1821, when Loukis and his father are residing as traders at Smyrna. His mother and sisters had stayed behind in Scio, and when the first rumours of an insurrection in Greece reached Smyrna, and signs of Turkish reprisals

* *Loukis Laras*. Translated from the Greek of D. Bikelas by J. Gennadius. London: Macmillan & Co. 1881.

became apparent, they managed to make their escape on board a schooner flying the Russian flag, and reached their native island in safety. In March 1822 they left the principal town, where they had hitherto lived, and sought refuge in their tower in the country. One morning they saw the Turkish fleet bearing down on the island, and the insurgent fleet in full flight. They felt that the danger they had so long apprehended had come at last, and they held a council with their neighbours in the little village church as to what should be done. They determined to seek the western coast of the island, opposite Psara, whence they hoped to be rescued. So they buried their plate in two sacks in the garden, and set forth. After a long and toilsome journey they reached the coast, where they found a vast crowd of fugitives already assembled. There were no boats, and the wind was blowing hard. So they continued their journey to Mesta, and there rested awhile. No Turks were to be seen, and they began to hope that the persecution had ceased; when one morning Adriana, their nurse's daughter, rushed in, pale and dishevelled, exclaiming "Fly! hide!" An old woman hid them in a stable, while the Turks pillaged, slew, or made captives of all the fugitives they could discover. Every moment they feared that their retreat would be found out; but at last the Turks went away, and a captain offered to give them a passage. For the exciting incidents that befel during the embarkation, which the Turks discovered at the last moment and tried to prevent, and the sad end of poor Adriana, who drowned herself on the voyage rather than survive her shame, we must refer our readers to the book itself. The incidents are not particularly new, but they are told with a dramatic force and a simple pathos that makes the reader feel that he has before him a true description of what real persons underwent. The fugitives could not be received at Psara, so they were taken on to Mykonos, whence, after wandering from island to mainland and mainland to island, they settled themselves at Tinos. The father had meanwhile died, and Loukis found himself the sole support of his mother and sisters. A lucky chance threw in his way a relic of their former stock, two cases of caps that had been consigned from Venice to their house at Smyrna. With the trifling capital, about 40*l.*, which they realized, and which was preserved to him by the honesty of a consul, Loukis commenced a retail business, which in a few months brought him in a decent income. He had now been absent from Scio about three years, and a longing to go back and try to recover the valuables that had been buried under the apple-tree in the garden took possession of him. The story of his expedition, disguised as a peasant of Tinos, his capture by the Turks, his liberation, and his return to his old home, which he finds occupied by the harem of Nejib-Agha, a Turk of rank, is admirably told, and is nearly as exciting as that of the flight from Mesta. By the help of his father's old gardener, who had taken service under the new possessor of the property, he finds the valuables and conveys them in safety to the house of one of his father's old friends. His reason for possessing himself of the hoard had been to provide marriage portions for his sisters; but it was destined to be put to another use. While loitering about the house he had caught sight of the harem, walking in charge of a eunuch. Among the children he had recognized, and been recognized by, his little cousin Despina, whom he had last seen on the day of their flight from their old home. She had just time to whisper, "Loukis, save me!" To leave her in the Turk's harem was not to be thought of; so he set on foot a negotiation with the Agha for the child's ransom. The whole family treasure was absorbed in the transaction, but Despina was set at liberty, and she returned in safety with Loukis to Tinos. Need we add that in a few years he married her. Here the story breaks off somewhat abruptly. With the end of Loukis's sufferings, however, the author's intention had been realized. He had written them down because he feared lest his grandchildren—

Will not easily realize with what sacrifices and what tortures their well-being and our national regeneration have been purchased. Therefore I should wish that more of the survivors of that time would write their memoirs. For out of the history of individuals that of nations is formed; and the history of Greek regeneration does not consist alone of the mighty deeds of our champions by sea and by land, but also of the persecutions, the massacres, the outrages on defenceless and weak creatures; their steadfastness amidst misfortunes; their faith in God, which strengthened and ultimately realized, though it be partially, our hopes of a better future.

M. Gennadius has done the work of translation with excellent taste, and an almost complete mastery of our language. Indeed, we have only discovered one grammatical error. He appears to think that "news" is a plural noun; and, when he says (p. 20) that "news circulated," he adds, "they were often false." He has added a useful preface, giving an account of modern Greek literature, and a list of the other works of M. Bikelas, who, besides original productions, has translated several plays of Shakspeare. It appears that *Loukis Larnas* has been already translated into French, Italian, German, and Danish. At the end of the story we find a few notes contributed by the translator, which corroborate, from well-known historical sources, the statements and allusions in the text. They are very adroitly put together, and will be found most serviceable by readers whose knowledge of the War of Independence has become rather rusty, and who may think the statements in the text exaggerated.

AMERICAN LITERATURE.

MR. HENRY COPPÉE'S title-page hardly gives a true idea of the contents of his two unpretentious volumes (1). They really contain an outline of Spanish history from the Roman Conquest to the surrender of Granada, about one-half of the space being occupied with a somewhat fuller account of the Mahometan conquest and empire. The consequence is that the latter is somewhat meagre and, if not exactly incomplete, yet too compact, too much of a summary for the real interest and importance of the subject. Few periods of mediæval history are more profoundly interesting, more instructive as throwing light on a most critical period, a most important element in the life of the modern world, than the invasion, ascendancy, and fall of the Spanish Moors. The rapid development and decay of Islam is one of the most remarkable incidents in the history of mankind, and no part of that singular episode is more striking or contributes more to explain and illustrate the greatness and the weakness of Mahometanism than the story of the Spanish Caliphate. To render the latter intelligible in itself, still more to explain its general significance, its bearing on the character and fortunes of Mahometanism at large, would require a much larger space, a much fuller treatment, than Mr. Coppée's method has allowed. But, on the whole, this part of his work is so well done that we cannot but wish that his scope had permitted a more ample and expansive handling of so great a theme. We cannot but close his volumes with a certain sense of disappointment, the keener because there is so much for which the ordinary reader will have reason to be grateful. As a contribution to the educational literature of America, to the works accessible and available to the ordinary scholar who has but a few years to give to the mastery of subjects not bearing on his professional career, the work is, we presume, all that it could be. The history of Spain has a signal and special interest for Americans, second only to that of England herself; but there are few European countries whose history is so imperfectly known to men of average education, whether in England or in the States. Students in American colleges and in English Universities who have a fair idea of the course of English, French, and German history, have scarcely more than a general conception of the outlines of contemporaneous events in Spain, chiefly as they bear on or are connected with the fortunes of neighbouring countries. Mr. Coppée therefore could not, in writing for such a class, take for granted such a knowledge of the previous history of the peninsula or of the after-fortunes of the Moorish Empire as would have been necessary to render intelligible a work confined to the history of the Arab conquest and an account of the Mahometan civilization as there developed. He has known fairly enough, no doubt, what he might expect from the public to whom he appeals, within what limits his demand upon their attention must be confined; and, though we might wish that his sketch of the barbaric feuds between the successive Gothic hordes that overran the peninsula had been even briefer than it is—since no part of the dullest and least instructive period of history is less interesting to modern readers—we can hardly complain that in a work in which such an outline was necessary it occupies more than a proportionate space. What was at least equally essential and has not been quite so sufficiently executed was an account of the previous history of the Mahometan conquerors, an explanation of the circumstances and characteristics which led to the extraordinarily rapid growth of their power, and rendered that power after all so unstable and so short-lived. The most valuable, and, to the readers for whom it is intended, the most instructive, portion of Mr. Coppée's work is that which deals with the peculiar aspect of Arabic civilization and literature as developed in Spain. We can certainly commend this part at any rate of the book to the attention of a class of English readers analogous to that in America for which it was originally intended—to the fifth and sixth forms of our public schools, and to that multitude of general readers who have not, or think they have not, leisure for any full and first-hand or even second-hand study of the obscurer periods of history.

Some passages in the *Proceedings of the Seventh Annual Conference of American Charities* (2), and a clear but unfortunately brief article in the *North American Review* (3) throw light on a very painful phase in the existing social order of America—the treatment of the insane. That treatment is bad enough even in those European countries to which American reformers direct the attention and emulation of their compatriots. The English Lunacy Law seems to those who have studied it about as bad as it well can be, or would so seem if we did not know how much worse it was at no very remote period. Yet Americans interested in the question look, and justly look, to England as affording by comparison a model to themselves, as a very paradise for the most unhappy class of human beings, when compared with the infernal regions to which in the States those who have no power of protecting themselves are consigned. In this country there is far too little security against the imprisonment of perfectly sane men and women under conditions far more cruel, upon the whole, than those of penal captivity. It is but too easy for evil-disposed persons to clap a

(3) *The North American Review.* March 1881. New York: Appleton & Co. London: Sampson Low & Co.

person of whom they wish to get rid into a lunatic asylum, paying the keeper thereof a high price to detain his captive, giving him the utmost possible interest in affirming the insanity of the victim. We know how little even honest lunacy doctors are to be trusted, how prone they are to see proofs of madness in everything like individuality or eccentricity of temper, and once he is imprisoned, and thereby presumed to be mad, the victim's chance of escape rests entirely on the judgment, tact, resolution of the Lunacy Commissioners, who are likely to be prepossessed with the conviction of his insanity. Yet Americans point, and justly point, to this as a state of things to which they earnestly, but very hopelessly, desire to approximate. There is simply no check whatever upon the imprisonment of any man or woman in an American asylum. There is no inspection, and the asylum-keepers, we are told, form a league to exclude all external supervision or control, a trades-union to ruin any chaplain, local trustee, or subordinate official who shall presume to disclose even to a public authority the secrets of the prison-house. The treatment of the insane is as bad and brutal as it was in English asylums a century ago. These are the facts, not as they appear to us, but as they are formally and publicly stated over the signatures of responsible men in the most respectable organs of American opinion. The facts given are simply horrible. We read at this time of men and women chained naked in the straw, beaten, bruised, their bones broken by the brutality of keepers—as our grandfathers read when first the treatment of the insane was made a subject of philanthropic effort in this country. But we find, to our utter amazement, that hardly an effort has yet been made to carry through the State Legislatures an Act throwing open the asylums to public inspection, nor are we aware of a single case in which condign punishment has been inflicted on the perpetrators of these outrages. We have every reason to believe that the asylums in which the worst of them occurred are still under the management of the offenders; we are told, at any rate, that there is no check whatever, except such as may be imposed by local trustees upon their own nominees and protégés. And it stands on record that witnesses summoned to tell the truth as to what they themselves have seen done within the asylum walls have been threatened with dismissal should they dare to fulfil their public duty; nay, that their employers have even presumed to speak of honour as binding them to silence! Here is one more among many examples afforded, not by America alone, how very little the enthusiasts of democratic freedom care for personal liberty, how little the idolaters of Humanity care to protect the first and most sacred of human rights. We confess to having been at first startled and almost incredulous; but we fear that there can be but little doubt as to the truth. It is known that all the stringency of our own laws of inspection is not sufficient to prevent grave abuses. We may imagine what must be the state of things in a country where inspection does not exist, and where public opinion is so indifferent that no earnest effort has heretofore been made to obtain such security as inspection can give.

Dr. Lee's *Coroner's Handbook* (4) may probably be of use to the classes for whom it is intended, even on this side the Atlantic. It contains much information, many novel facts and suggestions, wholly independent of the local law, which appears to differ more on this than on most similar subjects in England and the United States. As a rule, in all those practical matters of legal right and wrong with which ordinary people are liable to find themselves concerned, the law of the Northern and South-Eastern States at least differs little from our own; even where a complete codification has superseded the complexities and uncertainties of the Common Law, the latter is still the basis on which the new and probably simpler edifice has been constructed. But respecting the office of the coroner, itself one of the oldest creations of the Common Law, we are informed by Dr. Lee that most of the States have superseded the unwritten code by statutes distinctly defining the coroner's functions and duties; and the handbook contains almost as many references to foreign as to English practice. To the non-professional reader the most interesting parts of the work will be those which deal with post-mortem examinations and the means devised by men of long practical experience or of inventive genius to solve with greater certainty the multiplicity of questions of fact liable to arise in cases of sudden death, of suspected violence or poison, and the many difficulties that perplex the coroner's jurisdiction.

Mr. Holden's brief memoir of Sir William Herschell (5) is confessedly based on data already in print; it is in fact an abridgment of the memoir by Sir William's sister; as the review annexed of his astronomical works is drawn from his published papers. The book is in short little more than a summary of different accessible materials; but may be not the less acceptable to many who have not the leisure or the interest in the subject to have mastered those materials in their more elaborate form.

We have two collections of sayings—Mr. Ballou's *Pearls of Thought* (6), chiefly from English and American writers, a vast majority of which are at best seed pearls of little or no lustre; and Mr. De Finod's translation of *A Thousand Flashes of French Wit*,

Wisdom, and Wickedness (7), mostly, we must admit, brilliant, many of them well available for quotation, and not a few so unfamiliar that they may be safely stolen by such wits of the dinner-table as have sufficient self-confidence to believe that they may dare to take credit for them.

Mr. Munger's *On the Threshold* (8) is a collection of essays, full of good advice for young men, more likely to obtain a hearing than most such advice, but hardly, we think, more likely to be remembered or to be useful when required. Mr. Allen's *Fragments of Christian History* (9) consists of a collection of papers from various periodicals on different passages of ecclesiastical history, the best of which perhaps is that on the Mind of Paganism, an account of heathen thought during the first century of the Church, which has at any rate the merit of expressing the author's own views, and not simply repeating the received ideas upon the subject.

Mrs. Spofford's essays on the *Servant Girl Question* (10) are, it is only just to say, more readable than might have been expected from the triteness of the subject. It may be that American experience on the subject differs so much from our own as to give her work the advantage of novelty; but we incline to think that the amusement it affords is principally due to its discursiveness. The author's feeling evidently is that women are underrated and underpaid, that they do more than their share of the world's work, and get much less than their share both of pudding and praise.

Mr. Ingersoll deals with a pleasanter topic. His "friends worth knowing" (11) are snails, mice, birds, snakes, and the like; and upon each he has much that is novel and entertaining to tell us. His modest little work may be cordially recommended to men, women, and children—above all to that class of young people who, not being accustomed to or not caring for pets, are apt to treat animals in general with a cruelty that springs as much from ignorance and consequent indifference as from any worse feeling. Mr. Ingersoll abstains from lecturing on this subject, and on that account his work is likely to be all the more instructive and effective.

Mr. Nevins's *Vignettes of Travel* (12) deal at some length with English and Italian politics, and contain some rather remarkable blunders. The chapter, for instance, upon the House of Lords contains more inaccuracy, and gives a more completely false idea of the position of the oldest Senate of the modern world than might have been expected from the most careless of American observers.

Captain Mason's memoir of General Garfield (13) has, in common with the preceding works, the merit of comparative brevity. The President of the United States fills a place in the eye of the world that certainly renders it worth the while of political observers to give that brief study of his character and antecedents which this modest little volume demands.

We cannot say the same for Mr. Carter's *Reminiscences of the American Courts and Bar* (14). The book might have been very amusing and very readable if it had been condensed to one-fourth of its actual size. It is rather personal than historical, and rather anecdotic than biographical; not very instructive or illustrative, and too lengthy to be called entertaining.

Dr. Wilson's "Easy Lessons in Sanitary Science" (15) contain a good deal of curious information respecting the conditions of drainage on different American soils, particularly concerning the difficulty of adequately draining that low, sandy alluvial which forms so large a part of the Atlantic seaboard, and the Southern portion of which at least is almost invariably malarial. The pine-barrens, on the contrary, though the soil and subsoil be very similar in character, are notoriously healthy. Dr. Wilson accounts for this on an entirely novel and by no means improbable ground, pointing out that the roots of decayed pine-trees form excellent drains, carrying the water down to a considerable depth, where it may easily run off, and that the decay of the weaker-trees is so rapid as to maintain a continual supply of such drainage.

Mr. G. F. Seward, late United States Minister to China, has dealt with the question of Chinese immigration (16) in its various aspects at great length, and with an impartiality which, considering the unpopularity of the right side of the question, must be con-

(15) *Drainage for Health; or, Easy Lessons in Sanitary Science*. By Joseph Wilson, M.D. Philadelphia: P. Blakiston. London: Trübner & Co. 1881.

(16) *Chinese Immigration in its Social and Economical Aspects*. By George F. Seward, late United States Minister to China. San Francisco: Bosqui & Co.

(4) *Handbook for Coroners*. By John G. Lee, M.D. Philadelphia: W. B. Eerdmans, 1881.

(5) *Sir William Herschell; his Life and Works*. By E. S. Holden. New York: C. Scribner's Sons. London: Trübner & Co. 1881.

(6) *Pearls of Thought*. By Maturin M. Ballou, Author of "Treasury of Thought," &c. Boston: Houghton, Mifflin, & Co. London: Trübner & Co. 1881.

advised commendable. The book deserves a fuller notice than can be given it in this place, and is certainly worth the attentive study of all who wish to master a subject not unlikely to become interesting to our own Pacific colonies, as well as to the States of California and Oregon.

The great quarto monograph on the *Odontornithes*, or extinct toothed birds of North America (17), by Professor Marsh, is a most important contribution to paleontology, and to the practical history of evolution. Technically it is but an appendix to the geological exploration of the Fortieth Parallel, a work which has already attained the size and character of a vast encyclopedia, and is, we believe, still in many directions incomplete; practically it is an independent scientific work of no ordinary value.

Dr. Michels has given in a convenient and tolerably cheap quarto an account, illustrated by plates in black and white, of the current gold and silver coins of all nations (18), going back in some cases to the sixteenth century. There are more elaborate and complete works on the same subject, but mostly executed in a style and at a cost which confines them to libraries of reference. The present volume is within the means of any student of numismatics.

Mr. Ayres has his own ideas of orthoëpy (19), ideas with which we do not find ourselves always in accord.

Mr. Hasletine's tiny handbook of English and American education (20) is useful and convenient to those who may care to compare the formal rules, studies, and discipline of the Universities and colleges on either side the Atlantic.

Mr. Washburn's *Unknown City* (21) is a novel of New York life, of which it gives a somewhat sensational, and by no means agreeable, picture.

Among reprints, new editions, and the like we may mention a beautifully illustrated edition of Mr. Bryant's *Thamopsis* and *Flood of Years* (22), his first and last poems; the one published in 1817, the other in 1876. It is not often that a period of all but sixty years elapses between the first and last of a poet's published works, and that both are deservedly popular. Messrs. Putnam publish a translation of the *Loyal Ronins* (23), perhaps the best known of Japanese romances or legends, in which a Japanese writer has co-operated with Mr. Edward Grey, while the illustrations are contributed by another Japanese.

Mr. Bayard Taylor's dramatic works are collected in a single volume (24), issued by Messrs. Houghton of Boston and Messrs. Trübner.

Mr. Warner republishes his *Winter on the Nile* (25), a work not by any means devoid of merit or interest, but somewhat too full and elaborate for a subject so familiar.

The Hamilton Papers.
Dixon's English Church History.
A Modern Greek Novel.
American Literature.

CONTENTS OF No. 1,326, MARCH 26, 1881:

The Assassination of the Czar.—Urgency in Supply.—Irish Affairs.—The Transvaal.—Church and State in France.—The State of Parties.—Flagging in the Army.—Turkey and Greece.—Wellington College.
Alexander II.—A Political Pot-Forri.—Ashburnham House.—"Brer Rabbit"—Pins VII. and the Concordat of 1801.—Unfrequented Paris.—French and English Charming Romances.—Converted Frigs.—The International Monetary Conference.
Carlyle's Reminiscences.—Washington Square.—Voyages of the Elizabethan Seamen to America.—Etchings of American Ferns.—Notes and Sketches from the Wild Coast of Nipon.—Two Minor Novels.—M. Valerius Martialis.—German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

THE GROSVENOR GALLERY.

WINTER EXHIBITION.

THE GROSVENOR GALLERY Exhibition of Water-Colour Drawings, and Decorative Designs, by Living Artists, NOW OPEN
Daily, Ten to Six.

Admission, 1s.

WILL CLOSE Thursday, March 31.

DORE'S GREAT WORKS, "CHRIST LEAVING the PRÆTORIUM," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE PHARAOH," each 33 by 22 feet, with "Dream of Pilate's Wife," "Christian Martyrs," &c. at the DORE GALLERY, 36 New Bond Street. Daily, Ten to Six. 1s.

THE ANNUAL SPRING EXHIBITION of High-class PICTURES by BRITISH and FOREIGN ARTISTS, including Professor Leopold CARL MULLER'S picture, "An Enchantment outside Cairo," is NOW OPEN, at ARTHUR TOTT & SONS' GALLERY, 5 Haymarket. Admission, 1s.

UNIVERSITY COLLEGE, NOTTINGHAM.

The Town Council of Nottingham have resolved to appoint FOUR PROFESSORS, as follows:

ONE PROFESSOR, who shall undertake one or more of the following subjects—Classics, Literature, History, Political Philosophy, Moral Science; and

THREE PROFESSORS, who shall undertake one or more of the following subjects—Mathematics (including Theoretical and Applied Mechanics), Physics, Chemistry, Physiology, Biology, Geology.

The work of the College will be divided into Four Departments, whose arrangement will depend, to some extent, on the subjects undertaken by the Professors elected, but it is intended that the three scientific departments shall severally comprehend:

1. Mathematics and Mechanics,
2. Chemistry,
3. Natural Science.

and that the subject of Physics shall be placed as a subject of principal importance in one or other of those departments.

Applicants are invited to specify the subjects which they would be prepared to undertake. Applications for the above appointments to be addressed to the Town Clerk, Municipal Offices, Nottingham, endorsed "University College," on or before the 7th day of May next. Particulars of salaries, duties, and conditions will be sent upon application to the Town Clerk.

Candidates are especially requested to obtain from canvassing.

Municipal Offices, Nottingham, March 23, 1881. SAM. GEO. JOHNSON, Town Clerk.

INSTITUTION OF NAVAL ARCHITECTS.—SESSION 1881.

THE MEETINGS will be held on April 6, 7, and 8, in the Hall of the Society of Arts, John Street, Adelphi (by permission of the Council). The Right Hon. the Earl of HAVERSBORTH, President, will occupy the Chair. For Cards of Admission apply to the SECRETARY, 5 Adelphi Terrace, Strand, W.C.

HYDE PARK COLLEGE for LADIES, 115 Gloucester Terrace, Hyde Park.

The EASTER JUNIOR TERM begins April 1, and closes July 16.

The EASTER SENIOR TERM begins April 29, and closes July 10.

Prospectuses, containing Terms, Names of Professors, &c., may be had on application to the LADY HEADMISTRESS.

EDUCATIONAL ESTABLISHMENT, at BONN-on-the-RHINE, 37 Baumchuler Allee.—The Fraulein KUNDE receive a limited number of YOUNG LADIES. Home comforts. Best Masters. Personal interviews and escort after Easter.

CHELTEMHAM COLLEGE.—TWELVE SCHOLARSHIPS.

Eight £40, Four £20. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Cheltenham.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL,

and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition at Midsummer 1881, value from £25 to £50 a year, which may be increased from a special fund to £80 a year in cases of Scholars who require it.—Further particulars from the HEAD MASTER, or SECRETARY, the College, Clifton, Bristol.

ROSSALL SCHOOL.—ENTRANCE SCHOLARSHIPS.

Twelve to be competed for, June 24. Value from 70 Guineas (covering School Fees) to £20. Ages under 14 and 15. Candidates may be examined at Rossall or Oxford, as preferred, in Classics or Mathematics.—Apply to Rev. the HEAD MASTER, Rossall School, Fleetwood.

D O V E R C O L L E G E.

President—Earl GRANVILLE, K.G.

A Chapel and another new Boarding House have recently been completed. Each Boarder will now have a separate bedroom.

The 2nd place for Cooper's Hill, entries for Woolwich, Sandhurst, &c., have been obtained during the last year.

Tuition from 13 to 18 Guineas. Board, 24s 6d.
For particulars apply to the Rev. W. BELL, M.A., the Head-Master, or W. KNOCK, Esq., the Honorary Secretary.

ISLE of WIGHT PROPRIETARY COLLEGE, RYDE.

Head-Master—The Rev. Canon TEESDALE, M.A., New College, Oxford.

Assistant-Masters—R. WEIR, M.A., Trinity College, Cambridge; the Rev. J. G. CRAWFORD, B.A., St. Catherine's College, Cambridge.

Modern Side—HAROLD R. BROWNE, B.A., St. John's College, Cambridge.

Most healthy situation. Swimming and Gymnastics taught. Raquet and Five Courts.

Boys are received by the Head-Master and by Mr. R. WEIR.

SUMMER TERM commences April 29.

For terms apply to the HEAD MASTER, Isle of Wight College, Ryde, or to the Secretary, TREVOR R. OWEN, Esq., The Cottage, Melville Street, Ryde.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-

CLASS SCHOOL for BOYS of GENTLEMEN. The religious training is upon definite Church principles. Boys are Educated with much care and thoroughness. They receive individual teaching and help wherever needed. Candidates for Matriculation at the Universities are specially prepared. Terms, 47s a year.—For references, prospectus, or any further particulars, apply to the Warden, Rev. G. H. BOURNE, D.C.L.

ABINGDON SCHOOL, Berks (Six miles from Oxford).—

This old Foundation (1343) has complete new buildings in fine position. University and other Scholarships.—Apply to Rev. E. SUMMERS, Head-Master.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon.,

assisted by a Cambridge M.A. and competent Teachers, prepares PUPILS for the Universities, Woolwich, Sandhurst, and all Competitive Examinations. A few Vacancies.

CARSHALTON HOUSE SCHOOL, Surrey.—BOYS carefully

prepared for Civil and Military Examinations.

STRATFORD-ON-AVON.—TRINITY COLLEGE SCHOOL.
The Warden, RICHARD P. CUNY, M.A., is assisted by Seven Resident Graduate Masters. Special attention paid to Modern Languages, Classics, and Modern Science. Department for Young Boys. Exhibition to the Universities. Large Playing Fields. Gymnasium, Five Courts, &c. Terms, 40 and 50 Guineas. Apply to the WARDEN.

PREPARATION for SANDHURST, WOOLWICH, and COOPER'S HILL.—Individual Tuition. Special attention paid to the speaking of Modern Languages. For terms, address Mr. E. Vidal, Roseville, Paragon Grove, Saratou, Surrey.

ARMY ENTRANCE EXAMINATION.—There is a Department in connexion with BLAIR LODGE SCHOOL, Polmont Station, N.E., for preparing PUPILS for the above Examinations. All the Candidates (including J. M. Holmes, First in December Examination) sent up for Woolwich in 1880 have passed. Special advantages. A licence from town life, and individual preparation. For full particulars apply to the HEAD-MASTER.

SEASIDE.—PREPARATION for the PUBLIC SCHOOLS.
For Terms apply to C. H. ROSE, M.A., Conyngham House, Ramsgate.

THE ENDOWMENT of RESEARCH.—The ASTRONOMER ROYAL. In a letter of much import addressed by him to Captain W. NOBLE on the 10th instant, wrote as follows:

"The very utmost, in my opinion, to which the State should be expected to contribute is exhibited in the large Grants entrusted to the ROYAL SOCIETY. The world, I think, is not unanimous in believing that THEY have been useful.

"THE PROCEEDINGS" and "THE PHILOSOPHICAL TRANSACTIONS OF THE ROYAL SOCIETY" contain many elaborate Papers with details of painful Experiments upon Animals for Scientific Purposes. These practices extend over a long series of years down to the present generation. They are as much wanting in real humanity and true wisdom as, perhaps, they ever were. Which is asserting much, for two great Surgeons of distinguished ability and learning have said of the ROYAL SOCIETY: "Their old and favourite experiments, so often repeated by Hooke, Croone, and others, before our ROYAL SOCIETY, viz., of blowing up the lungs of a dog, and then compressing them, is good for nothing."

To such Practices, the language of the "Great Lord Chancellor of Learning as well as of Law" is most appropriate.

"Huiusmodi doctrinae bene adumbravit fabula de Iulio; qui cum Janoniam potentiam deo, concultum animo sibi designaret, cum evanida nube rem habuisset; ex quo Centaurus et Chimæras progeniit."

FLAUSCUS BABONIS DE VERULAMIO.

SOCIETY FOR THE TOTAL ABOLITION and UTTER SUPPRESSION OF VIVISECTION.

Honorary Secretary and Treasurer—GEORGE R. JESSE, Esq.
Henbury, near Macclesfield, Cheshire.

February 1881.

TO BE LET, with immediate possession, 55 LOFTUS ROAD,
Uxbridge Road, Shepherd's Bush, W., within a few minutes' walk of the Metropolitan and London and North-Western Stations. The House, which has just undergone complete repairs, contains Ten good rooms, and is well arranged as to domestic offices; with good Gardens at the rear overlooking fields. Apply to Mr. J. BARNES, Builder, 9 Pleasant Place, Uxbridge Road, W.

BRIGHTON.—BEDFORD HOTEL.—Facing Sea and Esplanade. Near the West Pier. Central and quiet. Long established. Suites of Rooms. Spacious Coffee-room for Ladies and Gentlemen. Sea-Water Service in the Hotel.
BENJN. BULL, Manager.

APOLLINARIS

"THE QUEEN OF TABLE WATERS."

Annual sale nine millions.

"Of great value to the cause of temperance and good health."

Dr. NORMAN KERR.

THE APOLLINARIS COMPANY, LIMITED,

19 REGENT STREET, S.W.

FURNISH YOUR HOUSE or APARTMENTS
THROUGHOUT on MODERN FIRE SYSTEM. The original best, and most liberal. Cash Prices, no extra charge for time given. Large, useful stock to select from. Illustrated price Catalogue, with Terms, post free. 248, 249, and 250 Tottenham Court Road, and 19, 20, and 21 Morwell Street, W.C. Established 1862.

HEWETSON & MILNER'S
STOCK-TAKING SALE

FURNITURE AND CARPETS,
at
GREATLY REDUCED PRICES,
will continue from February 10 to March 26.

THE EXCHANGE,
211, 212, 213 TOTTENHAM COURT ROAD
(Exactly facing Goodge Street).

HINDLEY'S

CHINTZES.

ORIGINAL DESIGNS,
FAST COLOURS.
From 9d. per yard.
Patterns sent and Estimates given.

ARTHUR THOMPSON, Esq. (Messrs. W. J. & H. Thompson), 39 Mincing Lane, E.C.
Captain J. T. WRIGHT, Royal Engineers, 13 Cadogan Terrace, S.W.

Auditors.

W. W. BAYNES, Esq., J.P., 33 Moorgate Street, E.C.
THOMAS CASH, Esq., 1 Adelaide Place, E.C.

Surveyor.

SAMUEL WALKER, Esq., St. Stephen's Chambers, E.C.

Sanitary Officer.

EDGAR ATHELING HALL, Esq., M.D., C.M., L.M. (Edin.).

Solicitors.

Messrs. WRIGHT, BONNER, & WRIGHT, Adelaide Buildings, London Bridge, E.C.

Bankers.

Messrs. DIMSDALE, FOWLER, BARNARD, & DIMSDALES, 50 Cornhill, E.C.

Brokers.

Messrs. GEORGE BURNAND & COMPANY, 63 Lombard Street, E.C.

Secretary (pro tem.)—LEONARD B. BURNS.

OFFICER (pro tem.):

1 ADELAIDE BUILDINGS, LONDON BRIDGE, E.C.

PROSPECTUS.

This Company is established for the purpose of providing Model Dwellings for the Working Classes, of the most approved construction; special attention being paid to the requirements of sanitary science.

The operations of the Company will not be restricted to the Metropolis, but they will be extended to the great provincial centres of population, where, quite as much as in the Metropolis itself, the danger of overcrowding and the urgent need for such improved dwellings have long been admitted.

The advantages which the buildings of the Peabody Trust and of the Improved Industrial Dwellings Company have conferred upon the working masses of the Metropolis, are admitted by all who have given attention to the solution of the greatest problem of social life, and have been eagerly recognised by the working classes. In the case of the latter Company it has also been proved by many years of successful work that such buildings, which are always rapidly occupied, can be so managed as to afford a sound and profitable investment for capital.

The difficulties attending the carrying out of the Artizans' Dwellings Act have deprived the working classes of the benefits which that Act was intended to secure for them, and it is evident that any further substantial advance in the direction desired will be best provided by a powerful Company established expressly with the object of erecting Buildings where advantage can be taken of every admitted modern improvement in domestic sanitary science and the enterprise be carried out on sound business principles.

Much Buildings, when erected in suitable localities, are found to yield a large return on the capital invested, and to rank amongst the most profitable investments, being free from speculative risks and from the fluctuations generally attending ordinary commercial enterprises.

As an example of the pressing need for such a Company as this, it may be mentioned that, at the present time, some of the most urgently required street improvements in the Metropolis, which have been actually authorized by Parliament, are delayed by reason of the difficulty of providing suitable dwellings for the large number of families of the industrial class, which the carrying out of such works will displace, and the existing machinery will not be able to house.

The sanitary arrangements of all Buildings will be under the supervision of EDGAR ATHELING HALL, Esq., M.D., &c., who has promised the Directors the benefit of his active co-operation in this important branch of the Company's operations as Sanitary Inspector. Care will be taken, whilst retaining the strictly commercial character of the Company and securing for the capital invested a remunerative return, that every facility shall be given in connexion with the intelligence of the Company to promote the physical, social, and moral well-being of the Company's Tenants. Adequate Laundry facilities will be at the command of the Tenants, and Baths will be erected where practicable. In many of the larger blocks of Buildings some portion of the ground-floor premises can be made available as Shops, Coffee Taverns, and other conveniences with profit to the Company and with great advantage to its Tenants. A portion of the Share Capital will also be set apart to be paid up by annual periodical payments, and reserved for the Tenants of the Company, who will thus have a sound investment for their savings, with the opportunity of becoming practically interested as Owners in the Dwellings they occupy as Tenants.

It is intended, should the estimated profits be realized, as the Directors confidently anticipate, to pay half-yearly a fixed Dividend, free of Income Tax, at the rate of Five per Cent. per annum, and to invest the Balance of Profit in the names of the Trustees, so that one half shall be devoted to the payment of a Triennial Bonus (over and above the fixed Five per Cent. per annum interest), and the other half towards a Contingency Fund to meet repairs and depreciation of value. It may be mentioned, however, that from the substantial and judicious manner in which Buildings of this character are constructed, the expenditure on repairs is reduced to a minimum, and that for some years after the Buildings have been erected, it will be, practically, nil, whilst the value of the Buildings will increase rather than depreciate. This Contingency Fund may, therefore, be expected to grow to a large amount, and to provide a most substantial Reserve Fund.

No promotion money has been or will be paid. The whole expense of establishing the Company will be restricted to the legal expenses attending the establishment and registration of the Company, and to the issue and publication of this Prospectus.

Application for Shares should be accompanied by a deposit of Five Shillings per Share. In the event of no Allotment taking place, the Deposit Money will be returned in full.

The Memorandum and Articles of Association can be seen at the Temporary Offices of the Company, and at the Offices of the Solicitors and Brokers, and at the Bankers.

Prospectuses and Forms of Application for Shares may be had of the Bankers, Brokers, or Solicitors; and at the Offices of the Company, 1 Adelaide Buildings, London Bridge.

THE TRANSVAAL.

LORD CAIRNS has not of late often indulged in set speeches on general political questions, and the Government have reason to wish that his reticence had continued. His criticism of the Transvaal arrangement was unanswerable and unanswered. Unfortunately fresh occasions for dissatisfaction with the policy of Ministers continually arise. The not unreasonable belief that the last had been heard of warlike operations in the Transvaal has been disappointed. A few hours before the final conclusion of peace the garrison of Potchefstroom, after bravely holding out for many weeks, capitulated for want of provisions, and doubtless also in despair of rescue. The armistice had been arranged to begin at each garrison from the date of the arrival of the provision waggons; so that, at least from this point of view, the Boers did not violate the laws of war. But, on the other hand, it is difficult to understand why Sir EVELYN WOOD did not take measures to convey intelligence of the facts earlier to Colonel WINSLOE. The waggons had two hundred miles to travel, and had not covered that distance in a fortnight. Ox-travelling is always slow, but mounted messengers could have done the distance in two or three days; and it is usual in such cases to send the earliest possible intimation of a cessation of hostilities to beleaguered posts. Perhaps Sir EVELYN WOOD was too busy in negotiating to think of the garrisons which have sustained the credit of the English arms so excellently during this unfortunate contest. Perhaps Mr. JOUBERT failed to carry out his undertaking to transmit the news. However this may be, the incident makes what was bad enough before worse, and may possibly serve to kindle livelier feelings of dislike at home to the manner in which the Government have managed the affair. It cannot be said that the prospects of a permanent peace are at present favourable. Although it was and is understood that a considerable portion of the old territory of the South African Republic is to be cut off as a native reservation, the Dopper party are believed to be extremely averse to anything of the kind. The animosity previously existing between the same party and the English and Dutch-English inhabitants of the Transvaal must necessarily make the condition of the latter almost intolerable, while compensation from a bankrupt treasury and from the pockets of a people notorious for their extreme indisposition to pay taxes of any kind is nearly impossible. When England acknowledged the United States of America, the Loyalists were compensated by the mother country, a precedent which Mr. GLADSTONE would hardly think it worth while to follow unless it were to impress on his admirers the expensiveness of Lord BEACONSFIELD'S government. Perhaps Sir GEORGE CAMPBELL will repeat his ingenious and thoroughly democratic idea of a special poll-tax on all who voted for Tory candidates at the last election.

Lord KIMBERLEY, even before the duel in which he was so unequally matched with the late Lord Chancellor, was to be pitied for the awkwardness which he must have felt in receiving a deputation of those who constantly sympathize with whosoever happens to be the enemy of England. The Transvaal Independence Committee objects to the suzerainty; to the control of foreign affairs; in short, to all the provisions which are supposed to make the Government's surrender tolerable. A return to the Sand

River Convention will satisfy them, and nothing short of that. Lord KIMBERLEY, conscious of the attitude he has himself maintained towards the annexation, must have felt not a little uncomfortable; but the fortunate tradition which enables Ministers to dismiss deputations with polite ignoring of their demands saved the situation to some extent. Nor is this the only point in which the COLONIAL SECRETARY is to be commiserated in his dealings with South Africa. For some time past the Cape Government has been purring, in reference to the Basutos, a policy curiously different from that of the Home Government towards the Boers. The Basuto war has been looked upon with disfavour by almost every section of politicians at home, and Mr. GLADSTONE'S Government have used their good offices to put a stop to it. These good offices, however, have been contemptuously declined by the Cape Government, and hostilities continue, the Basutos probably wondering in their simple minds why the QUEEN'S subjects in Africa persist in attacking them, while the QUEEN herself professes her readiness to accept their submission. Savages and uneducated people, as Sir EVELYN WOOD remarks in his perhaps too jubilant account of the settlement of O'Neil's Farm, "distrust Governments and trust persons." There is no need to inquire at present into the abstract question of the wisdom of the trust or the distrust. But it is a pity that the principle cannot be applied to Basutos as well as to Boers. More especially is it unfortunate that, at the very moment when Englishmen are making terms with those who are accused of being the principal oppressors of the natives, they should be actively harrying the natives themselves. But the heterogeneous conditions of social and political arrangements in South Africa have generally made these contrasts inevitable; and the restoration of the Boers to independence does not tend to lessen the danger.

Some documents of an interest which is now historical mainly have been published during the week. The despatch of Colonel ANSTRUTHER respecting the affair of Broeker's Spruit partly confirms and partly corrects the first accounts sent home of that unhappy business. It confirms, also, unfortunately, the strictures of Sir OWEN LANYON on the manner in which the party was led, and adds another to the woful list of mistakes committed in this brief and disastrous war. Treachery, properly speaking, there does not appear to have been; though Colonel ANSTRUTHER seems to have expected—a word according to usage, ought perhaps to have received—a word of message from Mr. JOUBERT before the fighting began, and has no expectation "of meeting the enemy at this spot," says the unfortunate commander; and it can only be replied that, if he had been prudent, he would have had an expectation of meeting the enemy at any spot. Unfortunately, he was not so prepared; and the action, such as it was, simply presented on a reduced scale the features of the Ingogo and Majuba—inferior against superior numbers, wild firing in exposed positions against accurate marksmanship under cover. The detailed report of the Ingogo action, also published, needs only the same comment. "I had no intention of camping out, and had brought no supplies," says the GENERAL, who, like Colonel ANSTRUTHER, has since made the last atonement for any fault of judgment he then committed. Officers, we are told, cannot understand how the Boers drove the English from Majuba. The answer is simply the old one—with brains. Objections are frequently made to critics who sit at home at ease and judge of military

operations conducted abroad under difficulties. These objections hardly take account of the fact that the conditions of successful and unsuccessful war repeat themselves in military history with an almost tiresome monotony. Nor are these painful documents altogether unprofitable reading with regard to the future, for it must be a sanguine person who thinks that all difficulty in the Transvaal is over. Sooner or later there will be fighting again in South Africa almost without doubt, and it will be a question then whether our officers have or have not profited by the lessons of this extraordinarily unfortunate war.

It would probably be vain to search for another contest in which fortune was so unvaryingly against England. Sir EVELYN WOOD makes light of "a series of actions 'fought with six companies.'" This remark, which has been eagerly caught at by the apologists of the ponce, seems to argue a somewhat unwise respect for big battalions. In this present petty war four engagements have taken place—at Bronkor's Spruit, Laing's Nek, the Ingogo, and Majuba—and every one has resulted in a more or less disastrous defeat, with a total loss which would have been heavy for a battle with ten thousand men engaged. Everything is proportional, and unbroken defeat in engagements with six companies is no more to be made light of than unbroken defeat in engagements with six regiments or six divisions or six *corps d'armée*. It is idle to speak of such things as "not affecting our prestige." They could not, indeed, have affected our prestige had one been successful and another unsuccessful, but the uniformity of result alters the inference. There are also words of Sir EVELYN WOOD's which seem to argue indecision as to the point already mentioned of insisting on compensation to loyalists. Should any further timidity be shown, the effect, bad enough already, would be infinitely aggravated. The internal independence of the Transvaal has been restored at a price which, if it had been demanded under other circumstances, might perhaps have been satisfactory, but which in any case ought to be rigidly exacted. In this case, the exaction is absolutely necessary. The abandonment of the loyal inhabitants would convert a dubious and disagreeable transaction into a disgrace of the deepest and most ineffaceable character. The surrender or weakening of any of the terms of recognition would be hardly more excusable.

TURKEY AND GREECE.

WHEN the Greek question was discussed at the Berlin Congress in 1878, Lord BEACONFIELD said that, even before the conclusion of the Treaty of San Stefano, England had entered on negotiations at Constantinople for the rectification of the Greek frontier. The demand for this rectification was not prompted by any desire to satisfy the aspirations of the Greeks, and still less by any desire to dismember the Turkish Empire. It was made simply with a view of suppressing brigandage. Lord BEACONFIELD himself disapproved of the Congress giving any indication of the direction which the rectification was to take, but Italy and France pressed for at least a general indication being given, and Lord BEACONFIELD acquiesced. The Congress accordingly recorded that, in its opinion, the line should be drawn from the mouth of the Salambria on the east to the mouth of the Kalamas on the west. This was vague, and intentionally vague. A line from a point on one coast to a point many hundred miles off on another coast may include much less or much more, according to the fancies of those who try to trace it practically, and have to take into account the configuration of the land and the position of towns, strongholds, and rivers. All that the Congress did was to invite Turkey and Greece to come to an understanding on this vague basis, and to undertake to mediate between them if they could not come to an agreement. They did not fail to come to an agreement, because they never began to try to agree. Turkey looked on what had taken place as a mere invitation to negotiate, and it was an invitation she did not feel inclined to accept. As Turkey would not negotiate, Greece applied to the Great Powers to do something for her. They consented, and in the Conference of last year the Powers set out a definite line on a map. They were not mediating, for the base for mediation had not arisen. What they

did was to say what, if they had been mediating, they would have pronounced to be the proper arrangement for the Greeks to come to. In the fulfilment of this task they gave an interpretation to the line of the Congress very favourable to Greece. Instead of starting from the mouth of the Salambria in Thessaly, they started from a point far to the north of it, and when they got to Epirus, they drew a curly zigzag line, which not only included Janina and Metzovo in the district to be ceded, but seems in one part to go almost at a right angle to the direct line to the Kalamas, so as to give more country to Greece. As Turkey paid no attention to the recommendation of the Conference, Greece proposed to go to war in order to obtain by force what the Conference recommended should be given her. The Powers again intervened, but in a new character. What they now wanted was to preserve peace, and the only way of preserving peace was to press Turkey until she had consented to draw a line which the Powers would recommend Greece to accept. This has now been done. No official statement of the direction taken by the new line has been given, but there have been enough semi-official statements to show generally what this line is to be. It is not the line of the Congress or of the Conference. It does not start from the Salambria and go to the Kalamas. It does not start far north of the Salambria, and go curling far up into Epirus. What it does is this. It starts some way above the Salambria, not so far northwards as the Conference line, but still far enough to give Greece the rich plain on the north of the river; but, when Epirus is reached, instead of going westward to the mouth of the Kalamas, it goes southward, and follows the course of the River Arta. Practically, it may be said that it gives nothing in Epirus to Greece, but it gives in Thessaly more than was given by the line of the Congress, although less than was given by the line of the Conference.

It is obvious that everything in the negotiations turned on the question whether the Greeks were or were not to have Janina. If a perfectly straight line is laid down from the mouth of the Salambria to the mouth of the Kalamas, it passes south of Janina; but it passes so very little to the south, that it can scarcely be doubted that the Congress line was meant, so far as those who suggested it had any clear intentions, to give Janina to Greece. The Conference line went considerably north of Janina, and left no doubt as to who was to have this great object of Greek ambition. Janina is an important town, and it is substantially a Greek town; but it is separated from Greece by a barren district, inhabited by people who are mostly Mussulmans, and who, if they are not Mussulmans, are not Greeks. Turkey positively refused to cede Janina to Greece, partly because it did not wish to give Greece so much as she asked, but mainly because it could not bring itself to make over to its enemy the non-Greek population settled between Janina and the Greek frontiers. Nor was this only a matter of sentiment. The Porte had every reason to suppose that this population would not quietly submit to be handed over, and that coercion would be necessary to make it submit. To have used force would have been painful to the SULTAN, and would have probably provoked a general Albanian revolt. What happened at Dulcigno would have happened again in Epirus, only on a much larger scale, and whereas in the case of Dulcigno the Powers could call on the SULTAN to carry out his engagements, even at the cost of coercing his subjects, they could scarcely impose on him a new engagement to coerce his subjects in Epirus. The notion of giving Janina to Greece was thus abandoned, and, apart from Janina, the district which would have gone with it is of very little natural value to the Greeks or to any one else. For this district an equivalent, and a full equivalent in point of natural resources, was obtained by shifting the Thessalian frontier northwards. In point of useful soil the Greeks have now offered them as much as they would have got if the frontier had gone to the Kalamas, but had not included Janina. What they have not got, and what they longed above all things to get, was Janina itself. And on the question of the retention or cession of Janina hung a subordinate question which appears to have given the Powers much trouble and anxiety. The River Arta flows into the Lake of Arta, and the present Greek frontier runs along the southern shore of the lake until the lake joins the sea. The lake offers a commodious harbour, and is exclusively used by Greek ships. What

where the lake joins the sea, the land all round about to give a very narrow entrance to the lake, and the entrance is commanded on its northern side by the Turkish fortress of Prevesa. Had the Greeks got Janina and the intervening district they would of course have got Prevesa; but, if they were to get nothing on the northern shore of the lake, they would be left with a Turkish fort commanding what is practically a Greek lake. For this no additional cession of land in Thessaly could be any compensation, and the Powers could hardly say that they were in a position to make a proposal to Greece that Greece might be reasonably expected to consider acceptable if Prevesa was left to command the Lake of Arta. There was no difficulty here as to the feelings of the inhabitants. Prevesa is an Italian town which was taken from Venice by the French Republic, from the French Republic by ALI PASHA, and from ALI PASHA by the Turks. There is no reason to suppose that Prevesa would have any objection to become Greek; but the Porte urged that Prevesa was so far connected with Janina that, if in Greek hands, it would afford a base from which the Greeks could operate in the direction of Janina. It therefore refused to cede Prevesa. Nothing remained except to effect a compromise, and it is said to have been settled that Prevesa shall remain in the hands of the Turks, but that its fortress shall be dismantled.

If the Greeks are not to have Janina, the offer now made them is one that has much to attract them. Without going to war, they get all Thessaly that is much worth having. Thessaly is rich, and, except a few land-owners, the population is exclusively Greek. And what the Porte now undertakes to hand over, it can hand over without any trouble. There is no need of coercing an unwilling population, and the Greeks may reckon on getting immediate possession of what is promised, which is much more than could have been said if they had been promised that any considerable portion of Epirus should be handed over to them. This is a very important point, and if the offer is to be looked on as a mere matter of bargaining, ought to be taken into serious consideration by the Greeks. In the circumstances that have arisen, Turkey, being unwilling to carry any cession out, and the Powers being resolved not to coerce Turkey, Greece would have got nothing if she had not threatened war, which made the Powers put pressure on Turkey, not for the sake of Greece, but for the sake of European peace. By threatening war, and by spending the money and incurring the debt which the threat of war has made necessary, Greece has got the offer of a large fertile province full of a population friendly to her, and this offer is one which can be practically made good without trouble and without loss of time. Financially speaking, it may be true that the game has not been worth the candle, and that the possession of Thessaly is not an equivalent for the money that will have been laid out in getting it. But there are other things to be thought of by a nation than finance, and a display of spirit and energy, followed by a certain measure of success, may do a nation more good than keeping its money in its pockets would do. Preparation for war appeals to the higher sentiments of a nation, and the Greeks have responded to the appeal with much spirit and determination. But it is this very appeal to the higher sentiments of the Greek nation that makes the present moment critical. The Greeks have always maintained that the war on which they were embarking was a war, not so much of aggrandizement as of liberation. They wanted to make their country bigger and richer, but they wanted still more to free other Greeks from the dominion of Turkey. Europe told them once vaguely at the Congress, and again very definitely at the Conference, that among the Greeks so freed the Greeks of Janina ought to be included. Now they are told that the Greeks of Janina are not to be freed. From the point of view of their contention, what they are called upon to do is to abandon their "suffering brethren of Janina." Common sense and the legitimate influence of the Powers, and especially that of the Powers most friendly to Greece, will, it may be hoped, prevail. The Greeks get enough by getting Thessaly to satisfy their honour and to substantially benefit the nation. The Powers have got as much as they could get for Greece without coercing the SULTAN into coercing his subjects. Every motive of prudence suggests to Greece that peace is far better for it than war, and no Power would think

of helping Greece if it went to war now. But, in calculating the probabilities of war or peace, it is necessary to appreciate the real difficulty with which the Greek Government, if it desires peace, has to contend; and this difficulty is not that of persuading the nation that it has made a good territorial bargain, but it is that of persuading it that it ought to abandon those who, according to what it contends is the solemn judgment of Europe, should be included within its fold.

THE FREIHEIT PROSECUTION.

THE suggestion which we made last week that in the interests of public morality the law should interfere to put an end to the publication of articles containing open and avowed instigation to murder has been followed by prompt and vigorous action on the part of the authorities. The editor of the German Socialist organ in London, the *Freiheit*, which recently published a leading article approving of the assassination of the Czar and counselling the murder of the Emperor of Germany and other sovereigns, has been arrested. Of the responsibility of the accused man, Moser, it would be unbecoming in us to speak while the case is still pending; but of the pernicious nature of the journal in question, and of the unwisdom of allowing it to go on unchecked there can be, we should imagine, but one opinion in the minds of law-abiding people. Since the article to which we called attention, another number of the journal has appeared, containing, amongst a mass of other seditious matter, an account of the meeting lately held in London to celebrate the anniversary of the Paris Commune and the news of the murder of the Czar. The resolutions passed at this meeting were as follows:—

"The execution of the Despot ALEXANDER ROMANOFF, *vulgo* Czar of RUSSIA, which was carried out on the 13th of March in the present year, has filled the Social Revolutionists of all lands with great satisfaction. The noble comrades who, at the sacrifice of their own persons, executed the sentence of the People on that monster have earned the thanks of all civilized men.

"We encourage the Social Revolutionists of Russia to complete their glorious work of freeing ninety millions of men from the curse of an insolent Tartar horde which has gained dominion over Russia. They are sure of the loudest approbation of all the poor and wretched.

"The extraordinary pressure which at present burdens all peoples makes extraordinary measures necessary."

These seditious doctrines are approved and encouraged in the number of *Freiheit* which is before us; and the rest of the paper is conceived in the same bloodthirsty spirit. Such words, coming as they do from ignorant and uncultivated men, might well be considered as more idle bombast, were it not for the fact that a powerful organization does exist for the destruction of all law and order, and that ghastly murders and other outrages have followed, and may again follow, as their direct consequence, the expression of such sentiments. It is, therefore, unfair to compare the *Freiheit* and kindred publications with the pultry, but blatant, organs of certain disloyal sections of our own community; nor is it wise to place too much confidence in their presumed insignificance and inability to do harm.

We are not surprised that the action of the Government in taking up the prosecution should at first sight provoke unfavourable comments; but we are sure that maturer reflection will convince any one who is not obstinately prejudiced that the arguments against interference in the matter are weak in view of the altered circumstances of the present day. Sir WILLIAM HARCOURT had no difficulty in justifying his conduct before the House of Commons. Miserable and contemptible as the *Freiheit* is, it is the mouthpiece of the party of assassination; and, apart from all political considerations, the writer who calls upon other people to murder a fellow-creature, be it emperor or peasant, is surely as much deserving of punishment as if he had instigated the commission of any minor crime. What would be said of a police which permitted the publication in London of a paper intended to further the operations of a gang of swindlers, or advocating the pillage of a jeweller's shop in Paris or Berlin? To talk about the liberty of the press in the case of such publications as the *Freiheit* is an absurdity; it had

nothing in common with the press, was neither a vehicle for the expression of popular opinion or the dissemination of news, but was purely and simply the weekly manifesto of certain revolutionary refugees. Had it confined its utterances to politics, it might have gone on ranting until it died of inanition. Even when it approved of murder committed it might have been treated with ignominious contempt, but when it counselled fresh murders, and designated the individuals to be slaughtered, it rendered itself as much amenable to correctional discipline as if it had offended against Lord CAMPBELL'S Act. The argument that a prosecution is an excellent and gratuitous advertisement for such a paper has but little force; while, should a conviction follow the arrest of its editor, it will be a safeguard against the publication of others of the same kind. A contemporary suggests that "it is safer to let men 'blow off steam by leading articles and resolutions than to leave them no means of expressing themselves but by 'dynamite.'" There is some truth in this; but it scarcely applies to leading articles and resolutions having no object but to encourage the use of dynamite. It is also true, as has been urged, that a paper suppressed in England might reappear in America or elsewhere; but it is scarcely logical to say that, because another country may possibly tolerate a nuisance, we ought not to try to get rid of it ourselves.

The most telling, though far from the soundest, argument against the Government prosecution of the Socialist journal is the suggestion, which will no doubt be made over and over again, that it is a concession to the demands of other Governments, and an attack upon the right of political asylum in England. It will be recollected how in a former trial in this country for conspiracy to murder a foreign monarch a jury were induced to give a verdict of acquittal by being told that they would do their duty though thousands of French cannon were roaring about their ears; but this is mere claptrap, for the offence with which the defendant in the case of the *Freiheit* is charged is one against common law and common decency, and it can surely need no foreign influence to induce the Executive to vindicate either.

Many eminent as well as obscure political refugees have from time to time sought and found shelter in England, and have been allowed to enjoy their opinions in perfect security, because they have behaved themselves as quiet, peaceful, and honest citizens. Any attempt to interfere with the right of asylum in the case of any of these would most justly call forth a storm of indignation, and meet with determined opposition. But it is a very different thing when, as in the present instance, the refugee takes a mean and ignoble advantage of England's hospitality to compass the death of England's friends, and to overthrow the structure of society upon which the prosperity of England as much as of any other country rests. It is certainly to be deplored that so vulgar and dastardly an offence should be dignified with the name of a political question; but unfortunately there is too great a tendency to make political capital out of any unforeseen incident, and this one will probably prove no exception to the rule. We should have preferred to see the editor and writers of *Freiheit* undisturbed in their original obscurity, but the same may be said of any low wretch whose crime makes him for the nonce notorious. We do not, however, let off the obscure thief or murderer because it is not a good thing to help such persons to obtain notoriety. At any rate, the arrest has taken place, and the law must now take its course; if there is anything to be urged, technically or otherwise, in the defendant's favour, he will certainly have the benefit of it; on the other hand, we feel sure that no external agitation or party cry will influence the even administration of justice. We can, in this country, afford to look on the Socialist movement with greater composure than some of our neighbours, for our own institutions, being so free and constitutional, are less pregnable; and happily the dark shadow of political assassination has not as yet hung over us. At the same time, there are unquiet elements in society even here, the existence of which it were unwise to ignore; and, although we should be the last to advocate any reactionary policy, we deem it worse than foolish to neglect the ordinary precautions against disturbance and crime which the Constitution already furnishes. The Nihilists and advanced Socialists aim at something more than mere political reforms or changes; they are bent upon the actual destruction of the whole framework of society, and are as

much its enemies as the burglar or garrotter. Still, as mere political theorists they have a right to their opinions and to be left alone; but when they appear as accessories before and after the fact to murder and outrages of which the criminal law takes cognizance, they ought to answer for their misdeeds "without the benefit of (political) clergy."

THE THAMES RIVER BILL.

THE House of Commons had a good time on Tuesday afternoon. Those who took any part in the debates of the Oxford and Cambridge Union will remember the keen excitement aroused in the members by "private business" as compared with the comparatively languid interest which was felt in motions relating to public affairs. Considering that public affairs are the proper concern of Parliament, it seems strange that this distinction should be reproduced in the House of Commons. Occasionally, however, it makes its appearance even there. Then the benches are filled at four o'clock, and the aspect of the House might delude a stranger into the belief that the existence of a Ministry was involved in the issue. The amusement provided for Tuesday was still more delightful. Private business may sometimes have the advantage over public, but both must yield to the charm of a discussion which has for its sole object the determination under which head a particular Bill shall fall. There are many members who may care nothing for the Bill in either character; but none can have a soul so dead as to be indifferent to a debate whether it shall wear one character or the other. This was the engrossing occupation of Tuesday afternoon. The Thames River Bill was set down for the time of private business, and Mr. RITCHIE had given notice of an amendment that its character and objects were such "as to constitute it a measure of public policy." No wonder that the House was content to put off even that delightful baiting of Ministers which goes on at question time. Sir WILLIAM HARCOURT'S answers had for the moment no attraction. To hang on Mr. RITCHIE'S demonstration that the Bill had been misdescribed as private, and to await Mr. CHAMBERLAIN'S statement of the reasons why he was under no obligation to describe it as public, were more agreeable because rarer employments than anything which could be looked for lower down in the notice paper.

Mr. CHAMBERLAIN'S argument was sufficiently convincing to relieve him of any suspicion of sharp practice. A private Bill has this conspicuous advantage over a public Bill—that it takes much less time to pass it. Every one admits that the House of Commons is over-burdened with business, and Mr. GLADSTONE has, so to speak, offered a prize to the ingenious inventor who will devise some way of lessening the work it has to do. That fortunate man will be declared a public benefactor by the voice of the PRIME MINISTER himself. This was the prospect which fired Mr. CHAMBERLAIN'S ambition, and the Thames Bill seemed to give him the opportunity for making a first essay towards its realization. It was not exactly a Government Bill, but it came sufficiently near being a Government Bill to invest Mr. CHAMBERLAIN with the control of it. "Strictly speaking," it was the Bill of the Thames Conservators, and they will have "to pay the expenses of promotion." But it has been concurred in by the Board of Trade, and it represents the opinions of a departmental Committee. The Board of Trade, in fact, has told the Conservators what it thinks they ought to do, and has generously given them leave to do it at their own expense. Still, it is not a Government measure, and consequently Mr. CHAMBERLAIN thought that there was a sufficient array of precedent to justify its introduction as a private Bill, and thereby to leave the House more time to give itself wholly to public affairs. Perhaps the House, except when obstruction is very rampant, does not wish to give itself wholly to public affairs. Perhaps it thought that to allow the use of this novel apparatus for saving time might constitute an inconvenient precedent. At all events, it looked with no favour on Mr. CHAMBERLAIN'S experiment. Mr. RITCHIE'S amendment was seconded by Sir SIDNEY WATERLOW. No private member could be found to oppose it, and finally Mr. BAXTER "earnestly appealed" to the Government to withdraw the Bill, and to deal with the question "in a proper and legitimate manner." A little earlier in the debate Mr. ASHLEY

had declared that the question could not be dealt with by a public Bill. Private it was, and private it must remain, unless the House of Commons was prepared to arrogate to itself the power to alter the essential nature of things. There was nothing in the speeches of Baron DE WORMS or Alderman LAWRENCE to lead Mr. CHAMBERLAIN to throw over his subordinate, but the reports of the Whip or his own observation of the House had convinced him by the time that he rose that either the essential nature of things must be altered or the Government would be beaten. Fortunately, when Mr. ASHLEY's impossibilities came to be looked at closely, they proved undeserving of so tremendous a name. Mr. ASHLEY had not formed his conclusion without some evidence to go upon, but he had not been very particular as to the quality of his evidence. It is commonly supposed that the Speaker is the authority to whom appeal should be made when the object is to ascertain what the rules of the House permit and what they forbid; but Mr. ASHLEY, perhaps wisely, had taken care not to ask the SPEAKER the question. He had only referred to "experienced gentlemen outside." Mr. ASHLEY had in fact taken counsel's opinion on the subject. This is a very proper course to follow as a prelude to stating a case for the decision of a court, but it is not usual to treat counsel's opinion as a substitute for the decision of a court. When Mr. CHAMBERLAIN referred the matter to the SPEAKER, it turned out that Mr. ASHLEY and his experienced gentlemen had all been in the wrong together. There was no objection to the measure's being introduced as a public Bill, and Mr. CHAMBERLAIN accordingly consented to bring it forward in that character.

As there will be other opportunities of considering the Bill on its merits—though whether they will be afforded this Session is a little doubtful—it is not necessary to say anything about them now. The only question that arises out of Tuesday's debate is the question whether the Bill had any proper claim to the private character with which Mr. CHAMBERLAIN desired to invest it. Putting technicalities aside, it seems most probable that it had no such claim. Mr. CHAMBERLAIN contended that under the searching examination of a Select Committee its faults or its virtues would be at least as thoroughly sifted as in a Committee of the whole House. This argument, if it is worth anything, would justify the application of private Bill procedure to all legislation whatever. The answer is that, as regards a great number of Bills, something more is wanted than a thorough sifting of their provisions. The House of Commons is not always willing to be bound by the report of a Select Committee. It wants to exercise its own judgment and to speak with its own voice. Nor can it be said that, if it insists on doing this in the case of the Thames River Bill, it will be pledged to show itself equally inquisitive in the case of every other private Bill. The Thames River Bill, as it was described in Tuesday's discussion, will certainly affect interests large enough to be regarded as public. It deals with no less a question than the navigation of the greatest of English rivers. At present, every ship navigating the Thames is compelled to carry a pilot, and, considering what immense interests would be affected by this regulation, it is only natural that the House of Commons should not lightly forego the right of speaking its mind upon its clauses one by one. There may be very good grounds for abolishing compulsory pilotage, but the House of Commons may fairly wish to weigh these grounds for itself, instead of leaving them to be estimated by a Select Committee. By another provision of the Bill the Thames Conservancy is created a nuisance authority and given the power of inspecting all factories on the bank of the river. This may be an enactment of great practical value, but it is one which the owners of these factories regard with some alarm, and though; if the Bill had remained private, they would have been heard either by counsel or in person before the Select Committee, this is not at all the same thing as having their objections threshed out in the House of Commons. On the whole, therefore, Mr. CHAMBERLAIN's second thoughts were better than his first, and Mr. RICHIE may claim the credit of having helped to train up an interesting but wayward child in the way in which it behoves him to go.

CENTRAL ASIAN AFFAIRS.

THE remarkable statement made by Sir CHARLES DILKE last week in the House of Commons, although half withdrawn by Lord HARTINGTON, and only confirmed since by vague rumour as to the personal intentions of the Czar, would of itself suffice to direct attention to the condition of that part of Turkistan which borders on the Perso-Afghan frontier. The ratification, moreover, of the Government plans for the abandonment of Candahar, and the utter anarchy in which Western Afghanistan is reported to be, make the situation still more interesting. To this, again, has to be added the fact that there is, or was very recently, a European traveller at Merv for the first time for many years. The Correspondent of the *Daily News*, who has so long been hovering about the outskirts of the Turkoman district, has at last succeeded in penetrating to the fabulous city, as a prisoner it is true, but as a prisoner soon to be released. No further intelligence has been received from this adventurous traveller, except an assurance of his safety and freedom, and the very important news that the Russians are actually on the lower course of the Tejend Daria or Hori Rud, the river which, rising in the Hindu Koosh, flows westwards past Herat and then northwards into the desert, where it loses itself in a great swamp or lake, the waters of which, when properly utilized, used to give its historical fertility to the oasis of Merv. Another of the scanty fragments of intelligence which have to be pieced together by any one who seeks for information on these matters has it that the remnant of the Tekkes have asked permission of AYOUN to place their families in safety in his dominions, a permission which, if granted, would hardly be of much value if it be true that AYOUN is once more a prisoner in his capital, besieged and threatened by mutinous soldiery, while revolt and anarchy are rife throughout the provinces he used to rule.

The situation at the time that Sir CHARLES DILKE made his singular statement, "on independent authority," respecting the intentions of the Czar was this. Speaking roughly, five stages or districts separate the Russian posts on the Caspian shore from the Oxus where it leaves Afghan Turkistan. The first of these is desert, and the Russians had to surmount it before they could attack the second, consisting of the oasis of the Akhal Tekkes. The resistance of the latter at the fortress of Yengi Sheher or Geok Tepo has delayed them for two years. But this is now entirely surmounted, and the power of the Akhals is definitely broken. Between the Akhals and their brethren of Merv a second stage of desert intervenes, then comes Merv itself, and then yet another desert strip bounded by the Oxus. The Russians were left at Tejend, the last stage before plunging into the waterless wilderness which intervenes between the Herat river and Merv. Thus placed, they have already mastered that road to India of which so much has been heard, and which has been mistakenly thought to run through Merv itself. The road to India from the Northern Khanates and from Orenburg does, indeed, so run, but not the road from European Russia by the Caspian. The shortest way in this latter case is inside, and to the south of the range of mountains which forms the northern frontier of Persia; but Persia being, at least nominally, independent, this does not count. The next shortest is that which the latest advances of General SKOBELFF have put actually in the hands of the Russians to within a stage of Afghanistan. This road is from the Caspian desert and inconvenient; but a railway has already bridged, or is in rapid process of bridging, this gap. Thenceforward it is easy enough leading through the now subjugated Turkoman country to the north-eastern corner of Persia, where, by way of the border fortress of Sarakhs, close to which the Russians now are, it turns to Herat and to India. Their present position, therefore, or their position before the mysterious and unconfirmed orders to which Sir CHARLES DILKE referred, so to speak, masks Merv, renders it powerless as an obstacle on the way to India, and only valuable as an opening yet another way, the way from Khiva and the north. Now there is a rumour that the recall of General SKOBELFF, of which the UNDER-SECRETARY for FOREIGN AFFAIRS made so much, concerns only Merv. Unless the Russians are prepared to face the great and terrible wilderness between Tejend and Antioch-on-the-Murghab, they must drop downward through Persian territory to

Sarakhs, and thence work upward again. This violation or abuse of a neutral territory has been committed by them before in the course of the war, but the new Czar is said to look on its repetition with disfavour. All, therefore, that Sir CHARLES DILKE's statement, even if literally true, need mean is that General SKOBELEFF has been forbidden to prosecute his plans against Merv itself at present. Considering that the best authorities doubt the possibility of so continuing the expedition until next year, this is a very small mercy. Considering that, as has been shown already, the occupation or non-occupation of Merv by the Russians in no way affects the fact of their having actually cleared away almost every obstacle which lay between them and the Afghan frontier, the mercy is smaller still. To make the recall or the stoppage of operations of any real value, the Akhal oasis ought to be entirely evacuated, and nothing but a post of observation to the west of it, if even that, retained. If this were done, as sanguine persons hope, there would be some reason for speaking of the action of the Czar as deserving compensatory withdrawal on our side. But if it be not done, the recall of SKOBELEFF is a mere empty form calculated to impose only on those (and it is to be feared that they are a considerable number) who are utterly ignorant of the actual circumstances and geography of the case. The country which the Russians have now actually occupied, to use a parallel which will be at once intelligible to all acquainted with modern history, stands to Afghanistan, and therefore to India, very much in the position which the Valtelline occupied in old days to Italy, and for the purposes of the Power occupying it, it is as unnecessary to go to Merv as it would have been for Austria, possessing the Valtelline, to go to Chambéry. The parallel—deserts taking the place of mountains—is almost an exact one.

While this is the case on the lower course of the Horat river, the way to it being completely clear to the Russians, and the power of the Turkomans being restricted to a doubtful possibility of maintaining themselves in their isolated stronghold of Merv, the districts on the upper part of the same river and farther south are in a complete state of anarchy. It is not known whether the failure of AYRUB to obtain investiture of Candahar from the English Government has discredited him with his followers, or whether the always smouldering jealousy between the Eastern and Western tribes has once more broken out without special cause. But his Herati and Candahari troops are said to be in open mutiny, the Cabuli regulars alone remaining true; while away from the capital, especially in the rich corn-producing districts surrounding Farah, his officers are being killed or driven off. In short, the whole country, from the Turkoman frontier to the neighbourhood of Candahar, appears to be in a flame. It has been argued, with the curious optimism which is usually strengthened by ignorance of the subject, and sometimes rewarded by a chance result, that this state of things favours the prospects of ABDUL RAHMAN. The idea seems to be prompted by the same notion of Afghanistan as a settled and stable unit, only desiring to be integral and independent, which has appeared so often in the controversies respecting it. The natural condition of the country is a condition of intestine war and disintegration; and it does not in the least follow that a tribe will join one candidate for universal sovereignty because they have attacked his rival. If ABDUL RAHMAN is strong enough to overawe Candahar and Herat, or clever enough to conciliate them, he will gain and hold them, and that is all that can be said. There would be a touch of comedy in the suggested request on his part that our troops should remain to countenance him at the southern capital. The English partisans of "scuttling" have descanted pathetically on the wrong we should do to the AMERs by remaining at Candahar, and on the harm which the mere semblance of his being a *protégé* of ours would inflict on his chances. All these things, however, are only rumour. The facts as known at latest dates remain, that the Russians are now complete masters of the road to India up to the Afghan frontier, and that the part of Afghanistan to which they have thus opened the way is in utter anarchy. Peace may of course descend upon Herat, and independence may be restored to the Akhal Tekkes. It can only be said that every reasonable Englishman will be heartily pleased at events which at the present moment present not much more probability than is compatible with their being not absolutely impossible.

COUNTY MAYO.

THE time when the Irish Land Bill is to be laid before Parliament draws near, and every scrap of information which can enable Englishmen to judge how far the Bill is at once a comprehensive, a just, and a practical measure ought to be eagerly welcomed. The difficulties of framing a measure which shall fulfil these conditions are seen to be greater and greater the more that such imperfect information as can be procured is attentively studied. It is difficult to make the measure comprehensive, for inside Ireland there are nine or ten Irelands, all distinct from one another. It is difficult to make it just, for every rule that can be laid down seems to require endless exceptions. It is difficult to make it practical, for as to many of its provisions it must be a grave matter of conjecture how they are likely to work. Even to make a probable conjecture as to the future, the guesser must satisfy himself so far as he can as to what are the facts of the present. Unfortunately, a great obscurity hangs over these facts. What we want is the evidence of competent observers, and when we get such evidence as is offered us we frequently find that it is subject to great drawbacks, that it is tinged by the peculiar theories of the witness, that it is drawn from the knowledge of a very limited area, or that it is the evidence of an outsider, honest and intelligent, no doubt, but sent for the special purpose of making the best report he can in a very short time on a country of which he had no previous knowledge. It is much to be regretted that there has been so much delay in publishing the evidence taken by Lord BERSBOROUGH's Commission. The introduction of the Land Bill has been delayed long beyond the date when the Government announced that it was ready to bring in its measure, and even with all this additional time, the evidence of the Commission created to collect the facts that were to serve as a basis for the Bill will scarcely be in the hands of members before they listen to Mr. GLADSTONE's statement. To some extent, however, the deficiency is supplied by the vast body of evidence collected and published by the Duke of RICHMOND's Commission. Far the larger portion of the volume relates to Ireland, and the selection of witnesses was at once wide and happy. All that can be said on the question of Irish land, from the point of view of liberal, kind-hearted, far-seeing proprietors, was said by Lord DUFFERIN, Lord LANSDOWNE, and Colonel KING-HARMAN. Professors and soldiers, large farmers and little farmers, buttermen and railway managers, Presbyterian ministers, and Roman Catholic bishops, all told their tale, and if, after reading all they had to say, we still feel the want of more information, it is not because their evidence was meagre so much as because the subjects on which they touched are so vast or so complicated, that the little that is learnt about them seems nothing as compared with the vastness of that which is not learnt. Most of the leading English newspapers have also sent special Correspondents to Ireland in the last few months, and it may be said to the credit of those sent that they have tried to learn all that it was in their power to learn in the circumstances in which they were placed, and that they were superior to any wish to accommodate their reports to the political leanings of the journal in which their reports were to appear.

The *Times* has just published what may be the concluding number of its series of reports on Ireland under the head of "County Mayo." It is perhaps too unfavourable a specimen to be taken as a fair sample of such contributions to knowledge, but it shows not inaptly what we may and what we may not expect to gather from them. What we are told is, no doubt, true, and is in itself well worth knowing. But it gives only the merest scrap of a contribution towards the information as to the state of one of the most backward, disorganized, and distressed counties in Ireland which we should like to have placed before us. It tells us that there are some good landlords in Mayo, that the land of these good landlords is low-rented, that pasture in Mayo has to some extent replaced tillage, that it would not be kind to establish peasant proprietors on red bog-land, and that rents are sadly in arrear. But on this last point we are left in doubt as to what is the date on which the writer is supposed to be writing. In an early part of his letter he tells us that, since the partial restoration of order, things have mended and rents are coming in. Then follows a series of notes on different estates, and in each estate the collection of rents appears to be more and more difficult, until

in one of the last of these picturesque descriptions we find the writer painting the scene before him on a bright January day. It is very interesting to know how things looked in Mayo in January when the Coercion Bill was only talked of, but it would be much more to the purpose to know how they look at the end of March now that the Bill has become an Act. A correspondent can only give what he has got to give. He takes notes in different places at different times, and pieces them together when he has leisure and opportunity. He wants to learn all he can in a short time, and much the easiest way is to visit the best class of proprietors, who are sure to welcome him kindly, and to give him information which they know must redound to their credit, and which it is only just to those and those like them shall be placed on record. If there was nothing else to report, the occasion of making reports would never have arisen. What we want to know is the real state of things in County Mayo. What is that has made County Mayo what it is? Colonel DEANE, one of the witnesses who gave evidence before the Duke of Richmond's Commission, and who had travelled over a large part of Ireland in connexion with the MARLBOROUGH Fund for relieving distress, spoke thus of Mayo as compared with other adjacent counties:—"I thought the land looked worse, and the condition of the people looked worse, and the general aspect of the holding was more unkempt and less tidy, and less cared for." This is the general aspect of County Mayo. It is the aspect which must be regarded when we ask whether the new Land Bill will for County Mayo be a practical measure. From the point of view of justice, it is certainly important to know that even in Mayo there are good landlords with properties fairly thriving. Such landlords have an excellent right to ask that justice shall be done to them. But the practical difficulty is to deal with County Mayo as Colonel DEANE saw it, and not with the little oases of prosperity to which the Correspondent confined his attention.

There are in County Mayo, as in Connaught generally, and in the South-West of Ireland, too many people. These people are always on the verge of famine, they are entirely ignorant of agriculture, they work little and badly, and they are inclined to be lawless. Mayo is an especially lawless county. One witness before the RICHMOND Commission said that they had lately got in Mayo as far as roasting a man, and he very properly considered this inexcusable. He thought that in decency they might have confined themselves to houghing cattle. Every witness agreed that this population must be thinned, and that to be a practical measure the Land Bill must start some process of thinning it. Three modes of accomplishing this desirable end were suggested. Some witnesses thought that by fixing the occupants in their holdings they would thin themselves. The unthrifty and the idle would find it impossible to retain their holdings, and then the thrifty and industrious would step in and take the place of those who, being dispossessed, would go with the proceeds of the sale into the towns or to America. Other witnesses talked enthusiastically of migration—that is, a transference of the population from occupied to unoccupied Irish lands. It is to projects of this kind that the Correspondent refers when he speaks of the cruelty of planting occupiers on a few acres of bog-land. Such schemes are condemned by the best judges, but it is only fair to say that the schemes actually proposed were not so crudely absurd as the Correspondent seems to indicate. Professor BALDWIN, the leading theorist on the subject, supposes that each family transplanted has given it a sum of £10. to start with; and his colleague in the investigation ordered by the RICHMOND Commission was strong in insisting that drainage must precede colonizing unclaimed lands. Very handsome ideas, it may be remarked in passing, are afloat as to what the State ought to do in the way of drainage. The Bishop of CLONFERR, for example, said that, in his opinion, the beginning of everything was to drain the big rivers. If all the water could be got out of the Shannon into the sea, then Ireland might be really happy, although he was quite willing to withdraw the suggestion if it could be shown that there were any serious engineering difficulties in the way. The third machinery is that of emigration, and there was a remarkable agreement of testimony that there would be no very great reluctance to emigrate if the people could once see that it was to their advantage to go, and could be made to feel that they were not going

under any kind of State compulsion. If it can be supposed that the population of Mayo were in any way thinned, what, it may be asked, would be the result? Even if we assume that under a marvellously clever Land Bill the law of the survival of the fittest is to be the law of human existence in Mayo, we have still to ascertain what we mean by the fittest. The Correspondent, who had probably got sick of being drenched to the skin in his tours, adopts one of those hasty generalizations which are so dear to hurried tourists, and lays down that grazing, nothing but grazing, and grazing on a large scale, will alone do in Mayo. But an important body of evidence given to the RICHMOND Commission points in a different direction. Witnesses who knew what they were talking about said that the most that could be got out of the soil, even in the moist West, was to be got by a mixture of tillage and grazing, and that, although the process could be carried on profitably on a large scale, it could also be carried on profitably on a small scale; and many of them were of opinion that a decent livelihood could be obtained by spade husbandry where a rapid ascent made it impossible that the plough should be used.

OUR IRONCLAD SOLDIERS.

THE mode of warfare practised by the British army is about to undergo a serious change. That this change will from one point of view be an improvement is beyond question. In their indirect action, at all events, the new rules as to summary punishments might have been drafted by the Peace Society. In the brutal days when flogging was still resorted to, the object of all war was unblushingly acknowledged. Flogging was justified on the ground that it could be easily and promptly inflicted; that the offender, though suffering sharply for the time, rapidly recovered from its effects; and that for these two reasons a soldier sentenced to be flogged was soon as ready as before to kill or maim such enemies as came in his way. It is plain that if for flogging there can be substituted a punishment which must necessarily withdraw a man from useful service in the field for some considerable time, he will kill or maim fewer enemies in proportion, and to this extent the object of war will no longer be attained. This fact, even if it stood alone, would suggest that the Peace Society had had a hand in the framing of the rules which Mr. OSBORNE MORGAN explained to the House of Commons on Monday. To subtract a certain percentage of British soldiers from the work for which they have been enlisted is an appreciable step towards fulfilling the Society's purpose. As it happens, however, this fact does not stand alone. The new punishments withdraw those subjected to them from active service in the field, and they do nothing else. All the eloquence that has been expended on the wickedness and folly of inflicting degradation on British soldiers turns out to have been wasted. The new penalties are at least as degrading as flogging.

In future the soldier who might formerly have been flogged will be punished at the discretion of the commanding officer in one of three ways. In the first place, he may sit or stand in irons. We say sit or stand, because, though neither of these words occur in the rules, it is provided by implication that while in irons the offender must not be compelled to walk. He may be "moved from place to place," but it must only be in a "waggon, cart, or other vehicle." There is reason to suspect that this limitation was the result of a compromise between the Peace Society and the War Office. The object of the Peace Society was no doubt to prohibit all motion on the part of offenders while in irons, since this would have involved an equal absence of motion on the part of the soldiers employed in guarding them. It would plainly be cruel to leave men in irons to the tender mercies of an enemy—say a Boer with a flag of truce—who might happen to discover them, and, provided that a sufficient number of men could have been found to qualify themselves for being put in irons, the whole force in the field might have been required for this purpose. Had the Peace Society been able to carry out their wishes in this respect, a new career would have been thrown open to its more adventurous members. In no way could war have been more effectually prevented than by enlisting and committing an offence for which the missionary of peace would be put in irons. It would have been too much perhaps to

expect Mr. RICHARD to sacrifice himself in this way, but to a youth of active temperament and pacific enthusiasm the new career might have had many charms. It may be supposed, however, that at this point the War Office put down its foot. No matter how many soldiers might be in irons, it insisted that the power of changing its place should not entirely be denied to a British army in the field. After their recent triumph in South Africa, the Peace Society could afford to be merciful, and offenders in irons may be moved from place to place so long as they are not compelled to take other than carriage exercise while on the march. The second of the new punishments is seemingly to be used when all the available vehicles are filled with soldiers in irons. It will then be necessary to inflict some penalty which is consistent with motion on the offender's own legs. He may accordingly be attached "to a cart, "waggon, or horse, so as to compel him to move onward "at a walking pace." The progress through an enemy's country of a regiment in which bad characters happen to be numerous will henceforward be a very striking spectacle. The main body will consist of the waggons containing the men in irons; attached to the waggons will be the men undergoing the penalty of attachment; while behind these will come a third class of offenders, those sentenced "to carry extra burdens or weights." The selection of this last penalty displays great judgment on the part of the military authorities. It is necessary to provide for the case of all available vehicles being wanted for the conveyance of men in irons. If the only other form of summary punishment had been attachment to a cart, waggon, or horse, the soldiers who had not been guilty of any offence would have been obliged to carry their own baggage, a state of things which might conceivably have had the demoralizing result of tempting them to qualify themselves for summary punishment as a preferable alternative to becoming a beast of burden. By making carrying burdens itself a punishment this undesirable consequence is avoided.

* Putting aside the third penalty, it can hardly be denied that the new punishments are to the full as degrading as flogging. Fetters are traditionally associated with convicts and galley slaves, and to put a soldier in the position of the extra horse behind a return coal-waggon is as little likely to maintain his self-respect as any plan that can be thought of. If this were all, however, the objection to the new rules would not be worth considering. All punishment is more or less degrading; and, so long as it is only inflicted for acts which in themselves imply more or less of degradation in the offender, it is quite fitting that it should be so. The real faults of the new rules are that the infliction of them is likely to prove extremely inconvenient and not particularly deterrent. Before 1879 a soldier convicted of drunkenness or insubordination in presence of the enemy, or of marauding in an enemy's country, was made to feel that indulgence in these pleasures brought with it sharp physical suffering. Flogging took no time, and only withdrew a man from his duty for a very short time. Under the new rules it will no longer be possible to inflict sharp physical suffering. Sitting or standing in irons is no doubt unpleasant, but it cannot be said to give actual pain unless the infliction is prolonged for some considerable time. It is accordingly provided that any one or more of the new punishments may be repeated for fourteen days, so long as not more than three of these days are consecutive. To inflict the maximum penalty, therefore, will require nineteen days. During all this time soldiers undergoing punishment will be useless. A man in irons would be useless in a charge, and as he may only be moved from place to place in a waggon, cart, or other vehicle, he could only take part in one conducted after the manner of the ancient Britons. Nor would an infantry soldier be of much service while attached to a cart, waggon, or horse, moving onward at a walking pace. Carts and waggons will naturally be found well in the rear of the army, and a horse which in deference to the man attached to him could only be moved forward at a walking pace, will be less in the way there than in the front. As regards the bearers of the burdens, they could hardly be sent to attack the enemy without risking the loss of the baggage; nor, even if this danger were disregarded, would a detachment of heavily laden porters advancing with shouts of "By your leave" be likely to create much alarm. Consequently all these punishments must go on at a convenient distance from the enemy, or they must not be

inflicted when the army is in the field. In the former case every man who is inclined to skulk will take care to get put in irons or tied to a cart's tail as soon as the enemy is known to be at hand, or else the new means of enforcing discipline will cease to operate just at the time when discipline most needs to be enforced. It is still more likely perhaps that these penalties will never be imposed at all, since officers are to take care that they are "inflicted in "such a manner as is not calculated to cause injury or "to leave any permanent mark," thereby aiding the detection of deserters, a measure entirely opposed to Radical notions of liberty. As officers will not wish to incur any responsibility in this matter, they will naturally do nothing, except under the advice and almost in the presence of the regimental surgeon. During, and for some time after, an engagement this gentleman will be wanted elsewhere, and he will scarcely have time to consider whether the continuance of the punishment will be prejudicial to the offender's health—a duty expressly imposed on him by the new rules. Altogether, therefore, the punishments which it is now proposed to introduce exactly meet the presumed wishes of the adversaries of flogging. By making the maintenance of discipline almost impossible, they still further diminish the already impaired efficiency of the British army.

RUSSIA.

IT is impossible that the new CZAR should have done much as yet to indicate the use which he intends to make of the great power which has devolved on him. He has had neither leisure nor time to adopt anything that can be called a policy. But the little that has been done by or in Russia since his accession harmonizes with the popular belief that his general wish is to keep Russia out of foreign complications and to introduce some measures of internal reform. The speech of the Crown Prince of GERMANY at Moscow may be accepted as a proof that he sees no difficulty in making the ties that have so long united Germany and Russia at least as strong as they ever were. The Prince of ROUMANIA has been turned into a king; and, although it may be said with truth that he won his crown at Plevna, still he is connected with the Royal Family of Prussia, and has only assumed his dignity after having satisfied Austria that his little kingdom will appreciate at its proper value the maintenance of friendly, if not dependent, relations with her Western neighbour. In the most recent discussions on the Greek question the influence of Russia is said to have been exercised with new energy in the interests of peace. What is the real significance of the recall of General SKOBELLEFF it is impossible to say at present, but the statement that he was recalled because he wished to push forward to a settlement far outside his previous sphere of operations may be provisionally accepted. For the sake of Russia, as much as for that of Europe, it may be hoped that these are all signs of a wish on the part of the CZAR for peace, each slight, but taken together of some real importance. Of one thing there can be no doubt, and that is that, if ALEXANDER III. purposes to devote himself to internal reforms, he will have enough to occupy his attention. Before, however, he can give his mind to vexed questions of domestic government, he must, it is said, put down the Nihilists. It is to be feared that putting down the Nihilists is a thing easier to talk of than to do. The notion of a grand combination of Governments to stamp out Nihilism, as if it were the cattle plague, does not seem very promising. It may be possible to make a secret society more secret, but that is all. A Government, too, like the German Government can do something to check the spread of revolutionary and demoralizing teaching within its own borders. But Nihilism, so far as it is a peculiarly Russian form of a general disease, can only be dealt with in Russia and by Russians. What makes Nihilism really alarming is not that the Nihilists managed to kill the late CZAR, but that those who have to defend the present CZAR against his enemies seem to be either marvellously inefficient or very untrustworthy. The curious thing is that what the Nihilists intend to do is known to the Government officials, and what the officials intend to do is known to the Nihilists, the only difference being that the Nihilists act upon what they know, and the officials do not. In some mysterious way the Nihilists are supplied with intelligence which can

only come from persons who have access to quarters very high in the official world. That he has enemies who openly say that if he does or does not do this or that thing they will kill him, is enough to sadden the life, although it may not break the courage, of the CZAR; but that there is so much reason to distrust those who ought to be his friends is probably a still greater trial to him.

When the happy time comes for the CZAR to be free from the anxieties caused by Nihilism, and for his mind to be seriously turned to domestic reforms, he will have to consider and deal with two subjects of primary importance. These are the institutions by which the local needs of his people are supposed to be met, and the distressed state of the peasantry. He will have a very difficult task before him. To create is easy in Russia, but to get creations to work is very hard. The scheme of local self-government decreed by the late CZAR in 1864 was theoretically a very good scheme. There were created district assemblies in which nobles and peasants sat by election, and which were intended to manage the affairs of the district, to look after charitable institutions, to promote education, and to make roads. There were provincial assemblies composed of delegates from the district assemblies which were to do for the provinces what the minor assemblies were to do for the districts. On paper this reads as if an excellent beginning of representative institutions had been made, and the scheme was not altogether a failure. It failed; but it did not fail altogether, or from the outset. In many parts of the Empire it was never brought into operation, for there was a complete absence of competent persons to set the machinery going. In other parts there was much energy and enthusiasm displayed at first, and then, when the first excitement had passed away, apathy took the place of zeal. The peasants sent representatives to the district assemblies, but none of these sent could afford to go away from their homes and form part of the provincial assemblies. There was in the first years after the emancipation of the serfs a spirit of vague and unpractical but ardent Liberalism in a large portion of the nobility, and those who were imbued with those feelings caught eagerly at the chance of making their views felt in local assemblies. But they got tired of taking what seemed thankless trouble, and if they continued to attend, they attended more and more as a matter of routine. The Government strictly forbade anything like political discussion, and this made the proceedings seem tame and uninteresting. The ratepayers, too, complained that their rates were increased, and yet they never got the roads which ought to have been the great practical work of the assemblies. Local assemblies have, in fact, failed, because Russia has not as yet got men who know what local assemblies ought to do, and how what is resolved on ought to be carried out. What has happened already will probably happen again. Any new system of local self-government will fail as the old system has failed until there are men to be found to carry it out properly. With the spread of education, and with the development of material wealth, the right men will probably by degrees show themselves. But for this time, peace and a wise Government are needed, and the road to real local self-government lies, not through schemes for establishing it, but through the preparation of the ground on which it is to rest.

The condition of the peasantry is a more urgent subject for consideration than local self-government. There is no doubt great distress, and there is probably discontent among the peasantry. The Russian poor are very patient and deeply attached to the CZAR; but arson is the familiar form of peasant discontent in Russia, and there has been too much burning going on recently, although not very lately, to leave it doubtful that there are at least the germs of discontent among the peasantry. But, if there is any doubt about the discontent, there is none about the distress. Last year there was in many parts a total failure of crops. This, although the most immediately powerful, is not the most serious, cause of suffering. The weather, it may be hoped, will change for the better in Russia, as in other parts of Europe in which we are more interested. What is serious is that there are permanent causes of distress, and that they are permanent is shown by the fact that, according to all accounts, the Russian peasant has in recent years been living on his capital, selling off his cattle, and parting with his little store of accumulated wealth. Among these permanent

causes of distress the following seem to be the most important. The burden of taxation, Imperial and local, is crushing, and Protection in the most exaggerated form adds to the cost of everything that is needed for the improvement of the country. All that the Government can do to mitigate this burden is to pursue a policy of peace, and to lower import duties whenever possible. Then the soil of a considerable portion of Russia is exhausted. It will not pay for the labour which is necessary to cultivate it, and it has only not gone out of cultivation because artificial means have been employed to chain the labourer to the soil. The serf has been emancipated from the authority of the nobles, but he has not been given the liberty of leaving the land which it does not pay him to cultivate. What the Government can do to help the labourer who is suffering from this cause is to promote migration from districts where the soil is bad and labour superabundant to other districts where the soil is good and labour scanty, and there are many districts of this kind in Russia. This sounds tolerably simple, but it involves great difficulties in its execution; for the whole scheme of emancipation was based on certain payments being made by way of compensation to the proprietors; and, if the communes do not pay what they are bound to do, some fresh means must be found to compensate the proprietors or to recoup the Government, if it has found the money for buying up the rights of the proprietors. It is also to be feared that the distress of the peasants is in some degree attributable to a moral change produced by the emancipation itself. They were flushed with delusive hopes; they grew more lazy, and much more drunken. The Government has done all that it could to check this evil in the way of taxing liquor, and probably nothing very effectual can be done immediately to counteract the consequence of an abrupt change from an old state of things to a new. Lastly, the great agrarian change of emancipation has undergone the fate which seems to await all great agrarian changes. It did much good, but it also did much harm. In too many cases it put the peasant in a position in which he had really no chance of success. Sometimes it gave him a holding on which he might have lived had it not been that his holding was charged with the payment of sums which, except in very good years, the land would not enable him to meet. Sometimes it gave him the holding he occupied, but this holding was too small for him to live on it; he has had to go great distances to find other land that he could hire, and the curtailment of the operations of the great landowners has shut him out from selling his labour. To give peasants so circumstanced a fair chance is an aim worthy of the aspirations of the best intentioned CZAR, but it would obviously involve a new agrarian change hardly less than that of the emancipation.

LOCAL GOVERNMENT.

THE Local Government Board have lately printed a very valuable return showing the results of the local visitations made by their Medical Inspectors for the last ten years. By the aid of this paper we can learn when the visitation was made, what were the sanitary defects which the Inspector found existing, and what had been done to remedy them up to the 1st of January, 1880. The point that first suggests itself in looking at this paper is the partial nature of the information contained in it. A separate column shows the ground on which the visitation was ordered. It is to the credit of the Local Government Board that in a great number of instances this ground was the REGISTRAR-GENERAL'S return of the death-rate in the district. Very often it was the occurrence of some specific outbreak of disease. But in all cases the visitation was specially ordered. There has not since the establishment of the Local Government Board, or since the passing of Mr. STANSFELD'S Sanitary Act, which for the first time placed every district under the jurisdiction of a single sanitary authority, been any attempt at a systematic visitation of the whole country. When things have gone very wrong, and an extraordinary percentage of the population has died or fallen sick of a disease which is known to be caused by some sanitary defect, a medical Inspector has come down and investigated the conditions under which the inhabitants of that particular place are living. But he has done

nothing more. All round the infected spot there may be others, in which the causes of disease are equally abundant, though at that particular moment not equally fruitful. Bad air and bad water are always able to kill, but they do not always care to use their power. Inasmuch, however, as their action is perfectly known, there is not the slightest reason for waiting until an outbreak of disease or a startling rise in the death-rate proves them to be at work. If a hundred villages are in an equally bad position as regards water supply, it is only common prudence to take similar measures with regard to them, though the disease which commonly follows from the use of such water has as yet only followed in five or ten cases. What was wanted after the passing of the Sanitary Reform Act was a systematic inspection of the whole country. If this had been undertaken, the Local Government Board would have known, and Parliament would have known, exactly how the case stood; what sanitary evils there were to be remedied, and what measures would be required to remedy them. Whether this investigation had been undertaken by the Local Government Board or by the local authorities would not have greatly mattered. Had it been entrusted to the latter, the Local Government Board would have prescribed the forms to be used and dictated, the questions to be answered; and, if the answers in any case had been very unexpected, the same authority would have tested them by means of its own Inspectors. It is conceivable that an obstructive local authority might have sent in a much too favourable account of the purity of the water in their district, but they would not have been likely to make a false statement of the source from which it was derived. They might, for example, have made such a return as this:—"Quality of water—excellent; source of supply—surface wells." Upon receiving this exceedingly improbable statement, the Local Government Board would have accepted the fact as to the source of the supply, and have made an inquiry on its own account as to the quality of the water. After a few instances of this sort, the motive for painting facts too favourably would have disappeared, and we might have looked forward to getting a fairly accurate account of the sanitary condition of the whole country. Had this been obtained, the way would have been very much cleared for further sanitary legislation. As it is, it is always possible for those who dislike such legislation to persuade themselves and others that any particular case of sanitary mischief is only exceptional. As regards some large areas, the Report of the Medical Officer of Health makes it impossible to maintain this view. Dr. CHILDS' reports on the sanitary condition of Oxfordshire, for example, contained statements which must have occasionally pricked the conscience even of the most stolid local authority. But exceptions, even frequent exceptions, have not the same effect as a rule. If every county in England and Wales had been shown to be in at least as bad a condition as Oxfordshire, there would have been at least a chance of something being done.

Unfortunately a table printed across a folio page is not easy reading, and the money of the local Government would be well spent if they would put together the main facts of this return in a cheap and convenient form, and take steps to ensure its general distribution. A good many lingering delusions would thus be swept away. It could no longer be believed, for example, that all that local authorities want is enlightenment, and that when it has been brought home to them that this or that sanitary defect exists within their jurisdiction they will at once repair it. Unfortunately such a theory has no foundation in experience. Although every one of the visitations recorded in this return had its origin in actual disease, or in an abnormal mortality, there are many instances in which the mischiefs pointed out years ago as the cause of disease or death are as prevalent as ever. Thus at Chesham in Buckinghamshire the Inspector reported in 1871 that the water was polluted. In June 1879 it was still polluted, and in December 1879 a scheme for improving it was only "under consideration." In Goole, in Yorkshire, there was in 1871 "every kind of insanitary condition in its most aggravated form," and especially "bad water." In January 1880 the Report is as follows:—"There is no proper water supply, and many of the wells are polluted. The water question has recently been much discussed, and it seems probable that a private Company will be started to supply the town." At Perry Street, in Kent, in 1871 the wells were polluted, and there was no system of drainage or sewerage. In 1875 the mains of a neighbour-

ing water Company had been laid throughout the hamlet, but few householders had laid on the water. In 1876 there was still no drainage or sewerage provided, and, as a note is appended, stating that "the Medical Officer of Health is not appointed under the Board's orders, and no reports have been received since 1876," it may safely be assumed that none has been provided up to this time. At Abingdon, in 1872, the water supply was "mostly from surface wells in porous soil, soaked with excremental and other filth." In 1879 a scheme for supplying the town with water had been "approved by the Local Government Board." At Andover, in 1872, the water supply was pointed out as the principal cause of diphtheria, and in 1879 it was still "chiefly derived from shallow wells, near privy pits and cesspools." The continuance of this state of things is the less excusable because "about one-third of the town is supplied by a private Company obtaining water from a deep well in the chalk." At Bingham, in Nottinghamshire, in 1872, there was imperfect drainage and polluted water. In 1879 the drainage was "same as before," and in the water supply there were "no alterations." At Wellington, in 1872, the water was "liable to pollution," and in 1879 the supply was still "mostly derived from wells exposed to pollution." Still, something had been done. A scheme for providing water-works had been projected and abandoned.

We have taken our examples entirely from the first two years comprised in the return, lest it should be said that a sufficient interval had not been allowed for the representations of the Medical Inspectors to bear fruit. If they had been extended to the subsequent years, the record would have been still less satisfactory. It is quite true that in many of the places visited there has been a real improvement—the fact being, of course, that where a sanitary authority chooses to mend its ways it has no difficulty in finding a place for repentance. But the point which is most impressed on the reader by the statements in the return is the powerlessness of the Local Government Board to do anything with a sanitary authority which does not choose to mend its ways. Against such there is no law.

OLD ENGLISH CHURCH WINDOWS.

IN *Much Ado about Nothing* we find how the imagery of Bel's priests in the old church window caught the attention of the cunning Borachio, who, it may be inferred, was no student of painted glass in general, though he could yet feel a sympathetic interest in a body of men who could be as deceitful to their kingly benefactor as he himself was to the Prince of Arragon. But, apart from Borachio, we can imagine an antiquary who might as fully devote himself to the study of church windows as did *Old Mortality* to sepulchral inscriptions, and we could rather envy the man who had means and opportunity to travel from church to church—now in some venerable city, now on the green banks of a flowing stream—to observe the manifold devices of tracery, and to study such illuminated panes as the ecclesiastical revolutions of the past have spared. Though every book is not a great action, every great action, we are assured by Luther, is a book, which he who understands may read. Whether the arch reformer would have considered a mediæval minster a great action we are not sure; but a whole volume of thought is unfolded by such a building, which is one of the greatest intellectual achievements of the dark ages. The stained windows are the illustrations of this fine volume, and the study of them is in a special way an art education. Between the rudeness of the lights of the Saxon chapel at Bradford-upon-Avon, and the glorious eastern window of Carlisle, with its powerful colouring, there is a wide field of art management. But a sincere and earnest purpose pervaded the successive modes of treatment. The wild play of fancy that expressed itself in the queer sculptures of miseries, gargoyles, and corbels found no place in the windows, which were constructed with regularity and beauty; the panes illustrated the religious instruction of the priest, while the iridescent illumination from the pictured figures of prophets, saints, and martyrs was but a symbol of the enlightenment imparted by their spiritual presence. The Saxon window was for utility, not ornament, while the tracery light was not more for utility than for the perfection of the whole design of the building it served. Even in so-called classical architecture, as exemplified by St. Paul's Cathedral, the windows, if unglazed, would be mere cavernous holes, and are never, as separate features, worthy of study. They are, in fact, only indispensable apertures, so arranged as to impair in as slight a degree as possible the complete effect of the building they illuminate. But the windows of a Gothic church, instead of being a necessary impertinence, are the living principle of the whole composition; and the very life of the building may be said to throb through the veinlike ramifications of tracery. The poorest Gothic church is dignified when pierced with good windows, and the finest church loses its distinction by having mean and impoverished

lights. Even when bare of glass, a tracery window like the western light of Tintern is as full of artistic meaning as a leafless tree with its feathering branches framed in a clear blue sky; but, when flush with colour and glowing with imagery, it is as graceful as the same tree with all its leafy honours thick about it.

Of Solomon's Temple we are told that he "made windows of narrow lights," and of his Palace in Lebanon that "there were windows in three rows and light was against light in three ranks." The Temple and Palace windows, with the doors, were square headed, and therefore we may assume inferior in beauty to the triple stories of some English cathedrals, such as Ely or Peterborough. The tradition of narrow windows was long maintained in Western as well as in Eastern architecture; and in the Saxon and Early Norman church we find but contracted openings, much like the loopholes or arrow-slits of a castle; and they might have served the same purpose in days when a church happened to be the only fortress against a sudden attack. The Saxon window was played within and without, the narrowest part being towards the centre. The poor attempt at ornamentation by annular mouldings on the dividing pillar of a double arch was dismissed in the succeeding style, the more advanced Romanesque window being sufficiently enriched with zigzag, chevron, or other ornament on its margin. The simple lancet aperture continues to remind us of the narrow lights of the contemporary fortress, but the maturely-developed thirteenth-century combination of lights expanding within to a single widely played opening suggests rather the bay window of the old English manorial hall. The famous "Five Sisters" in the northern transept of York Cathedral, with their original Early English diapered glass, are doubtless the grandest example we possess of the pure lancet style; and, viewed in connexion with the unrivalled lantern of the great central tower, they are a piece of architecture that not only York, but all England, may be proud of. Dickens's admiration of them was manifested by his "Tale of the Five Sisters of York" in *Nicholas Nickleby*, but he has placed their origin at the earlier part of the sixteenth century instead of towards the middle of the thirteenth. The eastern end of the chapter-house of Oxford Cathedral can be cited as a noble specimen of the later style of lancet, where the entire inside bay is filled by an arcade of graduated arches, three of which are pierced, the arches resting on slender clustered shafts with foliated capitals. Though York Cathedral suffered from the incendiarism of Martin, the lunatic, the worse visitation of a Wyatt had been spared. That wretched architect's operations at Salisbury Cathedral were at the time pronounced "tasteful, effective, and judicious"; but it was owing to him that the many-hued splendour that once poured through the thirteenth-century windows of Sarum, and damasked the floor like a garden of summer flowers, is now exchanged for a monotonous glare of light that distresses the eye, not only by the sense of what is lost in pictorial charm, but by the exhibition it affords of the other senseless innovations of the same hand. That a bishop and an architect could, so late as the year 1788, step down to the level of an ignorant glazier, and join with him in literally pounding to pieces the saintly windows of one of the most perfect churches in Christendom, and casting them, as is said, by barrow-loads into the town ditch, would seem incredible; but there exists a letter from the glazier himself that shows how unlimited was the havoc and confiscation. This letter was written on 10th June, 1788, by John Berry, glazier, of Harnham, to John Lloyd, Esq., of Conduit Street, Hanover Square, London, who had at least more taste than Bishop Harrington, for he cared to possess the mediæval glass which the prelate thought only worthy of a ditch. "Sir,—This day I have sent you a Box full of old Stained and Painted Glass as you desired me to do wick I hope it will sute your Purpos it his the best that I can get at Present. But I expet to Deatt to Peccais a great deale very sune as it his of now use to we and we Due it for the lead if you want eney more of the same sorts you may have what thear his, if it will pay for Taking out, as it his a Deal of Truble to what Benting it to Peccais his you will send me a line as sune as Posibl for we are govin to move ore glazing shop to a Nother Place and thin we to save a greatt Deale more of the like sort wick I ham your most Omblo Servnt John Berry." The original of this elegant letter, endorsed "Berry ye Glazier about beating the fine painted Glass Window at Sarum to pieces to save the Lead," is still extant, and was lately printed in the *Proceedings of the Wiltshire Archaeological Society*. The lancet windows of Salisbury and Ripon are as severe and stately as the figures of the warriors and priests on the altar-tombs they look down upon, but the sameness of outline and detail, after fifty years' repetition, began to pall upon the designer, and, by a natural transition, led on to the so-called geometrical style, which endured for the next half-century, or from A.D. 1250 to 1300. Though the diagrams of the Book of Euclid are exemplified rather than their properties, the mathematical relations of tangential circles and spherical triangles are hardly more interesting than the artistic devices which we find in windows of the geometrical period. In this style are the lights of Lincoln Cathedral; and the author of the metrical Latin Life of St. Hugh is justly proud of the storied pomp of the figured panes he describes. The east window is the largest to be found of its class, and consists of one grand pointed arch, having a large circle in the head which touches two smaller subordinate circles, the whole of the tracery being formed of a concentric repetition of circles relieved on their inner rims with leafage. The two windows in the transept are, according to the biographer of St. Hugh just cited, the two eyes of the church, and signify the

bishop and the dean; the bishop looks towards the south, as inviting the coming of the Holy Spirit for man's salvation; and the dean towards the north, as being the region of the Prince of the Air, to ward off his advances. That in the north transept, with its wheels within wheels, and rings full of eyes, reminds us of the mystic vision of Ezekiel, from which perhaps the idea of its design was taken; the throne encompassed by a rainbow, and the likeness of a man upon it, being here reproduced with the Christian accessories of the saints in conflict below and in triumph above. The tracery of the circular window in the south transept, which encloses two pointed ovals with their spandrils, has been compared by Pugin to the fibres of a leaf, and by Mr. Freeman to the branches of a tree without its trunk; but the tracery appears to us to resemble two sprays of a vine, and for beauty of execution is worthy to be compared with the natural growth. The windows of Exeter Cathedral are said to exhibit a greater variety of geometrical tracery than any other building in the kingdom, and would as much puzzle to describe as to re-invent. Circles, spherical triangles, and simple curves are combined with every grace but that which is conveyed by the flowing lines of the succeeding period. No two windows are alike side by side, but they correspond in opposite pairs, and show what fertile invention was expended in what was considered the very soul of the edifice. The great west window, with the expansive rose that fills its pointed arch, is a fitting crown-piece to the external screen, with its storied ranks of kings, warriors, saints, and apostles.

The Five Sisters of York Minster might alone give character to that vast pile; but its "walls of glass" pass from the lancet to the geometrical form, and thence to the most perfect patterns of flowing and perpendicular tracery. Those who argue that the fourteenth-century period of construction was the culmination of beauty in Gothic tracery can hardly need a more exquisite example than the great decorated window of the western façade of York. It is inferred to have been the work of Archbishop Melton, who is expressly said to have given, A.D. 1330, the painted glass. No stone of the original tracery remains, the windows having been some years since restored; but, so exact is the reproduction, that could the spirit of ancient work be conveyed into fresh design as truly as in this imitation, we might almost believe in the transmigration of the soul of the old architect into the new, which is at present a difficult belief. Each feature of the geometrical window in the aisles of the nave is a complete figure of itself, but in the flame-like wavings of the tracery of the western light each part is as necessary to the whole design as each leaf is to a flower. Consistently with its period of art the monials are filled with canopied images of archbishops and saints, which are finished with the delicacy of oil-painting. The only window in England that can be brought into rivalry with this one is the east window of Carlisle Cathedral, which is nearly of the same date and character. The latter is the larger of the two, and has been pronounced by Mr. Fergusson to be "without exception the most beautiful design for window tracery in the world." Every critic does not agree with Mr. Fergusson in giving Carlisle the preference, but the difference is rather of opinion than of fact. Here we may remark that York is the museum of England for stained glass. Some of the earliest colour glazing in the country is a portion of a Jesse in the second window from the west, on the north side of the clerestory of the Cathedral nave. The date is pronounced by Mr. Winston to be about 1200, and much earlier than the Early English glass of Canterbury Cathedral. The great eastern window is two centuries later (A.D. 1404), the artist being allowed three years for the fulfilment of his contract to glaze its lights. He did his work with loving care, and the poetic grace of his figures, with their distinctions of light, shade, and colour, are worthy of the superb reticulation of stonework in which they are shrined. The window is 78 feet by 33, and is the largest in England. It would have been somewhat excelled by the east window of Gloucester, only that the latter is unglazed in its lower compartment. Almost as notable as the minster for stained glass are some of the parish churches of York. That these should have escaped the passions of the Reformation and of the Rebellion is as surprising as the saving of the windows of the minster through two successive conflagrations. The church of All Saints has in the north aisle a representation of the Last Judgment, such as might have inspired the first of the three terrible Advent sermons of Jeremy Taylor. The fifteen days of prodigy before that supreme event, as related by St. Jerome "out of the Jews' books," and retold by the eloquent divine, are here as thrillingly depicted as in his language, and it might be interesting to compare on the spot the discourse with the mediæval artist's presentation, where the rising and sinking of the ocean, the gathering together of monsters and men, the rivers of fire, the falling stars, the earthquakes and rending rocks, the trees distilling blood, the fall of castles and towers, the birds that mourn and change their songs into threnes and sad accents, the opening graves and the rush of the reviving dead into the caverns of the earth, the final vision of the flaming world and of demons conveying the wicked to their place and of angels carrying the righteous to Abraham's bosom, are scenes in the theatre of mighty horrors.

A milder, but no less favourite, subject was the Jesse window, of which that of St. Michael's, Spurriergate, York, was once a fine example. Dorchester, in Oxfordshire, is remarkable that Jesse's figure is carved in stone, and the branches of the tree that springs up from his loins are formed out of the stonework of the lights.

The Jesse in the splendid east window of Bristol Cathedral is framed in tracery whose symbolical character is expressive of the mystery of the Holy Trinity, to whom the church is dedicated. This is evident from each group of the vertical and radiating lines resolving into triple compartments.

The famous windows of Fairford, in Gloucestershire, have been worthily reproduced in coloured plates by the Arundel Society. They are a gallery of religious glass-painting, and the Rev. J. G. Joyce, the late Rector of Stratfieldsaye, has eloquently expounded the artist's treatment of his subjects. He has shown how a church was a school of scriptural instruction as well as of religious art, being literally an open Bible where the unlettered might read in the shining windows with their undulations of coloured radiance the circumstances of prophetic and fulfilled sacred history. The chancel of Fairford, with its apsidal chapels, was devoted to the great events of the Incarnation from the Annunciation to the Descent on the day of Pentecost, the central subject being, of course, the sacrifice on Calvary; while, at the opposite end of the building, the triumphant return of the Victim Victor, with his Principalities and Powers, is portrayed with fearful energy. The side aisles are lighted by Creed windows, which are thus explained. It is said that before separating after their final commission, each of the Twelve contributed one saying of the Apostle's Creed, so that the whole being combined, the common rule and standard of the faith was formed. This mediæval belief was unfolded in the series of windows on one side of Fairford Church, while in opposite correspondence are the twelve prophets who had anticipated the symbolism of the same Creed. Thus St. Peter says *Crede in Deum Patrem omnipotentem Creatorem celi et terre*. To this the prophet Jeremiah in the opposite panes is made to have said in the far-off ages *Patrem invocabit qui fecit et condidit celos*. Andrew—*Et in Jesum Christum, filium ejus unicum dominum nostrum*. David—*Deus dicit, En filius meus es tu, ego hodie genui*; and so with the remaining ten apostles and prophets with their sayings. The church of St. Neot in Cornwall, with its wonderful illumination, has given as much celebrity to that saint as even his own miracles which they illustrate, and we are sorry to be obliged to dismiss it with this passing notice, and numerous others with no mention at all. Glass-painting attained its highest excellence in the first quarter of the sixteenth century, and the east window of Winchester contains perpendicular glass, the work of Bishop Fox (1525), as nearly perfect, says Winston, as can be. "In it the shadows have attained their proper limit."

We may as reasonably rejoice that so much stained glass has been saved as sorrow that so much has been destroyed. When it is considered that by the injunction of Edward VI. and Elizabeth all "idolrous images"—a very inclusive term—in windows were to be obliterated; and that in the days of the rebellion Parliamentary visitors like Dowding, who in his first day's work "broke down" at St. Gregory's, Suffolk, "ten mighty angels in glass, in all eighty," were followed by the occupation of the pulpits by the Puritan ministers to whom "tinted panes of oriel sanctity" were relics of Babylon, we may be surprised that so much has endured to a day when painted windows even in dissenting chapels are thought no more idolatrous than the pictures in the Interpreter's House of the *Pilgrim's Progress*. Let us hope that they have seen their day of visitation even from the injudicious restorer.

POLITICO-TRAGICO-COMEDIA.

WE do not pretend to know whether Sir Charles Dilke and Lord Hartington are adepts in the noble game of whist. Such ignorance is perhaps in these days something to be ashamed of, but if we did know we should not communicate the information to our readers. But all persons who have ever felt the delight of battle in that pastime must have been struck with the remarkable resemblance of a manœuvre executed on last Thursday and Friday night by the honourable baronet and the noble lord, to one which constantly occurs under eight eyes and on a board of green cloth. The enemy leads a commanding card, and second in hand instantly dashes down a trump on it; third, despite his traditional function of being master of the situation, is powerless, and the chaps of him and of his partner fall. But fourth is an old hand and knows his partner's ways, "having no spades?" he says, in the insinuating tone which is necessary to obviate virtuous indignation. And it sometimes happens that Number One has some spades, and that the cards have to be taken back *non sine ignominia*. So on Thursday night did Sir Charles Dilke dash Mr. Stanhope to the ground with the round assertion that "he was able to make a statement" to the effect that the Russians were going to stop General Skobelev, to cease their operations, to retire, for aught we know, to Kief or Novgorod. Naturally this produced a great effect. It was no use for the Opposition to urge the danger of Russian advance in the face of the certainty of Russian retreat, and their best card had to remain in their hands. But Lord Hartington on Friday was fourth hand, and his words practically amounted to the insinuation that, after all, his partner probably had a spade and had better have produced it. He "did not think his right honourable friend attached much importance to the statement." It was only a dropped card, in fact, not one regularly played, and the penalties of a revoke (should it turn out to be one, for the game is not quite over yet and the players may search the

tricks) were sought to be minimized by Lord Hartington, a prudent man skilled in sports and pastimes, and than whom we can imagine a much worse partner to venture with against the long odds. Only should not Secretaries or Under-Secretaries of State be a little more careful of their words, and would it not be well to state that their information is from a mere "independent source" when they announce it? There have been whist players who maintain that, great as are the penalties of a revoke, a skilled and unscrupulous person will sometimes find his account in it. But with a majority of a hundred, or is it two or three hundred, ready to swear "in a general way anything," like Mr. Jagger's witness, surely Sir Charles might have waited a little. We all hope that the news is true, but for the purposes of the Candahar debate it would have been as well that it should be known to be so.

This was perhaps the pleasantest incident of that particular discussion, except perhaps the remarkably bad verses with which the debate inspired the *Pall Mall Gazette*. The *Pall Mall* used to write better poetry when it was Jingo, doubtless on the celebrated principle of Waller. But even in the Transvaal business, intolerable as it has been, the blessed faculty of seeing the ludicrous side of things has been able to apply its usual salve, if that salve be in this case only a palliative. Accurate observers have for some time known that President Brand of the Orange Free State was a man of humour; long ago, in his dealings with Lord Carnarvon and with Mr. Froude, he showed signs of this. But his Excellency, or his Honour, or whatever is the title appropriate to the chief men among the people who, by the grace of Mr. Gladstone, are shortly to be masters of South Africa—at least, so says the President—has recently surpassed himself. He is free to confess that the Transvaal compromise is, in his opinion, one of the noblest acts in English history. "Oh, sir," said Mr. Sludge, the medium, in Mr. Browning's poem,

Oh, yours, sir, is an angel's part. I know
What prejudice must be, what the common course
Men take to soothe their ruffled self-conceit.
Only you rise superior to it all.

That is exactly Mr. Brand's language, and, though we apologize for the unsavoury comparison, it is undeniable that both Mr. Sludge and Mr. Brand answer to the title of medium. Mr. Sludge was a medium between his patron and that patron's sainted mother, Mr. Brand between Mr. Gladstone's Government and the Boers. The common course of Governments would have been what it is now useless to speak of; the course adopted by Mr. Gladstone and his Government we know. It is not surprising that Mr. Brand sees in it an angel's part, and regards it as superior. There is a frankness, too, about the President which is suggestive of his prototype in his better moods. Shortly after making this remark about the nobility of England's conduct, Mr. Brand confessed, at least the *Standard* Correspondent says so, that "a South African Republic is only a question of time." Of a very short time, some people may think, but this is a lapse from the proper point of view. That is one of enjoyment of Mr. Brand's enjoyment of the noble attitude of England. Could not Mr. Leland give us a Breitmann ballad on the subject? He is fortunately free from the awkwardness which an English bard would feel, and the matter is really worthy of him—as the incident is of the great Hans himself. Indeed, it seems more than probable that Hans was at Laing's Nek, having probably taken some other name out of modesty.

From Sir Charles Dilke and Lord Hartington playing political whist with a great deal of skill, and thumping hands to boot—from President Brand descending on the nobility displayed in the patient acceptance of kicks and the prompt disbursement of halfpence in payment therefor to the kicker—the spectator of the political tragi-comedy can turn to the coming bliss of the British soldier. Very tender are our present rulers of the British soldier. They would not waste his blood either in battle (except just so as to give a zest to peace by a preliminary defeat or two), still less would they waste it on the triangles. It is expedient, we are told, to do something to raise the moral tone of the British soldier, and, indeed, after the Ingogo and Majuba, it may be imagined that that good fellow, against whom far be it from us to say one word, may feel somewhat depressed in tone, moral and other. The requisite stimulant is supplied by the abolition of flogging. An idle epigrammatist may say that it is only equitable in the Government, after allowing the soldier to be beaten by his enemies, to prohibit his being beaten by his friends. This would be too much of a good thing, and the natural justice of a Government which is nothing if not just may well revolt at it. Again, if backs are to be exposed, it may be as well that they should not be scarred out of regard to the becoming. These arguments, however, can only find favour with malevolent persons eager for foolborn jest. For it is the Government, and not the soldier, who have in reality run away, and there is no question of inflicting the much-discussed penalty upon them. The reason, therefore, can be only what it is pretended to be, the desire to raise the soldier in his own and his comrade's eyes. We all know how this is to be effected by putting in irony, by tying up at the cart's tail, &c. Humane radicals suggest that it would be better still to make the delinquents perform the lower and menial duties of the camp. There are ludicrous sides enough to tying-up, which is practically the punishment inflicted on that tremendous malefactor, a young fool whose mother is in the shafts. But to the amateur of this form of tragi-comedy, the richest part of the jest is to be found in the fact that the whole, or almost the whole, sting of all these punishments, sug-

ated unofficially or unofficially proposed, is to be found in disgrace. The suffering of even the worst of them would be nil, the mere inconvenience not great. So there is nothing but the point of honour to look to. Yet, if we mistake not, it is the disgrace of flogging which is the very argument used against it by its sapient and logical opponents. The ideal Radical soldier, therefore, is only to be spared disgrace when it happens to be accompanied by pain. It is to this, it would seem, that he objects, or rather (for let it be again and again repeated that the soldier has nothing to do with his would-be champions) is supposed to object. Fresh disgraces, too, are to be created for him. Time was when menial and disgraceable work was looked upon by soldiers—and officers, too, for that matter—as a thing in no way disgraceful, a thing to be avoided if possible, but, if need would have it, to be done with as good a will as the most theoretically honourable duty. All this is to be altered, and a stigma put on necessary labour, which at times the best men might have to perform, that so a Radical fad about corporal punishment may be gratified. So the political theatre-goer passes laughing, but, if he be wise, laughing somewhat on the wrong side of his mouth, as he sees the welfare of his country and the experience of centuries made of no account to serve the ends of demagogues.

Suum corda, however—a motto most excellent for all conditions of life, including the consideration of tragi-comedies, political and other. Just at the present moment the remembrance of it may be said to be especially necessary. The element of comedy almost disappears, leaving nothing but the grimmest of irony in its place, when we come to the dying dispatch of the unfortunate Colonel Anstruther. "His men," he says, "consolated themselves for the surrender with the thought that the tables would be turned before long." It is to be hoped that they are undeceived by this time, and are duly admonished of the impolicy of counting without such a host as Mr. Gladstone. After all, another stroke of the same irony may possibly give them their revenge, and in that case the tragi-comedy would be complete. The probability of further disturbances in the Transvaal is a question on which we have not to decide here; but it seems to be at least great enough to make the crowning of the climax quite possible. If Sir Frederick Roberts, after being sent home immediately on his arrival in that very comfortable mail steamer, should find at St. Helena or at Madeira a telegram stating that the Transvaal is in a flame again, and that he must retrace his steps, it would be melancholy, but not wonderful. The gallant General, condemned to the fate of Vanderdecken in the same identical waters, might justly complain. But, on the whole, it seems better, to be an officer of Mr. Gladstone's out of reach of the enemy than within reach of them. Illness is bad for a soldier; and the Marquis Spinola agreed with Sir Horace Vere (great captains both) that it was enough to kill any general. But illness is, after all, preferable to humiliation; and, despite Sir Evelyn Wood's friendly suggestion that "Roberts" should get acquainted with the Boers as he himself has done, we are inclined to hope that Roberts will do no such thing. These, however, are high matters, and somewhat out of the beat of the mere watcher for the lighter and pleasanter sides of transactions in themselves ugly and dark enough. Perhaps some day the tables may be turned in a fuller and happier sense than even that in which the unlucky Ninety-fourth used the phrase. Meanwhile, there is nothing to do but to bear it, and, where it is possible, to lighten the bearing with a not indecent grin.

FIRES IN THEATRES.

IF the reports which have appeared in some French papers are true, the terrible catastrophe at Nice was due to a happy combination of carelessness and of official obstinacy. It is said that the gas-pipes of the theatre had been for some time in bad condition, and were so ill looked after that when an explosion took place a little time ago they were repaired with cement only. A smell of gas was noticed on the morning of the 24th, and it is stated that the director applied to the authorities for leave to postpone the performance until an examination of the tubes had been made, but that he was told that the opera which he had advertised must be given. A manager who closes his doors necessarily loses a considerable sum of money, and, at first sight, it seems hard to believe that even small French officials can have failed to see that there were probably excellent reasons for a request which was contrary to the interest of the person who made it; but small French officials have very peculiar views, and are capable of wonderful acts of petty despotism. In all probability the theatre belonged to the municipality, and the manager was aided from the municipal funds: It may have been thought derogatory to the dignity of the rulers of Nice that a performance partly under their direction, and given at a theatre belonging to them, should be postponed, after it had once been announced, and in comparison with such a consideration as this the possibility of a hideous catastrophe may have appeared a trifling matter. It is much to be hoped that there was no such combination of negligence and perversity; but, if the report which has appeared in the Paris papers is shown to be true, an example should certainly be made of the officials who insisted on a theatre being opened after they had been warned that those who entered it would very possibly be burnt to death.

The catastrophe, whether due to mere carelessness or to wanton

disregard of danger, is certainly one of the most hideous on record. The loss of life, it is true, was not nearly so great as that which was caused by the destruction of the Brooklyn Theatre; but it is certain that a large number of people must have perished by the most terrible death imaginable. From the numerous accounts which have appeared a clear idea of what happened may be obtained. The gas, which had been escaping all day, collected at some height above the stage, and shortly after the upper gas jets were lighted an explosion occurred. Parts of the scenery caught fire, and the flames spread with terrible rapidity. The explosion shattered the gas-meter, and all the passages of the theatre became pitch dark, though the house itself was lighted by the constantly increasing flame. Fortunately the boxes of the grand tier and the stalls were nearly empty, as the fire burst out before the time fixed for the rise of the curtain, and therefore before the time when those who paid for expensive places would think of arriving; but poorer people had come in considerable numbers to the pit and gallery, and it is to be feared that many of the occupants of the latter must have perished. It is supposed that most of those who were in the pit escaped, but with regard to this point the accounts of the accident are not altogether clear, and very possibly the loss of life has been understated. As to the fate of the luckless artisans who had gone to the gallery for an evening's amusement, there can, unhappily, be no doubt. There was only one door out of the gallery, and this led to what is described as a narrow corkscrew staircase. At the first rush, those who got soonest to the door were thrown to the bottom and killed by the fall. They were almost fortunate, compared with the rest, some of whom were suffocated, and some burnt to death. Of the few people who had gathered in the boxes, some escaped, but others were burnt, and amongst those who were employed on the stage there was probably considerable loss of life, but the information given on this point has been incomplete. The prima donna escaped, but as to the death of the basso there can be no doubt, and his fate seems specially pitiable, inasmuch as in a fire at Rouen he had been obliged to jump from a window to save his life, and had sustained terrible injuries. Of the horrible state in which the bodies of those who had perished were found it is unnecessary to speak. It is said that in many cases they were so charred that identification was impossible.

The fate of the unfortunate people who were thus consumed by the flame necessarily suggests a question which has often been put before and never satisfactorily answered, though often answered with infinite assurance. To what extent can such a catastrophe be considered probable in London? Are there not many metropolitan theatres from which the whole of the audience could scarcely escape in the event of a fire, and might not fire, or even the alarm of fire at some places, cause hideous disaster? It may, no doubt, be urged that a London theatre would not burn so rapidly as the Nice Opera House did, inasmuch as the fittings of the latter were of a peculiarly inflammable kind. The scenery, it is said, was paper, and not canvas, and the woodwork was exceptionally light. With such materials the flame must doubtless have spread very rapidly; but, then, it must be remembered that the theatre was only half full, and, owing to this, egress must have been for a portion of the audience comparatively easy. The fact that the burning of the theatre at Nice was exceptionally rapid is balanced by the fact that the house was half empty, and it cannot therefore be fairly argued that the disaster should cause no apprehension with regard to London theatres. From some of these doubtless the entire audience could escape without more accidents than must inevitably follow the rush of a panic-stricken mob. With regard to others great doubt must be felt. No one who goes to theatres can have failed to notice the very long time which is often required to get from the seats to the outer door; and indeed so notorious is this that many people, in order to avoid the delay, try to slip away just before the fall of the curtain. This practice has become so general that managers occasionally appeal to the spectators not to leave their places before the conclusion of the performance. If, then, such a long time is occupied in going out when there is not the slightest excitement, when everybody is perfectly calm and self-possessed, what is likely to happen when there is a rush for the doors, and when a number of people beside themselves with terror are striving madly to get away? Can it be doubted that the narrow passages and exits which so delay a crowd under the most favourable circumstances would become blocked? that a great many men and women would be suffocated and a great many more burnt to death? We do not desire to take on ourselves the invidious task of pointing out what playhouses are to be considered as specially dangerous, but there are some names which must suggest themselves to those who habitually frequent the London theatres.

The possibility of great loss of life from fire in a metropolitan theatre has, it is true, been boldly denied, and recently Mr. Hollingshead has come forward to say that there is no reason for apprehension. In the *Daily News* of Monday last is a letter from him, in which he states that he does not believe that such a calamity as happened at Nice is, "in our theatres, within the range of probability." In support of this opinion he says that, though many theatres have been burnt down, the burning has not been in what are called "business hours," that is, when many people are about to render assistance; and he then refers to the results of careful inquiries respecting the deaths caused by fires in theatres which he published some time since. "It appeared," he says, "that, taking not London merely, but the whole

of England, only one actual death from fire in a theatre was recorded during the preceding fifty years. This was the case of Eliza Twichell, a dresser in the employment of the equestrian Ducrow, and even this person might have escaped if she had not rashly gone back to fetch some little articles, and thus lost her way and been suffocated. "Since then poor Mr. Egerton lost his life in trying to save Mr. Gunn's theatre in Dublin, but he had assuredly time to escape if he had chosen." Mr. Hollingshead has doubtless taken great pains with the researches which gave this result, as surprising as it is gratifying; but the subject is an extremely difficult one, and it is impossible not to feel some little doubt as to the facts which he sets forth. During the last fifty years eighteen theatres have been destroyed by fire in England, and it is strange indeed if all these conflagrations have only caused two deaths. Moreover, in dealing with this question, the loss of life which may be caused by an alarm of fire when the means of egress are insufficient must be taken into consideration. Even if Mr. Hollingshead is right, and if there has been extraordinary immunity in England, owing to the fact that there have never been serious fires in theatres during the time of performance, it still remains only too clear that such fires may occur, and that terrible disaster may be the result. The burning of the Carlisle Theatre in 1874 caused the loss of 104 lives. The burning of the Brooklyn Theatre in 1876 caused the loss of 300 lives, and now about one hundred persons have been suffocated or burnt to death during the destruction of the Nice Opera House. Owing to wonderful good fortune, no similar calamity has hitherto occurred in this country; but it would be very hasty to assume that such a disaster is impossible, or even highly improbable. That very eminent authority, Captain Shaw, is clearly of opinion that this is no improbable calamity, as he has written a pamphlet to show how great are the risks of loss of life from fires at theatres during the time of performance, and how they might be lessened. The Metropolitan Board of Works came to a similar conclusion, and their view was accepted by the Committee of the House of Commons who reported on the Bill brought in by the Board, which has since passed into law. That the risk which they sought to diminish was, and is, a real one, can scarcely be seriously disputed by any one who looks impartially at the question. As we have in a former article pointed out, the Lord Chamberlain's officials failed signally in their duty, and up to a recent date allowed theatres to be opened, in the construction of which the danger to the audiences from fire or from the effects of a panic was utterly disregarded. Twice within five years has a hideous calamity been caused by a fire in a house full of spectators, and it can hardly be doubted that in some London theatres a similar calamity might occur any night. Probably, however, the second warning will be disregarded as the first was, and in all likelihood we shall, after our usual fashion, wait until disaster comes, and then cry out for measures of prevention.

THE RECENT LIBEL CASE.

THE non-agreement of the jury empanelled to try Mr. Labouchère for libel brought to a lame and impotent conclusion a case which, verging on the ridiculous in its origin, at one period well nigh attained to the sublime by virtue of its accessories and the halo of importance cast about it. It occupied the Lord Chief Justice of England and a special jury for more than a week, it was dignified with a verbatim report in most of the papers, it necessitated the attendance of the Prime Minister as a witness, and involved the consideration of the respective policies of Conservative and Liberal Governments with regard to matters of the highest moment at home and abroad. Incidental subjects of interest abounded; the morality of duelling, the Eastern question, the Christian religion, baby-farming, the parentage of Ulysses, European geography, and the circulation of the *Daily Telegraph*. But what was the foundation of this gigantic superstructure, what the mouse that brought forth this mountain? A mere journalistic squabble; the proprietor or editor of a weekly paper calling the proprietor or editor of a daily paper "a disgrace to journalism." The only point of real importance in the case—a difficult question of the law of libel—arose at a very early stage of the proceedings, and was treated of by us at the time, being utterly independent of the merits of the case. We do not wish to be disrespectful to either of the parties concerned, but the perusal of the facts of the case irresistibly brings to mind the opening sentence of Charles Dickens's *Cricket on the Hearth*, to the effect that "the kettle began it." Sir Hardinge Giffard placed the beginning of hostilities as far back as 1877, when Mr. Labouchère is alleged to have written in disparaging terms of Mr. Lawson and his family. Coming to more recent dates, September 1879 found Mr. Labouchère inditing what he considered, or professed to consider, a kindly obituary notice of a near relative of Mr. Lawson's. It may be that Mr. Labouchère was actuated by the kindest of motives, and that the tender mercies of the "Society" journalist are unavoidably and unwittingly cruel; but Lord Coleridge said he should not like to see such a notice written of any one he cared for; and, without going further into the matter, we are disposed to agree with Lord Coleridge. So did Mr. Lawson. Arming himself with his uncle's stick, or the stick of his uncle, a phrase continually occurring throughout the trial, which had a curious smack of the *Grande Duchesse* and Ollendorff's Grammar combined, Mr. Lawson lay around, as Americans would say, for Mr. Labouchère in the neighbourhood of the Beefsteak Club, and essayed to chastise him. But, as Johnny Rames found out long ago, it is not an easy matter to horsewhip an enemy with dignity and success, and accounts varied considerably as to the amount of damage inflicted on Mr. Labouchère, and the exact part taken by "my uncle's stick, or the stick of my uncle," in the transaction.

There may not improbably have been a rough-and-tumble sort of fight, the result being very similar to that of the battle of Sheriffmuir, or of those Thucydidean engagements where each side complacently erected a trophy. Mr. Labouchère, whether thrashed or not, felt himself insulted, and he adopted a course not very usual nowadays, namely, that of sending a challenge to Mr. Lawson, on receiving which Mr. Lawson sought the advice of divers friends as to the manner in which he should act. We have no wish whatever to impugn Mr. Lawson's courage, but his conduct gave rise to the insinuation that he, after a fashion common to mankind, was seeking rather to obtain an opinion confirming him in a predetermined course than advice to enable him to shape one. He applied first to Mr. Montagu Williams, a soldier first and a lawyer afterwards—who counselled fight; then to Colonel Sturt—who counselled fight; then to General Hutchinson—who counselled fight. To a rash and inconsiderate person, thirsting for his enemy's blood, such unanimous crying havoc might have been sufficient; but Mr. Lawson, remembering, perhaps, that in the multitude of counsellors there is safety, turned from the men of blood, and betook him to Mr. Edwin Arnold; nay, further, according to his own account on one occasion, he, though in the converse position of the British warrior queen, so far as any smarting from rods was concerned, sought counsel of his country's, or rather his household, gods. The poet, mindful of the example of his beloved Buddha, counselled a "great renunciation" on Mr. Lawson's part—to wit, that he should abstain from fighting, and, as Lord Coleridge pointed out, it was not likely that the ladies of Mr. Lawson's family would differ from this advice. So Mr. Lawson wrote to Mr. Labouchère that, in the words of a now well-nigh forgotten, but once popular, lyric, he did not want to fight, and he did not.

The discussion on the morality of duelling induced by this episode was curious. Whenever this subject crops up in a court of law, counsel and judge, fortified possibly by Bentham's theoretical approval of the system, affect that, while as lawyers they regard duelling as murder committed or attempted, yet as men they look upon it as a mere *malum prohibitum*, a sort of laudable practice, temporarily interfered with by the solicitude of a paternal government. In the very place where he might be tried for his life if he did fight a duel, a man stands at a considerable disadvantage if he has declined to fight one.

This tone was peculiarly marked in the late abortive trial. Mr. Montagu Williams and other witnesses had no reticence as to their having advised Mr. Lawson to fight; one witness almost challenged Mr. Labouchère in Court; Mr. Labouchère himself seemed to feel that his having sent a challenge to Mr. Lawson was a strong card in his favour; and Lord Coleridge, while officially deprecating the practice of duelling, might have been thought to show a lurking sympathy with it, and gently suggested the advisableness of hostile encounters being brought off on a foreign soil, a piece of legal advice, by the by, which, though coming from so high an authority, is slightly misleading, and might get a confiding duellist into trouble were he to follow it implicitly with the view of obtaining immunity whatever happened. People have a sort of idea, encouraged by popular dramas and novels, that, if they betake themselves to foreign countries for the purpose of committing acts lawful there but unlawful here, such as fighting a duel or marrying their deceased wives' sisters, they can, after accomplishing their design, return home to England as though nothing had happened, and Lord Coleridge's dictum will tend to confirm this impression. But, if the unsuspecting duellist killed his man, say in France, he and the seconds might on their return to this country be indicted for murder, and the lady in our second supposed case would return to this country a deceased wife's sister and nothing more.

Anyhow, the proposed duel between Messrs. Lawson and Labouchère resolved itself into a wordy war only, in the course of which Mr. Labouchère stigmatized his opponent as a "disgrace to journalism." This time Mr. Lawson did not take the law into his own hands, but instituted the criminal proceedings which have just terminated so inconclusively. Mr. Labouchère undertook to justify his assertion by proving that it was true, and that it was for the public benefit that it should be made. This he strove to do by pointing out the influence exercised by a journal with the largest circulation in the world over the minds of its readers, and then by formulating a series of charges against the *Daily Telegraph* tending to show that, by reason of the sordid motives, the moral obliquities, and the political tergiversation of its proprietors, that journal was, in fact, a false and misleading beacon, a blind leader of the blind, an unworthy member of the journalistic family. Mr. Labouchère undertook a sort of iconoclastic mission against an object of superstitious reverence, to show the brazen serpent to be a mere Nehushtan or piece of literary brass, to make his rod swallow up my uncle's stick, the rod of the other magician. "Magna est veritas et prævalet." Descending to particulars, Mr. Labouchère, among other incriminations with which we do not propose to deal, accused Mr. Lawson of adapting the politics of his paper to suit the public tastes, of presuming to lead in national matters as to the facts and merits of which he was profoundly ignorant, and, to use the form of a regular indictment, for that he, being a Jew, had countenanced the publication in the

Daily Telegraph of articles of an ultra-Christian character on the occasion of certain great festivals of the English Church.

Now, with regard to the first of these countercharges, is it not matter of common knowledge that newspapers do sometimes chop and change their political predilections? Did not the graphic pencil of Mr. Lanley Sambourne some time ago depict in *Punch* a whole flotilla of London papers under the semblance of yachts trimming their sails and shaping their courses to catch the shifting breezes of popular opinion, and who failed to see the appropriateness of the sarcasm? The fact is that, as is observed by Mr. Kinglake in his last volume of the *Invasion of the Crimea* with reference to the *Times*, newspapers rather anticipate the probable set of public opinion than guide that opinion into channels consistent with their professed policy. Passages quoted by Mr. Labouchère from the columns of the *Daily Telegraph* certainly seemed to show that when that journal did transfer its affections, it did not do so by halves; that if its "love flowed like the Solway, it ebbed like its tide," and that, having adored its fetish one day, it was apt to beat it over the head with a club the next. But the fervour of a convert is proverbial, and the *Daily Telegraph* is nothing if not exuberant.

Striving to convict Mr. Lawson of political ignorance, Mr. Labouchère subjected him to a cross-examination, geographical, classical, and historical, which might have taxed the ability of Mr. Gilbert's "modern Major-General." Mr. Lawson declined to answer most of the questions, and the jury were left to draw their own inference from his silence. But a proprietor of a newspaper like the *Daily Telegraph* does not necessarily embody in himself the whole working knowledge and ability of the staff. He need not be able to say, like the University dignitary in a recent Oxford skit, "Whatever can be known, I know it." The constituent parts of the paper are supplied by contributors having specific knowledge of their peculiar subject, and if the proprietor exercises a general and intelligent supervision, that is all that is, or can be, required from him; so that Mr. Lawson might well be unable to answer off-hand where Epirus is, or who Dr. Franklin was, or to say how far Quetta is distant from Cabul, and yet be perfectly competent to maintain the relation in which he stands to the *Daily Telegraph*.

The same argument applies in part to the last of Mr. Labouchère's accusations which we have noticed. If Mr. Lawson, admittedly a Jew, had himself indited a Christmas or Easter article from a Christian point of view, still more, if such an article had contained anything depreciatory of Judaism, there might have been ground for complaint; but this was not even suggested to have been the case. Mr. Lawson's staff comprises some Christians; one of these wrote the articles in question; and all that Mr. Lawson did was to authorize, or not to stop, their publication. It seems hyper-criticism to take exception to this. Mr. Labouchère would have every newspaper proprietor impress his individuality upon every copy of his paper; and would, we suppose, contend that an honest Jew could only be connected with the *Jewish World* or the *Banner of Israel*.

For some reasons, perhaps scarcely logical ones, we cannot help regretting the issue of this trial. It might be unjust to make Mr. Labouchère a scapegoat, but, had the verdict gone against the defendant, there would have been an opportunity for the Court to have administered a salutary lesson to "Society" journals in general. Even when they are not offensive, journals of this class, in the ardour of unhealthy competition, think nothing of invading the privacy of persons whose station unfortunately renders them subjects of snobbish interest. Bits of idle gossip which may not be libellous may still be most annoying, and in view of the increasing number of so-called "Society" journals, the suggestion of one of our most eminent judges, that the publication of matter which does not concern the publisher or the public generally might be treated as libellous appears worth consideration.

Finally, in the interests of the Bar, we hope that parties will for the future forbear from pleading their own causes, or that, if they cannot resist the temptation, they will at least have the decency to exhibit incompetence and afford a warning to others. It used to be said that the man who undertook to be his own lawyer had a fool for his client. Baron Grant, Mr. Bradlaugh, and Mr. Labouchère have proved dangerous exceptions to the rule.

ARCHBISHOPS ON ARCHBISHOPS.

THERE is something much graver than a mere personal fray, from whatever point of view, civil or ecclesiastical, we look at it, involved in the tilting match which has just taken place between two Irish Archbishops of the Roman obedience—we ought perhaps rather to call one of them of the Roman disobedience—and their respective backers and allies lay and clerical. To begin with, such public conflicts are not very common between high ecclesiastics of the most strictly organized Church in Christendom, least of all when one of the contending parties is perfectly well known to be acting in all but direct opposition to the openly expressed will of the Pope. It is not indeed the first or second time that Leo XIII. has had to learn the value of ultramontane professions when the infallible pontiff who elicited and stereotyped them in the Vatican decrees has given place to an equally infallible but very differently minded successor, who combines with the divine gift of infallibility the

less acceptable human endowment of a statesmanlike temper and strong common sense. In Belgium and elsewhere prelates and journalists, who were loudest the other day in denouncing the disloyal irreverence of seeking to discriminate in practice the official from the non-official utterances of Rome, have been forward to remind their new master that his prerogatives are strictly limited, and that beyond these limits—which practically means where his judgment differs from their own—they are neither bound nor disposed to listen to him. Still there is something which is novel, and which would be very amusing, if the matter were less serious—for religious complications are often serious enough for others besides those immediately concerned—in this truly Irish imbroglio. But let us first refresh the memory of our readers as to the facts of the case. They may perhaps recollect seeing notices in the daily papers of a pastoral issued on occasion of the recent festival of St. Patrick by the Roman Catholic Archbishop of Dublin, Dr. McCabe, Cardinal Cullen's successor, which was welcomed with much satisfaction by all lovers of peace and order on the other side of the Irish Channel. After deprecating assaults on the faith of his people from without the Archbishop goes on to notice the far more dangerous and deplorable attacks that come from within, and, in terms pointing unmistakably to leaders of the Land League agitation, condemns the attempts which are being made to estrange the people from their clergy or to force the clergy into following the popular lead in matters of conscience. "Unsound and untheological opinions on the mutual obligations which bind the members of society together and lift them up to the dignity of a Christian community are industriously propagated by men who have proved themselves in every way most untrustworthy guides of a Catholic nation." It is "false" and unchristian to say that one of two contracting parties can by his own authority modify or rescind the terms of his engagement, and therefore, while the end aimed at by the Land League is a righteous one, "we must proclaim from the house-top that some of the means employed cannot receive the sanction of religion." But worst of all these means is the expedient which has been most studiously promoted and highly extolled by the agitators, and accordingly the sting of the pastoral is in the tail. On this point the Archbishop's language which immediately provoked the contest is sufficiently emphatic; we give the more important passage as it stands, merely italicizing one significant clause, which has naturally proved distasteful to Mr. Parnell's admirers:—

The modesty of her daughters was the ancient glory of Ireland. The splendour of the purity of St. Brigid won for her the sublime title of the Mary of Ireland. Her spiritual children were worthy of their mother's fame, and Ireland shone out more brightly by the chastity of her daughters than even by the learning or labours of her most distinguished sons. Like Mary, their place was the seclusion of home. If charity drew them out of doors, their work was done with speed and their voices were not heard in the world's thoroughfares. This sacred retirement was so dear to St. Paul that he commands the holy women of his day, even in church, to cover their heads with the veil of modesty, out of reverence for the angels. But all this is now to be laid aside, and the daughters of our Catholic people, be they matrons or virgins, are called forth, under the flimsy pretext of charity, to take their stand in the noisy arena of public life. The pretext of charity is merely assumed; for already we have holy associations of men and women, who, with the full blessing of religion, do the works of mercy, corporal and spiritual, for the poor and afflicted. And even the harsh laws now coming into force have mercifully provided for the families of those who fall under their power. . . . This attempt at degrading the women of Ireland comes very appropriately from men who have drained the country into her present terribly deplorable condition, where, deprived of the safeguards of the Constitution, her people may become the prey of perjured informers: men who have sent their agents to fawn on notorious infidels and revolutionists; and, to escape the odium of their act, abuse the Christian politeness of a most venerable prelate and an illustrious soldier of France.

How far the Archbishop carried his own clergy with him in this vigorous assertion of civil and religious loyalty it may not be easy to determine. That many of them are simply dominated by mob rule and simulate a zeal they are far from feeling for an agitation which they must know in their hearts bodes as ill for ecclesiastical as for secular authority there can be little doubt. One priest near Ballinrobe is reported in the *Times* to have publicly announced his resolve to refuse the sacraments to any of his flock who join the Ladies' Land League. And we hardly see how he could consistently act otherwise, more especially when Archbishop McCabe was notoriously acting in accordance with a previous Papal Encyclical condemning the Land League addressed to himself and ordered by the Pope's desire to be published throughout his diocese. But that order was by no means universally obeyed. In one parish the priest who had refused to read it was removed by his diocesan, whereupon the parishioners dutifully nailed up the church doors against his successor. At a public meeting elsewhere in the diocese a Mr. Sexton blandly declared that he would as soon take the Archbishop's opinion on a political question—the Archbishop had expressly treated it as "a matter of conscience"—as send his watch to a tinker to be mended. But no sooner had the pastoral been issued than a more conspicuous opponent came into the field in the person of Mr. A. M. Sullivan, M.P., who immediately issued a lengthy reply in the *Freeman's Journal* flatly denying the Archbishop's right to give any advice on such subjects, denouncing his pastoral as an insult and wrong to some of the most exemplary and devoted children of the Church, and his imputation of motives to the Lady Land Leaguers as "odious and repulsive." This seems pretty strong for a layman to his Archiepiscopal superior, but the most wonderful part of the matter is yet to come:—

Dnubus

Regibus incensit magno discordia motu.

Scarcely had Mr. Sullivan's letter seen the light, boldly challenging, and in terms neither courteous nor respectful, the judgment of his metropolitan, when another Archbishopial missive was issued, not in vindication of the outraged dignity of a brother primate, but of the lay assailant who had flouted him. The titular Archbishop of Cashel addressed the following epistle to Mr. Sullivan, which was at once inserted with his sanction in the *Freeman's Journal*, published, as the *Tablet* points out, "in the diocese of Dublin." We have emphasized two passages, the first of which offers a somewhat remarkable comment on Mr. Sullivan's style of diction, while the second is still more remarkable, when it is remembered that the contemptuous sneer at a possible difference of opinion "elsewhere" refers to the judgment of Rome.

MY DEAR MR. SULLIVAN,—I congratulate you very heartily on the timely and, under the peculiarly provoking circumstances of the case, very temperate and without touching letter that appears over your name in this day's *Freeman*. I adopt unreservedly the sentiments you have so admirably expressed, and am delighted to find that some one of mark has at last stepped forward from the ranks of the laity to vindicate the character of the good Irish ladies who have become Land Leaguers, and to challenge publicly the "monstrous imputations" cast on them by the Archbishop of Dublin. His Grace will not be allowed in future, I apprehend, to use his lance so freely as he has hitherto done, or to ventilate unquestioned the peculiar political theories which he is known to hold in opposition to the cherished convictions of the great, and, indeed, overwhelming, majority of the Irish priests and people. It is a satisfaction, however, to feel that his Grace's political likings or dislikings, though possibly of some consequence elsewhere, carry with them very little weight or significance, except with a select few, in Ireland.

I remain, my dear Mr. Sullivan,

Your very faithful servant,

* T. W. CROKE, Archbishop of Cashel.

It is hardly wonderful that the *Tablet*, after carefully reminding its readers that "the prescriptions contained in a Pastoral Letter constitute, to all intents and purposes, an exercise of episcopal jurisdiction," thinks it odd "that the Archbishop of Cashel should understand in this manner the relations which ought to exist between himself and a brother Archbishop"; and we can easily believe that "this is the first time that the Ordinary of a diocese in Ireland has been directly and publicly assailed in this fashion by an episcopal colleague for an episcopal act."

But even this is not all. His holiness "Grace of Cashel," whom the *Tablet* is nervously anxious to treat with the respect due to an "exalted personage," is no more ready himself to show respect for the *Tablet*—the leading Roman Catholic newspaper in England—than for his own episcopal colleagues. His letter to Mr. Sullivan was dated the 16th March, the day after the appearance of Mr. Sullivan's, but meanwhile he had not been idle. The Dublin pastoral had been published a few days earlier, and the *Tablet*—which has, we believe, been considered much too Irish in its ideas by many of its English Roman Catholic readers, and cannot certainly be charged with any very "Saxon" proclivities—followed suit in an article which it describes as "virtually an echo of the utterances of" Archbishop McCabe. This was more than his Grace of Cashel could endure, and he lost not a moment in inditing a gentle remonstrance to the peccant editor in these terms:—

The Palace, Thurles, March 10.

TO THE EDITOR OF THE TABLET.

SIR,—A clerical friend has just called my attention to an article in this week's *Tablet* entitled "Ireland and France." Any public print or periodical, no matter under what colours it may sail, that would deliberately express some, at least, of the sentiments, and strive to give currency to the patent misrepresentation of historic analogies contained in that article is not fit, I think, for admittance into my house.

I pray you, then, to cease sending me your paper.

The *Tablet* is very solicitous indeed about the faith and morals of the Irish people. Let its pious concern on that score be put to rest. The faith and morals of our people were never, thank God, in less peril than they are to-day; and the sympathetic Saxon who wrote the article I complain of will, no doubt, derive great consolation from the assurance which I venture to give him, namely, that the real, or fancied, coquetting of one or more Irish agitators with French poets or incendiaries is not likely to do any serious damage to the cause which he has so disinterestedly taken to heart.

I am, Sir, your faithful servant,

* T. W. CROKE,

Archbishop of Cashel.

This letter was also sent at once to the *Freeman's Journal*, and the *Tablet*, being accused—somewhat unjustly, we cannot but think—of "suppressing" it, prints it in a leading article in the next number, with a not unnatural complaint that, while "we have grave reasons for dissociating ourselves from and protesting against co-operation with the enemies of social order"—such co-operation being of course not at all congenial to its English supporters—"our difficult task is rendered immeasurably harder by attacks such as that" of Archbishop Croke. In another part of the same number appears a consolatory epistle to the editor of the *Tablet* from "an old priest" signing himself "P. P." and dating from "Co. Roscommon," who "really pities Dr. Croke," and proceeds to administer a "manly" castigation to the missive from "the Palace at Thurles," which leaves little to be desired.

The article headed "Ireland and France," to which the letter from the "Palace" at Thurles takes exception, is marked by the *Tablet's* usual ability, and Catholic tone and treatment, and could not be fairly objected to except by some one blinded by political partisanship of Parnellism—male and female. It is a terrible state of society in this unfortunate country, that a Catholic journal cannot treat a public question on independent grounds without running the risk of being turned out of doors, or without previously canvassing the private opinions of its readers, especially if they happen to live in "the Palace." Go fearlessly in your manly mission without dread of the consequences of evasion from the "Palace" at Thurles. I say it, in sorrow, the writer of the letter to the *Freeman* ought to feel ashamed of being guilty of such paltry weakness.

All this, as we observed before, sounds amusing enough, but we may be sure there is not so much smoke without some fire below. There is a real and bitter, though as yet smouldering, jealousy between priests and lay agitators and between two parties among the priests themselves in Ireland. Even bishops take opposite sides. Thus Bishop Nulty of Meath, Bishop Delany of Cork and Bishop Woodlock of Ardagh are understood to sympathize with Archbishop McCabe, while Dr. Croke has also his episcopal allies. Nor must it be imagined that the question at issue between the rival factions concerns simply the Land League or the Lady Leaguers. These are in fact the straws to show which way the stream is flowing. The spirit of Fenianism, of which these things are but one manifestation, not only lies under the formal ban of the Church, but is radically opposed to the deepest instincts and interests of ecclesiasticism. There is a section indeed of the Irish priesthood who are "Catholics, if you please, but first Irishmen," and in their case the nationalist of course supercedes the ecclesiastical sentiment. But those who have at heart the interests of their Church—men like Archbishop McCabe and his predecessor the late Cardinal Oullen—cannot so regard matters. They are well aware that the nationalist programme is fatal alike to all authority, and that the Church has nothing to gain and much to lose by coquetting with secret or open rebellion, though it be rebellion against a Protestant Government. We learn therefore without any surprise that the loyal party among the Bishops are anxious to see a papal nuncio in London, and that they are backed up in their desire by the Vatican. It is equally intelligible that Dr. Croke and his friends should indignantly repudiate such a scheme, and that the *Freeman's Journal* should denounce it as sure not only to alienate priests and people but even to endanger the steadfastness of Ireland in the Roman faith. It is only natural that a pontiff like Leo XIII. should desire to establish official relations with the English as with other Governments, and there are probably many English statesmen who would agree with him. An Act of Parliament was indeed actually passed with that object in 1849, but it proved abortive, owing to the introduction of a clause suggested by those opposed to the scheme altogether, providing that the nuncio must be a layman, and this condition, infringing on the established etiquette, was resented at Rome as an insult. We are not discussing the merits of the question here, but it is curious as a sign of the times that the project should be renewed at this moment by Rome and those most loyal to Rome among the Irish hierarchy. The growing alienation between the religious and nationalist parties, and the decreasing hold on their flocks of those clergy who aspire to lead instead of being led by them, opens out a wider question. It was once wittily observed—we rather think by Dean Swift—that "if you want to make the Irish Protestants, the surest way is to pass an Act of Parliament requiring them all to be Catholics"; and the joke has a serious side to it. The praise so lavishly bestowed by Roman panegyrists on "the first efflorescence of the faith and morals of the Irish people" must at least be heavily discounted by the suspicious but incontestable circumstance that Irish devotion to the Holy See synchronizes precisely with the split between Rome and England, when religious allegiance became a badge of civil dissatisfaction and hatred for the Saxon oppressor was testified by love for the Pope. The policy both of Rome and England in later years has gradually dissolved that connexion, and it remains to be seen how far Irish orthodoxy will survive its dissolution. Archbishop Croke assures his "Saxon" opponent that "the faith and morals of our people were never in less peril than to-day," but Archbishop McCabe is, with better reason, "persuaded that Ireland's faith was never exposed to greater strain than it is at this moment." Such a passage at arms as that between the two prelates and their respective adherents suggests at all events some curious speculations as to the ultimate result of the nascent feud between national sentiment and national belief, embodied in the rival forces faith and Fenianism.

THE BASINGSTOKE DRAWL.

THERE were probably great rejoicings over the glad news of a real and undeniable persecution which lately reached the "Head-Quarters" of the Salvation Army. Hitherto the conductors of their official paper, the *War Cry*, have been perforce contented with announcements which, though conveyed in the strongest possible language, caused no real shock to the nerves. What boots it to tell every week that the enemy is in full force, that the struggle is desperate, that shouts of victory are ringing along the whole line, when one cannot get over the disagreeable consciousness that nobody has been hurt? The stronger the language the greater is the incongruity. So that, though the writers for the *War Cry* aim entirely at the production of exciting battle pieces, and reports of such brilliant and unexpected victories that one wonders how a single one of the enemy can be left to fight, the result is, to tell the truth, rather dull reading. From beginning to end not one single groan of a wounded man, no shrieks of agony, not the least chance of a lament over those who have fallen gloriously on the field. Why, we know that even Milton, though certainly he had less practice in the description of battles than the reporters of the *War Cry*, found it difficult to awaken interest in a fight where severed limbs immediately joined themselves together again. But still his wounded angels did groan. To make up for the

absence of horrors usually attendant on a field of battle, we have had in the *War Cry* to fall back upon dark hints of mud, stones, and brickbats. It must, therefore, be indeed a welcome thing to the "Chief of the Staff" to hear of real fighting, thwacks with the "knobby" ends of sticks, stones flying through the air, and the collision of fists. One corps of the Army has covered itself with glory; not only has it achieved a glorious Victory, which is a common, even a weekly event, but it has been handsomely drubbed as well. After this who shall say that the title of soldier and the uniform of the officers are borne in vain?

The scene of this encounter was at Basingstoke, a neighbourhood already famous in history for good hard fighting in another cause. The tumult, like most such affairs, was sudden, yet not unexpected. We read, for instance, in the *War Cry* for March 17th that, "though the old lion is raging," the Mayor and principal inhabitants show sympathy. Is there, under the name "lion," a latent allusion to some tavern sign? In the number for the following week there is a shorter and more gloomy report, which refers to the "old lion" under a more familiar name, and owns to two policemen having been secured for protection the whole of Sunday. It was not, however, until last Sunday that the real excitement came. One of the most striking peculiarities of the Salvation Army—that by which the unthinking world chiefly recognizes them—is their habit of parading the streets, four abreast, bawling hymns. These processions may be seen every Sunday afternoon in Hammersmith, Whitechapel, and a few other favoured parts of the metropolis. It was known at Basingstoke on Sunday morning that there was going to be a disturbance; the streets were full of roughs, and country bumpkins came into the town to see the fun and join in it; yet the gallant soldiers resolved upon having their musical march. The opposition is said to have been caused by the malice of the licensed victuallers. This may be true, but we should remember that it is the fashion to charge a great many crimes upon this class of tradesmen—such as Jingoism, attachment to the Established Church, corrupt elections, and increase of intemperance. So many converts, it is said, have been made, that the public-houses are losing their best customers. One remembers the Great Whiskey Crusade, one reflects that it is finished, but that the consumption of Bourbon remains steady, and one fears that the news is premature. Considering that a "great victory" means, according to the official reports, the conversion of two, four, or six, while language fails to announce with sufficient joy the conversion of more, it certainly does seem as if either the Basingstoke converts must be men of very exceptional personal influence, or they must have been toppers quite out of the common. And considering, further, that nothing would help these people more than a riot, one is inclined to believe, on the whole, that the attack upon them was not instigated by the sellers of strong drink. It was apparently intended to disturb the procession of the morning; but this design fell through, owing to the protection of a hundred special constables. In the afternoon, however, an engagement took place, which could not fail to give the highest satisfaction to all concerned. A band was provided, consisting of a trombone, cymbals made of tin pans, tin whistles playing different tunes, a clarinet, and a tin can full of stones. Those who had no instruments yelled. When the Salvation Army turned out, a hundred and fifty strong, they were met by a raging mob and by this hideous din. The Mayor, who was there (with only twenty special constables, like Mr. Nupkins), actually refused to interfere "further than the law required." This is to say, he allowed the streets of his quiet little country town to be occupied on Sunday afternoon by a mob of howling and roaring roughs. When the police were quite satisfied that "violence" had been committed, they made a rush, and the Mayor read the Riot Act. Whether the police rushed, or with what effect, does not appear; the procession was broken up, the Salvation Army got back to their own conventicle, and the roughs remained outside to shout and roar. No one seems to have been arrested, except an ill-regulated person who took advantage of the general confusion to get drunk; and no doubt the Basingstoke roughs, having once tasted the delights of rioting, have resolved upon getting a really enjoyable time next Sunday, with much more noise and a great deal more mischief.

The whole business would be comic, but for the inefficiency of the authorities and for certain possibilities which lie in the background. It is the business of the people who call themselves the Salvation Army to preach and sing among the very lowest classes, and such opposition as they have aroused at Basingstoke may be repeated on a larger and more dangerous scale at Manchester, Sheffield, and other great towns. For it seems to us time to recognize the fact that we have a very remarkable religious organization, before which there may be a great future. It certainly will not do to confuse the thing with the strange enthusiasm of twenty years ago, which shot up so suddenly and died away so rapidly. The so-called "Revival" led some people to believe in a universal conversion of the masses. The "Revival" fell to pieces because it was a movement without a leader, without order, method, or reason. It was sporadic and uncertain; it might break out anywhere; it seemed to break out spontaneously; it was no doubt violent while it lasted, but then it lasted such a very little while. And, as regards the fruits of all that enthusiasm, all those hopes, all those promises, we may well ask, after twenty years, what has become of them. The "converted" have perhaps to some extent kept their pledges; they stepped, at any rate, into the ranks of sobriety and respectability; it would be to a certain extent difficult to desert the new friends; watchful eyes were kept upon interesting converts; when, at last, the newness of the thing

died away there was no longer any temptation to rejoin the old disreputable associates. So that probably a great many were really staided for life. Again, we had two or three years ago a visit of rather a remarkable kind from two people who modestly called themselves Evangelists. Large sums—very large sums—of money were collected for them; no accounts, so far as we know, were ever rendered of the expenditure; great crowds of people went to hear—and that was all. We have never heard any one pretend that the predications of Messrs. Moody and Sankey were of any permanent value whatever. But the efforts of the Salvation Army are of a more serious character and more worthy of respect. Indeed, since the foundation of the Wesleyans, we know of no religious movement which has seemed so full of life and well-directed energy. It is, in fact, ruled by a dictator who appears to be possessed of administrative capacity of a very high order.

His name is Booth; he belonged originally, we believe, to a body called the Primitive Methodists. The ignorant world has been known to call these people Ranters, a name which seems to imply a zeal more than common, an insistence upon doctrine more than comfortable, an activity in converting and exhorting greater than the world generally desires. Yet what injustice we do to each other out of ignorance! So far from finding his brethren ranters, Mr. Booth thought them cold and formal. He looked for zeal, and found doctrine; in place of missionary enthusiasm, he found the conventional harangues of ministers and elders waxed fat and comfortable. Then Mr. Booth came forth out of that connexion and set up on his own account, as in this country and the United States of America every prophet may. He has greatly succeeded. We need not here write the history of this sect; the important thing is to observe its actual position and its possibilities. His followers call themselves an army; every one of them, man or woman, is supposed to be a "soldier"; six thousand of them are trained and practised speakers; they wear a uniform and get promoted to the rank of lieutenant, captain, and so forth; and every one is exhorted to keep on "fighting." The head of the whole is, naturally, the founder. With the single exception of Edward Irving, the head of every sect has always been the founder. Mr. Booth has conferred upon himself the title of General; he issues his orders from "Head-Quarters," which are at Whitechapel; he requires absolute and unquestioning obedience; he sends his officers and changes their posts wherever and whenever it seems good to him. He is aided by his wife and family, all of whom are active members of the Army, and are fighting the "old lion" daily. His "officers" have been sent to all the large towns and a great many of the smaller ones; they have, as stated above, about 6,000 members, all active and zealous "soldiers"; they have a paper which circulates some 120,000 weekly; every one who joins them is exhorted and trained to preach; their orders are to go into the poorest and roughest neighbourhoods, and to work exclusively among a class which has not hitherto been considered open to the influences of religion and morality.

Discipline, obedience, enthusiasm, readiness to work hard, to live frugally, to endure hard things, faith in the reality of their work—these are things which redeem the Salvation Army from ridicule. So long as these virtues remain with the "Army" it will go on and increase. There is no reason why this six thousand should not multiply a hundredfold, for the supply of enthusiastic young people is practically unlimited; and it really seems as if we might begin to speculate on the future of converted Whitechapel when it will be filled from end to end with "Hallelujah Joes" and "Happy Elizans." No doubt there are sources of weakness and danger which the "General" alone could reveal; it may be that his captains are not always, perhaps, fully impressed with the necessity for obedience; they may promote themselves to higher rank, and even lead off an independent army; the whole thing may collapse at the death of the founder through incapacity of his successor; if the enthusiasm of the "soldiers" should be suffered to fall off or the discipline to be relaxed, the movement would become ridiculous even to the "staff." But, as it now stands, the Army seems certainly the most remarkable attempt to reach the lowest class that has been made since the time of Whitfield.

THE NATIONAL GALLERY.

THE Report of the Director of the National Gallery presents this year several features of special interest. During the period to which it refers some important changes have been introduced into the practical conduct of the establishment, and the collection itself has been greatly enriched both by purchase and bequest. Formerly visitors were altogether excluded from the Gallery during the whole of the month of October. This serious curtailment of the privileges of the public was held to be necessary for purposes of cleaning and repairs, but a little gentle pressure from without has sufficed to suggest to the authorities a more convenient arrangement. By a small increase of expenditure, which has been authorized by the Treasury, some addition has been made to the working staff of the Gallery, and it is now found possible to accomplish all that is required in the way of cleaning and alterations by closing the different rooms in succession, still leaving the greater part of the building accessible to students and the public. A more considerable hindrance to the free enjoyment of the national collection arose from the practice of reserving two days in each week for the use of persons employed in

copying the pictures. The Gallery was thus practically closed to the public during five months out of the twelve. Even if all those who make a business of copying pictures could be held to deserve the title of students, the facilities which were granted to them might still be deemed to have been excessive. But, as a matter of fact, the copyist is not always a student in any strict sense of the word. The return giving the list of works most frequently copied during the past year affords ground for the belief that the commercial element is an important one in determining the choice of subjects for reproduction. There is a certain market for the sale of copies taken from the works of popular masters, and the execution of such copies is a regular employment both in England and on the Continent. It is, indeed, only on this assumption that we can explain the preference shown for a painter like Greuze by the students at the National Gallery. The "Head of a Girl" (206), by the popular French painter, has been copied no less than fifteen times during the twelve months; the "Girl with an Apple" (1,020), by the same hand, thirteen times; and a second "Head of a Girl" (1,019), also by Greuze, eleven times. The selection in the case of several other masters points to a similar conclusion. Murillo's "Pensant Boy," Guido Reni's "Youthful Christ and St. John," and Sassoferrato's "Madonna in Prayer," to name only a few examples, belong manifestly to a class of art that is found attractive for other than purely artistic reasons. The return from which these figures have been taken contains at the same time the evidence of much serious labour upon pictures that possess a higher claim upon the student. Velasquez's portrait of Philip IV. has been copied thirteen times, and many of the greater Italians, together with the earlier Flemish painters, have received a due share of attention. But even with the most generous appreciation of the benefit to be derived by young artists from the practical study of great masterpieces, it was obviously unnecessary that the public should be altogether excluded from the Gallery on students' days. The authorities have therefore done well in modifying the former arrangement. They have adopted a system that has been found to work well elsewhere, and visitors are now admitted on these reserved days after twelve o'clock by payment of an entrance fee of sixpence. At the end of last year the new regulations had only been in force for a period of five weeks, but the experiment justifies the Director in the belief that the annual return from this source will be not less than five hundred pounds, a sum more than sufficient to cover the salaries of the extra attendants required under the new arrangements.

In spite of the fact that the Gallery was for the first time kept open during the month of October, some important changes have been effected during the year in the disposition of the pictures. The examples of the British school have been rearranged, in order to find room for the series of early Flemish pictures left to the nation by Mrs. Joseph Henry Green. This forms, in point of numbers, a very considerable addition to the collection; and, to judge from the specimens already exhibited to the public, the bequest is likely to prove of the highest artistic interest and value. The changes which its reception have forced upon the Director prove, however, that the space at his disposal is still far short of the requirements of the Gallery. It is altogether unfortunate, even from the point of view of economy, that the rooms in Trafalgar Square should be always overcrowded. The nation, we feel convinced, would ultimately be the gainer by a further enlargement of the present building; for the very fact that there were vacant spaces to be furnished would afford the surest encouragement to owners of artistic treasures to entrust their possessions to the national keeping. Even as things now are, several of the pictures are unfavourably placed. The dome-shaped hall in the centre of the new building is, by reason of insufficient light, quite unfit for the display of pictures; and in Gallery No. VI., where Turner's works are collected, the hanging is far too crowded for good effect. The Director strongly urges upon the Government some necessary reconstruction of the roof of this room, in order to improve the present imperfect mode of lighting. It is to be hoped that his appeal will receive a prompt response; but it would be no less desirable that the Treasury should at the same time consider some comprehensive scheme for the further enlargement of the building.

Only two pictures have been purchased for the Gallery during the past year; but one of them is a work of the very highest value and beauty. Until the acquisition of Lord Suffolk's Madonna, the nation possessed no authentic work of Leonardo da Vinci. The "Christ Disputing with the Doctors," which bears his name in the catalogue, is now by common consent assigned to Bernardino Luini, the most gifted of Leonardo's pupils. It bears evidence of the master's influence, and is intrinsically a picture of delightful quality, and there is, therefore, some ground for regret that its true authorship should not be frankly acknowledged. It is of course always a delicate matter to alter the description of pictures in public galleries; but now that the nation has become possessed of an indubitable example of Leonardo da Vinci, there is the less reason for associating his name with one of Luini's most admired performances. The fortunes of Lord Suffolk's picture belong to the romance of art history. Lomazzo, one of the followers of Leonardo, writing in 1584, upwards of sixty years after the painter's death, mentions it as being then in the Capella della Concesione at Milan. It is referred to again in a work published in 1751, and in 1796 it was bought by Hamilton for 30 ducats and carried to England, where it passed into the possession of the Earl of Suffolk. From Charlton Park, where the picture has since remained, it has now been transferred to the National Gallery at the cost of nine thousand pounds, and, having regard to the

rarity of the master and the indisputable beauty of the work, we think the public has the best reasons for being satisfied with the purchase made on its behalf. Such a picture by such a painter would have been cheaply acquired even at a much heavier outlay than nine thousand pounds. It will rank henceforth as one of the noblest examples in our Gallery; and, as an expression of the characteristic qualities of Leonardo's genius, it will even bear comparison with the best of his works to be found in the older galleries of Europe. Such comparison is, indeed, directly challenged in the case of the "Vierge aux Rochers" of the Louvre. The design of the two pictures is almost identical. Slight differences in the details of the landscape and in the drawing of the angel only serve to emphasize the general resemblance existing between them, and it has sometimes been assumed that the one is only a copy of the other. But even if this theory were acceptable, it would by no means follow as a matter of course that the Louvre Madonna could claim precedence over our own. Passavant was disposed to pronounce the "Vierge aux Rochers" to be a copy of the work described by Lomazzo, and Waagen expresses a more confident opinion to the same effect. The evidence we possess, however, would rather tend to the belief that both works are to be ascribed to Leonardo himself. One or two drawings in the Royal Library at Windsor are studies, for portions of the composition which are only to be found in the Virgin of the Louvre. On the other hand, several contemporary copies of the work repeat in every particular the design of Lord Suffolk's picture, a fact which goes to prove that it was accepted at the time as a genuine example of the master. But, after all, the only trustworthy testimony in such a case is to be sought from the painting itself, and here the version lately acquired for the National Gallery stands in a somewhat better position than its more celebrated rival. "Our picture of the Louvre," writes M. Arsène Houssaye, the enthusiastic biographer of Leonardo, "is covered with retouches, and it is difficult to pronounce absolutely on a first view." Lord Suffolk's "Madonna" has suffered but little in this way. The painting of the principal parts is admirably preserved, though the colouring has perhaps lost something of its original force. It is impossible, we think, to examine carefully the face of the Virgin without arriving at the conclusion that we have here the handiwork of the master himself. The particular type might, as we know, be reproduced by another hand; and it is equally true that in the sentiment of precise definition of the most subtle realities of form, Leonardo was closely followed by the pupils whom he had inspired. But it is only the originator of such a searching system of draughtsmanship who can carry these principles of his art into the minutest touches of the brush, and who can grant to every detail an equal impression of certain and subtle execution. The painting is everywhere worked out with the sentiment and the power of a great draughtsman in whose scheme of art colour holds a subordinate place, and who uses the brush as he would have used the silver point or the pen; whereas in the best productions of Leonardo's pupils—such, for instance, as the picture by Luini already mentioned, or the delightful "Madonna" of Beltraccio—a similar effect of light and shade is more broadly indicated by means that belong more directly to the ordinary processes of painting. Of the general beauty of the composition it is scarcely necessary to say anything, for it differs in no essential quality of invention from the picture in the Louvre. All the peculiar excellences of Leonardo's style, with his characteristic choice of unfamiliar types of beauty, wherein the truth of momentary expression strangely mingles with the record of the deeper realities of individual form and feature, are to be found in both works alike. The powerful charm of the design has been admirably suggested by Théophile Gautier in a spirited description of the picture in the Louvre:—"L'aspect de la Vierge aux Rochers," he writes, "est singulier, mystérieux et charmant. Une espèce de grotte basaltique abrite le divin groupe posé sur la rive d'une source qui laisse transparaître à travers son eau limpide les cailloux de son lit. L'arcade de la grotte découvre un paysage rocheux clair-semé d'arbres grêles et que traverse une rivière au bord de laquelle s'élève un village; tout cela d'une couleur indéfinissable comme celle des contrées chimériques que l'on parcourt en rêve." And of the type of the Virgin's face he continues:—"Il est tout particulier à Léonard et ne rappelle rien des vierges de Pérugin ni celles de Raphaël; le haut de la tête est sphérique, le front développé; l'ovale des joues s'amenuise pour se clore par un menton d'une courbe délicate; les yeux aux paupières baissées se cerclent de pénombres; le nez, quoique fin, n'est pas rectiligne avec le front comme celui des statues grecques; ses narines se découpent et ses ailes frémissent comme si la respiration les faisait palpiter. La bouche un peu grande a ce sourire vague, énigmatique et délicieux que le Vinci donne à ses figures des femmes; une légère malice s'y mêle à l'expression de la pureté et de la bonté."

These sentences convey no exaggerated impression of the beauty of the picture that is now exhibited to the public in the National Gallery. The Director, it should be said, has not yet found for the work a fitting place upon the walls, and in its present position on a screen in the large gallery it is seen at some disadvantage, owing to the reflections from the floor. Either the frame should be raised considerably, or some dark covering should be placed over the oak boards of the Gallery. It is a pity that the enjoyment of such a noble masterpiece should be even temporarily injured by the neglect of these very simple precautions.

THE FRANCO-AMERICAN DRAFT RESOLUTIONS.

THE publication of the draft resolutions which the French and American Governments propose to lay before the coming International Monetary Conference explains why the British Cabinet insisted upon a modification in the form of invitation sent out by the originators of the Conference. The resolutions, in fact, bind the several Governments adopting them to the extreme bimetallicism, and it is only honest in our own Ministers to make it clearly understood beforehand that they have no intention to seriously discuss, much less subscribe to, such a system. The resolutions are prefaced by a statement of the reasons recommending them, very able and concise, but such as might have been written by M. Oernuschi himself. The statement begins with the assertion that bimetallicism had always been practised until a few years ago; that for nearly a century it had preserved a fixed relation between the value of gold and silver; that, in consequence, the gold and silver of the whole world formed one homogeneous monetary material more stable in its paying value than either gold or silver separately; that this state of things was of the greatest service to the monometallic countries; that the break-up of the arrangement has rendered the commercial and financial relations between the gold- and silver-using parts of the world almost as complicated and hazardous as if the exchanges between them were made by barter; and that it has left an immense mass of silver which the countries possessing it can neither use nor sell, and which is thus an oppressive incumbrance. Therefore it is proposed that the several countries taking part in the Conference should re-establish bimetallicism; that is to say, should enter into a compact to coin, free of charge, any amounts of gold and silver which any person may bring to their mints; that a fixed value should be established between gold and silver in the proportion of 1 to 15½; and that the arrangement should subsist until 1900, or, if a year's notice were not given by that time, for ten years longer. Each of the countries would be free, however, to retain its own pieces of money; and, if it chose, might also issue State paper notes; but gold and silver must both be full legal tender; and even the adoption of an inconvertible paper currency should not relieve the country using such from the obligation contracted by the Convention.

The reasons assigned for adopting bimetallicism, as we have said, are very clever; but they are neither convincing nor even accurate. The statement, for example, that bimetallicism had always existed until a few years ago is not correct. Bimetallicism never has existed in England, nor in most other countries of the world. It is true that both gold and silver have been current, just as they are still current in India; but both gold and silver have not been full legal tender at any time in the greater part of the world, and certainly have not been coined free of charge at the option of any person who chose to present them to the mints. That, however, is a small point which does not affect the argument. The main contention of the two Governments, no doubt, is that the adoption of bimetallicism by France kept the value of both gold and silver fixed for nearly a century. If this is true, it matters little whether the former assertion is strictly accurate or not. The past century has witnessed immense changes in the production of the precious metals; and if, notwithstanding, the free coinage of both metals by France prevented the violent fluctuations in value which we have since seen, the fact is indubitably of great weight on the side of the bimetallicists. But, is it really a fact? We think not. Until the gold discoveries in California in 1849, gold had been gradually getting scarcer and scarcer, and any one who has examined the evidence must have convinced himself that its value was constantly rising. At that time, however, the gold-using countries were few. The greater part of the world either used silver alone, or else used both gold and silver, the main portion of the currency in the latter, however, being silver. When the great gold discoveries in California and Australia followed, gold came into much more general use, and, as the production of silver did not increase, this greater consumption of the dearer metal kept its value from falling as much as *a priori* it was expected it would do. But when Germany suddenly decided not only to substitute a uniform metallic currency for the various currencies previously existing, but also to demonetize silver and adopt gold alone as legal tender, the equilibrium theretofore existing was disturbed; the demand for gold, that is, was enormously increased and the demand for silver was enormously diminished. At the same time, it will be recollected that the United States had an inconvertible paper currency and had long ceased to coin silver in any appreciable quantity. The Franco-German war also had compelled France to suspend specie payments, and thus the one country in Europe which had been the largest consumer of silver ceased to be a large purchaser of the metal. The demonetization of silver by Germany thus came at a time when the demand for silver on the part both of the United States and of France had fallen off enormously; and to aggravate matters the Nevada mines suddenly began to prove much more productive than they had formerly been. Lastly, a series of terrible famines afflicted India in quick succession, and, by impoverishing its population, restricted the demand for silver. At the same time, moreover, the home charges of the Indian Government increased enormously, intercepting a large portion of the specie which otherwise would have gone out to the East, as the bills drawn by the India Council are as useful for remittance as coin or bullion. The causes which brought about

the depreciation of silver were thus very numerous instead of being simple, as these draft resolutions represent them to be. No doubt the suspension by the Latin Union countries of the free coinage of silver helped to make the depreciation greater than it would otherwise have been. But even if France and her monetary allies had continued to coin silver freely, it may safely be asserted that some depreciation must have occurred, in consequence of the great increase in the production of silver in the United States, and the great decrease in the demand for silver both in Germany and in India.

The other important contention of the French and American Governments is that the paying power of gold and silver conjointly is more stable than the paying power of gold and silver separately; that is to say, that there are fewer and less violent fluctuations in bimetallic than in monometallic countries. Now this clearly is not true. In a country like our own, in which gold alone is legal tender for large amounts, the value of the currency fluctuates only with the fluctuations in the value of gold itself. If, for example, new gold mines of vast productiveness were to be discovered, the purchasing power of gold would tend to fall. If, on the other hand, the existing gold mines were to be exhausted, or nearly exhausted, the purchasing power of gold would tend to rise. But there could be no fluctuation in the value of gold, no matter what became of the silver mines of the world, unless, indeed, the now silver-using countries were to become gold-using. Indirectly in that way, no doubt, there would be an effect. But even in that case the only effect upon a currency like our own would be from variations in the supply or in the demand for gold alone. In the case of a country like France or the United States, on the other hand, where both gold and silver are legal tender, the purchasing power of the currency would vary with every variation in the value of both gold and silver; in other words, there would be a double set of causes acting upon the currency of a bimetallic country, and only a single set of causes acting upon the value of the currency in a monometallic country. Greater stability, therefore, there could not be. More moderate bimetallicists than the draughtsmen of these resolutions which we are considering admit that this is so. But they contend that, although the fluctuations in the monometallic country would be fewer, they would yet be more violent. The point is not worth arguing. It is enough for our purpose that the fluctuations would be more numerous, whether they would be greater or not; for, in fact, that admission comes to this, that, instead of preventing changes in the value of the currency by adopting bimetallicism, we should be adding to their number. This is very clearly proved by the experience of the United States. Like France, the United States have been a bimetallic country since the end of the last century; but, unlike France, they have made changes in the relative values of the two metals. Originally the relation was fixed at 1 to 15, whereas, as we know, the relative value in France was as 1 to 15½. In the United States, consequently, silver was over-estimated. In the United States, that is, for only 15 ounces of silver you could buy an ounce of gold, whereas in France, to purchase an ounce of gold cost 15½ ounces of silver. It was, therefore, profitable for all holders of silver to turn that metal into coin in the United States, and consequently the whole of the gold in that country was drained away, and silver alone remained. When the Americans discovered this, they changed the relation from 1 to 15 to 1 to 16. Then the silver was as much under-estimated as it had been previously over-estimated. It now cost 16 ounces of silver to buy 1 ounce of gold, whereas in France 1 ounce of gold could be bought for 15½ ounces of silver. The result, then, was to drain away all the silver from the United States, and to leave only gold. It paid the holders of gold to send it to the United States, get it coined there, buy silver, and export the latter to Europe and Asia and sell it there. Thus we see in the case of the United States that not alone were there fluctuations from changes in the supply and demand of the two metals composing the currency, but there were actually fluctuations caused by the law fixing their value in relation to one another.

It is not worth while to follow out in detail the several reasons set out in these draft resolutions for adopting bimetallicism. We have said enough to show that the adoption of that system would not necessarily have the results expected from it. It would not, as we have been showing, make the value of gold and silver in relation to one another more stable than they are. There is but one way, in fact, of acting upon the value of any commodity, whether it be a precious metal or not, and that is by acting upon either the supply or the demand. If the demand for silver is increased in a greater proportion than the supply, then the value of silver certainly must rise. If, on the other hand, the supply of silver is increased more largely than the demand, then it is equally inevitable that the value must fall. But whether the action upon the supply and demand is brought about by bimetallicism or by monometallicism is entirely indifferent. If Germany, for example, were to undo what she has been doing during the past ten years—in other words, if she were to go back again to the single silver standard—she would certainly rehabilitate silver, unless, indeed, either France or the United States were to take advantage of the change and to demonetize silver. But, if France and the United States retained their existing system, and Germany gave up the single gold standard, then the value of silver would be restored without any extension of bimetallicism. We freely admit, of course, that if, in the name of bimetallicism, Germany and other countries in Europe are induced to consume a larger quantity of silver than they now do, that will tend to raise

the value of silver. But that will be done by an increase of consumption, not by bimetalism, which in itself tends rather, as we have just been showing above, to multiply fluctuations than to diminish them.

THE THEATRES.

THAT the performance of *Romeo and Juliet* at the Court Theatre was, on the whole, though interesting, dispiriting, is perhaps not entirely to be wondered at. Mme. Modjeska is a finished actress, equipped with everything that study, and care, and intelligence can provide, but lacking freshness and spontaneity. In *Romeo and Juliet* Mme. Modjeska played with great sweetness, sometimes with extraordinary grace; where she was least herself, and that is in the garden scene, she almost persuaded us that this beautiful and touching figure was the young Capulet just awakened to the power of passion; but she never quite persuaded us of this, and in the later tragic scenes she adopted a restless, writhing action, a monotonous, wailing voice, and a distracting and incessant motion of the hands, which were far too studied to be moving. But praise is due to her fine feeling for the poetry, and to her unflinching intelligence of interpretation.

Juliet will always remain one of the greatest difficulties that the stage presents. Extreme care and delicacy are required to bring out the rapidly varied shades of impulse that drift across the mind of the young girl like cloud-shadows across a little sunshiny bay, deepening every moment with the approach of the tragic storm. To render this a perfectly trained and balanced style is required, such a style, in fact, as no child of fourteen can ever hope to attain. At the Court Theatre the age of Juliet is advanced to eighteen by the Nurse, simply with this effect upon an audience that is familiar with its Shakespeare, that that venerable woman is not merely telling a lie, but that she knows it. We have all in our memories that striking passage in the memoirs of Miss Fanny Kemble, where she describes her first appearance on the stage in the part of Juliet. Her "stage-fear," her fluttering timidity and hopeless rush at her mother for protection, were not acting, they were reality, and so true to the instinct of the audience that this timid action brought down the house. Mme. Modjeska attempted a girlish demour of a gayer and more confident type; she sported with the Nurse, and danced around Lady Capulet with a captivating vivacity that lacked the charm of sincerity. This extreme lightness of manner, in our opinion, is a mistake; the quiet, timid artlessness of Miss Kemble must have been, not merely fresher to the public, but more near to Shakespeare. Juliet is meek and indifferent, a mere smooth surface ready to take any impression; even the sudden proposal that she must marry does not startle her inexperience. Her answer is icily maidenly:—

It is an honour that I dream not of.

And even the Nurse is stirred by her absolute indifference to emphasize the charms of Paris—

A man, young lady! lady, such a man!
Nay, he's a flower, in faith, a very flower!

On her next appearance, after the ball, Mme. Modjeska showed a just feeling for the character of the heroine. Her infatuation for Romeo was well indicated, and it was not until the question,

Go ask his name,

that she gave one of those contortions which she is only too fond of indulging in, and which, to our mind, form the chief disadvantage of her acting.

In the garden scene she was much less herself, and the great beauty of the scenery and light helped the audience to realize something more of the Southern richness and passion of the play than had hitherto been possible. It is exceedingly difficult to address a soliloquy to the stage when an individual plainly visible to the audience is in the middle of it, and it would perhaps be better that Romeo, on Juliet's speaking, should hasten into the shadow of the house. Mr. Forbes Robertson, however, remained well in view, in a position of devotion, and Mme. Modjeska, in order to show distinctly that she was not addressing him, spoke to the footlights. Instead, however, of delivering the speech that begins

'Tis but thy name that is my enemy

in a passionate reverie, looking upwards, as would surely be the best way of delivering the soliloquy, Mme. Modjeska went through all her graceful and restless evolutions, not sparing us even the conceit of plucking at a cluster of theatrical roses to emphasize

that which we call a rose
By any other name would smell as sweet.

In the actual dialogue that followed she pleased us better than in any other part of the performance, although she had not the tact to prevent the giggling with which the gallery is always moved to receive:—

O for a falconer's voice
To lure this trevel-gentle back again.

It would surely be wiser for the actress to say this very quietly, not while darting hither and thither in her balcony like a frightened bird in a cage. Juliet has no genuine expectation of seeing Romeo again that night, until he responds to her. Even then he is unseen to her; for before she continues she names him again, and he comes out of his hiding-place, having in all probability strayed no further than the shadow of the balcony itself.

There was subdued humour—it might have been less subdued without verging upon the farcical—in the scene at the close of the second act, where Juliet impatiently extracts from the Nurse the message from Romeo. Mme. Modjeska's cat-like movements round and round the Nurse, as she cajoled her secret from her, were well devised, and so was the sudden outburst of temper when that very desultory personage gave as Romeo's message:—

Your love says like an honest gentleman,
"Where is your mother?"

Until the fourth act Mme. Modjeska varied her style very little; she was the same nervous and excited, but somewhat suppressed, person that she had been since the garden scene. It was in the scene where she drinks the contents of the phial in her bedroom that she finally persuaded us that Juliet is a character that she should never attempt to personate. The eccentricities of this performance seemed to us monotonous and dispiriting to the last degree. In the midst of her wailings, Juliet suddenly throws open a window, and floods herself with glaring light, as though at the thought of being stifled in the darkness of the vault, it became necessary for her to breathe and see. This should be done in a quieter manner, however, to obtain a proper result; like many of the other features of this part of the performance, it is violent, exaggerated and unnecessary. When, finally, Mme. Modjeska rushes towards the bed, trips over something, clutches at a very rotten curtain which comes away bodily, and rolls herself round and round in it, the only feeling of the spectator when the scene closes is one of relief.

Mr. Forbes Robertson acted Romeo perhaps better than any part he has yet taken: his appearance was very striking and attractive. He threw considerable passion and a fantastic sort of tenderness into the part, which would have claimed almost unabated praise if the elocution had been more distinct. In Mr. Wilson Barrett we were presented with a Mercutio whose performance was really the most interesting of the evening. He delivered the long and difficult speech beginning

O! then, I see, Queen Mab hath been with you,

by which his first introduction is made to the audience, rather too rapidly. The opening words were almost lost, but he gained distinctness as he proceeded; and the lines

And in this state she gallops night by night
Through lovers' brains, and then they dream of love;
On courtiers' knees, that dream on court'sies straight;
O'er lawyers' fingers, who straight dream on fees;
O'er ladies' lips, who straight on kisses dream

could not have been better given, or with more agreeable variety.

Mr. Barrett's manly bearing and bright flow of animal spirits were needed to raise the temperature of a play that is almost over-weighted with the extremes of love and death. There can be no doubt that Shakespeare intended the gay rattle of Mercutio to serve this end, and indeed he is one of the liveliest and most charming creations of his author. Mr. Barrett acted with great vivacity, and his voice is not only well trained, but held under strong control. For the other gallants, Montagues and Capulets, we have no other advice than this, that they should go through a course of lessons in the elements of distinct utterance before they take upon themselves again to render Shakespeare's blank verse in public. The Nurse was acted carefully, but far too heavily and dolefully, by Miss Le Thiere. We want, in such a play as *Romeo and Juliet*, all the fun and brightness that we can get, and for the Nurse to turn lachrymose and descend into the vale of tears is the last straw that breaks the back of our endurance. The merits of Mr. Ryder's Friar Laurence were already well known. Of Gregory the less said the better. The text used was one laudably close to the original.

One of our comic contemporaries takes occasion of Mr. Booth's last performance at the Princess's to indulge in a tirade against almost everything connected with the stage that is not burlesque and melodrama. We have not met with so charming an utterance of the undiluted 'Arry for a long time. Mr. Booth's acting, it appears, has not a single merit, although Mr. Irving admires it; it belongs to the wretched school of Macready, the Kembles, and Phelps; and his hopeless state is clearly indicated by his production of a play of Shakespeare's, which, if it had been "the work of a modern dramatic author, would most assuredly have been hissed off the stage." It is, no doubt, salutary to students of the human mind to observe even 'Arry in this beautiful frankness of his, naked of all taste, yet unashamed.

REVIEWS.

ANTHIROPOLOGY.*

MANUALS and "Series" are too much with us, and it must be frankly confessed that Mr. Tylor's new book is a manual, and is one of a series. But if all manuals were like this, a generation over-educated for its intellect would have no reason to complain. We are weary of popularizations of knowledge, of books in which information is reduced to a pulpy condition for the benefit of feeble and indolent minds. But Mr. Tylor's work is of a higher

* *Anthropology: an Introduction to the Study of Man and Civilization.* By E. B. Tylor, D.C.L., F.R.S. London: Macmillan & Co. 1881.

order. His volume seems to us to serve a double purpose. It is a most attractive and entertaining introduction to the science of anthropology, the science which "seeks to understand how mankind came to be as they are, and to live as they do." Mr. Tylor has acquired the art of teaching without appearing to condescend to the ignorant. His writing is clear and luminous, and his arrangement more masterly than it was in his *Primitive Culture*, an excellent book, but certainly less well ordered than this unpretending manual. Perhaps it is practice in lecturing to popular audiences that has thus improved Mr. Tylor's method. He invariably starts from what is known and familiar to all, and so proceeds to what is less known and more difficult, illustrating all his statements by examples of the highest interest. Thus a reader who may happen never to have thought about anthropology, acquires, in perusing the manual, a lively interest in the subject, and the knowledge of a well-reasoned theory. But Mr. Tylor's manual has another merit. The confirmed anthropologist, no less than the beginner, finds his profit in the manual, which is a brief abstract and compendium of the best and soundest thought on the subject.

The natural history of man has always been interesting to man. How did our race come on the earth? Whence came the varieties of races and breeds? How did we acquire language and the arts? The lowest savages, no less than the highest modern intellects, habitually busy themselves with these questions. A great part of savage mythology consists of stories which are really anthropological speculations. For example, the degraded Digger Indians have their own theory of the origin of man. At first all Indians were Coyotes, a kind of wolf. They began to assume the shape of man, but it was a slow transformation. Just as Mr. Tylor says the horse once had five toes, which shrank into one toe, with the hoof for nail, so the Po-to-yan-tes say man began with one finger, one eye, one ear, and gradually developed the present number of these features. Our tails, say the Po-to-yan-tes, we wore off by sitting on them, and they greatly regret the loss of so fashionable an ornament. Mr. Tylor, too, assures us that our skeletons have rudimentary tails. Then, again, as to the diversity of races which Mr. Tylor treats of, the Winnebagoes partly explain it by saying that the Great Spirit created white men to make weapons for the poor Indians. Here we have early teleology and a scheme of creation in place of the theory of evolution as maintained by the Po-to-yan-tes. And the Winnebagoes seem to have quite as much sense on their side as the Boers, who explain to the Zulus "that we black people have no spirit, but that we should be burnt, and are like a dog that has no spirit."

But we must leave Mr. Tylor's savage precursors in the study of anthropology, and merely congratulate him and the science of our time on having got rid of doctrines no less puerile than those of the earliest negro thinkers. Mr. Tylor writes with as much caution as learning, and trends very lightly over the volcanic ground of evolution. His first chapter deals with the time probably required for the development of the existing races. He believes in the unity of the human stock; "it naturally suggests itself that the races of man may be accounted for as breeds, varied from one original stock." The evidence as to the possibility of crossing between all races "goes to prove that all the varieties of man are of one species." But the testimony of the Egyptian pictures of four thousand years ago makes it certain that the black, brown, yellow, and white races had already settled into their well-known features. The Hebrew, the negro, and the fair-haired tribes, possibly akin to the Greeks, are easily recognizable in the Egyptian paintings on the walls of the British Museum. We must ascertain causes strong enough, and allow for time long enough for the differentiation of types which was already established four thousand years ago. As to time, there is plenty of that, and we can make allowances "as rich men give that care not for their gifts." But causes are further to seek, though Mr. Tylor looks on it as certain that "there is a real connexion between the colour of races and the climate they belong to." He conceives that the comparatively fair race of Bushmen may be a special modification of the sun-blackened negro—the darkest type being principally found in a tropical climate. But Mr. Tylor admits that "to account for the origin of the great primary varieties or races themselves, and exactly to assign them their earliest homes, cannot be usefully attempted in the present scantiness of evidence." We entirely agree with him, and would sooner hold with the opinion of the Winnebagoes than with the enterprising writer who finds the "cradle of the Aryan race" in the northern part of the Arctic circle.

Mr. Tylor's second chapter, a very interesting one, deals with the connexion between man and the lower animals. "No competent anatomist who has examined the bodily structure of these apes" (gorillas, gibbons, and others) "considers it possible that man can be descended from any of them," which is a comfortable doctrine. But Mr. Tylor thinks that, in comparing man with the lower animals, "it is wrong to set down his pre-eminence entirely to his mind, without noticing the superiority of his limbs as instruments for practical arts." But man's limbs must enjoy this superiority for one of two reasons. Either he was created with these instruments ready made, in which case his relations to the lower animals become less interesting and scientifically important; or he improved his natural instruments, his limbs, in accordance with the directions of his intellect, which thus, after all, is the cause of his pre-eminence. A Belgian artist paints, and even paints well, with his toes, not because his toes are as useful as the ape's, but because his intellect enables him to adapt them to their task. The

real interest of the relations between man and the animals appears to us to lie in the pathetic failure of the lower creatures to cross the "uno'er-leaped mountains of necessity" which hem them in so much more closely than ourselves. As an example, we quote Mr. Tylor's account of poor Mafuka:—

The anthropoid ape Mafuka, kept lately in the Zoological Gardens at Dresden, saw how the door of her cage was unlocked, and not only did it herself, but even stole the key and hid it under her arm for future use; after watching the carpenter she seized his bradawl and bored holes with it through the little table she had her meals on; at her meals she not only filled her own cup from the jug, but, what is more remarkable, she carefully stopped pouring before it ran over. The death of this ape had an almost human pathos; when her friend the director of the gardens came to her, she put her arms round his neck, kissed him three times, and then lay down on her bed, and giving him her hand fell into her last sleep.

The bulk of the manual is naturally occupied with an account of the rise of the arts and institutions by virtue of which man has come to be civilized. The greater part of this information is not, of course, new to students who have interested themselves in the development of society. It is Mr. Tylor's merit to have told the story, which he had already done so much to elucidate in his former books, with singular clearness and brevity; while he has marked opinions of his own on such questions, for example, as the nature of early language, he carefully avoids disputes, criticisms of others, and controversy. Nobody knows but an anthropologist how difficult it is to avoid riding off at adventure on a favourite hobby-horse, and breaking lances with opponents all over the field of battle. Mr. Tylor might have been excused if he had given more space to an account of the distribution of games, which he has made the subject of special researches. But he strictly subordinates what is of mere accidental interest to that which is essential. We have never read so clear and simple an account as that given by him of the singular philological processes by which the African and North American races construct their sentences. His chapter on writing traces the art from the pictures of the Chippewa to the hieroglyphics and hieratic character of the Egyptians, and thence to the improvements of the Phœnicians. Of all races, not excepting the Chinese, the Egyptians were the most strangely conservative. They did not mind advancing in religion or in the art of writing, but they insisted on dragging the burden of a savage past into the midst of civilization. Thus they worshipped beasts as devoutly as the Ainos, while they had developed a complicated theosophy, and along with their spelt words they mixed up old picture-signs like those which are growing obsolete in the Rocky Mountains. The Phœnicians, being aliens, had no reason for keeping up a mere superfluous survival. They dropped the pictures, selected what signs they needed, and improved them into the origin of our modern alphabets. Mr. Tylor traces as distinctly the progress of Chinese writing from "the ancient pictures," the early Chinese character, which were rapid pictorial sketches, to "the meaningless looking cursive forms now in use." Yet, when the Chinese word *chow* means, not "ship," or "basin," or "loquacity," but "fluff," the voluble character of this particular sort of *chow* is indicated by a sketch of two recognizable feathers. Mr. Tylor steers clear of the recent theory of the Chaldean origin of the Chinese characters.

There are, of course, a few points even in a book where controversy is avoided, about which a determined critic might pick a quarrel with Mr. Tylor. He thinks "fly-fishing seems to have been unknown in ancient times," meaning, we suppose, angling with the artificial fly. If this were the case, it would be vain for pessimists to deny the doctrine of human progress. But does not Oppian describe the "flee-heuks" of a period which, in this connexion, may be called ancient? In the matter of tattooing, we think that early man everywhere much more frequently blazoned himself with his crest than any one would gather from Mr. Tylor's observation, "the tribe or nation a negro belongs to may be indicated by his mark." Mr. Tylor's chapter on "The Spirit World" is in harmony with his chapters on "Animism" in *Primitive Culture*, and we think he has treated too sketchily the important chapter of Vampires. What is the evidence for the real genuine vampire? We think it is better, and the belief more widely spread, than Mr. Tylor indicates. Too sketchy, also, are the pages on mythology, and Mr. Tylor will never persuade us, "not if he had persuaded us," that the tale of Red Riding Hood has anything to do with the night swallowing the day. He holds, too, that Maui, the New Zealand hero who crept into the old woman's body, and was slain by her, "is really a nature-myth of the setting sun dying as he plunges into darkness." Now what are the facts about Maui? He was a creature born in the good times when there was as yet no death. Unluckily, part of the ceremonies of his baptism were omitted, and he was thus liable to death from the anger of the gods. On reaching his father's village, after performing many of the feats still practised by *tohunga*, or magicians, he was told he must encounter his great ancestress, Hinenuitepo. He had already subdued the sun, and drawn up an island from the sea-deeps, so he went boldly for Hinenuitepo, taking all the little birds (the familiars of sorcerers) for his companions. He warned the birds not to laugh, as he crept into the gigantic body of the old chieftainess, as Hinawatha, Wainamoinen, and other heroes crept into fishes. But one little bird laughed, and awakened the monster, who snapped up Maui. "This was the cause of the introduction of death into the world." The story seems to us to be a savage myth, like those common from Kamtschatka to the Cape, explanatory of the events which "brought death into the world, and all our woe."

If we were to go on with minute objections, we might carp at

Mr. Tylor's statement (p. 358), "The idea of the divine ancestor may even be carried back far enough to reach supreme deity, as when the Zulus, working back from ghostly ancestor to ancestor, talk of Unkulunkulu, the Old-old one, as the creator of the world." But the Zulus do not "work back" to Unkulunkulu; no one can work back to him, his stock is lost, and, far from being "supreme deity," he is not worshipped at all, precisely because no one can trace to him, and no one owes him the sacrifices paid to ancestral *idongo*, where the pedigree is clear. Also Unkulunkulu is much more the first man than the creator. "He exists no longer. As my grandfather no longer exists, he, too, no longer exists; he died," a Zulu told Bishop Callaway. And, with scarcely a protest from a Zulu dissenter, this seems to be the voice of Zulu orthodox tradition. But Mr. Tylor may have other sources of information, and we only mention a few trilling differences of opinion, that we may be true to the quarrelsome practice of anthropologists, a practice from which Mr. Tylor consistently departs.

A CHILD OF NATURE.*

IT occurred to us several times in reading this interesting romance that possibly in novel-writing Mr. Buchanan had discovered the one sort of literary work for which his talents were thoroughly and not merely partially fitted. But this is not our final opinion as we close the volumes. We find in them, as we have found before in Mr. Buchanan's dramas, poems, essays, and criticisms, a considerable amount of cleverness, quickness of perception, sense of natural and emotional beauty, all spoiled and rendered fruitless by that inherent want of distinction, in both senses of the word, which is perhaps the most fatal want that a literary artist can have. Mr. Buchanan is a chameleon for versatility; he can adopt at a moment's warning the colour and style of any author or school of authors—for instance, he can be distractingly like Mr. William Black—but he never has displayed, except sometimes in his wrath, a manner which can be recognized as individual to himself. Again, he is often instigated, apparently in all sincerity, by large and generous aims, unselfish enthusiasms, and warm impulses; but he can never quite throw off a twang of what we must be permitted to call vulgarity. The character of Sir Charles Sedley, in the book before us, is an instance in point. The self-acknowledging of this personage is placed as a foil to the nobility of Graham with a perfectly legitimate intention; but the character of the aristocrat is drawn with so much coarseness that our indignation is instinctively transferred from Sir Charles to the novelist who has offended by creating him. So much it seemed necessary to say in connecting *A Child of Nature* with Mr. Buchanan's other productions. If we consider it by itself, and as a "novel of the week," it calls for considerable praise and comparatively little blame.

The opening chapters are exceedingly interesting and effective. A young gentleman, who chooses to call himself Lawrence, is discovered on board his yacht, beating to and fro off the mouth of Loch Urìbol, which seems to be a firth in the north of Sutherlandshire very lightly disguised indeed, especially as, by a slip of the pen, the cliffs of Tongue are in one instance described as rising to the east of it. Lawrence has on board a crew of Celts only, with but one of whom he can hold any converse in English. On the night in question they find that a squall is coming on, and that the entrance to the loch is so extremely narrow, and so beset with sunken rocks, that it would be madness to try and enter without a pilot. So the little yacht is kept running to and fro on the wind just off the shore; but for a whole hour no notice is taken of her, and as the night falls the danger becomes extreme. They are just determining to try a run down the coast when the keen ear of the skipper catches the sound of oars, and a small boat, rowed by a woman, shoots out of the shadow of the hills. A slim girlish figure springs on board, speaks in Gaelic to the sailors, and peremptorily takes the helm. With marvellous skill she brings the yacht through the narrows, and disappears in her boat before the astonished Lawrence has time to thank her. He is still more amazed to find that no one can, or will, give him any account of her, and for the time being he sees her no more. But the novelist takes his readers into his confidence, and we are introduced to the mysterious maiden as she slips up the loch from the side of the yacht. Half way up the winding stretch of waters she begins to sing to herself:—

The girl rowed on, singing like one in a dream. Suddenly she paused, conscious of something dark floating behind her in the moonlight—a small black object, which oscillated like a leather bottle, and now and then disappeared with a splash. As she leant on her oars, still intoning, it came nearer, and showed the head of some animal swimming in the water.

"Ee-rach! Ee-rach!" cried the girl.

The animal came nearer, within a few feet of the boat, and showed the head of a large seal, with eyes which attentively regarded the speaker.

"Ee-rach! Ee-rach!" repeated the girl, in a low, coaxing voice, leaning over the side of the boat, and stretching her hand towards the animal. Strange to say, it swam closer, uttering a low cry, and rubbing against the side of the boat, an effort to pass her hand again and again over its slippery head.

This romantic playmate is destined to fill an important link in the development of the story. Meanwhile, we are introduced to the home of the girl itself. She is the niece of the minister of Urìbol, the Rev. Norman Macdonald, who is an old bachelor, and

who has brought up Mina, the seal's friend, as his daughter, in the manse. She, of course, is the "child of nature," from whom the book takes its title. She has had schooling of two kinds; her uncle has taught her English, Gaelic, and Latin, and has made her the companion of his scholastic labours, and a grim giant of a fisherman, called Koll Nicholson, has undertaken her outdoor education in rowing and steering, climbing, shooting, and fishing, so that she is at the age of nineteen as agile and skilful in these pursuits as any young Highland gillie. Her one brother, Graham, whose temperament closely resembles hers, has left the wilds of Sutherlandshire to look out for a living in the South; his nature is even more passionate and impatient of restraint than that of his sister; and indeed, the most fitting name for the novel would be "Two Children of Nature."

It very soon appears that the so-called Mr. Lawrence, the bronzed young gentleman of twenty-nine whose yacht was saved by Miss Mina, is no less a person than Lord Arranmore, who is paying a first visit to his ancestral possessions, and wishes to observe the state of things all unobserved. He goes out seal-shooting, and is just going to sacrifice poor Ee-rach to his ambition, when the mistress of Ee-rach darts down upon him, and knocks his rifle out of his hand. In this boisterous and indignant maiden he recognizes the saviour of his yacht, and he precipitately falls in love. It would not be fair to Mr. Buchanan to tell in detail the really very pretty and affecting circumstances of this courtship, which, however, it must be acknowledged, reminds us at first a little too obviously of those in the *Princess of Thule*. Lord Arranmore, however, is in a worse position than Lavender, for, although he chooses to forget it, he is really engaged to be married to a proud English coquette, Miss Ethel Sedley. This lady and her father appear unexpectedly upon the scenes, and fill everybody with dismay. Mina Macdonald sees no more of Lord Arranmore, and her brother Graham returns home only to fall desperately in love with the impracticable Miss Sedley. The remainder of the plot must be palpable to the most ingenuous mind. Given two children of nature, and two young aristocratic persons of warm feelings, but, although betrothed to one another, not in love with one another, the game is within three volumes to separate the engaged couple in an honourable manner, and bestow upon each of them the hand of one child of nature. This Mr. Buchanan succeeds in doing in a more or less conventional way, and leaves us hanging over the perilous brink of a double matrimony.

Some curious studies of Highland character preserve the latter part of the story from being absolutely insignificant. Koll Nicholson, the white-bearded old ruffian who attempts to murder the second heroine out of devotion to the first heroine, is a child of nature of a very sinister type, but not at all without interest of a romantic kind. But better conceived in every respect is Angus nan Chonn, or Angus of the Dogs, a sort of shrewd lazy fool, with a kindly paternal passion for all sorts of canine wails and strays. This innocent creature, after spending all his life in Sutherlandshire, goes South for a while, and finds life very hard in civilized parts. His description of his visit to Glasgow is admirable, with its touch of resentment against the police—"at ilka street corner there's a blackguard in black ready to take up any decent man that asks help for the love o' God." But we prefer to quote the passage in which he presents to Miss Mina Macdonald an exceedingly low-spirited black-and-tan terrier, much bedrugged with the rain:—

"I found him up a dark entry in the cetty of Glasgow, sleeping his lane, out of the cold, in a place where I meant to sleep myself, for ne'er a soul would gie a decent man a bed; and he was stuirving, and I gie'd him meat; and he was cauld, and I warmed him here on my ain naked flesh. Then I thought I'd bring him back wi' me to Urìbol, as a present to the colleen with the bird's voice; for, look you, my braw leddy" (here he addressed himself to Mina), "the dog is a good dog, wi' real blood intil him, though he had fallen on evil ways. It's no me that would come here asking your acceptance o' a beast o' nae quality, after aal you've done and said to me and mine."

Thereupon, better to illustrate the "game" qualities of the animal, Angus proceeded to lift him by various parts of his person successively—by the tip of the ear, by the mouth, by the skin of the neck, by the tip of the tail—all which indignities the unfortunate stranger bore without a murmur, though his eye was fixed, as if in sullen protest, on the face of the mendicant.

"There!" said Angus, in a tone of approbation; "you'll ne'er regret his keep. It'll dne your heart good to see him on rats, and the weasel doesna walk he willna face. You'll find him a constant source of diversion, and muckle sport he'll bring you."

The description of the fair at Storport, at the close of the first volume, combines a variety of striking features of Highland life, and might indeed be extracted without injury to the story as a telling magazine article. This suggests, perhaps, the weakest point in the romance—its desultory and fragmentary style, as if the romantic story had been devised on second thoughts, as a thread on which to hang a series of isolated sketches. Mr. Buchanan ought to be able to construct a better novel than *A Child of Nature*.

SAINTSBURY'S DRYDEN.*

IT was full time that a place should be found for Dryden in Mr. John Morley's rapidly growing series of *English Men of Letters*; and it was for more reasons than one fitting that the

* *English Men of Letters.—Dryden*. By G. Saintsbury. London: Macmillan & Co. 1881.

* *A Child of Nature. A Romance*. By Robert Buchanan. 3 vols. London: Richard Bentley & Son.

task of writing the life "of the greatest craftsman in English letters" should be assigned to the skilled hand of Mr. Saintsbury. If he has by no means exhausted his theme under its various aspects, he has at least remembered what some of his fellow-contributors to this series of biographies appear to have forgotten; that the first and most important question connected with the life of a literary man concerns the services rendered by him to literature. For dealing with this question in the case of Dryden, Mr. Saintsbury is peculiarly qualified by his habit of appreciating what is excellent in literary workmanship because it is excellent, and not because it is English or French, Whig or Tory, Catholic or Protestant; as well as by the sympathy which naturally attracts him to a great author whose good name, literary or other, has more than once "fallen among the Philistines." To speak in the first instance of one of the most distinguished of Dryden's more recent assailants, Mr. Saintsbury certainly puts the case anything but strongly when he observes of the late Mr. Christie that, while he is generally admirable in his judgments of Dryden's literary work, *Abraham and Achitophel* and *The Medal* had stealed Shaftesbury's biographer against Dryden's personal character. Though Mr. Christie was never wanting either in readiness or in ability to enter upon an elaborate defence of the correctness of his own views (an ample instance of this in connexion with Dryden lies buried among the files of a Scottish daily newspaper), yet our respect for his abilities and his integrity cannot prevent us from regretting, as in its way a real calamity, the publication in his otherwise excellent Globe edition of his ungenerous and misleading life of the poet. In Mr. Saintsbury's hands the great literary champion of the Stuarts was not likely either to be tried on the principles of the glorious Revolution, or to be belaboured by a Protestant flail. Nothing, we may say at once, could be in better accordance with justice and with common sense than Mr. Saintsbury's summary statement of the history of Dryden's religious conversion; though there is one incidental matter on which we should be inclined to take a view differing from his. No question, it is obvious, could be more barren or "saw-dustish" than this; whether James II.'s renewal of the pension granted to Dryden half-a-dozen years before by Charles II. preceded or followed the poet's change of faith, inasmuch as the sole reason for the necessity of the renewal was a technical one. At the same time, in view of the passage cited by Mr. Christie from Evelyn's *Diary*, it can hardly be doubted that Dryden was on the eve of declaring himself a convert, if he had not actually declared himself such, six weeks before the renewal of the pension. A more serious discussion might be raised on the theory of a connexion between Dryden's supposed unsteadiness in matters of faith and his supposed immorality in matters of conduct. But nothing could be more absurd than to carry on such an argument before both assumptions had been proved to be founded on fact. In his thoroughly reasonable remarks on the *Religio Laici* Mr. Saintsbury places Dryden's "inconsistency" in the proper light; "consistency," he says, "was in no matter Dryden's great characteristic, and the arguments of *Religio Laici* are not more inconsistent with the arguments of *The Hind and the Panther* than the handling of the question of rhymed plays in the *Essay of Dramatic Poesy* is with the arguments against them in the prefaces and dissertations subsequent to *Aurengzebe*." It was, in short, a question of "first thoughts" and second thoughts; nor, in all probability, had Dryden long entertained definite opinions before he began to think of changing them. His present biographer rightly resents the ignoble imputation that he would afterwards have changed them again, had it been worth his while. "I cannot," Dryden writes in 1699, in the charming letter towards the close of this biography, "forsake my religion; because I know not what Church to go to if I leave the Catholic; they are all so divided amongst themselves in matters of faith necessary to salvation, and yet all assuming the name of Protestants. May God be pleased to open your eyes, as he has open'd mine! Truth is but one; and they who have once heard of it can plead no excuse if they do not embrace it." "Such an omniscient Church" the author of the *Religio Laici* had already "wished"; and the difficulty cannot have been great in the wish becoming belief, or remaining it.

As to Dryden's immorality, the indictment of course resolves itself into two parts—a charge of profligacy against his plays, and one of looseness against his life. On the former head there is no need to add anything to the confessions made by Mr. Saintsbury (who is almost pathetic on his author's "scarcely ever wholly quotable lyrics," and might in a similar mood have regretted the mixture of grossness and fire in *Amphitryon*), anticipated as these confessions have been by those of other candid admirers of the poet, and by those of the poet himself. And it must be allowed that, his doubtless honestly-meant regrets notwithstanding, his offences, whatever may be their relation in degree or amount to the sins of some of his contemporaries, have an impenitent exuberance about them which is very imperfectly described as resembling "the forced impudence of a timid man." On the other hand, it would be difficult to gainsay the opinion of Dryden's present biographer that the charges against the poet's own life break down altogether. A certain amount of suspicion will hardly fail to attach to the circumstances of his marriage, and the late Mr. J. Bell and Mr. Saintsbury will not be held to have quite demolished the scandal about Mrs. Reeve. But Mr. Christie's curt sentence, "Dryden was a libertine," and Mr. J. R. Green's application to the representative Restoration author of M. Taine's ingenious notion that the English society of this age tried to be as wicked as its poor powers would allow it to be, are equally un-

tenable. It is perhaps more strange that Sir Walter Scott should have been misled by the occurrence of a single piece of old-fashioned grossness in Dryden's letter to his cousin Honour, into describing it as "a woful piece of the gallantry of the time, alternately coarse and pedantic."

In writing the personal life of Dryden under such aspects as are open to a biographer (and they are fewer than might perhaps at first sight appear), Mr. Saintsbury therefore had something in the way of carelessness and something in the way of prejudice to contend against and to correct. His estimate of his author's literary achievements, on the other hand—though in this respect also the tide until recently ran against Dryden—can hardly be said to have been beset by similar difficulties. Had this, however, been the case, Mr. Saintsbury's neat critical formulae would have helped him to surmount or circumvent the most formidable obstacles. "What constitutes a great poet is supremacy in his own line of expression," shown, of course, "in work of sufficient bulk and variety." What constitutes a "poetical critic worth his salt" is to be able unhesitatingly to lay his finger on the signs of such pre-eminence. In any case, Mr. Saintsbury is indisputably right in insisting upon the primary importance of the changes or reforms introduced by Dryden in far greater measure than by any other individual author into the form of English literature, both in verse and (as is far less generally remembered) in prose. If there was some arrogance there was also some truth, in the boast which he uttered, at the very time when second and "fifth-rate" wits were bunding together against him and his school, that "our native language" was now "more refined and free" than in the much-lauded Elizabethan days themselves. Occasionally, however, in the arguments by which he supports his general position, Mr. Saintsbury seems to us to trench upon the over-subtle, or even the paradoxical. Dryden's want of originality in the choice of his themes (should not, by the by, a redeeming exception be allowed in favour of *Mac Flecknoe*?) is described as perhaps an advantage rather than the contrary to one whose task it was "to control the peaceable revolution of a literature." Of this revolution itself the course is at times rather arbitrarily marked out. From some points of view it is surprising to find Cowley, next to Dryden the most magnificent, but occasionally also one of the most extravagant, of our panegyric poets, enrolled as a member of the "school of good sense" which Mr. Saintsbury contrasts with the Fantastics. And, though the better part of *Hudibras* may have been written before the Restoration, yet it seems questionable to deny to Butler a share in the reform with which the Restoration authors are here identified. He says of himself that he could, if he chose, "make verses without art or wit" were he less scrupulous; and at least regarded himself as a contributor to the literary movement which strove in the direction of terseness and propriety of diction. With regard, we may say in passing, to Butler's supposed share in the *Rehearsal*, we quite agree with Mr. Saintsbury that there is in it nothing so good as the "Repartees between Cat and Puss at a Caterwauling"; on the other hand, we cannot share his displeasure at the fact that the *Rehearsal* does not now make a good acting play; for what modern audience can be expected to recognize parodies on Stapylton and the Howards, or even on Davenant, or (as a dramatist) Dryden himself? And unfortunately modern tragedies are too few and too thin to furnish forth fresh stock for the *olla podrida* of the burlesque.

But, quite apart from the attacks of contemporary critics, the drama of the Restoration is a branch of its literature of the Restoration as to which Mr. Saintsbury—and with him Mr. E. W. Gosse in his interesting paper on Etheredge in the March number of the *Cornhill Magazine*—are specially desirous of correcting what they consider a prevalent blunder or series of blunders. Mr. Gosse is very wroth with those who think that rhymed dramatic verse and the lighter form of comedy were introduced simultaneously with the Restoration, whereas they did not begin to flourish till 1664, when Etheredge produced the *Comical Revenge*. Mr. Saintsbury, in his pointed way, complains that

the blundering attribution of Dryden and his rivals to Corneille and Racine—the more blundering attributions of Corneille and Racine to the Scudéry romance (as if somebody should father Shelley on "Monk" Lewis) has been generally accepted without much hesitation, though Dryden himself has pointed out that there is but little connexion between the French and the English drama; and though the history of the French drama itself is perfectly intelligible, and by no means difficult to trace.

The point in the comparison to "Monk" Lewis certainly escapes us, inasmuch as, though the refinement of *Le Grand Cyrus* is not the refinement of *Bérénice*, it is a real refinement after all. The tragedies of Corneille and Racine are assuredly to be held apart from, though they can hardly be regarded as wholly uninfluenced by, the school satirized by Boileau; and, numerous as were the translations and reproductions of Corneille and Racine in the generation following upon the Restoration, they cannot be said to have moulded the style or manner of any tragic dramatist of high mark in this age. But Mr. Saintsbury, though he does not dispute, certainly appears in the passage cited to obscure, the fact that the direct debt of the English heroic plays to the French romances of the Scudéry school was very considerable, and that, indeed, it is difficult to conceive of the existence of the former without the inspiration of the latter. To France, he says, our heroic drama "owed little more than its rhymed dialogue, and perhaps something of its sighs and flammings." Considering to how large an extent the matter of these plays consists of the sighs and flames in question, some importance must be said to attach to the

interpretation of the word "perhaps"—a favourite with Mr. Saintsbury—in this sentence.

But, whether or not part of his argument may be overstated, we rejoice that Dryden's claim to be remembered not only as a great, but as a great English, writer should have been fearlessly vindicated by his most recent critic. "Perhaps the most English of all English writers," he calls him in an early passage of this biography; nor is the hyperbole, if it be such, inadmissible in the case of a genius so richly endowed, and so free and even haphazard in the use of its endowments. Dryden's literary life resembles the political career of more than one distinguished Englishman who could afford changes which are nearly all that the world contrives to remember in the history of lesser men. And the progress of this career reflects itself in the growth of the qualities of his style and diction till, as Mr. Saintsbury well says, in the meridian of his powers the classical and the Gallican tendencies of the time, and his own perfect command of English, had "produced a dialect which, if not the most graceful that the language has ever known, is perhaps the strongest and most nervous." Will it be out of place if we express a hope that later masters of style will, like Dryden, learn to eschew the Gallicizing fashions of their own day? Mr. Saintsbury himself seems at times to obey less independent influences, and repeatedly introduces French phrases which may or may not have precise English equivalents, but which Dryden's method, as a translator, might have taught his biographer either boldly to English or boldly to omit. But this habit, and a few mannerisms such as the intolerably frequent use of the word "work" in the special sense in which it pleases the younger "Athenians" of the present day to employ it, may be passed by. The spirit of the book, as becomes its theme, is a genuinely free and fresh one.

A word in conclusion as to an early page of this biography referring to Dryden's University career. We are not about to attempt any explanation of Dryden's insult to his own University, which Mr. Saintsbury very properly treats as such, but which he might have spared sensitive "Thebans" the pain of having to read at length twice over. We refer rather to the *obiter dictum*, that Dryden's election to a Westminster scholarship at the age of nineteen is "an instance, among many, of the complete mistake of supposing that very early entrance into the Universities was the rule before our own days." On referring to Mr. Christopher Wordsworth's admirable volume, we find this observation fairly borne out so far as the eighteenth century is concerned; but, what is more directly to the purpose in the present instance, he cites in a note a passage in [Fachard's] *Grounds and Occasions of the Contempt of the Clergy*, showing "that sixteen was the ordinary age for lads to come up in 1670, so that they would be eligible for Holy Orders 'after seven years being at the University.'" And entries at an even earlier age must have then been at least frequent, though, as Mr. Wordsworth says, the case of "Granville the polite," who in 1667 entered as a nobleman at Trinity before he had completed his tenth year, must, together with a parallel case a few years later in date, be regarded as exceptional.

REDHOUSE'S MESNAVI.*

THE performances of the Dancing Dervishes—solemn-looking persons in long petticoats and conical caps who whirl round and round like human teetotums to the strains of a few tootling flutes and the cadence of a monotonous Persian song—are well known enough to tourists in Eastern cities, but few suspect the great antiquity and interest of the exhibition. The sect to which we in Europe give the undignified name of "dancing" or "whirling dervishes" is the most important of all the orders of Oriental illuminati, and is known as the Mevleviyeh, from the founder Mevlânâ Jelâlû'd-din, "Our Lord Jelâl-ud-din." This distinguished mystic was the scion of a princely house, being descended from Abu Bekr, father-in-law of the prophet Mohammed, and was himself a grandson of the actual Kharezmian ruler of Balkh. He settled at Iconium, where he founded a Dervish college, and enjoyed a wide reputation as a saint, a worker of miracles, and an inspired poet. The peculiar philosophical and religious tenets which he professed are better known under the name of Sufism, and consist chiefly in the assumption that God is the only actual and real existence, everything else being merely hypothetical, and that man's highest and ultimate aim is reabsorption into the Divine Principle from which he has sprung. This doctrine has much in common with Buddhism, as well as many points of contact with Vedic philosophy, and has served as a means for perpetuating the deeply rooted ideas of Aryan faith amongst peoples who were compelled to adopt the unsuitable trappings of a Semitic creed like Islam.

The Mesnavi, or "rhyming couplets," as the name signifies, is a complete exposition of Sufi doctrines, illustrated with numberless tales, apologies, and scraps of history, and is the work of the illustrious Jelâlû'd-Din himself. Next to the Kor'an, it is more highly esteemed by Shiah Moslems than perhaps any other work, and it has even earned some popularity in Europe, where, however, it is only known from a few fragmentary translations. The complete work consists of six books, containing 26,660 couplets, to which some authorities add a seventh book, to make up the number of the "seven planets," the "seven zones," and the "seven heavens,"

although the authenticity of the supplementary portion is more than doubtful. This long didactic poem is, as might be expected, very unequal in merit, grand and noble thoughts, exquisite language and imagery, and apposite illustrations being mixed up with much that is dull, commonplace, and stupid. It would appear from internal evidence that the master dictated it from day to day to his amanuensis, Husâmu'd-Din; began each sitting with energy and poetic ardour, and finished with prosy repetition consequent on drowsiness and fatigue. To clear away all the rubbish, and present the European reader with a trustworthy account of the residue, would be a great boon to literature, folk-lore, and philosophy; but no one has as yet come forward to undertake the task. The next most desirable thing was for some scholar to produce a complete translation of the whole—to do, in fact, for the Mesnavi what the late Jules Mohl has done for the great Persian Epic, the Shahnâmeh. The announcement of a rendering of the work by Mr. Redhouse, one of the very first and soundest Oriental scholars of the day, therefore excited no common interest; and the volume before us, if not quite fulfilling all the expectations which such an announcement raised, is at least a very important contribution to Eastern learning. It contains the first of the six books of the Mesnavi, translated entirely, and with scrupulous accuracy, and preceded by a number of biographical anecdotes illustrative of the life of the author and his immediate predecessors, contemporaries, and successors, as well as of the beliefs and superstitions of the mystics of the time. By what we cannot help thinking an unfortunate error in judgment, a metrical form has been adopted in the translation, and a certain want of technical facility which the versification displays is apt to distract the reader's attention from the intrinsic merits of the book. When, however, one becomes used to the style, its reflection of the depth of thought and beauty of diction for which the original is so conspicuous cannot fail to charm.

The poem opens with some lines in praise of the reed-flute, Jelâlû'd-Din having sanctioned the introduction of music and song as an accompaniment to the religious exercises of his followers. The reed is made to sigh for its separation from its home amid the rushes by the river-side, and the plaintive notes which it utters are said to be in unison with absent lovers' passionate moods because of this inherent sympathy. We then pass on to the first story, the moral of which sounds rather strangely to our ears. A mighty prince while out hunting sees a maiden whom he falls desperately in love with and purchases of her father. The girl is no sooner brought to the palace than she falls ill, and the court physicians are unable to afford her any relief; at length a mysterious visitor arrives, and undertakes to effect a cure. During an interview with the patient he discovers that her indisposition is due to the loss of her lover, a young goldsmith whom she had left behind in Samarcand. The king is easily persuaded to send for the youth, promotes him to high office, and unites him with the object of his affections, and in consequence of the removal of her secret care the girl quickly recovers her health and good looks. When the physician has achieved this desirable object he administers slow poison to the goldsmith, who in his turn loses health and all his youthful charms, and presently dies, an object of disgust and loathing to his former loving mistress, whose heart is thus left free to receive the king's amorous advances. The apparently treacherous murder is thus apologized for:—

Our prince was kind and virtuous, wise and just,
A man God-fearing and in God's full trust.
A victim put to death by such a friend
Is slain in error, or for some wise end.
Did not our God mean mercy in His wrath.
How could the God of Mercies thunder forth?
A child may tremble at the lanest's smart,
His mother knows there's healing in the dart.

The next story is intended to show the tendency of the masses to judge by appearances, and the wrong conclusions to which the practice leads them. An oilman, or rather perfumer, had a parrot whose clever talking and tricks were the admiration of the neighbourhood. One day the bird, alarmed at the sudden irruption of a cat into the shop, flew up and upset a valuable pot of oil of roses, and received a blow upon the head from her enraged master which completely denuded her skull of feathers. To the oilman's great grief, the bird now moped and obstinately refused to utter a word; nor could she be prevailed upon to break her silence by any means, until one day a bareheaded mendicant, with a perfectly bald scalp, happened to pass by the shop, and was greeted by Polly with the sarcastic inquiry "if he, too, had been upsetting some one's oil jar?" But these tales are little more than pegs on which to hang moral reflections, philosophic disquisitions, and incidental anecdotes, which occur so frequently that one has some difficulty in following the narrative. The author himself seems often to have lost the thread of his own discourse, and brings himself up with a jerk in couplets such as this, which Mr. Redhouse renders:—

'Twould never end the branches of this theme to count,
So let us sip again from our old story's fount.

The remaining stories are, first, one of a Jewish king whose vizier mutilates himself, and, pretending to flee from his master's wrath and injustice, seeks the camp of the Christians, whose confidence he gains; and, having become their leader, commits suicide, after leaving with them such conflicting instructions that the society is broken up by internecine strife. Another story of a Jewish king follows, which is partly a distorted version of Nebuchadnezzar and the fiery furnace. Next

* *The Mesnavi of Mevlânâ (our Lord) Jelâlû'd-Din, Muhammed, or Rûmî.*
Book I. Translated, and the Poetry versified, by James W. Redhouse.
London: Trübner & Co. 1880.

comes a fable after the manner of *Æsop*, in which the lion and the other beasts discuss the question of freewill; and then a rather pathetic apologue of a parrot who regains his liberty by feigning death; after this the narrative part grows poorer in plot, while the digressions are more frequent. It is in these very digressions, however, that the chief charm and interest of the book lies, revealing as they do glimpses of so many sides of Oriental life at the remote period (the beginning of the thirteenth century) at which the book was written. One anecdote tells of the simplicity of character and habits of the early Caliphs. When Omar, the successor of Mohammed, had achieved the final triumphs which consolidated the power of El Islam, an ambassador from the Byzantine Emperor came to Arabia to pay homage to the great conqueror on the part of his master. Arrived at Medina, he asked for the Imperial palace, and was much astonished to find that no such building was in existence; after much vain search and inquiry, he was at last directed to the presence of the Caliph, who, dressed in simple Arab garb, was reclining fast asleep and unattended beneath a palm-tree. The simple life of one whose fame had filled the whole world, and still more the discourse which Omar addressed to him on waking up, made so profound an impression upon the Greek ambassador that he then and there embraced the Mohammedan faith. The contrast between the unassuming manners of the early Caliphs and the arrogance and luxury of the later Commanders of the Faithful in their palaces at Damascus or Bagdad was indeed striking. The Arabic annals are full of examples of this, and the incident of the entry of this same Omar into Jerusalem clad in a rough mantle and leading his own camel, like the poorest Desert Arab, is familiar to all readers of the history of the Holy City.

Some of the other smaller anecdotes in the *Mesnavi* are also very remarkable, especially those which embody such popular legends as the following. Solomon, who was king, not only of men, but of the angels, genii, elements, beasts, and birds, was one day holding a court when a poor fellow who was present suddenly exhibited signs of the most extreme terror, and declaring that it was the Angel of Death who had frightened him, begged Solomon to command the wind to convey him far away to Hindustan, which was accordingly done. Another day, when the Angel of Death attended the monarch's levee, the latter asked him how it was that he had driven the poor fellow forth from his home to wander like a waif throughout the world? The Angel answered that God had commanded him to

"Go this very day
And take his soul in Hindustan, his debt to pay."
In wonder then I said within myself: "Had he
A hundred wings in Hindustan he could not be."
But going still to Hindustan by God's command,
There I found him, and took his soul with my own hand.

The figure of Solomon seems to have impressed itself very strongly upon the Arab mind, and not only is the literature full of incidents like the above, but the local legends of the peasantry attribute almost every relic of ancient architecture or engineering skill, especially the Cyclopean structures, to the agency of the genii and demons who served the son of David.

Mr. Rodhouse has made the work much more intelligible by prefixing to the poem the biographical anecdotes to which we have already referred. The reader of these will be struck with the similarity which they present to the lives of the Christian saints, especially of those of the more mystical and emotional school. The only difference is that the alleged visions and manifestations of Divine love and union are a little more material, and therefore more shocking among the dreamers of the East than among those of the West; but the supernatural machinery and the motives are in both cases almost identical. It is curious, however, to observe how the personal characteristics of the different personages stand prominently forward in spite of the mystical character of the incidents related. The great teacher and spiritual guide of Jelalu'd-Din, Shems Tabriz, of whom the poet speaks throughout in terms of the most extravagant admiration, is introduced to European readers, we believe, for the first time in these pages; and a very unpleasant, arrogant, self-asserting sort of saint he seems to have been:—

Jelal's father, Bahā Velel, had a disciple, who, for some reason, gave offence to Shemsu'd-Din; the latter in punishment inflicted a deafness on both the disciple's ears.

After a time, Shems pardoned the offender, and restored his hearing. But the man bore him a grudge in his heart nevertheless. One day, Shems said to him: "Friend, I have pardoned thee; wherefore art thou still cast down? Be comforted." Notwithstanding this, his rancour remained. One day, however, he met Shems in the midst of a market. Suddenly he felt a new faith glow within him, and he shouted out: "There is no god save God; Shemsu'd-Din is the apostle of God!"

The market people on this raised a great hubbub, and wished to kill him. One of them came forward to cut him down; but Shems uttered so terrible a shout that the man at once fell down dead. The rest of the market people bowed and submitted.

Shems now took the disciple by the hand, and led him away, remarking to him: "My good friend, my name is Muhammed. Thou shouldst have shouted, 'Muhammed is the apostle of God.' The rabble will not take gold that is not coined."

Shemsu'd-Din's arrogance and violence at length brought him into difficulties, for he was arrested during a tumult which his followers had raised, and removed by the police. All his pupil Jelal's miraculous powers failed to find out his whereabouts after this.

Jelal was a saint of a less austere type; indeed, he was so ami-

able that he had a good word even for the "pauv' de'il" himself:—

One day, while Jelal was yet living, Satan appeared in person to Husamu'd-Din, and complained bitterly of the torments inflicted on him by the continuous pious exercises of Jelal. He had said that, such was his deep reverence for Jelal and his followers, that he dared not attempt to seduce one of them; and that, had he known that of the seed of Adam so holy a race of men were to spring, he would never have tempted the father of mankind. He further added, "I entertain a hope that the kindness of heart of his sons will lead them to intercede with Jelal for me, and so obtain my eventual release and salvation." Husam related this occurrence to Jelal, who smiled and said, "There is reason to hope that he need not despair. God forbid that he should despair."

There is no mock modesty about Jelal and his followers; he was a Muslim saint of the very first water, and accepted any little testimony to his excellence from competent authorities as a tribute due to his merits. Take the following incident, for example:—

When Jelal was quite young, he was one day preaching on the subject of Moses and Elias (*Qur'an* xviii. 50-57). One of his disciples noticed a stranger seated in a corner, paying great attention and every now and then saying, "Good! quite true! Quite correct! He might have been the third one with us two!" The disciple surmised that the stranger might be Elias. (Elias is believed by Muslims to be always visible somewhere, but that people know him not. Did they recognize him, they could obtain from him the secret of eternal life which he possesses.) He, therefore, seized hold of the stranger's skirt and asked for spiritual aid. "Oh," said the stranger, "rather seek assistance from Jelal as we all do. Every occult saint of God is the occult friend of him." So saying he managed to disengage his skirt from the disciple's hold, and instantly disappeared. The disciple went to pay his respects to Jelal, who at once addressed him, saying, "Elias and Moses and the prophets are all friends of mine."

The reader will find in these veracious anecdotes all the "phenomena" of modern "spiritualism" anticipated, and Jelal not only had intimate personal relations with deceased worthies, but he could "levitate" better than Mr. Home, and perform aerial journeys against Mrs. Guppy herself. At Damascus, when a young student, he "was frequently seen by others to walk several arrow-flights' distance in the air, tranquilly returning to the terraced roof on which they were standing"; and being questioned by an admirer concerning his ubiquitous qualities, he replied that "The men of God are like fishes in the ocean; they pop up into view on the surface here and there and everywhere, as they please."

Amidst all this extravagant nonsense there is a great deal in these anecdotes that throws light upon the career of the remarkable man who composed the "*Koran* in the Persian Tongue," as the *Mesnavi* is called; while Mr. Rodhouse's work forms as a whole a complete treasury of occult Oriental lore.

SCIENCE AND SINGING.*

WHENEVER any branch of art is touched on by scientific men, the first result is to excite a strong movement of antagonism amongst its professors. They begin by asking, Of what use is this to us? We practise our profession successfully, and we teach it to others, without knowing all these things. Why should we burden our minds with useless knowledge? And, again, as the result of scientific examination is sure to be that science points out one method as being better than others, all who do not practise that method are at once up in arms, and deride the presumption of men of science in venturing outside their legitimate field of action in order to teach artists their own art. Ever since the invention of the laryngoscope by Garcia, there has been more or less of this antagonism between teachers of singing and investigators who have worked at the subject of voice from a scientific point of view; but we hope, considering how rare good voices and good singers are in spite of the great interest taken in music and the large number of people of both sexes who are year by year making it their profession, that teachers of singing will begin to feel that there is something wrong in their methods of training, and will therefore be inclined to listen to the lessons which physiologists can teach them.

The two points which we propose to consider are both touched upon by the authors of the books now before us—first, the method of breathing, and next, the important question of the different registers of the voice. Mr. Gordon Holmes's present book, which is an abridgment of his *Treatise on Vocal Physiology and Hygiene*, touches on so many subjects in so short a space, that we prefer to follow Mr. Beluŋke, only saying that Mr. Holmes fully agrees with him on the question of breathing, and that there is nothing in "the science of voice-production and voice-preservation" to contradict him on the subject of the registers. For the clear, even, and steady production of the voice, the first requisite is to fill the lungs fully, and to have free control over the flow of air from them. Both these results are obtained by cultivating what is known as "abdominal breathing," in which the capacity of the chest is increased by flattening out the curved muscular base of the lung-chamber. This is the natural mode of breathing, and increases the capacity of the chest more than any other form of breathing by itself. With this is to be combined the "rib breathing," in which the ribs, by turning on their joints at the backbone, advance the front wall of the chest. It is doubtful

* *The Science of Voice Production and Voice Preservation, for the Use of Speakers and Singers.* By Gordon Holmes, Physician to the Municipal Throat and Ear Infirmary, formerly Chef de Clinique at the Hospital for Diseases of the Throat, &c. London: Chatto & Windus, 1880.

The Mechanism of the Human Voice. By Emil Beluŋke, Lecturer on Vocal Physiology at the Tonic Solfa College. London: Curwen & Sons.

whether the "collar-bone breathing," by raising the shoulders, should ever be used, and it certainly should be reserved as a last resource when notes of exceptional power and length are required. These points have been brought out experimentally by Mr. Behnke by means of the spirometer, an instrument for measuring the quantity of air breathed out after a full inspiration. These experiments have been made, not only on himself, but also on pupils who have been under his care as a singing-master. Both authors attribute the unsteadiness of voice known as "tremolo," or "vibrato," to faulty teaching on this point; and both explain the prevalence of this blemish amongst French singers by the system of breathing recommended by the *Méthode de chant du Conservatoire de Musique*, which says, according to Mr. Holmes:—"Quand on respire pour parler ou pour renouveler simplement l'air des poumons, le premier mouvement est celui de l'aspiration; alors le ventre gonfle et sa partie postérieure s'avance un peu. . . . Au contraire, dans l'action de respirer pour chanter, en aspirant il faut aplatis le ventre et le faire remonter avec promptitude en gonflant et avançant la poitrine." The effect of thus flattening the abdomen is to prevent the descent of the muscular base of the chest cavity (the diaphragm), which is endeavouring to fulfil its proper function, so that not only is the cavity of the chest not as large as it ought to be, but the whole column of air which the singer is using rests on a large muscle which, being in a state of unnatural strain, has a tendency to convulsive twitches and quiverings, which makes steadiness of voice-production out of the question. The condemnation of collar-bone or clavicular breathing is so clearly set forth by Mr. Holmes that we cannot do better than quote his words, with some little abridgment:—

Clavicular respiration . . . is performed by a set of muscles which are not primarily intended to move the chest walls. . . . As these muscles act chiefly on the upper ribs, which not only possess little mobility on account of their size and stiff joints, but are, moreover, restrained by the bones and soft parts of the shoulders and neck being superimposed on them, clavicular breathing can only be effected by a kind of struggle. For the muscles which are capable of lifting the shoulders off the upper part of the chest must first contract before room can be obtained for the elevation of the superior ribs. The consequence of such labour is rapidly supervening fatigue, which is greatly disproportionate on the side of excess to the trivial amount of respiratory movements executed. And it may also be affirmed with confidence that no speaker or singer can practise it to any extent without showing a marked deficiency of endurance, which must lead to a complete defeat of his strength if called on to use his voice for a lengthened period, such as when engaged energetically in a protracted debate, sustaining a leading part in a five-act play, or singing through an opera.

But, though these facts have been long known, it is even at this day not uncommon for singing-masters deliberately to teach this vicious method of breathing to their pupils.

On the next most important question, that of the different registers of the voice and their proper use, Mr. Behnke practically breaks new ground. He has carefully gone over the whole subject of the production of the voice as far as the larynx is concerned, and worked it out anew by a long and careful series of experiments and observations with the laryngoscope; and he has come to the conclusion that at the lower part of the voice the vocal chords vibrate throughout their whole length, and that some considerable part of their width takes part in the vibrations; as the pitch of the note rises the chords are strained more and more tightly up to a certain point, thus forming the chest, or, as he prefers to call it, the "thick" register. Now, if the pitch be still raised, the chords vibrate still throughout their whole length, but only at their edges, until another point has been reached—the notes thus produced forming the "throat" register of singers and the "thin" register of Mr. Behnke's nomenclature. Now the chords only vibrate by a portion of their length, and the scale can be further ascended, forming the "head" or "small" register. Here we see much such a provision for preventing excessive strain as we find in stringed instruments—the banjo being a good example; the low notes (we speak of the open strings of the instrument) being produced by thick strings, the next higher by thin strings of the same length, and the high notes by a shorter string. Of course Mr. Behnke's statements must be exposed to scientific criticism by other physiologists who have repeated his experiments, before they can be accepted as final explanations of the mechanism by which change of register is effected; but, fortunately, his practical conclusions are almost independent of the trustworthiness of his observations and theoretical deductions. There is no dispute amongst physiologists as to how the strain on the vocal chords is produced; it is universally admitted that they are tightened by the movement of one cartilage of the larynx (the thyroid) on another (the cricoid). This movement can be felt in the living subject, and Mr. Behnke gives the following experiment:—If we feel carefully at the lower part of the larynx, or "Adam's apple," in the throat, we shall find a small soft place which will about take in the tip of the little finger; sing up the scale, keeping the finger in this place, and following the upward movement of the larynx, it will be found to close up gradually, but after it has closed, if the register be changed to the "throat," the scale can be further ascended without fatigue. Now this space is formed by the opening between the fixed and movable cartilages of the larynx, and its closure indicates strain on the vocal chords, and by the nature of the mechanism when it is completely closed no more strain can be put on them without actually bending the cartilages.

We thus see that, whether by the means suggested by Mr. Behnke, or by some other, the vocal chords at certain parts of the scale can be made to give higher notes without increasing the strain on them. Now the necessary physiological effect of

throwing away this natural relief of the strain on the larynx by attempting to force up the lower register is to over-stretch the vocal chords and to bend the cartilage which tightens them, which produces irritation of the parts, and, if carried too far, causes inflammation to set in, with the very probable result of thickening and hardening a mechanism which ought to be flexible and free to work properly. This commencement of inflammation can be seen by means of the laryngoscope, the parts becoming red and gorged with blood. Mr. Behnke concludes his little book with these words:—

Never extend the lower registers upwards, but strengthen the upper registers, and carry them downwards, thus equalizing the voices from top to bottom, and enabling your pupils to sing without straining. That is the great lesson taught by the investigations described in these pages. I have seen a singer pull himself together, and with a tremendous effort about a high A in the thick register (from the chest). His neck swelled out, his face became blood-red, and altogether the "performance" was of an acrobatic rather than of an artistic nature. The general public of course loudly applauded; but people of refinement and taste shuddered. Such exhibitions are unfortunately not rare. If this little book should contribute, however remotely, to discourage them, it will not have been written in vain.

We may add that it would also tend to prevent the waste of many a life; for the cases which are now so common of young men and women who, having beautiful voices, determine to become professional singers, and lose their voices during their training, would become very much rarer, and perhaps eventually disappear. Singing is not a game in which things are fair or unfair, but an art; and if a tenor has to sing a high C, provided the note be of good quality and true in pitch, it does not matter artistically whether it be produced in one register or another. We hope that the day has now gone by when people went to the opera to hear one singer sing one note, and that the death-warrant of the "Ut de poitrine" will soon be signed by all real lovers of music.

The complex but interesting question of quality or *timbre* is not touched upon by Mr. Behnke, and is only shortly spoken of by Mr. Gordon Holmes; it is one which must be carefully attended to by any teacher who takes Mr. Behnke's advice, as, if the upper registers are to be used, great care must be taken to preserve a uniform quality of tone throughout the voice by paying due attention to the movements of the tongue pillars of the fauces and soft palate.

In conclusion, we may say that Mr. Behnke's book is clearly written, and the plates well drawn and printed, while the anatomical details are made clear to the general reader by the use of English names for the different parts. We can only regret that the small size of the work prevents the author from giving any record of his experiments, which would be of much interest to all students of the subject; but, as it stands, it is a very valuable book, and ought to be read and thought over by all who have the training of young singers, and indeed by all musicians.

JAPP'S GERMAN LIFE AND LITERATURE.*

IT is impossible to read Mr. Japp's book at the present moment without comparing him at every turn with Mr. Carlyle on the same theme. The death of that great interpreter of things German in England is in all our minds, and the appearance of a series of fresh essays on such names as Lessing, Herder, Novalis, Tieck, inevitably recalls those review articles published more than half a century ago, which more than anything else served to unveil to English society the principles and the leading representatives of German romanticism. Such a comparison, moreover, is constantly invited by Mr. Japp himself, who has apparently read his Carlyle mainly in order to disagree with him, and is always ready to pour alternate argument and reprobation upon the head of the translator and admirer of *Wilhelm Meister*. But the comparison actually made can only turn out ill for Mr. Japp. From a book representing considerable reading, but of intolerable prolixity and verbiage, dealing with great themes without an adequate understanding of any one of them, it is a welcome relief to turn to the strong, intelligent sincerity of the Carlyle essay on Novalis, or to the full knowledge, the sympathy guarded by independence, of the article on "The State of German Literature." One of the first points of difference that one remarks between the earlier essayist and the later is that, while Mr. Japp is for ever hovering round the philosophical and artistic principles of the German romantic movement, endeavouring by an obscure and allusive style to persuade himself and his readers that he understands matters which are really altogether out of his ken, Mr. Carlyle throws himself straight upon the uninstructed popular consciousness he imagines himself to be addressing, and makes plain to it, in language that no educated person can fail to understand, what Romanticism and German idealist philosophy as a whole are driving at. He does not need to clear his own mind in the process. That has been long ago cleared and illuminated by the same order of beliefs which had inspired Novalis and Herder, and in describing the Romantic or the Idealist point of view, Mr. Carlyle is describing intellectual processes through which he has himself passed and himself issued into light. Sympathy, however, can be very well dispensed with in a guide if he makes it plain that he possesses sufficient intellectual power to secure a true apprehension of the thing viewed without it. Or, instead of the stimulus of sympathy, we may have the

* *German Life and Literature, in a Series of Biographical Studies.* By Alexander Hay Japp, LL.D., F.R.S.L., F.R.S.E., F.R.G.S., F.S.A. London: Marshall Japp & Co.

stimulus of opposition, and clearness may result from the endeavour to contrast opposing views. But Mr. Japp satisfies none of these conditions. He has neither the infectious illuminating sympathy of the believer, nor the intellectual grasp which might serve as a substitute. Nor has he any analytic force of disbelief and criticism, whereby to sharpen his adversaries' points against his own. In fact, the book is as little positive as may be. Its mere length is an index of weakness. One paragraph of Carlyle's will convey more to a reader asking what Herder and Tieck and Novalis really meant than a hundred of Mr. Japp's elaborate and closely-printed pages.

The readers whom these essays may attract will probably turn first to that on Goethe. For, in the first place, everybody imagines himself to know something about Goethe; and, in the next, there is much recent German work on Goethe which remains still to be summed up in English, and a fresh article on him, after all that has been said and written on the subject during the last thirty years, has no *raison d'être* at all unless it has either new information for new points of view to offer. Mr. Japp cannot certainly lay claim to new information. Of a whole modern section of German books on Goethe Mr. Japp appears to have made little or no use. Nor was it his object apparently to know anything about them. His object was to present what he supposes to be a new point of view, in much danger of being lost sight of. His thesis appears to be that Goethe personally and as a writer was so morally corrupt that his fame never could have grown and flourished as it has done unless it had been first of all fostered by a degenerate society and then spread in a degenerate world. Mr. Carlyle, Lewes, *et hoc genus omne*, are represented as conspiring to force upon a moral English public a man whose genius was no doubt great, but whose life and views on certain subjects were such that they ought for ever to interpose between this genius and its natural effect upon mankind. Mr. Japp feels called upon to protest, and to drag forth passages from Goethe's life and writings in order to fortify his own position, that Goethe was not, as Mr. Carlyle or Mr. Arnold has imagined, a moralizing and enlightening influence in spite of all the blemishes both personal and literary, of which they were quite as well aware as Mr. Japp, but that he was at once odious as a man and corrupting as an artist. For his officiousness in collecting and commenting upon these aforesaid passages no reader will feel much inclined to thank him, nor will it contribute to the general circulation of his book. No line of criticism can well be more barren or more futile than this. Is there really nothing to be got out of Goethe but the doctrine, more or less sensually embodied, of the *Wahlverwandtschaften*? Is this his only or his chief content? Is this what people mean when they place Goethe in the forefront of the intellectual forces of our day? Mr. Japp would complacently say yes. He traces the doctrine of elective affinities through the majority of English novels, sees it strong in George Eliot and triumphant in—Ouida! But the majority of cultivated readers will turn away contemptuously from the question. Such an influence as Goethe has exercised upon the finest minds in Europe is not to be so explained, and to dwell exclusively upon that side of it which Mr. Japp has chosen for consideration is only to put oneself out of court as a critic. How far the endeavour to save society from Goethe has led Mr. Japp from all ordinary standards of literary good taste may be judged from the following extraordinary passage (the italics are ours):—

Though he had been a prince of the blood or a reigning monarch uniting to his high position all the glory of the genius that was his, still we should turn away from him with the same sense of something inexplicably coarse, gross, and sensual, deeply indelicate in the grain of him—something at once priant and callous, impervious to many of the loftier strains of sentiment and self-respect; and we should have written precisely as we now do, were he still alive to pit his patronage and his power against us for such words.

This is courageous, indeed, though it is difficult to understand how Goethe's resurrection to life and royalty could affect Mr. Japp's moral judgment of his works. If the royalty were a royalty of the Frederick the Great order, no doubt such writing as Mr. Japp has allowed himself might be a little risky; but if we may look at a king, an indignant critic may at least "turn away" without too much heroism. Altogether there is something irresistibly ludicrous in Mr. Japp's treatment of Goethe. Much of what he says is undeniably true, and his remarks upon the separate stages of Goethe's development are often acute, so far as his Germanized style will allow; but the self-importance, the fussiness, the one-sidedness of the whole are so amusing that all serious impression is finally lost in laughter, and we forgive Mr. Japp for what has evidently afforded him so much occupation and relief.

There is a great deal of purely biographical interest in some of the remaining articles. The essay on Lessing is full, and shows reading; while that on Winckelmann is apparently a useful summary of Carl Justi's exhaustive biography. We have heard much, however, both of Lessing and of Winckelmann of late years; and Mr. Japp's power as a biographer does not extend to giving us new lights upon the critical or philosophical positions of those two great men. When he comes to talk about these positions there is nothing but weariness for the reader, who feels that, whereas Lessing's *Laocoon*, whatever be its positive merits or demerits, is at least an exquisitely clear and intelligible piece of writing, Mr. Japp's criticisms on it and endeavours to clear up what he calls its logical inconsistencies are fragmentariness and incoherence itself. So with Winckelmann's *History of Greek Art*. Mr. Japp makes a great many remarks upon it which, in the ag-

gregate, convey little or nothing to the reader; while the real significance of the book, its place in the history of art criticism, of the art-spirit itself, are left untouched and uncomprehended. He is content to quote second-rate and clumsily translated criticism such as this of Hettner's—"He presented to the intelligence once more clear and complete, as with the gracious demand of divine forms, the eternal beauty of the Greek art, which had been perceived only as by the eyes of men awakening-out of dim dreams"—when there was lying close to his hand in English judgments so adequate and so finely expressed as those in Mr. Pater's well-known essay. Mr. Pater, however, belongs to what Mr. Japp calls the "art pour art" school, and is therefore discredited in his eyes. He might, however, have so far yielded as to take a hint from Mr. Pater in his treatment of the relations between Goethe and Winckelmann. Mr. Japp seems to have altogether missed the importance of these relations; and yet "the aim of a right criticism is to place Winckelmann in an intellectual perspective of which Goethe is the foreground. For, after all, he is infinitely less than Goethe; it is chiefly because at certain points he comes in contact with Goethe that criticism entertains consideration of him."

For the rest, it may be said that the article on Moses Mendelssohn is the best that Mr. Japp has done. It does not provoke disadvantageous comparisons; it is well filled with facts; it tells an interesting story fairly well; and Mendelssohn's place in the history of Jewish thought has been appreciated. On the other hand, the essay on Novalis is perhaps the worst. It is avowedly intended as a polemic against Mr. Carlyle, who, according to Mr. Japp, has dwelt too much on the mysticism of Novalis, and too little on his "dutiful practicality." As a matter of fact, Mr. Carlyle has by no means neglected this side, but, as might be expected from such a critic, he has spent his strength on what was really important and distinctive in Novalis—his religious imaginativeness. Nor is Mr. Japp's account of Novalis wanting in insight only; as a mere catalogue of his works it is extremely deficient. As for the translated maxims, the greater part of them are unintelligible until they are compared with the German. What, for example, is a "genuine canonical man"? and why must his life be "throughout symbolical"? Many, again, seem to have been borrowed from Mr. Carlyle's rendering, and spoilt in the borrowing. But if we were to dwell upon details our task would be endless. Mr. Japp makes an apology in the preface for the misprints of which he dimly suspects the number; and we are bound to say that the apology is sorely needed. If any "society journal" chose to start a series of German puzzles for the amusement of its readers, it could not do better than quote Mr. Japp's German extracts and ask for the correction of them. Sometimes, again, the translation is truly amazing, as in the following passage from the preface to Herder's *Volkslieder*:—

Homer, Hesiod, Orpheus, I see your shadows still moving before me in the islands, blessing the multitudes, and hear the echo and re-echo of your songs as I feel your presence and your power in my land and my language. The German, literally translated, yields the following very different result:—

Homer, Hesiod, Orpheus, I see your shadows there before me, amid the multitude upon the islands of the Blessed, and hear the echo of your songs; but ship from you to my land and my speech is wanting [*mir fehlt das Schiff von euch in mein Land und meine Sprache*].

TEXTS, TRANSLATIONS, AND CLASSICAL AIDS.*

WITH Mr. Taylor's happy researches in some parts of Ovid we have had favourable experience in his Rugby days, and we are glad to see him adding to and utilizing his handy book at Kelly College. His work presents the due amount of necessary elucidation, and puts the gist of all that is contained in the text clearly before the tiro. Among the later sections, for instance, is the "Story of the Tuscan Marieners," transformed, as Milton sings in *Comus*, on Circe's Island; as well as the graphic passage about the Calidonian Boar-Hunt. The first passage is obviously borrowed by Ovid from the Seventh Homeric Hymn, where Tuscan sailors take Dionysus for a king's son, and carry him off in their vessel in hope of ransom. The helmsman alone protests against the wrong, and thus escapes the penalty and transformation which befalls the rest. It is he who is the spokesman of the Metamorphose, and tells how he was born and bred a

fisher, but found it well to supplement this solitary and slow calling by steering and star-gazing, and so

Mox ego ne scopulis hærerem semper in fidem,
Addidit regimen dextra moderante carinas
Flectere, et Oleniæ sidus pluviale capellæ.—III. 392-4.

In discriminating the course of the mutiny Mr. Taylor makes all clear as to the functions of the rebel crew and the capture, against the will of Acætes the steersman, of the girl-faced Bacchus in disguise. Acætes is overpowered by the rebels, of whom Lycabæus is the fiercest, and, narrowly escaping from being thrown overboard, has to resign the helm and forsake his own and Bacchus's intent to steer for Naxos. Alongside of Lycabæus figure Dictys, the clever topsail bestriker (35), "quo non alius cœscendere summas Ocyor antennis, prenosque rudente relabi," who was expert "at sliding down by the ropes"; or he

qui requiemque modumque
Voce dabat remis animorum hortator Epopeus (38);

where Mr. Taylor shows that the functions of boatswain, who by voice or flute gave the time to the rowers, were those of *κελεύστης*. We may note that this adaptation of the *Metamorphoses* for schoolboys is the very place to find illustration meet of such figures as "metonymy" or "transfer of names"—e.g. in xviii. 41, where "pinus" the timber is put for the ship as we used "steel" for "sword," or "copper" for "caldron." Another of its good points is the good and apt citation of parallels for every memorable passage.

To turn to fables, we know from the title of Phædrus's work that the Fabulist was unannounced by Augustus. It ran *Phædri Aug. Liberti Fabularum Æsopiarum Libri V.*, and he is believed to have composed them in the reign of Tiberius, in Rome, where he learnt Latin, and it is inferred that he wrote the prologue to Eutychus after the death of Augustus. From himself we gather that he was a native of Thrace, and was one whom, speaking in poetic style, "Pierio mater euixa est iugo," Book iii., Prol. 16-7. His sufferings at Rome are shown from internal evidence to have been caused by a relentless persecutor, Sejanus, until after whose death he is assumed not to have published. The nature of his debt to Æsop is somewhat discrepantly stated in different prologues. That to Book i. states the Fables as Æsop's matter turned into Iambics, and adds that their scope was to amuse and instruct. Prologue to Book ii. intimates a freer handling of Æsop's material. In Prol. to Book iii. he still quotes Æsop as his model. There is no prologue to Book iv., and in that to Book v. he says he has often used Æsop's name only to recommend his verses. It is plain that many of Phædrus's fables are not Æsopic, as they relate to much later historic matter (see v. 1, iii. 10). Written in iambic verse, the fables which come to us as Phædrus's are pure in their Latin, precise, elegant, and simple. They show him to have been desirous of fame, and sensitive of detraction. It is generally admitted that it is the fabulist Phædrus who is alluded to, iii. 20, v. 3 of Martial's Epigrams, "An æmulatur improbi jocos Phædri," where the epithet "naughty" imputes loose stories to this writer. The fables of Phædrus were buried long in the library of St. Remy at Rheims, and at last published by Peter Pithou, a Frenchman, at the end of the sixteenth century. We cannot see any superiority to the versions of Christopher Smart and others in Mr. John Barke's long-drawn-out version, as may be seen by any one who will compare Fable VII. of the first book with its original, "The Fox and the Mask," "Personam Tragicam," &c.:—

A fox once found a mask an actor lost
An over fields with careless steps she crost.
"Doubtless 'tis fine," she said, "its beauty gains
My admiration; but it has no brains."
This is for those to whom chance doth dispense
All the good gifts, excepting common sense.

Smart's rendering is beyond question briefer, brighter, and better, e.g.:—

A Fox beheld a Mask—"O rare
"The headpiece—it but brains were there!"
This holds—when'er the fates dispense
Pomp, power, and everything but sense.—CHR. SMART.

Mr. Charles Donald Maclean's graceful prousions to his fellow-Salopians are worthy of those to whom they are dedicated, as also of the classic press to which they are confided. We could select choice samples of elegiac, hexameter, alcaic, sapphic verse, worthy to serve as models hard to match, to say nothing of some nine or ten exercises in Greek iambs. But in a group of booklets of this kind, it is length, or rather brevity, that helps a reviewer's choice, and, therefore, we transcribe from p. 5 the elegiacs which fitly represent Goldsmith's song, "When lovely woman stoops to folly":—

Cessert intectum si quando femina nomen,
Nec-ia proh tacitus fallere posse viros,
Carmine quo tandem possis lenire dolorem?
Fleibile qua valens arte luisse malum?
Unica que culpam possit velasse pudendam,
Et nimis infelix ocululisse nefas,
Conscilique infido eruciet quam pectora amanti
Sufficit ars illi, sufficit una, mori.

We may add an epigram of Herrick on poet Prat:—

Prat he writes satyres; but herein's the fault,
In no one satyre there's a mite of salt.

Scribit Aper satyras. Sed Aper culpandus in hoc est,
Quod est in satyris nilon vel una salis.

The circulation of such neat translations should evince a good time coming for model composition.

The three books next following differ more in matter than in plan. All aim at realizing the maxim which Mr. Sherwill has propounded—namely, "Répéter sans cesse"; and it cannot be doubted that the grand secret for beginners is a perpetual testing of knowledge by practice, a perpetual ringing the changes between accidence and exercises. Each of the latter consists of four sections—namely, A., work to be prepared for next day's lesson in writing; B., exercises in the accidence prepared for oral practice; C. and D., sentences for translation, whether written or oral. This exercise-book seems adapted for the class of beginners for whom it is designed by its sound and simple tables of case-endings, verbs, vocabularies, &c.

Mr. Jerram's *Græcæ Reddenda* is designed rather for practice in translating English into Greek than for instruction; to supplement, not to supersede, other manuals. It represents a collection of chief constructions, without rule or reference, for *vivâ voce* or paper work, prepared or off-hand on the pupil's part. A hundred sentences or so illustrate the simple sentence, and with the help of a few notes run easily into Greek. These represent Part I. Part II. on the compound sentence presupposes a knowledge of ordinary idioms; Part III. forms a helpful introduction to continuous Greek prose. Phrases printed in italics direct the learner to differences of idiom, though sparingly as the book advances. Much stress, too, is laid, and justly, on a serviceable vocabulary. A good sample of Mr. Jerram's sentences from Xenophon's *Anabasis* may be tested by comparing pp. 19-21 with the Greek author himself. But Dr. John Williams White works out this problem with most entirety in his series of first lessons in Greek adapted to Godwin's Greek Grammar, and designed as a threshold to Xenophon's *Anabasis*, Books I.-IV. Avoiding too much of formal grammar along with the opposite extreme of slipshod and ill-based carelessness, he pursues a middle course, and makes each detached sentence from Xenophon serve as a drill not only on forms, but also in syntax, with a complete and careful armoury of memorial footnotes. It is vain in our present space to enumerate the features which give Dr. White's book a superiority as a full and sufficient text-book over the two foregoing. We can but say that in the matter of excellence of vocabularies, no less than in distinct and bold print, it bids fair to win its way into the favour of enlightened teachers.

Mr. Grey's *Classics for the Million* is a work of no originality or research, though happily a sufficient epitome for the use of the unlettered. Taking the double series of *Ancient Classics for English Readers*, and testing each volume of it side by side with his compendium, we gather an impression of considerable drudgery to little profit, though here and there a little fugitive amusement.

It is a welcome task, albeit apoco-restricted, which we hail in our final notice, the so-called *Story of Achilles*, from the Iliad. This, as we are reminded in its preface by Mr. Leaf, is the offspring of a suggestion of the subtle De Quincey in his *Homer and the Homerides*, that the lines of an Achilleis might be gathered and interwoven from the Iliad with perfect regard to the unity of a beautiful whole. Mr. Grote's subsequent dogma on the subject has to be disconnected with any such special subject, or the name Achilleis might mislead; but it is not the less a happy undertaking of Mr. Leaf's, to weave into a connected whole the twelve books contained in this edition, and consisting of the First, the Ninth, the Eleventh, the Sixteenth, and the remaining books consecutively. We have to deplore the loss of Mr. Pratt, the proposed editor, but perhaps no one is more competent to carry on his work than Mr. Leaf, who promises, when the present task is fulfilled, another and completer edition of the whole Iliad on a larger scale. The present volume has the advantage of references to Autenrieth's Homeric Dictionary, translated by Dr. Keep, and avails itself of La Roche's text, and (*inter alia*) Ebeling's unfinished lexicon.

We are led to draw our criticisms from the Eleventh Book of the Iliad, as a part of the Achilleis, inasmuch as its annotations throw some collateral light on the speculation which Sir George Lewis and Mr. Grote solved adversely to Lord Macaulay, whether Homer represents his heroes as riding. The famous book which affords light on the topic is the Tenth, where Diomed and Ulysses are conceived as one sitting, the other driving in the *δῖππος*. In the Eleventh Book, however, where in the former part there is ample illustration of Agamemnon's prowess, we come upon the manner of fighting which Priam's sons, Antiphilus and Isus, as also Peisander and Hippolochus, sons of Antimachus, used; and in a valuable note on v. 94, upon *ἐξ ἵππων κατεπάλμενος*, it is made plain that *ἵπποι* is very frequently (to say the least) in the Iliad synonymous with *δῖπποι*. It is of the sons of Priam, Isus and Antiphilus, in v. 100, when laid low, that Homer says, *καὶ τοὺς μὲν λίπεν αὐτὸ ἀναγὰς ἀνδρῶν Ἀγαμέμνων στῆθεσι παμφαίνοντας, ἐπεὶ περιδύρε χιτῶνας*; and here we note an original suggestion of Mr. Leaf, that there may be in the words an ironical allusion to the common phrase *τεύχεσι παμφαίνοντας*, "shining with bare breasts instead of with cuirasses," and a concurrent allusion to the fair skin of youth. Our only demur is whether this be not a too early and comic touch of *παρὰ προσδοκίαν*, though it is very ingenious. This is one of the best of Macmillan's School Class Books.

IN LUCK'S WAY.*

In Luck's Way is a light and somewhat inconsecutive sporting novel, with a love story cropping up through it here and there. The love seems to be thrown in as an indispensable sacrifice to the exigencies of fiction, though the author might have made more of it with advantage, as he dashes in his love scenes prettily. In sporting matters, on the other hand, he is thoroughly in his element; he lingers fondly about paddocks and training-stables; he dilates on race-meetings and the excitements of the course; and seeks his sensations in speculation on forthcoming "events" and the intrigues and counterplots of the betting ring. It is entirely a man's book; but many of the chapters are amusing reading, and the author is generally lively. Unfortunately he is unconsciously and gratuitously diffuse; and the story, so far as there is a story, might have easily been compressed into a single volume. Nowhere is he more prolix than with some of his humorous characters, though he is far from being devoid of humour. There is a certain Mr. Abraham Emmet, for example, who figures most prominently in the broad comedy parts. Mr. Emmet is the sporting landlord of a snug little rural inn greatly in repute among local sporting men. It has flourished long under the sign of the "Bumblekite Pie," and is so named, as we have reason to believe, after a popular Yorkshire delicacy. Emmet is rather happily conceived. He has a jovial visage and a shrewd wit; but while he is a landlord by profession, he is a quack doctor for his pleasure, and goes botanizing in the hedgerows in his leisure moments. "The humour of it," as Nym would say, is that he prides himself on the possession of a sovereign specific in the shape of a vile decoction of simples, which he is perpetually pressing on his friends and even on casual acquaintances. The joke, to a certain point, is a good one; as when we hear of his poisoning a wealthy aunt of his wife's with a cup of his most abominable mixture, sacrificing thereby their fair hopes of her succession. On another occasion, a knowing jockey bends Abraham to his purposes, by flattering his medical vanity and actually swallowing his doses. But the joke is mercilessly ridden to death, and all the more so that Abraham is irrepressibly garrulous when fairly mounted on his favourite hobby. And although the sketches of individuals are tolerably true to nature, allowing for a certain caricaturing and over-colouring, there is much that is fanciful in their combinations. The Turf, in one respect, is like the proverbial misery; it makes its votaries familiar with strange companions. But Mr. Webber carries social incongruities rather far. His hero, Mr. Mark Winstanley, is intended to be emphatically a gentleman; and, indeed, he is a gentleman in manners and feelings, though, having been brought up in the United States, he has some of the peculiarities of his adopted country. We should scarcely have supposed that he would have appreciated the facetious familiarity of one Mr. Gimble, the sporting clerk of his family lawyers; for, though Mr. Gimble is made entertaining enough, he is of the class of light-hearted youths who are the ornaments of popular music-halls. Nor should we have expected either to find Mr. Winstanley's worthy trainer hospitably urging his employer as a matter of course to take a share of the domestic dinner *à la façon*, or to see Mr. Winstanley hobnobbing with a rough-mannered bookmaker, visiting that gentleman at his private residence, and flattering him by admiring his collection of paintings. It is even more astonishing to know that Mr. Gimble enjoys the unreserved confidence of a firm of steadygoing men of business. For Messrs. Bartle and Stent are fully aware that the scapegrace is devoted heart and soul to racing; and is in the habit of "putting on his money" so freely, that even the sporting Mr. Winstanley deems it advisable to give his young acquaintance a hint on the subject. We may add that Mr. Webber, and not perhaps unwisely, has made very obvious efforts to utilize accidental stores of local knowledge in laying the substructures of his story. For there is no special reason why Mr. Winstanley should be introduced to us through the medium of a thrilling adventure in the Channel Islands, where he and a cheery Bohemian artist, who happens to know his family, are caught and nearly cut off by the rising tide. As the incident occurs in the opening chapter, we need hardly say that they escape the melancholy fate of the hero in Victor Hugo's *Travaillleurs de la Mer*. The episode leads on to some amusing studies of the habits, speech, and eccentricities of the lower classes of the Channel Islands.

Taking Mark Winstanley's practical American training into account, it is almost startling that he should be "fooling about" in Jersey, when urgent family affairs are demanding his presence in Yorkshire. He is ignorant, as we are willing to believe, that his rich old grandfather lies actually on a deathbed; but, considering that the Squire was notoriously in feeble health and far advanced in years, it seems improbable that his grandson should have deferred his intended visit to him. Happily, however, if Winstanley is supine, the family lawyers are energetic and heartily devoted to his interests. It is the more lucky for him since they are not the only people who are profoundly concerned as to his movements. Mr. Jack Raspley, the old Squire's steward and sporting factotum, with Mr. Raspley's magnificently beautiful daughter Gwendoline, have promptly started on a voyage of discovery, guided by some rumours as to the probable whereabouts of the presumptive heir. On the same packet from Southampton that carries the Raspleys and their

future fortunes, Mr. Gimble has embarked as special envoy of the lawyers. In the neck and neck race between the rivals, Mr. Gimble wins, having the more accurate information. He has an interview with Mr. Winstanley, gains his ear, puts him in possession of all the circumstances, and fully on his guard. Nor does Gimble's chance to be the only evidence as to the doubtful character and questionable designs of the Raspleys. The warnings of the London lawyers are amply confirmed by the personal experiences of Mr. Mercer, the artist, whose intimacy Winstanley had been cultivating between high and low water mark, and who was a very old acquaintance of the Raspleys. So, with ample warning and with much at stake, we should have supposed that a wide-awake young gentleman like Winstanley would either have given the syren Gwendoline a wide berth or have been effectually steeled against her fascinations. As a matter of fact, the reverse is the case. He plays with fire and scorches his wings; rushes upon his fate with his eyes open; and is victimized in a barefaced fashion that makes us contemptuously indignant. Gwendoline and her unscrupulous old father play a game that proves to be only too simple, and appear for the time to have it all their own way. When Mark has been dragged clear of the toils by the frank disclosures of his honest trainer, he struggles back into them of his own accord. Yet, in spite of a weakness, altogether inconsistent with his conception, and almost amounting to idiocy, we admit that Mr. Webber succeeds in interesting us in him. And the extent of our interest may be measured by the irritation we feel when he has committed a crowning act of folly on the eve of the principal event, at a great Northern racing meeting. He owns the favourite, and winning is a "moral"—we may observe, by the way, that the favourites from the Winstanley stables are always sure of winning, bar accidents or foul play. He misdoubts Raspley, though he is dazzled by Gwendoline, and his trainer, in whom he thoroughly believes, has persuaded him to give the mount to a jockey who may be trusted. The effect of the announcement of his decision on Raspley, coupled with most suspicious fluctuations in the betting, should have convinced him beyond all manner of doubt that Raspley has been foully abusing his confidence. Yet when Gwendoline chooses to exercise her charms, she wheedles him out of his assent to a piece of most dishonourable dealing. He will not retract his arrangements as to the mount, but he declares that his horse shall be scratched; and we fully assent to the indignation of the backers whom his most inexcusable weakness has "put in the deepest of holes." In fact, he has dealt so heavy a blow to his reputation as a straightforward sportsman, that we are surprised he could show his face at subsequent meetings without more unpleasant personal consequences than any suggested in the novel. It is true that in the end he has his revenge upon Raspley; and, so far, romantic justice is satisfied. The revenge is entirely in harmony with the spirit of a thoroughly sporting novel. He makes his losses, with a heavy payment in discharge of a debt of honour bequeathed him by his grandfather, the pretext for a visit to America and a temporary withdrawal from the Turf. From America, where he inherits a second fortune, he comes back with a string of famous "flyers" and a crack American jockey. He lays himself out chiefly for the ruin of Raspley, who has been figuring in the highest feather on the strength of his plucking of the Winstanley pigeon. Thenceforward the chief events in English racing seem to reduce themselves to a series of matches between the Winstanley "cracks" and the animals from the Raspley stables. The rascally touts whom Raspley retains in his pay discharge their duties but indifferently. Ignoring the glorious uncertainty of the Turf, as well as the quality of the animals they have to beat, Raspley and his confederates pile on the money with blind confidence. They come, as might be expected, to signal grief, and are effectually disposed of in a couple of meetings. And when we take our last look at the disreputable old leg, he has been landed by the revolutions of the wheel of fortune in the deepest mud of an Epsom racecourse, where his heartless daughter, shining in the social firmament as a star of the stage, is flaunting it in her carriage; and Winstanley, moved to compassion, is thinking of reaching his enemy a helping hand.

We have seen that Winstanley was predestined to be befooled by the fair sex. It was a happy succession of mishaps rather than his own good sense or penetration that saved him from falling for life into the clutches of Gwendoline Raspley. And we confess that, had we not been let so freely behind the scenes, he might have made fair excuses for his folly. Gwendoline might have seemed eminently seductive had it not been for the running commentaries of the author on her conduct, and for her close confederation with her scheming father. She is strikingly handsome; she has almost a genius in the art of dress; she wears airs of winning frankness as a second nature; and, to crown all, she is a finished actress. But, then, Winstanley has every reason to know that, beneath that enchanting mask of candid beauty, she conceals selfishness, sensuality, and utter unscrupulousness. And, moreover, Mr. Webber has put him *en rapport* early in the story with a character in every respect the opposite of that of Miss Raspley. Nelly Stewart has all the sweetness and freshness of nature implied in her simple name; and her gentle counter-attractions, acting on the straightforward and susceptible young Squire, ought to have proved an effectual antidote to the charms of the Circe of the betting-ring. Of course we feel assured from the beginning how things will certainly end; and when Nelly is troubled over the hesitating advances of her admirer, we know that she is destined to change her name for

* *In Luck's Way*. By Byron Webber, Author of "Pigskin and Willow." London: Tinsley Brothers. 1881.

that of Winstanley. At the same time we feel that, in marrying her, Winstanley will be far more fortunate than he deserves to be; and it is always unsatisfactory when the hero of a story drifts into fair prospects of happiness, in place of attaining them by his merits and an exercise of the will.

FRENCH LITERATURE.

IN undertaking a memoir of Valentin Conrart (1) MM. Kerviler and de Barthélemy have done a good deed. The first secretary, and, as far as any one man can be called so, the real founder of the Academy, the friend of almost two generations of men of letters, and himself a man of letters of no mean order, Conrart has come down to posterity chiefly ticketed with Boileau's perfidious praise of his silence. Conrart would not perhaps, even had he been a more audacious and prolific writer, have ranked with the greatest of the great writers who illustrated his period; but he deserves no mean place among the reformers of French prose, the men who, with Balzac at their head, set to work to fashion, as Dryden and his followers did in England somewhat later, a flexible and elegant style suitable for all purposes, and not so absolutely dependent on the individual genius of the writer as was the case with the rich but ill-organized language of the Renaissance. This volume comprises an excellent life of Conrart, diversified by many pleasant citations in verse and prose from contemporary authors, and illustrated by ample information as to persons and things mentioned, and a copious collection of his correspondence. Both the authors have proved their acquaintance with the period already, and their combined knowledge and skill have achieved a very useful and creditable monograph.

The third volume of M. Wallon's History of the Revolutionary Tribunal (2), occupied as it is with the very central period of the Terror, covers a frightfully small space of time in proportion to the abundant matter with which it deals. By this time the author has reached the so-called "grands procès de Germinal," when the Revolution, having already devoured the Girondins, began to lust after its own thoroughbred children. Hébert, the half-mad fanatics who had made up the entity of the *Terreur*, began the sacrifice, and the turn of Danton and his friends followed next. Owing to the affection of the Positivists for the Sansculotte Mirabeau, the trial of Danton has of late received a great deal of attention; but it is not superfluous to have it treated once more by a writer so able and so impartial as M. Wallon. The third great *fournée* of Germinal contained partly the dregs of the Hébertist party, Chaumette, the apostate Gobel, &c., and partly guiltless victims such as the wife of Camille Desmoulins, besides innumerable persons who have not been fortunate enough to get themselves fixed in the general memory. Floréal, the flower month, was not behind in eventfulness; and its calendar includes the death of Mme. Elisabeth and Lavoisier, besides that proclamation of the existence of God and the immortality of the soul which has pointed so many epigrams, from that of Billaud Varennes downwards, against Robespierre. Five hundred pages barely suffice M. Wallon for the history of these two months of blood.

The last volume of a history (3) not dissimilar in subject though different in plan, completes the work of its author, who has now been dead for some time. The Baron de Layre appears to have executed his task—that of arranging the materials of the late M. Mortimer Ternaux—very well. And though the scale of the work—eight large volumes for two years—may appear excessive for a book which has not, like M. Wallon's, the excuse of including an almost textual reproduction of documents, there is room for it among the annals of perhaps the most eventful period of modern history.

The only objection that can fairly be brought against M. Laugel's work (4) is that its major title is a little too ambitious. Actually it consists of four separate studies of persons sufficiently remarkable—Eléonore, Princess of Condé; Jeanne d'Albret; Louise de Coligny, the Admiral's daughter; and the Duc de Bouillon, lover of Marguerite de Valois and father of Turenne; besides an essay on the religious wars, one on the Swiss regiments in France, and others. These papers are of real value, full of fact, and lucidly written and arranged. But they are *mémoires pour servir* only, not a regular treatise on their titular subject.

Yet another volume of scattered semi-political papers of M. Alphonse Karr's (5), and one which is perhaps superior in interest to the last issued. The dates of these white pebbles are not given, nor are they, except approximately, traceable. But they seem to have coincided with the Presidency of M. Thiers. At the opening there is a charming story, told in M. Karr's best manner, of Eugène Delacroix's first appearance at the Louvre, of the frame which he wrought himself and which fell to pieces, of the painter Gros insisting on the adaptation of a frame in order that the conditions of exhibition might be complied with, of Delacroix's gratitude, and

his unwillingness to accept Gros's invitation to "come and learn to draw," and of the older man's epigram later when the young colourist bowed to his benefactor—"Il ne faut pas seulement louer les gens; il faut apprendre à dessiner." Perhaps it will not be new to all readers, but, as told here, it is certainly readable by all.

The inroads recently made on the independence of the French judicial bench by Republican impatience of anything but servile partisanship have inspired M. Georges Floot to write a learned and useful book on the history of French judicial arrangements for the last century (6). He has gone regularly through the chapters of the Republic, the Empire, the Restoration, the July Monarchy, and the Second Empire, adding some discussion of the state of the Bench in other democratically governed countries, notably the United States and Switzerland, and has then dealt with the whole subject of the organization of the magistracy. No impartial critic will deny that M. Picot's ideal of a judge as "le libre serviteur de sa conscience et du droit, non pas le soldat d'une cause," is the true one, and few will be found to assert that the tendency of democracy is to affirm the same proposition.

It was assuredly a good thought of M. Calmann-Lévy (7) to issue in an album, as a companion to that which recently illustrated the work of Châmp, some extracts from the work of his greater predecessor Gavarni. Like the former, this book has a preface by M. Ludovic Halévy, modest enough in size and tenor, and acknowledging itself as chiefly a cento of what Sainte-Beuve, Paul de St.-Victor, the brothers De Goncourt, and others have said. The book does not contain the work by which the artist is best known, and which, perhaps unjustly, has frequently caused him to be regarded as a light censor of the follies and fashions of the times. The plates here contained are taken from the series entitled "Histoires de politiquer," "Thomas Vireloque," "Les Bohêmes," "Mœurs de voir des voyageurs," "Les parents terribles." They were all, if we mistake not, composed after Gavarni's London sojourn, when he was already a man of middle age, when the strange studies or delusions (whichever word may be preferred) that occupied him later had already acquired a hold on him, and when a distinct vein of cynical misanthropy was the vein he chiefly worked. With somewhat less pathos than "Les Lorettes vieillies," "Thomas Vireloque" is (we have the pleasure of fully agreeing here with M. Halévy), perhaps, on the whole, Gavarni's masterpiece. The very first presentation of the modern Diogenes, with his hideous and yet scarcely repulsive mask of a face, his fluttering rags, and his sentiment, "L'homme ça mange les moutons comme fait le loup, et ça bêle comme le mouton et touche à tout. . . . Misère et corde!" strikes the key-note of the series. All who know anything of Gavarni know that the legend of his pieces is an integral part of them. He sometimes left them finished, but unpublished, for months because "they had not spoken to him," and he constantly altered the legend in successive states, because he was not satisfied with it. This intensely literary character, which made him one of the most typical of the men of 1830, has sometimes lowered him in the estimation of mere art critics, unjustly perhaps, for caricature may be fairly argued to be a kind of middle term between literature and art, partaking of both, as drama partakes of poetry and prose. However this may be, the legends are assuredly almost the chief part of Gavarni's designs, though the designs themselves rarely fail to illustrate them admirably. Thus, in the Vireloque series the philosopher in rags comments on a cow which regards him with placid wonder, after the manner of cows, "Belle créature; Et pas de corset." Thus he leans against a telegraph-post and delivers himself in a style that would have charmed the author of *Gryll Grange*:—"Y avait la parole, y a eu l'imprimerie. Misère et corde! Ne manquait plus que ce fil-fer du diable à la menterie humaine pour vous arriver de longueur aussi raide qu'un tonnerre." Most famous of all, and not least remarkable, is the piece in which Vireloque rests against a paling looking down on a wretched object sleeping off a debauch with the simple words, "Sa majesté le Roi des Animaux." Then, again, there is his plea against cruelty to animals—"Ça se dévore entre soi"; his lecture to youth on the philosophy of history, "L'histoire ancienne, mes agneaux, c'est mangé et mangés. Blagueux et blagués—c'est la nouvelle"; his horribly undemocratic epigram, "Ego! ego! ego! Tous égaux," and a dozen other arrows of the chase as pointed and swift-flying as these. If he yields, as he certainly does, to some caricaturists, both French and English, in political apportionment, to others in happy seizing of the minutest social follies and fashions, Gavarni has had few equals, if any, in this sort of ethical cynicism, not perhaps very deep or very original, but universally applicable, admirably true, and expressed with a literary and artistic skill still more admirable. Nor is it unworthy mention that some of the best things here reproduced were included in the marvellous series of designs which for a whole year he contributed to a daily paper of the Comte de Villedieu's at the rate of one full-page lithograph a day.

We have more than once had occasion to notice the pleasure with which a reviewer from time to time comes across reprinted work of Théophile Gautier's in the midst of the books of to-day. These carefully garnered by works of the most golden-mouthed of journalists are rarely such as to add directly (in comparison, that is to say, with already known work) to his literary fame. But they always savour delightfully of a time which knew neither naturalism nor slovenliness in matter of writing, and they are always

admirable examples of journey-work in literature. The present volume (8) might in English be entitled "Little Travels." A good deal of it is concerned with Switzerland, a hundred pages being given to Mont Blanc, and nearly as many more to the Matterhorn and its neighbourhood. The pleasantest paper in the volume, however, to our thinking, is one on a bargo journey on the Meuse, and there is a set of shorter articles on the Vosges which is almost equally attractive. The well-known description of Gautier's articles—"Nectar qu'on vous verse au coin d'une borne"—could hardly be better illustrated than by the perfect narrative and descriptive manner of these unpretending papers.

M. Nisard's volumes of travel (9) cannot pretend to the charm of Gautier's, but they are interesting, all the more so perhaps that the papers which they contain are in some cases as much as half a century old, while not one of them seems to be younger than the age when man is supposed to be sufficiently ripe for the episcopal office. The first volume deals with France, the second with Belgium and England. The observation of the veteran Academician is usually accurate, his opinions sound, his information sufficient, and his manner of writing clear and agreeable. The first volume, which deals with France, and for the most part with the South of France, deserves even less measured praise.

M. Lemonnier's *Les charniers* (10) is a curious and rather unpleasant book, introduced by a curious but not unpleasant preface from the pen of that singular writer, M. Léon Cladel. Written under the immediate inspiration of the disasters of 1870, the book presents the horrors of battle-fields and ravaged villages with an odd mixture of naturalist affection and genuine literary power. There is something of the latter in it, but the effect is nightmarish and unsatisfactory.

A new volume (11) of the *Bibliothèque d'aventures et de voyages* is occupied with Polar expeditions since the death of Lieutenant Bellot; an ingenious fashion of connecting France in some measure with a kind of travel with which her sailors have not for many years been officially associated. The chief sections are naturally devoted to the *Polaris*, the Austrian expedition, that of the *Alert* and *Discovery*, and that of Professor Nordenskiöld.

The second volume of Mme. Carla Sérena's travels (12) busies itself with Persia, and bears on the cover the presentment of the author fantastically, but not unbecomingly, equipped, and confronted with an exceedingly "high-batted man," as Mr. Morris picturesquely describes the inhabitants of Iran. As before, personal interviews of no very great interest make up the greater part of what Mme. Sérena has to tell us. Moreover, the traveller does not seem to have penetrated much further than Teheran, which she reached by the usual northern route from the Caspian.

Whether the republication of the *causes célèbres* of a year as told by a *Figaro* reporter can be considered a work tending to edification is perhaps a moot point. M. Albert Bataille (13), however, certainly tells his stories well, and if, as his friend M. de Rodays (who, according to a custom which seems to become more popular every year in France, contributes a recommendatory preface) suggests, he makes his republication yearly, the book may have some value as one of reference.

A less dubious annual presents itself in the twenty-fourth volume of M. Louis Figuier's valuable *Année scientifique* (14).

Mme. Ashurst-Venturi has thought fit to publish (15), for the use apparently of the French workman, a short but adoring biography of Mazzini, and a translation of his thoughts on European Democracy and the Whole Duty of Man. It is to be feared that she has not chosen her time very well. The French Progressist workman has got beyond Mazzini, whose beautiful nebulous sermons must seem to him far inferior to the practical lessons enforced by Hartmann and Russakoff, while the unadvanced is hardly likely to read him.

The *Bibliothèque de philosophie contemporaine* has enlarged its already long list by two items (16, 17), a treatise by M. Ribot on Diseases of the Memory, and an essay on Substance, written from the point of view of what may perhaps be called a kind of abstract empiricism, by M. Roisel.

The French-English and English-French Dictionary (18), begun by the late Mr. Clifton, and completed by M. Adrien Grimaux, boasts itself to be the most complete of its kind, and, we are inclined to think, not without reason. Two thousand pages of a large imperial octavo size, printed in triple columns, give a very large amount of space; and, so far as we are able to judge, this space is well filled. It is hardly possible to criticize a dictionary except after having it in possession and use for some

time, and noting the occasions on which reference is unsatisfactory; but such inspection as we have been able to make has been, on the whole, favourable. The inclusion of numerous technical terms, and of a very large number of phrases, seems to constitute its speciality. It ought to be added that M.M. Garnier, who are famous for bringing out cheap books, have surpassed themselves here. It would not be easy to have a bigger twenty-francs' worth of permanently useful printed paper.

Le monologue moderne is a pretty little pamphlet (19) in which M. Coquelin cadet gives an account in monologue-form itself of the kind of address he has made so popular. The illustrations, drawn in miniature by M. Luigi Loir, are quaint and pleasing.

Some novels of merit have recently appeared. To begin, according to our custom, with reprints, M. Charpentier has issued the ever-charming *Manon Lescaut* (20) in his little pocket series, and M. Lemerre has republished the *Boussac* (21) of M. Léon Cladel, one of the least eccentric, and perhaps the least repulsive, of that powerful, but crochety, writer's works. The foremost place among new books must be given to M. V. Cherbuliez (22), but we do not think that *Noirs et rouges* will add very much to the reputation of the author of *Méla Holdenia*. As the title not obscurely indicates, the burning question of clericals v. anti-clericals furnishes a good deal of the matter of the book. The heroine, Jetta Maulabret, has some of the attractiveness which seldom fails M. Cherbuliez's heroines, but the other characters are not very interesting, and the story somehow fails to enlist the reader's attention; Sister Amélie, Jetta's aunt, is perhaps the best of the personages. M. Théodore de Banville has paid to the other sex, in entitling and dedicating to them his volume of short tales, a compliment which they ought to be grateful for, though these *Contes* (23) are, to some extent, rather *pour les femmes* than *pour les jeunes filles*. They are admirably written, in perfectly good taste—according to Parisian standards, which are not quite the same as ours—and seasoned with that humour which often deigned to visit the cradles of the men who were born in France between 1800 and 1830. To say this is, indeed, only to say that they are the work of the author of *Les Curatides* and *Les Occidentales*. A volume of translations from M. Rangabé (24) will give those readers who "have" no modern Greek an opportunity of estimating the justice of M. Gonnadus's recent strictures on his countryman's "inherent shallowness," combined as it is with some merits of style and manner. *Le roman de Gabrielle* (25) is a disagreeable story, showing no originality of plot or manner, and saturated with the kind of sentimental morality or immorality which leaves a bad taste in the mouth. On the other hand, M. Huysmans' book (26), though like most of the work of the members of the tribe of Zola, it is equally unpardonable from the point of view of art and from that of morals, shows not a little misapplied talent. In essence it is a kind of study after *L'éducation sentimentale*, and, though immensely inferior to that strange book in richness of character-drawing and observation of life, it has the advantage of greater unity and less length. M. Emile Pouillon has drawn in *Cécile* (27) (which appeared originally as a *feuilleton* in the *Temps*) one of the best of the studies of Southern French peasant life which are now so frequent. The heroine, a shepherd girl in the *Causses*, or great chalk plateau of south-central France, is very good indeed, and her lover Jordi, with his superstition and weakness of character, if less prepossessing, is not much less good. M. Jules de Glouvet, whose remarkable novel *Le forestier* attracted much attention some time ago, has followed it up by a kind of parallel study in *Le marinier* (28). This time the personages are drawn not from the inhabitants of the great forests of central France, but from the river-faring population of the Loire. Perhaps the book is hardly equal to its forerunner, but it has great merit notwithstanding, and the character of the faithful widow Marie-Anne is novel and striking enough.

In *Une femme d'argent* (29), without exactly exposing himself to the charge of plagiarism or imitation, M. Hector Malot has somehow kept very close to the tracks of M. Alphonse Daudet. The attached clerk, whose wife at once betrays him and speculates on the credit of his connexion with a great financial house, is a figure which needs to be made thoroughly sympathetic to be interesting. But a man of business who allows his wife to persuade him that by bargaining she has bought things for about a tenth of their value is not sympathetic, because he is too obviously a fool. *Secondes noces* (30) is a somewhat colourless book, neither better nor worse than the ordinary run of French novels, except that it is quite unobjectionable in subject and treatment morally, and that it is written and imagined with rather less skill than most of its fellows. M.M. Tissot and André appear to be entering into serious competition with M. Jules Verne as purveyors of books of adventure, though they in-

THE LAND BILL.

THE enterprise of that organ of the London press which apparently combines Conservative principles with a friendship for Mr. CHAMBERLAIN, and the natural emulation of less favoured newspapers, furnished the curious with something like a notion of Mr. GLADSTONE'S Land Bill considerably in advance of the legitimate edition. If, as is rumoured, some twenty or thirty drafts of the measure have, at different times, been submitted to the Cabinet, an abundant choice of rejected or approved versions must have been at the command of Ministers anxious to make friends of the mammon of unrighteousness. Mr. GLADSTONE'S own statement of course relegated all these into the position of mere curiosities; nor can it be said that some, at least, of them were beyond the reach of a daring conjecture made by a person well acquainted with the subject. The Irish land question has been so thoroughly discussed for the last year, the limits within which the Government could hope to carry their own party with them have been so clearly indicated, that a clever guesser might well have elaborated a draft nearly as true to the accepted measure as either of those with which the *Standard*, the *Times*, and the *Daily News* favoured their readers on Wednesday and Thursday morning.

It had been shrewdly conjectured that, in the first place, the measure would involve not a little of the process familiarly known as giving with one hand and taking back with the other; and that, in the second place, it would be capable of very different representation according to the terms used. These expectations were fulfilled. To put the matter as briefly as it can be put, the tenancy of farms in Ireland of less than 150*l.* valuation is henceforth to be, not tenancy at will, or under contract freely made, but an endless series of fifteen-year leases. More precisely, the landlord is to take, in exchange for the fee-simple, a perpetual but variable rent-charge, fixed at intervals of fifteen years by a Commission. Further, though the tenant is bound to pay this rent-charge, not to dilapidate, not to sublet, and so forth, failure to fulfil these conditions does not reinstate the landlord in his property, but merely substitutes another tenant, the defaulter receiving the price of his right. It is only at the magic periods of fifteen years that even pre-emption is allowed to the owner of the soil, though he has certain rights of choice in reference to incoming tenants by assignment. On the other hand, the tenant is absolutely bound to the statutory covenants, such as they are, and may be driven to a forced sale of his holding if he breaks them. This relation of landlord and tenant, with the establishment of the Land Court, or Commission which is to arbitrate between the two, to decide on fair rent, on compensation, and so forth, make up the really important provisions of the measure, the rest being mainly explanatory and additional. Practically the Bill throws the soil of Ireland into the hands of the Land Commission, who assign it to the tenants, charged with a certain annuity, to be revised at intervals, to the landlord. No invasion of the rights of property could possibly be greater than this in theory, though many smaller invasions might have inflicted more pecuniary loss on the landlords, and most certainly might have given the tenant more of what he professes to wish for—absolute independence. Thus very different descriptions of the scheme are pos-

sible. Those who wish to make the most of the concessions to Irish ideas put in the forefront the recognition of the property of the tenant in his holding—a property of which, let it be remembered, the proposers of the present measure denied the existence ten years ago, and which was not fully recognized even by the Compensation for Disturbance Act of last year. The same persons insist on the embodiment of the principle of the three F's. Had these points been conceded without limitation, it would have been impossible for any English landowner for very shame to have voted for the Bill. The limitations actually introduced put a very different complexion on the matter. The provisions of the Bill, elaborate as they are, and grievously and unnecessarily as they interfere with the rights of property, stop far short either of the full recognition of the property of the tenant or of the principle of the three F's. That is to say, the recognition of the right of property in the tenant is accompanied by a recognition of a right of expropriation in the landlord (though that right dies and revives in the most complicated and unnatural fashion), and the three F's are conceded only with limitations which deprive them of all their sweetness to the Land League. It has been not inaptly remarked that, while the Irish contention is for absolute fixity of tenure, first of all with fair rents and free sale imposed as a sort of corollary, the Government measure puts free sale first of all, fair rents next, and concedes fixity merely as a consequence of compliance with the conditions of these. The difference is not trivial, it is vital. The only rights that the Irish tenant of the ill-conditioned sort cares for are the right not to pay rent, the right to subdivide, the right to let on conacre, the right to dilapidate, and all the other rights, or rather wrongs, which the Bill refuses him. He has, in nine hundred and ninety-nine cases out of a thousand, the fixity of tenure which the Bill grants him, while he enjoys in addition incidental advantages of which the Bill will almost certainly deprive him. Conjecture as to the working of any land measure in Ireland—where, as a rule, land measures do not work at all—may seem to be rash. But, while it is possible that waste land cultivation and the buying up and subdivision of properties may succeed in acclimatizing that phoenix the contented and prosperous small farmer, the impression produced on the mind by reading the provisions of the measure as they apply to existing holdings is that a great consolidation and diminution of small tenancies will take place if anything takes place. The small men, incorrigible in their backwardness and no longer helped by their landlords' long-suffering, will go out; their moneyed neighbours, careless of the curses on land grabbing, will take their place. This, at least, would be the almost certain result of the free working of the Bill as it stands, a freedom of working which, perhaps, it is not very likely to enjoy.

It must not, however, be supposed that because the Bill is almost certain to disappoint those who want in Ireland, and because its concessions are in many respects illusory, it is any the more likely to conciliate those who have. They are, indeed, robbed less than they may have expected to be robbed. They are not asked to give their coat in addition to their cloak, and, in a money point of view, supposing them to be hard-hearted enough to take full advantage of the Act, they might be the gainers. But the inroad on the principles of property is so great, the meddling with simple relations of demand and supply so mischievous, the intrusion of the State in

matters where the State has nothing to do so heavily fraught with disastrous consequences, that the measure may well seem to them more objectionable than one of more positive confiscation. The resignation of the Duke of ARYL expresses this feeling beyond all doubt. The Bill might have for its short title "A Bill for the Promotion of 'Litigation in Ireland.'" It is clearly to the interest of the recalcitrant and dishonest tenant to throw himself at every possible occasion on the protection of the Land Court or the Land Commission. As a man of straw, or a man with his wheat carefully thrashed out and garnered safely out of reach, he has nothing to fear, and he has a good deal to gain in the way of popular sympathy, revenge of the harassing kind on his landlord, and not improbably a bumper compensation to start him comfortably elsewhere. The evils likely to result from all this in such a country as Ireland are self-evident, even if experience did not teach them. Lord LITTON's chief, if not his only, crime in the eyes of his murderers was that he availed himself at vast trouble and expense of the rights given him by the Act of 1870 to free his property from the servitudes which that Act imposed. This more mischievous measure is described by the supporters of the Government as one recognizing the partnership of landlord and tenant, and Mr. GLADSTONE accords a more or less acquiescent reference to this description. The indignation of the one partner at being got rid of by the other is likely to be much more grievous than the indignation of a mere debtor at being made to pay his debt. It is impossible, of course, to criticize offhand all the details of so complicated a measure. But it may be said to suffer from the initial and radical defect of ignoring the cause of the evil in Ireland, and thus of applying a totally inapplicable remedy. Free contract and strict administration of a simple law are what Ireland requires; elaborately restricted contract and complicated law, certain to be loosely administered, are what the Government gives it.

LORD BEACONSFIELD'S ILLNESS.

THE whole English nation, high and low, rich and poor, Conservative and Liberal, has been watching for many days, with genuine anxiety and sincere sympathy, the shifting phases of Lord BEACONSFIELD'S illness. Lord BEACONSFIELD was for some days ill without alarming his friends or his medical adviser, and without there being anything more to communicate than that he could not leave home. Then the symptoms grew worse, and apprehension was excited. The symptoms were only those with which those who knew him were familiar; but he could no longer shake off the beginnings of danger with the ease and vigour of other days. One day this symptom seemed passing away, and another day that symptom seemed less grave; but there was no commencement of general recovery, and the most that could be said was that Lord BEACONSFIELD was no worse. To a certain extent the mind can keep the body going, and the wonderful mental energy of Lord BEACONSFIELD imparted something of its own strength to a frame that was growing weaker. At last the physicians have had to announce that the weakness has increased so much that the danger is now very great. Two or three days ago there was a temporary rally, but then came a relapse, and, although the remedies used were temporarily effectual, the strength grew less. When, after many days of suffering and of alternate access and subsidence of acute pain, there is shown a general lowering of strength in a man of seventy-five, there is not, in ordinary cases, much room for hope. Lord BEACONSFIELD, however, is an exceptional man, and life has so strong a hold when there is so unusual a power of intellect and will, that there may be in his case a larger possibility of escape, even when danger seems most imminent.

It is impossible that the illness of Lord BEACONSFIELD should not bring to mind the illness through which Mr. GLADSTONE passed last summer. There was the same fear of a great national loss, and the same desire to give expression to natural feeling, irrespective of class or party. It was then Lord BEACONSFIELD who was inquiring after Mr. GLADSTONE, and it is now Mr. GLADSTONE who is inquiring after Lord BEACONSFIELD. It is only second-rate men and short-sighted men who whisper to themselves that their path would be smoother if their rival was out of the way. On the contrary, it is easy

to see that, to the few men who ever attain the first rank in politics, it is an indisputable gain that they should have to work in the face of an equal. They have necessarily to encounter opposition, and they know that the opposition of a first-rate opponent is never like that of a second-rate opponent. It has different qualities in itself, and it has this essential feature of difference—that it is made by a man of national eminence. A first-rate statesman is a statesman who has got a hold on the nation; and, if he opposes, he opposes with all the advantages of the hold that he has gained. To be able to gauge adequately the wishes of the nation is one of the primary duties of the leading adviser of the Crown, and he is aware that the wishes of a great rival are sure to be the wishes of at least a large portion of the nation. It is not merely that his rival reflects the wishes of those who follow him, but that he by his eminence determines those wishes. To him it is given to create opinion as well as to formulate it. There is a feeling widely spread, perfectly natural and perfectly legitimate, that what a man of real eminence thinks must have something in it. For the basis of the eminence of statesmen is the conviction they have inspired that they have a right to be eminent. And the test of eminence is that their loss, possible or actual, is spontaneously treated by every one as a national loss. They can say things and do things that other men cannot say and do, and the nation reflects with pain what it would be to be for ever without this amount of stimulus and guidance. The nation, too, is proud that it has produced such men, and has gradually worked out a state of things in which they have had an ample field of showing what is in them, and of obtaining the recognition they deserve. On proper occasion, this feeling triumphs in England over the littleness of party; or, rather, it may be said that the best party men have at such times nothing of the littleness or the bitterness of party. When Sir STAFFORD NORTHCOTE said that he had listened with admiration to Mr. GLADSTONE'S speech on the Irish Land Bill, he was actuated by the same feeling which makes men of all parties call to hear the latest news of Lord BEACONSFIELD.

The precise kind of eminence gained by the few statesmen who deserve to be called eminent varies enormously. PITT was very different from FOX, and Lord BEACONSFIELD is very different from Mr. GLADSTONE. Except that they are men of great intellectual power, they have hardly anything in common. But it may be remarked that all real political eminence implies much more than mere intellectual power. It implies great moral qualities and the faculty of conceiving or presenting new ideas. Very often the leading idea such a man impresses on the nation may seem scarcely an intellectual one at all, although it is in a great measure by the force of intellect that it is impressed. Perhaps it may be said, without the risk of epigrammatic exaggeration, that the leading idea of Lord BEACONSFIELD has been that of making the Conservative party just and England great, while that of Mr. GLADSTONE has been that of making England just and the Liberal party great. Ideas of this sort might present themselves to numberless minds in a vague ineffectual way, but it is only when great men seize on them that they become living and actual, and form part of the common stock of national thought. And into the conception of the eminence which is attached to leading statesmen there necessarily enters the memory of their personal career. They are admired not only for what they are, but for having become what they are. Their difficulties, their dangers, their opportunities are taken into account. And in this respect Lord BEACONSFIELD stands unrivalled. No one of his eminence has ever surmounted such great obstacles. Of no one else can it be said, in anything like the same degree, that he started with everything against him, and ended with everything with him. His illness has interested every one, because it was felt that it might be the end of not only a great, but a marvellous, career. The time has not come, and we trust it may be distant, when it will be opportune to recall in what way his career has been marvellous; but the general sense that it has been marvellous is everywhere present, and colours every thought which the intelligence of his illness awakens.

RUSSIAN REFORM.

THE Emperor of RUSSIA may probably begin his reign with a serious desire to improve the condition of his subjects. Any effort which he makes for the purpose will be regarded with sympathy and good will; and, it may be added, that eventual success would be attended not only with approving recognition, but with genuine surprise. At the end of the last century, and at still later periods, there was a popular belief in all European countries that political freedom was the proper remedy of almost all existing evils; and the example of England had produced unlimited confidence in the efficiency of representative institutions. It cannot be said that the constitutional experiments which have consequently been tried have wholly failed; but the enthusiasm with which they were once regarded has in great measure subsided. Few political theorists would now anticipate unmixed good from the establishment of a Russian Parliament, though there seems to be no other alternative to the continuance of absolute monarchy. In Russia the aristocracy possesses little influence, and there is no important middle class. The peasantry would take no interest in any legislation which was not exclusively directed to the improvement of their own condition, probably at the expense of the larger landowners. The numerous and powerful official classes, and the actual and former students of the Universities, supply no sufficient materials for a constitutional system. On the whole, the best instrument of Russian progress is probably a wise and beneficent Sovereign. In so vast an Empire, power, whatever may be its nature or origin, must be concentrated in the hands of the Government, as long as the people are not sufficiently advanced to dispense, like the Americans, with almost all internal control. The task of reform in Russia is rendered more arduous by the impossibility of ascertaining the real desires of the nation. The revolutionary doctrines and practices of Nihilists and other conspirators furnish no sufficient clue to the causes of discontent, or to the possible remedies. The outrages which have culminated in the murder of the late Emperor would, even in a free country, justify exceptional legislation, and even the temporary concession of dictatorial power to the Government.

The participation of some persons of birth and education in revolutionary movements probably indicates impatience of the compulsory inaction and obscurity to which aspiring minds are reduced under a levelling despotism; but the Nihilists have never affected to desire the establishment of limited monarchy, or even of an orderly republic. It is useless to make concessions to agitators who openly demand the subversion of society. To the majority of malcontents the Government and the Imperial authority are represented by the police. There can be no doubt that many acts of violence have been committed in revenge for intolerable cruelty and oppression; but the evil reproduces itself because it is necessary to use arbitrary measures against unscrupulous conspirators. The Emperor cannot disband the force on which alone he relies for personal security and for the protection of life and property, and the moderation of a police necessarily invested with large powers cannot always be insured. It is not even possible to guard against treachery or incapacity among the guardians of society. Assassins are almost always more than a match for the police, and they sometimes possess accomplices in their ranks. The best precaution against abuse of power is the appointment of honest and prudent directors of the police force, and until lately it was believed that General LOUIS MELIKOFF had been more successful than his predecessors. It is not known whether the present Emperor reposes the same confidence with his father in the loyalty and capacity of the late Minister of the Interior. The powers of the police cannot for the present be advantageously restricted; but the vigilance of their superiors may perhaps restrain them from the excesses which have aggravated their unavoidable unpopularity.

To foreigners, or at least to Englishmen, it appears strange that the assailants of the Russian Government dwell but little on the system of military service which might well be deemed an intolerable grievance. The nominal army of the Empire numbers about two millions; and the force in actual service is utterly disproportionate to any legitimate purposes. The rural population, which supplies the bulk of recruits,

is by no means of a warlike character, though the soldiers, when they are once enlisted, possess many military qualities. The compulsory withdrawal from their homes and their ordinary occupations of many hundreds of thousands of young and able-bodied men inflicts much suffering on themselves and their families; but the conscription is seldom mentioned as one of the causes of popular discontent. It is possible that the peasants themselves, if they had opportunities of expressing their feelings, might complain of enormous military establishments maintained in imitation of more civilized nations. The Emperor ALEXANDER III. was supposed before his accession to incline to a policy of aggression which would require the continuance of the present establishment of the army. On the other hand, the Emperor has already begun to reduce the expenses of government; and the reduction of the army would be an obvious source of economy. Unless new enterprises of conquest are undertaken, there can be no reason for incurring excessive expense in military preparations. Against foreign attacks Russia is practically secured; and the forces employed in the extension of her dominion in Central Asia are not numerically large. No other great Continental State could so easily reduce its armaments; but no such policy is likely to be pursued in any part of the Continent. The public opinion of Europe, excluding England, is likely for many years to favour universal military service; and the only State which is unwilling or unable to follow the example of the rest is exposed to their contemptuous criticism. One of those periodicals which vie with one another in the selection and corresponding treatment of disagreeable topics contains an elaborate essay by a German Staff officer on the military impotence of England. There is no doubt that a million of conscripts are more than a match for a tenth part of their number of volunteers; but the German writer and the patriotic editor who perhaps sympathizes with his forebodings are premature in announcing the facility of occupying London with an army of only 50,000 men, after the dispersion of a fleet which is described as scanty and weak. Russia is safe not only against a second capture of Moscow, but against the professional scorn of Continental fire-eaters.

There is some reason to believe that the Emperor is for the present indisposed to external adventures. The suspension of the Russian advance towards the Afghan border probably implies a desire to facilitate the withdrawal of the Indian troops within the former frontier. At Constantinople and at Athens the representatives of Russia are supposed to have supported the compromise which has already been accepted by Turkey; and it is to the French and English Governments alone that a rumour which may probably be unfounded, attributes the strange project of a fresh naval demonstration in favour of Greece. The family connexion between the Emperor and the PRINCE OF WALES, and the friendly feelings which are thought to exist in consequence, may perhaps not be wholly without a beneficial influence. It may be hoped that the report of the employment of Count SCHOUVALOFF in diplomatic transactions is well founded. No other Russian statesman has been so consistent or so successful in the promotion of a pacific policy. His exclusion from active service since his recall from the Embassy to England may perhaps have resulted from the dissatisfaction of Prince GORTCHAKOFF with his conduct at the Berlin Congress. The interests of peace will be furthered by the final retirement of the aged CHANCELLOR. He must be allowed the credit of having raised his country by an aggressive policy to a commanding position. His successor may be more beneficially engaged in the less ambitious enterprise of securing tranquillity while the Emperor is engaged with internal improvements. It is difficult to define the reforms which may be possible or expedient, but it may be assumed that something will be done.

THE BUDGET.

ALTHOUGH Mr. GLADSTONE has for once framed an unambitious Budget, his explanation of its provisions illustrated as fully as on any previous occasion his wonderful power of mastering and reproducing complicated statements of figures and facts. On one point alone he confessed an ignorance which he appears to share with the whole

staff of the revenue departments. While he modifies the duty on mum, he is unable to explain the nature of that mysterious liquor. As it probably contains alcohol, the CHANCELLOR of the EXCHEQUER takes care that it shall, through any oversight, not enjoy an immunity which is denied to similar beverages. An uninstructed visitor to the gallery might have mistaken Mr. GLADSTONE for a brewer while he expatiated on the comparative value of the materials of beer. It seems that, in consequence of the abolition of the Malt-duty, brewers have learned to substitute for barley, not merely oats, but maize, relieved by an ingenious process from an inconvenient superfluity of oil. Mr. GLADSTONE has even discovered that the residue of the maize, treated according to the improved method, is additionally nutritious to cattle. The barley-growers who for half a century grumbled with mild obstinacy against the Malt-tax will derive but little satisfaction from Mr. GLADSTONE's eulogy on oats and maize. The brewers, also, still maintain their contention that they have been wronged by the measure of last year; but Mr. GLADSTONE was justified in his statement that the effects of the change are not yet fully disclosed. An excise duty on the materials of an important manufacture was more vicious in principle than a tax on the finished product; and it is admitted by general consent that beer is a proper subject for taxation. With the wine duties, on which he had dwelt largely in last year's Budget's speech, Mr. GLADSTONE was, in consequence of the perverse policy of France and Spain, unable to do so. The principal provisions of last year's Budget have proved inoperative, with the exception of the tax on publicans, which was imposed for penal rather than financial objects, and the additional penny of Income-tax, which is now removed.

The proposals of the present year are none the worse for their moderation and simplicity. Mr. GLADSTONE would perhaps in opposition have found fault with a Chancellor of the Exchequer who contented himself with an estimated surplus of three or four hundred thousand pounds; but the estimates of revenue have not been founded on sanguine expectations, and the calculated surplus will probably be exceeded. It was right that last year's addition to the Income-tax should be withdrawn, for Sir G. CAMPBELL's project of taxing political opponents has hitherto been applied only to the publicans. Few members of the House of Commons or readers of Mr. GLADSTONE's speeches are deeply interested in mum; nor are the reasons for caution in reducing the anomalous duty on silver plate likely to command general interest. Sir STAFFORD NORTH-COTE's increase in the tobacco duty has not hitherto been found productive; but the experiment may be conveniently tried for two or three years longer. The change in the probate and legacy duties is for the moment comparatively insignificant, though it points to future modifications, both in taxation and of the tenure of property, which may reasonably alarm the classes which are concerned. If Mr. GLADSTONE adheres to his intention of introducing no more Budgets, his successor will have a difficult task to perform. It is true that, as long as he remains Prime Minister, Mr. GLADSTONE will control finance even more completely than general legislation and foreign policy. Some of the greatest modern fiscal changes were effected by Sir ROBERT PEARCE in the capacity of First Lord of the Treasury. On one occasion the Prime Minister superseded Mr. GOULBURN, then Chancellor of the Exchequer, in the duty of opening the Budget.

If Mr. GLADSTONE was for once chary of financial innovations, his oratory was as copious as on any former occasion. His digressions on the former progress and the recently suspended growth of prosperity was instructive and interesting. In the produce of a penny Income-tax he selected a convenient test or index of national growth of riches. After correction for all the changes which have at different times been introduced, the penny produced in 1842 about three-quarters of a million, and in 1878 nearly two millions. In the last complete year the produce fell to 1,950,000*l.*, on which the estimate for the present Budget is based. It is surprising that the reduction should be so small in a time of unprecedented agricultural distress and of severe commercial depression. The returns for the present year will be still more unfavourable, and they will include a special diminution in consequence of the nonpayment of Irish rents. A certain allowance must be made for the higher rate of the tax as compared with the smaller percentage of five or six years

ago. It is notorious that a low rate of tax encourages comparatively accurate returns from taxpayers who find that they can afford to be honest. From the decline in the value of property, which seems to be indicated by the fall in the productiveness of the Income-tax, Mr. GLADSTONE once more deduced the familiar conclusion that the reduction of debt ought to be accelerated. There is little difference of opinion as to the expediency of a diminution of the debt, although the importance of such a policy is sometimes exaggerated. Payment of the English debt is an investment of capital at 3 per cent., although the simple calculation is sometimes disguised by ingenious contrivances. Little direct gain results from the process; but it tends to financial convenience and political safety. The next generation will profit by the operation of converting the short annuities which expire in 1885 into similar securities with twenty years more to run. It is impossible to foresee whether the Finance Minister of the early part of the next century will be inclined to repeat the operation.

By far the most important part of Mr. GLADSTONE's speech referred to the future alteration of the taxes which he designates by the repulsive title of "the death duties." He is happily not prepared to repeat a proposal once made by Mr. LOWE, to equalize the duties on all classes of legatees. No harsher or more unjust measure could be devised by any fiscal theorist; nor would such a proposal have been made by a Minister who had a sympathetic comprehension of the general feeling of the community. The almost universal opinion that strangers ought to be more highly taxed than lineal successors appears to be in some degree shared by Mr. GLADSTONE; though he also thinks it expedient to tax widows for the first time, and to increase the tax on bereaved children. There are better reasons for abolishing the exemption which is enjoyed by certain kinds of personality. Mr. GLADSTONE, not for the first time, denounces the immunity of property held in mortmain; and he reasonably objects to the preference given by the law to settled personality over property inherited or bequeathed. The present Budget only touches the fringes of the matter which is mixed up with far larger questions. Mr. GLADSTONE not obscurely indicated his desire to abolish life estates both in personality and in land. The arguments for such a measure have been repeatedly stated; but the greatness of the proposed change is perhaps not adequately appreciated. It was probably of set purpose that Mr. GLADSTONE noticed but incidentally his intended mode of dealing with landed property. There can be no doubt that he will propose to make probate duty universal; and, when life estates are no longer recognized, every successive possessor will be liable to the full amount of taxation on property held in fee. Landowners have, since the imposition of the Succession duty nearly thirty years ago, had experience of the difficulty of meeting on their accession a large pecuniary demand, though they now pay only in proportion to the value of their respective life interests. If the rate is largely increased, and at the same time applied in full to every succession, a large part of the land of the country must be either heavily mortgaged or transferred by sale. The anticipated consequence of the proposed fiscal legislation recommends it to a well-known school of economists. In anticipation of comprehensive measures affecting real property, it is to be regretted that no information as to the number of landowners will be derived from the Census returns. After the last Census Mr. MILL and Mr. BRIGHT hastily inferred from a return of fifteen thousand persons as landowners that they divided among them the whole of England. Less prejudiced students of statistics corrected the error by observing that one-half of the number consisted of women. The REGISTRAR-GENERAL has now issued directions, to the effect that no person shall describe himself as a landowner if he has any other title or description. It follows that, if the directions are followed, no peer, no member of Parliament or of a profession, no trader, and no artisan will be returned as a landowner. It is difficult to judge whether the blunder is to be attributed to scandalous negligence or the cunning of some Radical subordinate in the office who may have wished to diminish the apparent number of landowners.

FRANCE AND TUNIS.

THE Tunis question has entered on a new phase. Between Algeria and the territory of the BEY there is a strip of barren land inhabited by wild tribes, of whom a people called the Kroumirs appear to be one. They are not under the control of either France or the BEY; but ordinarily they are kept in tolerable order by the fear that either France or the BEY, or both, will interfere to punish them if they are aggressive. They have now made a raid on French territory, and killed a few Frenchmen and several Algerian Arabs. France is not only entitled, but bound, to punish them. She is going to punish them in a very effectual way. There are said to be about two thousand fighting Kroumirs all told, and to subdue these dangerous people a French force is being collected, which is roughly estimated at twenty thousand men. It must be owned that a great nation may be wise in taking excessive precautions, and it may be safely said that, if we had collected thirty thousand men before we had to take Laing's Nek, we should not be where we are now. But we also know that, in point of fact, great nations do not send 20,000 men to put down 2,000, and a wondering world may be excused for believing that the 20,000 French soldiers are meant to do something of a more imposing kind than punishing 2,000 Kroumirs. The French Government says that this is a mistake; that it is thinking of the Kroumirs, and of no one else; and that it would not for the world touch a hair of the BEY's head, or make him in any way uncomfortable. But the French public does not in the least believe its Government. It can see into an open secret, and reveals what the Government intends to do, or what, if it does not now intend, it must be made to intend. The time is come, it is said, for France to get hold of Tunis, and the only doubt in the French mind is what shape this getting hold of Tunis is to take. Is it to be annexation, or is it to be a French protectorate? France would, in the opinion of most Frenchmen, be quite justified in either annexing Tunis, or in protecting it, as she pleased; but the prevailing notion appears to be that in the present circumstances of Europe it would be better to choose the protectorate, and leave annexation for the future. It may be sometimes wise to make two bites of a cherry, and a protectorate would secure the most juicy parts of the fruit. The question that agitates the breast of French journalism is not why a protectorate should be established over Tunis, but why it should not. When it is said that Tunis is a part of the Ottoman Empire, and that to attack Tunis is to raise the eternal Eastern question in a new form, the French turn round and flatly deny that Tunis is a part of the Turkish Empire, or that it has anything whatever to do with the Eastern question. When it is said that a French protectorate in Tunis would cause jealousy and misgivings in other European Powers, the French reply that there is no Power which both can and may object to such a protectorate except England, and that England ought to look on in friendly silence, partly because she herself has recently acquired Cyprus, and partly because she is bound to show some gratitude for the cordiality with which France has acted with her in Egypt.

Nothing can be more difficult than to say in what sense Tunis is a part of the Ottoman Empire, or what consequences flow from its being a part of the Ottoman Empire in so far as it may be a part of it. The BEY is a Bey, and his title itself shows that he has a superior. He is diplomatically called the Regent of Tunis, and a Regent means a ruler who rules on account of some one else. Sir CHARLES DILKE described Tunis in the House of Commons as a vassal State, and it has no doubt been a vassal State since the first conqueror of the reigning family started from Crete and placed himself under the supremacy of the Porte. But the Bey is a very independent sort of vassal, more independent than the Khedive of Egypt. He pays no tribute and does not send troops to aid the Sultan in time of war unless he pleases. The only sign of dependence which is incontestably given is that each new Bey receives investiture from the Sultan. What further amount of dependence exists is a matter of controversy; but Sir CHARLES DILKE says that the Bey, although he can conclude treaties of some kinds without the permission of Turkey, cannot so conclude treaties which are political or military; and if it is true that very recently France complained at Constantinople of the conduct of the BEY, there must be some sense in which France admits that the SULTAN has or ought to have a

control, more or less vague, over his vassal. But when we have got so far as this we have not got very far in discussing the question of a French protectorate. Everything that concerns Turkey is so anomalous that we can never be accurate if we talk of Turkey as we should of any ordinary European State. The Great Powers never treat, and never have treated, Turkey as they would treat one of their Christian neighbours. They have insisted on upholding the jurisdiction of their consuls in Turkish territory, and a most curious system has been allowed to grow up by which the subjects of the vassals of Turkey have foreign passports given them, and are forthwith placed under foreign protection. England and France, again, are at this moment exercising a protectorate over Egypt. No one can for a moment believe that Turkey likes our protectorate in Egypt, but we choose to exercise it. England claims to exercise this very exceptional kind of authority on the ground that one is very much interested in the Suez Canal being kept open, and that one must see that the government of the country through which the Canal passes not only offers no obstacles to its free use, but itself behaves so well that the Canal shall pass through an orderly and settled population. For our material and political interests we exercise the Egyptian protectorate, and France has joined us, not because we wished her to join us or because Turkey wished her to join us, but because she said that she had material and political interests, which determined her to join us. So far as Turkey is concerned, there does not seem any real difference between a French protectorate in Tunis and a joint protectorate of England and France in Egypt. If France had in point of fact great material and political interests to uphold in Tunis, and could not maintain them otherwise than by a protectorate, and if the material and political interests of no other Power would be endangered, the French would be as much entitled to set up a protectorate in Tunis as we or they have been entitled to set up a protectorate in Egypt.

But it is very hard to persuade ourselves that the French have any great material or political interests to defend in Tunis, or that they cannot defend such interests as they have otherwise than by a protectorate, or that the material and political interests of no other Power would be damaged by France getting Tunis under its complete control. The French have no doubt some material interests in Tunis. They are clearly interested in Tunis not giving shelter or countenance to plundering hordes which might be inclined to trouble the peace of Algeria. They have sunk some capital—not very much—but still some in Tunis; and they are interested in seeing that this capital is not lost through any outrageous act of spoliation, or through any wilful neglect on the part of the authorities to protect Frenchmen and those whom Frenchmen employ. But these are not great interests, and France might, it would seem, protect them in the ordinary way. As to other Powers, it certainly cannot be said that we have any great interests to protect in Tunis, as we have in Egypt; that we have any motive or excuse for claiming to share a protectorate, or that we should be much the worse in any way if a French protectorate was established. But this is not true of Italy. The object of the protectorate is avowedly to make the material interests of Italy in Tunis subordinate to those of France; and, politically, it must be a cause of new anxiety, and it may be even said of very legitimate apprehension, to Italy if France got the command of a capacious and defensible naval station at the very gate of Sicily. And, if an aggressive expedition against Tunis would be bad for Italy politically, it would also be bad politically for France itself. It would lower France in the eyes of Europe. A portion of the French press is actually pleased with the discovery that Germany would make no objection to such an expedition. This is, indeed, something like humility. France throw over Greece because Germany did not approve of anything that might stir up European war, and now she is to carry the tricolour into Tunis, because Germany says that she does not in the least care whether the tricolour is carried there or not. Why should Germany care? By patting France on the back, she can raise up a deadly enmity in Italy against the action to which Italy is the most drawn by the ties of interest and gratitude. Unfortunately, the humiliation of Italy is to many Frenchmen, who, it may be hoped, do not represent the statesmanship of France, the most attractive part of the expedition which they hope is going to do such great things. The movement in favour of effecting these great

things in Tunis is a movement of pique much more than of policy. It is so strong for the moment that the Government cannot openly run counter to it, but it may hope to give it time to diminish, if not to die away, and it is by no means impossible that the talk of a French protectorate in Tunis may fade almost as quickly as it has sprung up.

CHURCH PATRONAGE.

AN ecclesiastical debate was absolutely welcomed as a relief by the House of Commons as it turned for half a night of last week from the dreary round of Ireland, Canada, and the Transvaal to consider what could be said against or on behalf of the exercise of private Church patronage. We are not grateful to Mr. LEATHAM for the intentions which prompted him to forestall Mr. STANHOPE's Bill by a carefully compiled indictment, garnished with tit-bits from the Blue-Book of the late Royal Commission. But, failing as he did to support his very wide assertions with evidence connecting the evil practices which he reprobated with any large section of the Church, he broke down in the attempt to transform the demand for a searching reform of the laws of patronage into an assertion of the necessity for disestablishment. The true interest, however, of the discussion lay in Mr. GLADSTONE's speech, and as it was upon the first occasion on which he had since the general election to deal with the Church as a national institution. We do not envy the feelings of those sanguine gentlemen who trooped to the ballot-boxes a year ago in the assured conviction that GLADSTONE meant disestablishment writ large, as they heard or read the declaration that "the Government for their part felt it to be an obligation upon them to give what assistance they could to all who were engaged in an intelligent and earnest endeavour to amend any of the institutions of the country, and *a fortiori* so important an institution as the National Church." Even Mr. LEATHAM, so added Mr. GLADSTONE, confined his strictures to private patronage, and this limitation, he asserted, was "an important matter" in the discussion, for, as the PRIME MINISTER continued, with the tone of a man who was laying down a general proposition too self-evident to need even the formality of any proof, "public patronage had never since the scandalous case of the Dean of York," since which nearly forty years have elapsed, "been before the country in connexion with these gross and foul proceedings." This blunt statement of an undoubted fact simply cuts away the whole ground from under the feet of the Liberation Society. According to Mr. GLADSTONE, private patronage has a certain, however slight, proclivity to corruption of which public patronage does not partake. But, while public patronage presupposes a public character in the body wherein it exists—or, in other words, the existence of a national or established Church—private patronage may exist in a private or dissenting community. All patronage in such a body is, indeed, in a certain sense private; but we restrict the meaning of the word to patronage exercised by a single individual, or by a small clique in virtue of some private ownership, and not from the fulfilment of any public trust. A trust deed may make, as it often has done, the private patron of the Nonconformist cure. Yet he is the man who finds himself, as Mr. GLADSTONE tells us, in constant presence of the temptation to gross and foul proceedings from which public patrons are exempt. Our Liberationist friends will draw small comfort from the definition of a public patron, which may be inferred from the PRIME MINISTER's pertinent exception whereby he tests his rule; for in his mouth it does not mean merely a Premier, or a Lord Chancellor, or even a Chancellor of the Duchy of Lancaster, but absolutely a Dean. Even as to the section of the clergy who dabble in gross and foul proceedings we are instructed that "those clergymen were extremely small in number." At all events, if Disestablishment is to be made a plank of the Liberal platform, fresh reasons must be excoquired for its gratuitous adoption since Mr. GLADSTONE's ruthless demolition of the favourite sophisms of Liberationism.

Mr. GLADSTONE singled out the clause in Mr. STANHOPE's Bill prohibiting the sale of next presentations as the object of his particular commendation. We confess that we see no reason to depart from the opinion which we felt

bound to offer when noticing the report of the Commission. We had no hesitation then in declaring our concurrence with the dissent expressed by Lord Devon and Lord Justice JAMES from this one of its recommendations. The reasons which we then gave we may as well again repeat. We fear that such a prohibition would either be mischievous or nugatory. It would be mischievous with a conscientious and nugatory with an unconscientious vendor. The scrupulous God-fearing patron would find himself constrained under some passing monetary stress to separate for ever the patronage of the family living from the possession of the family estate, and thus inflict a permanent injury both on the parish and on his own descendants. On the other hand, the scampish patron would have no difficulty in finding some agent as black a sheep as himself, who would negotiate a clandestine sale to the third party in the villany, the clergyman, who would enter on the living with the pretence of being the free choice of the patron. In fact, whatever mischief attaches to the act would be intensified, not mitigated, by the abstraction of that legality by which it is at present sweetened. Mr. STANHOPE, indeed, promised during the fragmentary debate upon his Bill of last Wednesday to bring up a clause providing against the risk of such secret transactions. But the draftsman who can frame it so as to be efficient must be a man who combines rare knowledge of human nature with peculiar ingenuity in devising legal expedients. No clause, however, would palliate the misfortune of a permanent alienation, unwillingly resorted to because Parliament had left no other way of honestly meeting a transitory difficulty. Lord DEVON, as his reason for opposing the prohibition, further alleged the positive advantage of not cutting off one of the various expedients by which variety in patronage is maintained within the Church of England, to the manifest benefit of toleration and breadth of view within its pale. Common-sense bids us deal with this one as with the other questionable elements of the patronage question, not by trying to stamp out, but by limiting and regulating. The same ingenuity which is interesting itself in devising checks on the sale of perpetual advowsons will, we are certain, not be found wanting in devising some unobjectionable method of dealing with next presentations. In one case as in the other, publicity of sale, under the eye of the recognized ecclesiastical authorities, will be the efficient safeguard against gross and foul practices.

TURKEY AND GREECE.

THE postponement of war during the recent negotiations in Constantinople is in itself a beneficial result. According to a well-known saying, if war is to come sooner or later, it is better that it should be later, because circumstances may prevent it from occurring at all. The Greeks are supposed still to be subject to uncontrollable excitement; and both the present Ministers and their predecessors, who are now leaders of the Opposition, are pledged to acquiescence in the popular demand. It is only within a few days that it has been thought possible to find an independent candidate for office who would have the courage to defer to the unanimous counsels of Europe. There is no doubt that the Greeks have reason to complain of the deception which was practised, not on themselves alone, by the ill-advised Conference of Berlin. At that time the Powers believed themselves to be issuing a decree, and not merely to be expressing an opinion or offering a recommendation to the Porte. England and France, which had taken the lead in the negotiations, were prepared to enforce the decision of the Conference, if the other Powers had concurred. It is now immaterial to inquire whether the proposed transfer of territory was warranted by justice or international law. With the disclosure of differences of policy among the different Governments, the concert of Europe, on which the force and authority of the Conference depended, ceased to exist. The Turks not unnaturally refused to submit to a sacrifice which was not enforced by irresistible power; but they have since that time displayed unwonted prudence and moderation. After many abortive efforts, the Ambassadors were said to have agreed with the Porte on a demarcation of territory which will give the Greeks the whole of Thessaly and a fragment of Epirus, though Janina and Metzovo are to be excluded from the cession. A still later report, to the effect that the Great Powers have proposed an additional cession on the Lake of Arta,

includes a statement that the Turks are willing to accept the further demand.

An identical Note is said to have been already presented to the Greek Government, which indeed has rejected its terms by anticipation; but the apparent perversity of the Ministers may probably be explained by their wish to devolve on the Great Powers the responsibility of peace. The army is perhaps really eager for a contest of which young soldiers may not accurately estimate the difficulty and danger. The Assembly will perhaps consult the passions of its constituents by offering real or ostensible opposition to pacific proposals; but means will probably be found of arriving at a rational conclusion. The advocates of war must be hard pressed for arguments when they complain that they were encouraged to prepare for the struggle by the intimation given by the English Government in the course of last summer that no opposition would be offered to the mobilization of the army. For the purpose of negotiation with the Porte it was necessary to show that Greece was prepared for war; and a friendly Power which might have undertaken to prohibit Greek armaments would have been expected to guarantee the results which might otherwise have been obtained by war. There is always reason to distrust Governments which profess to be irresistibly pressed by popular agitation. The managers of the movement are not always entitled to represent the community; and a part, at least, of ostensible enthusiasm for war is always insincere. No intelligent Greek can really believe that success in a conflict with Turkey would be either easy or certain. The main body of the Turkish forces are concentrated in the neighbourhood of Larissa, for the purpose of repelling a Greek invasion of Thessaly. The war would probably begin with a political battle; but, even if the Greeks were justified in their hope of occupying with comparatively little opposition the districts which are inhabited by a Greek population, it would be absurd to fight for a territory which may be acquired without a struggle. In North-Western Epirus the Greek army would encounter not only the SULTAN'S regular troops, but the warlike tribes of Southern Albania; and a professed attempt to liberate an alien and hostile population would be both paradoxical and dangerous. The city of Janina would probably desire annexation to the Greek kingdom, but the feeling which may prevail in the neighbouring country is at least doubtful.

Notwithstanding the sacrifices which have been made in preparing for war, the Greek Government and nation may deem themselves fortunate if the settlement arranged at Constantinople is finally accomplished. Five or six years ago the little kingdom had no reason to expect any extension of its territory during the present generation. The Cretan rebellion had been finally subdued, notwithstanding the undisguised sympathy and open assistance which it received from Athens. The previous acquisition of the Ionian Islands had been exclusively due to the unambitious benevolence of the English Government. The revolt in Bosnia and Herzegovina, and the Russian and Austrian intrigues by which it was produced, were in no way designed to promote the interests of Greece; nor could any ambitious hopes be founded on the embarrassments of the Turkish Government, until the long-prepared Russian invasion struck down the power of the SULTAN. During the war the Greeks had the safe and cheap task of not joining in an unprovoked attack. In return for their forbearance, they were allowed to hope that their interests would be consulted in the future negotiations for peace. Few precedents could be found in support of the recognition of a claim to compensation for maintaining peace in the total absence of provocation; but the Greeks were for the time favourites of diplomacy, and the Congress of Berlin, though it made no formal stipulations on behalf of Greece, recommended a rectification of frontier which involved the transfer of a large Turkish territory. If the object of the Powers had been merely the aggrandizement of a petty kingdom, the protocol appended to the treaty would have been wholly unjustifiable; but it was morally, and therefore politically, desirable to relieve from the oppression of an alien and imperfectly civilized Government a discontented population which had by an error of policy been excluded from the liberated area when Greek independence was first acknowledged. The limits of the kingdom as they will be defined under the settlement of Constantinople will approximately coincide with the boundary which in popular estimation was assigned to continental

Hellas in ancient times. If the kingdom flourishes, and if it is regarded by the outlying Greek population as their centre and representative, there can be little doubt of further extension hereafter.

A part of the recent negotiations which produced no immediate result may probably be at some future time revived in a more practical form. It is something to have made the transfer of Crete from Turkish to Greek rule into an open question. It is not known whether the scheme of substituting Crete for Epirus was first suggested by the Turkish representatives, or by one of the Powers; but it is understood that the compromise was not summarily rejected as inadmissible; and Greek ambition will, on convenient occasion, disregard the conditions which might have accompanied the cession. An immediate annexation of the island would perhaps not have been desirable. The Mahometans of Crete who bear with impatience the equality enjoyed by their Christian neighbours would have offered an obstinate resistance to the transfer; and it is even doubtful whether any part of the population is at present disposed to surrender local independence. The time will probably arrive when a Greek State, perhaps with a federal constitution, will occupy the whole or the greater part of the coasts and islands of the Archipelago. No other race in South-Eastern Europe can rival the Greeks in commercial and maritime aptitude. A war on land with Turkey would be the most disadvantageous exertion of national vigour and activity. If the contest, in spite of reason and prudence, proceeds, it is probable that neither combatants will make great efforts at sea. The Turks, who have the stronger fleet, would shrink from the risk of collision with some of the European Powers, which might perhaps be provoked by the bombardment of the Greek cities on the coast. Some months ago the Turkish Ministers announced their design of marching to Athens, if, as they hoped, they should effectually repel the Greek invasion. The conditions of modern warfare at sea are so little known that greater Powers than Turkey or Greece might find it difficult to frame the plans of a naval campaign. It is probably a waste of time to anticipate the various modes of prosecuting a contest which will almost certainly be avoided. But for the confident assertion of English newspaper Correspondents at Athens, it would seem certain that the representations of the Great Powers will command obedience.

LETTERS OF OBEDIENCE.

THE French must be allowed the credit of finding excitement in discussions which in England are associated with almost hopeless dulness. It is difficult to imagine the House of Lords engaged, night after night, in debating a single stage of a Bill providing that the teachers in elementary schools shall all be certificated. For an hour or so it is conceivable that the humorous eloquence of the Bishop of PETERBOROUGH might draw peers and commoners to listen to him, even on so impossible a subject as this. But at this point the patience of the House would be exhausted, and their lordships would go home to dinner, with a consciousness of having deserved well of their country in sitting out the episcopal speech. Yet this is precisely the question over which the French Senate has been busy for the whole of a working week. Among the education Bills which have come up from the Chamber of Deputies is one to abolish the "letters of obedience" which have hitherto been accepted in the case of teachers of elementary schools as an alternative qualification to a Government certificate. These "letters of obedience" are simply a direction from the ecclesiastical authorities to a member of a religious congregation to take the charge of a particular school, and wherever a school has been served by a religious congregation the production of this direction has been accepted as a sufficient title to the post of teacher. When short work has been made of so many other privileges hitherto enjoyed by the Church, it was not to be expected that this one would be left untouched. It must be admitted, indeed that there is exceedingly little to be said in its justification. The defenders of letters of obedience have been compelled to go very far afield in search of arguments. The case as put by the Government is extremely simple. Letters of obedience are objectionable on two grounds. They commit the education of a great number of children to teachers who, for any-

thing that is known to the contrary, may be quite incompetent to teach, and they concede exemption from the Government examinations to a particular class of teachers only. M. CHESNELONG, who has already made two long speeches against the Bill, has argued as though it involved the existence of the teaching orders. He has reminded the Senate of the good work which the orders have done in the education of the poor, and has protested against their members being given the insulting alternative of either ceasing to teach or submitting to the prescribed examination for a Government certificate. It is not his fault that this way of treating the question is open to the very obvious retort that, if the members of the religious orders are able to pass the examination, it is no insult to ask them to do so; while, if they are not able to pass it, they can hardly have the knowledge necessary to make them efficient teachers. If M. CHESNELONG could have handled the question so as to steer clear of this dilemma, he would doubtless have done so. He was forced to talk generalities, because as soon as he condescended to particulars the weakness of his position became evident. The State has a right to ensure that the education given to children is what it professes to be. A child goes to an elementary school in order to learn certain necessary rudiments. It is an unwarrantable interference with the liberty of parents for the State to dictate to which of two schools they shall send their children, supposing that in both these necessary rudiments are adequately taught. But it is no interference with the liberty of parents for the State to ask for proof that the school which the parent has chosen answers to this description; and one of the cheapest and least burdensome modes of obtaining this proof is to subject the qualifications of the teachers to the test of examination. The religious orders have no intelligible claim to be excused this test. No nation, least of all such a nation as France, can be expected to put up with bad secular teaching because it is given by a spiritual person. All that can be looked for is equal readiness to accept good secular teaching from a spiritual person and from a layman.

The only justification for the uncompromising resistance which the Right has offered to the Bill is the possibility—perhaps in the minds of opponents the more than probability—that it will not be worked in an impartial spirit. It would be easy of course to make the examination of elementary teachers a mockery by arranging with the examiners that a certificate should never be given to any candidate belonging to a religious order. But where the subject-matter of the examination is so simple, it is inconceivable that a plan of this kind should be carried out with any success. If many presumably competent candidates were rejected, it would be impossible for the Government to resist the demand that would arise for a review of the examiner's decision by an impartial tribunal. There is ground, therefore, to suspect that the opposition to the Bill is partly prompted by the conviction that a considerable proportion of the members of religious orders now engaged in elementary teaching would fail to satisfy even an impartial tribunal. When teachers have been scarce, or when, as has been the case lately, the orders have been unusually active in giving their members the opportunity of acquiring what may possibly be regarded as a vested interest in the teaching office, it is probable that a very low standard of qualification has been accepted as sufficient by the ecclesiastical authorities. After all, they may have argued, these worthy monks and nuns are only wanted to teach children to read and write and to work a few easy sums. Any young man or woman who has mastered these arts for himself is competent to impart them to others. Consequently we may safely take the wish to be employed in teaching as evidence of the ability to teach. No doubt, if this kind of reasoning has been largely resorted to, the prospect of having to pass an examination even in reading and writing may well be alarming.

The Committee of the Senate has shown some desire to make the transfer from one system to the other as easy as may be. As the Bill came up from the Chamber of Deputies, it proposed to exempt women who have held the place of principal teacher in a school for ten years, and are over forty-five years of age, from the dreaded examination; and the Committee have enlarged the scope of this exemption by omitting the limit of age. The effect of this omission, according to the *Temps*, would be to leave 71 per cent. of the nuns who are now

acting as principal teachers in public elementary schools, and 89 per cent. of those acting in that capacity in private elementary schools, altogether unmolested—there being only 29 per cent. in the one case and 11 per cent. in the other who are of less than ten years' standing. The Senate, however, has not considered this concession sufficient. By a majority of four, it has adopted an amendment of M. BERENGER's, by which the Bill is deprived of any retrospective effect. If this amendment is adhered to by the Senate, and the Chamber of Deputies in the end acquiesces in it rather than abandons the Bill altogether, letters of obedience will be abolished for the future; but those who now hold them, or, more precisely, those who hold them previously to the 1st of March, 1880, will not be allowed to profit by them. M. BERENGER's argument is that it would be a very hard measure to deprive twenty thousand teachers of their places. He is willing to insist upon the Government certificate as a necessary qualification in the future, but he objects to its being required from so large a multitude of men and women who have embraced a teacher's life, without any expectation of such a demand being made on them. If the examination is one that they can pass easily, why humiliate them in the eyes of their scholars by throwing a doubt upon their qualifications? If it is not one that they are likely to pass, why turn them out of their schools, when, in the course of a very few years, they will be forced to retire, either by age or by consciousness of their own shortcomings by the side of a new race of teachers. M. BERENGER's view of the question seems a very rational one; but it is not likely to find acceptance except with those who in their hearts would not be greatly troubled if the letters of obedience had been left alone. That is not the temper of the majority in the Chamber of Deputies. The members of the religious bodies who would have become teachers under letters of obedience may hereafter become teachers by examination and possession of a Government certificate. In that case, if the Bill is not to be retrospective, the position of the teaching orders will not be altered for the worse, and the principal object of educational legislation will not be attained.

THE NEW MINT.

THE Government have discovered, a little late in the day, that it would be impossible to carry on public business if each succeeding Ministry were to hold itself released from the engagements entered into by its predecessors. The doctrine preached by Lord FREDERICK CAVENDISH on Tuesday is so salutary that it may be accepted, without too much speculation whether the second reading of the "London City Lands (Thames Embankment) Bill" was the most appropriate occasion that could have been chosen for its promulgation. It is better to note with becoming thankfulness that the Government do hold themselves bound to carry out at least one arrangement which is not of their own making. Even this concession was too much for the patience of Mr. FIRTH. There was a fine flavour of universal suspicion about the speech in which he moved the rejection of the Bill. First of all, there was something wrong about the manner in which it had been introduced. Had Mr. FIRTH been acquainted with the late Mr. SEWELL's translation of the *Agamemnon*, he might appropriately have thrown off with "The tythed year is with us, lo!" for it is just ten years since an identical proposal was rejected in another character. What the House of Commons would have nothing of as a public Bill in 1871, it is asked to tolerate as a private Bill in 1881. The mere change of form suggests all manner of obscure designs against the freedom and publicity of debate. Why private now, and public then? Clearly because the House had rejected the proposal when it was brought forward frankly, and the only chance of inducing it to accept it now was to bring it in in the poke which enshrouds the proverbial pig. Then, the price of the ground which it is proposed that the Government should buy has risen in a very mysterious manner. In 1871 it was valued at 40,000*l.* an acre. Now, 80,000*l.* an acre is asked for it. Perhaps, if the Corporation of London were not the vendors, this circumstance would not in itself be damning. Sites on the Thames Embankment have a tendency to grow more valuable. But, when a site is owned by a Corporation, and that Corporation the City of London,

Mr. FIRTH feels that nothing must be taken for granted. It is safest to assume that even the apparently unearned increment of the land is somehow associated with a job. There is an increase, too, in the amount of ground sold as well as in the price to be paid for it. In 1871 two acres were thought to be enough to build a new Mint on; this year three acres are wanted. When a valuer has raised the price of land from 40,000*l.* to 80,000*l.*, it is very natural that the lucky possessors should be anxious to sell as much of it as they can. Better times are dawning for the public; and the day may not be far off when land belonging to wicked Corporations may be got hold of by a simpler process than purchase. In view of this biasful future, it is shocking to think of the Corporation as holding three acres less in land and 250,000*l.* more in money. As long as the land belongs to them it can be seized, but the most radical legislation cannot get hold of 250,000*l.*—when it has been spent. If ground must be had for a new Mint, why not buy it from somebody else. The site on Tower Hill can be enlarged, and there land, instead of increasing in value, is going down. It would be a great deal cheaper to tinker up the existing Mint a little than to build a brand-new one on the Embankment. Mr. FIRTH feels quite sure that, to carry out the latter plan would cost at least 200,000*l.* more than the sum put down in the Bill.

Mr. FIRTH is anxious, we believe, to have his name associated with the reform of the government of London. He could hardly have made a speech more calculated to injure the object he has at heart than the one which he made on Tuesday. The first requisite for taking in hand the creation of a new London municipality is a readiness to deal fairly and even generously with the existing Corporation. The change which Mr. FIRTH wishes to bring about is needed—if it be needed—for quite different reasons from those which have usually called for similar measures. The City proper does not ask for any change. It is already as well governed as it cares to be. The people who do desire a change are those who live in the districts of London which lie outside the City proper, and their main motive for desiring it is the contemplation of the superior advantages enjoyed by the dwellers within the City boundary. One of the main difficulties connected with the better government of London is the difficulty of extending the jurisdiction of the Corporation without radically changing its character. And this is not a difficulty likely to be surmounted by a legislator who approaches the question in a spirit of declared hostility to the body which he has to conciliate. The whole tone of Mr. FIRTH's speech was that of a police-court attorney cross-examining a witness whose evidence he is determined to break down. The action of the Corporation of London in reference to the proposed new Mint has been perfectly simple and straightforward. In 1871 the Government thought that they would like to build a new Mint on the Thames Embankment; and the Corporation, having the land the Government wanted, consented to sell them two acres of it at the price at which it was then valued. This arrangement came to nothing, as the House of Commons refused to find the money. By and by the need for a new Mint having become greater in the interval, the late Government reopened negotiations with the Corporation. The Corporation, as before, were perfectly willing to sell at the price of the day, but before the purchase had been completed the then Government went out of office. The present Government now propose to carry out the contract made by their predecessors, both because they are bound in fairness to do so and because they are of opinion that a new Mint is really wanted. Of course it is open to Mr. FIRTH to contend either that a new Mint is not wanted, or that it ought not to be built on the Thames Embankment; and if he had simply confined himself to making good these points he would have been formally right, though he might have been materially wrong. But why mix up these contentions with a perfectly unprovoked attack on the Corporation of London? The late and the present Governments may be greatly to blame for being dissatisfied with the existing Mint. They may be quite in the wrong in desiring to build the new Mint in a part of the town where land is valuable. They may have grossly erred in calculating the cost of the proposed building. Upon one or all of these points Mr. FIRTH may conceivably have an excellent case against them. But even then he has no case against the Corporation of London. Mr. FIRTH would apparently

make the Corporation constructively responsible for all the mischievous things which the Government might conceivably do with the land when they have bought it. It does not seem to have occurred to him that when a landholder sells a piece of ground to a respectable purchaser, he may fairly consider himself absolved from all further responsibility in the matter.

As a matter of fact Mr. FIRTH would have been mistaken even if he had confined himself to attacking the Government, and had let the Corporation go free. The reports of the Master of the Mint have repeatedly pointed out the necessity of a new building if the work entrusted to him is to be done properly. Mr. FIRTH would hardly be content if sovereigns were coined of less or more than the proper weight, or if the workmanship were so bad as to make the reproduction of them in baser metal an easy process. Upon a matter of this kind the authority of an expert must be taken as conclusive. Tinkering the present building is practically excluded from consideration by the fact that the work of the Mint cannot be suspended. As fresh coins are constantly wanted for the business of the country, the new Mint must be ready before the officials are disturbed in their enjoyment of the old one. When it has been decided that a new Mint is to be built, the only question that remains to be settled is where it shall be built; and the choice of the Thames Embankment is every way satisfactory. Far too little has been done in the way of adorning with good buildings a singularly fine site. A great opportunity was lost when the suggestion that the new Law Courts should be built on the Embankment was rejected, and the task of adorning the Thames virtually confided to the directors of the District Railway. It is very seldom that any of the public offices can be taken so far from Downing Street, and this makes it all the more to be desired that the Mint, which is not tied to any one spot, should be built on ground which it is so especially important to rescue from the commonplace ugliness with which the neighbourhood of Blackfriars is commonly associated.

=

THE EXTRAORDINARY PAPAL JUBILEE.

THERE is nothing unnatural or even, we may add un-Protestant, in the nature of a Jubilee. The Mosaic Law had its Jubilees, and the tradition of the secular games passed on from the Roman Empire to the Papacy, and probably combined with Judaic precedents to suggest the first establishment of the *Anno Santo* or Year of Jubilee, as it was afterwards designated, by Boniface VIII. in 1300. It had from the first been the avowed and systematic policy of the Church to utilize and consecrate to her own purposes such Pagan rites or customs as were not intrinsically evil, and many details of ancient ritual as well as the incidents of some great Christian festivals—notably of Christmas—bear unmistakable traces of this discreet condescension to popular sentiment and habits. In these days, Societies, both religious and secular, not at all excluding the most strictly Evangelical, celebrate their jubilees, to say nothing of golden and silver weddings and the like. There is therefore nothing out of the way in the general Jubilee just proclaimed by Leo XIII. "unto all and singular of both sexes of the faithful of Christ," to last from the feast of St. Joseph (March 19) to All Saints' Day, except the unusual rapidity of its recurrence. For the last ordinary Jubilee, being the twenty-first in all, was held in 1875, and there was a kind of supplementary one in 1877 to commemorate the fiftieth anniversary of Pius IX.'s first Mass. But otherwise these sacred seasons have been observed for some centuries past at intervals of 25 years only, the Jubilee of 1850 being omitted altogether, on account of the exile of the pontiff and the hostile occupation of Rome, which offered obvious impediments to a general pilgrimage. The present observance however is expressly announced by Leo XIII. as an extraordinary one, grounded on the grievous and perilous circumstances of the Church, and the conviction that "God is the more ready to hear prayer in proportion as there is in man a greater depth of penitence and the will of becoming reconciled to Him." In former ages indeed another and more mundane object contributed to the appointment and gradual multiplication of these great pilgrimage times—for such they then were—as will appear from a brief review of the origin of the institution. But no one need complain of Leo XIII.'s modest suggestion in his last Encyclical that some alms should be given to certain specified Societies for the Propagation of the Faith and education of Christian children in the East, nor does it contain any requirement or condition of visiting the threshold of the Apostles. Those dwelling in and about Rome are indeed directed to visit twice the Lateran, Vatican, and Liberian basilicas, but "all other persons dwelling without the City and elsewhere" are simply required to visit twice three churches designated by their Ordinaries, or if there be but two or only one church where they reside, their six visits can

be paid to these one or two. Leo XIII. may in short be credited with a genuine anxiety to rouse the zeal and secure the prayers of the faithful, nor was such a desire perhaps ever wholly wanting in his predecessors or those who inspired their policy on such occasions. But it would be an excess of charity, whether we consider the character of the men, or the circumstances of the case, to suppose that spiritual motives alone prompted the action of such pontiffs as Boniface VIII. or Clement VI., whose names are associated with the first introduction of the pilgrimage of the Holy Year.

In the year 1299 "all Europe," as Milman puts it, "was in a phrensy of religious zeal." There was a spontaneous rush of pilgrims towards Rome, or perhaps we should rather say that the stream of pilgrimage which had formerly set towards Jerusalem, and the forcible stoppage of which by the Moslem occupation was the immediate cause of the crusades, now set towards the *Limina Apostolorum* instead. At Christmas, in 1299, thousands of strangers thronged the Roman churches, and the question arose whether it would not be wise to take advantage of this new outburst of devotional fervour. After due examination of precedents and consultation of Cardinals the Pope on the feast of St. Peter's Chair (Jan. 18) 1300 solemnly proclaimed from the pulpit of St. Peter's the first Jubilee—not that the name was then employed—with plenary indulgence for all who during that holy year should visit the basilicas of St. Peter and St. Paul, on 30 days if residents of Rome, on 15 days if strangers. The experiment proved a great success. No less than two millions of pilgrims, of all ages and both sexes, and from all parts of Europe, are said to have visited Rome during the year, and as many as 200,000 were constantly to be found gathered in the holy city. At one time the numbers were so great that openings were broken in the walls for ingress and egress, and many persons were trampled to death. Villani, who was there himself, describes at great length in his *Cronica* the solemnity of the spectacle, the immense concourse of pilgrims, and the admirable arrangements made by the authorities for victualling both men and horses, "as I can bear witness, who was present and saw it all"; and on this point his testimony is confirmed by other contemporary chroniclers. The drain therefore on the Papal treasury must have been considerable, but the offerings also were very large. We are told how "two priests stood constantly by the high altar with rakes in their hands, sweeping from the sacred table the countless heaps of coin laid in offerings there." Cardinal Stefaneschi, however, the poet historian, who has left us his own record of the first *Anno Santo*, says that the annual offerings at St. Peter's averaged 30,000 florins, and that not above 50,000 more were offered during the Jubilee, mostly in very small coins. Among other distinguished visitors there came to Rome Giotto, who was commissioned by the Pope to paint frescoes in St. Peter's, and Gubbio the miniature painter who illuminated manuscripts for the Vatican Library. It had been originally intended to restrict the *Anno Santo* to the first year of every century, but this interval was speedily curtailed, first to fifty, then to thirty-three, and finally to twenty-five years. The occasion of the second Jubilee was a peculiar one. The Papal Court was in captivity at Avignon, and soon after Clement VI. ascended the throne, in 1342, an influential embassy came from Rome, including among its members Petrarch and the future tribune Rienzi, to entreat his Holiness to return to his See, and asking among other things that the Jubilee should be celebrated every fifty years, for how many of the faithful, it was urged, would die without ever witnessing a centenary. To the first part of this petition Clement—who had no idea of leaving his luxurious retreat at Avignon—returned a gracious but evasive answer; to the request for a Jubilee he readily assented. Rienzi, who had been treated with great distinction, returned in triumph, and the Bull *Unigenitus*, announcing the *Anno Santo* of 1350, appeared the following year. The result showed, as Mr. Heiman points out, that neither the alienation caused by the removal of the Court to foreign soil, nor the unpopular government of the Cardinal Legates had weakened the force of religious sentiment in Italy; "while the Papacy was feeble the Church was mighty." This second Jubilee brought a yet larger influx of pilgrims and of pious offerings than the first. Yet there was much in the conduct of the Roman populace to shock the piety of their foreign guests. A Cardinal Legate sent for the occasion from Avignon was publicly insulted, and even shot at with arrows while on his way to visit the basilicas—an outrage which he attributed to the machinations of Rienzi, who was now out of papal favour, and had crept secretly into Rome in the crowd of pilgrims. A great bull-fight was held in the Coliseum in September, which had a tragical termination, not only eleven bulls, but eighteen noble youths being left dead in the arena. There were also quarrels and even murders arising out of casual encounters in the crush of spectators, and the chroniclers tell us that on great devotional occasions two or three or even twelve persons used to be suffocated or trampled to death. They speak in high terms of the general conduct of the pilgrims themselves, who were peaceable, honest, good-humoured, and patient under severe trials and hardships, "but at Rome over-reaching and speculative avarice were in wait for victims." The police arrangements and accommodation were as bad as possible. Petrarch paid his third and last visit to Rome on this occasion.

The limit of fifty years was as little destined to be permanent as the limit of a century. The second jubilee was held within half a century of the first, and the third followed still more closely on the second. Urban VI. was anxious at once to

confirm his waning popularity and to provide for his financial wants by anticipating the period fixed, and in order to excuse this somewhat arbitrary innovation, he decreed that henceforth only thirty-three years—the period of our Lord's earthly life and of a generation of mankind—should intervene between the successive celebrations. A fresh jubilee was accordingly proclaimed in 1389, but Urban did not live to see it. It was solemnized next year by his successor Boniface IX., who however treated it as a mere casual interpolation and proclaimed another at the close of the century, which was kept accordingly in 1400. The jubilee of 1390 did not open very prosperously. No pilgrims of course came from the countries where the Anti-Pope Clement VII. was acknowledged, and the financial success of the solemnity was largely due to the adoption of some very questionable expedients. Richard II. of England, and John I. of France were expressly privileged to gain the indulgence without leaving their States, and certain German cities obtained a similar concession on condition of payment for the restoration of Roman basilicas. It was a far graver innovation to send questors all over Europe commissioned to sell the indulgence at the presumed cost of the journey to Rome, and who according to contemporary chronicles offered a plenary remission of all sins without the condition of repentance. Chaucer, who lived at the time, is supposed to refer to these proceedings in his description in the Prologue to the *Canterbury Tales* of the "gentil Pardoner, That streyt we comen from the Court of Rome." In some provinces more than 100,000 florins were extorted by these unscrupulous emissaries, who did not forget to enrich themselves, and many of whom appear to have come to an evil end. Still grander than any previous celebration was the *Anno Santo* proclaimed by Nicholas V.—one of the ablest and most high-minded of the mediæval Popes—for 1450. A new coin was struck for the occasion, and so enormous were the offerings that above 100,000 florins were lodged in the bank of the Medici alone. But the immense concourse of pilgrims led to very disastrous results. One day as the multitude were returning from an exposition of the *Volto Santo* at St. Peter's, some trifling obstacle on the bridge of St. Angelo caused a panic, in which, according to Infessura no less than 200 persons were drowned or crushed to death. And then the plague broke out and even the Pope and Cardinals were driven away from Rome. The next and last recurrence of the Holy Year that need be specially noticed here took place in 1475, when the present name of Jubilee first came into vogue, and the practice of holding it every twenty-five years, which has continued ever since, was introduced, by virtue of a Bull of Paul II., in consideration of the shortness of human life and in order that each generation might have an opportunity of benefiting by the spiritual treasures of the Church. King Ferdinand of Naples and Catherine, Queen of Bosnia, were among the pilgrims, but the concourse was not so large as on previous occasions, being impeded as well by wars and political troubles as by the dangerous state of the roads infested by brigands. On this last account the indulgence was extended to Bologna, where four churches were raised to equal dignity *pro hac vice* with the four patriarchal basilicas of Rome. Sixtus IV., who presided over this solemnity, was one of the most shameless of papal traffickers in sacred things: all the offices of the Court were sold at fixed prices publicly advertised, and new offices were actually created in order to be sold to the highest bidder. The next Jubilee was celebrated under the auspices of Alexander VI., when the Papacy had reached its lowest depth of degradation.

The last ordinary Jubilee under the old regime at Rome was solemnized, as was before observed, in 1825, when the number of pilgrims during the year amounted to nearly 400,000. Whether the ancient ceremonies, now many centuries old, will be revived at its next recurrence in 1900 may perhaps be doubted; there has at all events been no attempt at such a revival either in 1875 or now. It may be worth while therefore to put on record that, according to the traditional rite, the *Anno Santo* is proclaimed after the Gospel at High Mass in St. Peter's on the previous Ascension Day, by reading the Bull in Latin and Italian, followed by military music and peals of cannon; first in the Vatican, then in the three other patriarchal basilicas. At Vespers on Christmas Eve the Jubilee begins with a grand procession, when the Pope in person solemnly opens the *Porta Santa* in the atrium of St. Peter's, while three Cardinal Legates, deputed *ad hoc*, open with similar formalities the sacred gates of the Lateran, Sta Maria Maggiore and St. Paul's. The Holy Year is brought to an end on the ensuing Christmas Eve, with the solemn ceremonial of closing the sacred gates of the four basilicas. Pilgrimages cannot certainly be said to have gone out of fashion, in view of the recent popularity of Lourdes and La Salette, and we observe that this last Encyclical recommends, though it does not enforce, a pilgrimage to Loretto. But pilgrimages to Rome will hardly survive the transformation of "the holy city" into the capital of Italy. The *Anno Santo* need not therefore lose anything of its strictly religious significance, but it must cease to operate as a centralizing power. And this is a point of some importance, when we remember that centralization has been confessedly the great motive force of the Catholic reaction of the last half-century, the secret alike of its weakness and its strength.

THE ADVANTAGES OF DEMOCRACY.

A RATHER curious series of evolutions has just been performed in the columns of the only London newspaper which is at once avowedly democratic and conducted with decency and ability. Rumour charges some men of letters of great and historical fame with having written, or caused to be written, unfavourable reviews of their own works, in order that these exposures might be triumphantly exposed in their turn. The article which appeared in the *Pall Mall Gazette* of last Saturday, under the title "Democratic Consolations," might excusably remind a reader of this manoeuvre when he saw what followed it on Monday. On the first day inquiry was made whether pessimist critics of democracy, including some extremely anti-reactionary persons, such as Tocqueville and Mill, were or were not right in anticipating a general deterioration of the political standard in governments and individuals. Perhaps the authorities for some such anticipation might have been dated a little further back. Burke, for instance, if we do not mistake an authority justly in some favour with the *Pall Mall Gazette*, spoke of the "disgusting vices" of democracies, and the result of a good many centuries of observation has made it almost an axiom with impartial students of politics, that the gain, such as it is, of an occasional and almost superhuman display of energy is more than compensated, not merely by the inherent absurdity of the democratic principle, but by the defects which, as experience shows, accompany the working of that principle. However, the modern democrat who has searchings of heart may be allowed to state his case his own way, and he would doubtless say that the limited and imperfect Republics of the past offer no criterion applicable to the improved democracy of the nineteenth century. Yet even in this improved democracy he sees spots, blemishes, black clouds "among the blue," wandering stars in the orderly galaxy. Is not Wigan (a place of apparently good conditions, which neither withers in the baleful shadow of a cathedral nor depends on the patronage and custom of the county) pretty obviously corrupt? Is not the London School Board, the crown and flower of things in the democratic point of view, a body of dubious wisdom and of conduct not dubious at all? Does not the enthusiasm awakened by the illness of Lord Beaconsfield or Mr. Gladstone, as the case may be, show a dangerous leaning to personal government? These uncomfortable questions were put to the faithful democrat on Saturday, and he was left to study them in company with his Census paper during the Sabbath. But on Monday badm was to be found in Gilend. A useful "Democratic Liberal" made very short work of the *Pall Mall's* objections. Wigan is only corrupt because it is not democratic enough—"Magis magnos democraticos sunt magis magnos puros," in fact. The London School Board is falling off because the horrid cumulative vote, loathsome to democracy, enables the wicked inhabitants of villas to send evil delegates of their own, who stop the business, and are as flies in the ointment. This argument is particularly interesting, because, in reply to it, we have only to mention, with all respect, the name of Miss Helen Taylor. Thirdly, the democracy clings to men only as representatives of causes—apparently in exactly the same way that image worshippers, by their own account, never worship the image, but only the thing or person imaged. In case this handy "Democratic Liberal" should have done the business insufficiently, a short article in the same number points out how admirably the Caucus works, and how it has provided Ipswich with a man and member of the most extreme justice and tenaciousness of purpose. This is, of course, a tonic thrown in to complete the effect of the "Democratic Liberal's" antidote; and if the uncomfortable qualms are not allayed, why the modern democrat must have a very weak stomach and very weak knees indeed.

Let us examine these remedies for democratic doubt a little more closely. The "Democratic Liberal's" special pleading does not want much more attention than we have already given to it, in so far as the second and third counts are concerned. The first merits a little more attention. "The growth of democracy, we are told, has been attended by a steady improvement of opinion in this respect [purity of election]." This is a very favourite argument with the writer's likes, and in various forms it is used to support extension of the franchise, redistribution of seats, and half-a-dozen other things. It is obvious, however, that it is a mere begging of the question. The actual fact is, that in very large constituencies there is less direct bribery than in small ones. The "Democratic Liberal" would have us think that this is owing to the improvement of opinion. If this means that he thinks the Glasgow or Manchester elector to be, circumstances and cases equal, less accessible to bribery than the elector of Sandwich or of Boston, he is of course entitled to his opinion, though no reasons are or can be produced for it except the viciously circular one that large constituencies are above bribery. The facts seem plain enough. Bribery of a constituency of many thousands is simply a physical impossibility. But the real point of importance is whether, corruption having ceased owing to mechanical, not moral causes, seven devils worse than itself have not come into its place. The "Democratic Liberal" who is bound to admire Birmingham will of course strenuously deny this; we for our part shall as strenuously assert it. The organization whereby the whole patronage, office-holding, and municipal administration generally of a borough becomes the prey of one political party seems to us an infinitely worse evil than the letting loose of a temporary flood of gratuitous beer, and the conveyance into gaping pockets of irregular ten-pound notes. But this is not the whole of the evil. The arrangement

has had so little time to work in England that it has not produced its full fruits. What those fruits have been under conditions almost precisely similar ought to be well enough known. In America you do not bribe the voter, but you bribe the managers. As the immense power and profit at the disposal of the victors in caucuses becomes more fully appreciated, the same thing must necessarily take place in England. For instance, it is no secret at all that many responsible citizens of Birmingham declare that the dominant clique in that town have grossly abused their power—though not, let us hasten to say, in the direction of actual malversation. Birmingham has not come to that yet, though it is in an excellent way to come to it. But, when the golden age of the Chamberlains and the Collingses has passed, it is very much to be feared that, if Birmingham has not freed herself from the chains of the Hundreds, "houses" and "rings" will quickly arise. We may go further, and say that such must inevitably, according to human nature, be the case. That is a worse state than the perfectly open and unblushing corruption which it has become a convention to speak of with horror and disgust, but which did very little harm to anybody; and, if it did any harm, did it only to the lower strata of society. Those who governed were not, in the old system, corrupt; in the new, this is exactly what they will be. Now we venture to think that it is less harmful for the body corporate, as for the body individual, to have its heels than its head in the mire.

This brings us, naturally enough, to the curious guarantee of the excellences of democracy, as manifested in the member for Ipswich: which is, as we have said, exhibited as a corroborative and cordial to the doubting democrat. The argument is this. Mr. Collings is a Caucus man, and the President of the Caucus of all Caucuses. He was adopted by the Ipswich Liberals, and sent to Parliament to support the present Government. Yet he voted against the Government on the Coercion Bills. He is impenitent, and the Ipswich Caucuser has not requested him to resign. What can be clearer than that the relation of Caucus and member is one of perfect freedom and independence? A good many things, we think, can be clearer. The state of the case is this. The Ipswich Radical Association, like the majority of Radical Associations throughout the country, cared for nothing and nobody at the last election but the defeat of the late Government. They were apparently so desperately hard put to it for a candidate that they had to order one from Birmingham. Birmingham sent them Mr. Jesse Collings—famous in his native town for a certain Afghan meeting. The mere selection of such a candidate told its own tale. Mr. Collings, of whom we desire to speak with all respect, is in no sense a man of mark, except as being an able and determined party organizer. He has no claim to represent Ipswich or any other place except this. In electing such a man Ipswich gave him practically *carte blanche*; but it is said there was one thing marked on the white ticket, and that was "support Mr. Gladstone." The remark may be innocent, or it may be guileful. In the first place, the so-called opposition which Mr. Collings has given was a perfectly harmless and playful opposition. It was the sort of thing that a party man can give himself the luxury of, with the chance of acquiring a reputation for independence and the certainty of not damaging his party. In the second place, by selecting one of Mr. Chamberlain's tail, Ipswich had practically said to its selection "We want you to follow Mr. Chamberlain." Mr. Collings did follow Mr. Chamberlain very faithfully, though he did not follow the President of the Board of Trade. Not being in office, he was not obliged to go through the pleasant little form of tergiversation to which his superiors accommodated themselves so gracefully. But we can go further into the question than this. Does anybody really think that such opposition as Mr. Collings indulged in displeased the Government he was sent to support? He must be very young who does. The remarkable irritation which Mr. Gladstone showed on Tuesday night at a chance remark of Mr. Justin McCarthy's might be a useful study for political youth of this kind. It has been sufficiently evident all along that the Government have been only too anxious not to get into real opposition with men of Mr. Collings's type. Had the whole of their party voted with them in the measures to which they were so reluctantly driven by the feeling of common sense and justice which still exists (perhaps owing to habit) in England, the extreme Radical section of electors might have indulged in a revolt. The apparent or real independence of persons like Mr. Collings has served as a safety valve, saving them from this danger, while it has not been of a kind calculated to do them the least practical harm. Meanwhile, Mr. Collings's own attitude—which, were it not for his indiscreet eulogist, we should not criticize—is certainly not one which can be regarded as a noble spectacle, the nobility of which is due to the caucus and to the innate excellences of democratic sentiment. Mr. Collings, be it remembered, has differed from the Government on a point which is, to strict democratic tempers, the very article of an orthodox or heretical Government. The defection of Mr. Gladstone and his colleagues from the great Radical principle that every one not a Tory should be allowed to do what he pleases, is vital to the whole scheme of politics. Mr. Collings ought at once to assume an irreconcilable attitude, and to wash his hands of a Government of buckshot and brutality. But he does nothing of the kind. The Government is still a good stick to beat Tories with, useful to prevent inconvenient religious censures, and to help on the golden age of misrule by little and little. So Mr. Collings condones the crime of the Coercion Bill, satisfied with having

washed his own hands of that. Probably the day's service at O'Neil's Farm has a little gilded over the night's exploit at St. Stephen's. The crime of coercing Connaught is pardoned, for the sake of the magnanimous surrender of the Transvaal; the wickedness of making Irishmen pay their debts, for the sake of the virtue of restoring to Dutchmen what is admitted to be their own, after being well beaten for keeping it. On the whole, we fear that we cannot accept Mr. Collings's name, respectable as it may be in itself, as a guarantee of the blessings of democracy. The *Pall Mall* must procure us better assurance. We like not the security.

QUESTIONS LEFT OUT.

THE humours of the Census seem to have been tolerably abundant. The members of the working German colony in Soho looked on the paper as one of the diversions which are provided for tyrants by the blood and iron slaves of our corrupt society. The clergy in some country districts saw in the Census paper an excellent opportunity for collecting subscriptions towards new churches. The poor people in Whitechapel thought the questions were a new dodge of the School Board, which they seem to regard with superstitious awe, as a purely malevolent power. On the other hand, a number of persons write to the papers complaining bitterly that they never received the papers at all, which, with truly British ingenuity, they appear to consider a grievance. Other thinkers, of a statistical turn of mind, regret that such splendid opportunities of collecting information have been partially neglected. They would like the Census returns to have been constructed on the principle of these "sociological" charts which are compiled for Mr. Spencer, and by aid of which the philosopher can frame a theory of the origin of any institution, from religion to fermented liquors. By settling some dozen adroit questions, an inquiring Government might have enjoyed the advantages, without condescending to the tricks, of Haroun Al Raschid, and might have found out what people really think of them.

Even as things stand there were some odd questions on the list. The Americans are a curious people, and one or two of the queries were almost of American inquisitiveness. There is a well-known anecdote of an American who travelled in the same railway carriage with an English lady dressed in deep mourning. "Loss, ma'am?" he said. The lady admitted her bereavement. "Recent?" "Yes." "Husband or father?" The victim, now in tears, murmured "Husband." "Leave you pretty comfortable?" On this the unlucky woman withdrew behind a newspaper; and the inquirer exclaimed to another stranger, "She seems kind o' stuck-up, like." We have a tolerably distinct recollection of an American census-paper in which the public were asked how often it had been convicted, for what offence, and what term of punishment had been endured. These are very pertinent inquiries, and the answers would afford much useful information as to the gratifying diminution of crime, the percentage of fraudulent directors, and the chances of repentance offered to the converted criminal. Our Census stops short of these queries, but asks, rather curiously, about our "infirmities," and whether they are casual or congenital. This section must have opened a playing-field to the domestic humourist, who found in them an easy opportunity of satirizing the failings of his family. Other questions were almost as petty as those with which Mr. McCarthy, Mr. Arthur Arnold, and other members beguile the tedium of the House of Commons. "Is it true that some one said it was hardly worth while to tell a Land-Leaguer that his chimney is on fire; but, after all, we may as well rap him up?" This is the kind of problem that Irish members think worthy of the attention of the House; and we may infer that, when the Irish Republic gets founded, the Census papers will ask, "Who fears to speak of '98?" and other questions of equal gravity. But our own authorities showed similar curiosity when they asked barristers to declare whether they practised or not, and requested men of letters to state the branch of study to which they devoted themselves. Can this singular question be intended to facilitate the endowment of research out of the funds of a Disestablished Church? Will the man of letters, who is giving his time and energy to elucidating the connexion between mysteries of the Cabiri and the Mandan rite of O-ta-pe, receive some morning a letter from Mr. Gladstone notifying his succession to the revenues of a deanery? Probably but few men of letters have answered a rather needless and impertinent question, though it would certainly be interesting to know how many writers neglected by a vain people have written themselves down as poets.

There are many much more important questions to be decided than the proportion of poets, philosophers, and historians in the British islands. Most people are fluent when they talk about themselves, and probably the majority of the public would have eagerly seized a chance of giving information about their own opinions. Even in this age, when people say we all write, many millions of our fellow-creatures are "blue-moulded," as the Irishman said, for want of a chance of expressing their ideas. Newspapers cannot print all the letters they receive, and the editors of magazines are still more chary of their space. Hence the popularity of examinations among ambitious ladies. Though no one but the examiner knows what they have to say, they unbosom themselves of their intellectual store with fluency and pleasure. Hence, too, the former popularity of albums, in which

people were asked to name their favourite flower, their favourite hero, their favourite author. We believe that a supplementary schedule of this sort, to be filled up or left alone at will, would have given sincere delight to many millions of eager persons who, at present, cannot get a hearing. In a trial which has been filling the newspapers this week, it appeared that a lady asked her ghostly adviser "whether she was likely to have babies in the spirit world." The friend replied with confidence that she was sure to have spirit-babies, that this great void in her nature would certainly be satisfied. Millions of people have the same kind of desire to speak their minds in a semi-public way. In this world they are condemned to lack satisfaction, except in the rare cases when they appear as witnesses in a trial. Then they do their best to deliver themselves of their ideas on all topics, but are apt to be snubbed by persons in authority. A supplementary census would give them, every ten years, the chance which otherwise must be deferred till they can secure an opportunity in the spirit-world.

Questions of a personal nature would, of course, be most welcome. Any one who studies the answers to correspondents in the cheap weekly papers will readily discover the kind of topic that most provokes dissension and discussion. "Did you marry your cousin, and how do you like it as far as you have gone?" would be a query somewhat in the style of Artemus Ward, but by no means purely otiose or useless to science. Indeed, so desirable are answers to this question that an inquirer who bears a name renowned in science through several generations has issued his own private catechism on the subject. The results so far have been unsatisfactory, and absolutely no scientific conclusion can be based upon them. Again, much would be learned if every one were asked whether he has been vaccinated, and how often, and whether he has suffered from small-pox. By this means a body of evidence would be obtained which might possibly convince even the most unreasonable of all crotcheteers—the people who oppose compulsory vaccination as a tyrannous infringement of the liberty of the subject to make himself a dangerous nuisance. The members of infinitesimal majorities, however, rather glory in being "in the right with two or three," as Mr. Hughes so constantly quotes Mr. Lowell, and in the conviction that the opinion of many millions is always in the wrong. The question of spelling reform might also be submitted to an experimental plebiscite. But here the results are very uncertain, for the number of persons who would like to spell as the spirit moves them may be very considerable, and its weight would be thrown into the scale of Mr. Tito Pagliardini, Mr. Max Müller, and the other aliens who are so patriotically anxious to improve the English language out of existence. The late general election proved that no one who merely resides in London and beyond the sweet influences of the *Shields Gazette* and of the *Northern Echo* knows what the people really think about politics. A supplementary question or two in the Census would throw much light on important matters of which we are condemned to remain in utter ignorance. "What do you think of the surrender of Laing's Nek and portions of Natal to the Boers?" would be a very good test-question; also, "Do you regard property as a feudal wrong?" If the people in their millions were to reply to the former question that they are proud of the transaction, and to the latter in the affirmative, it is plain that investors in English securities would remove their wealth, and that there would be a new exodus of the patriots. In a small vessel, about the size of the *Mayflower* (it would hold them all, including Mr. Ashmead Bartlett), they would steer for "lands undiscoverable in the unheard-of West," and would leave behind the morality of the *Pall Mall Gazette*, and "the military impotence of England." On the other hand, the popular answer might be much more satisfactory, and we might be permitted to hope that the People does not really go in for a policy of foreign surrender and domestic confiscation.

Turning from politics to art and the deeply important questions of "culture," the compilers of the Census might find out whether the People is not dreadfully bored with pictures of "aesthetes," and sincerely anxious that some new kind of joke might be invented. At the same time, a properly constructed schedule would show how many aesthetic people are actually in existence at this moment. We imagine that, if these fanatics were subjected to a real persecution, like Monotheists in ancient Israel, and Unitates in orthodox Russia, no pitiful person would find it necessary to hide them by fifties in a cave. A very small, self-contained cave would conceal the whole congregation, and leave room for both the antagonistic sects of Positivists—for the Society of Painter Etchers and for Mr. Whistler. The last Census returns but one contained, we believe, under the head of Professions, "Sophists—2." The two sophists were young bachelors with their first reading party, and they chose to designate their profession by the appropriate name readily suggested by their studies. Under the head of "Professional Aesthetes" we certainly do not think that more than two would be recorded, while gaps have been made—"the ranks that were thin have been thinned"—in the numbers of ladies who are beauties by profession. A proper investigation into professions and modes of securing a livelihood would enlighten us as to the number of buffoons and diners-out, of social touts who give "tips" about the people they meet to the papers, of directors of Companies, of promoters of gold mines in London and the country, and of translators of *Horace*. Even as things are, a wondering world may learn from the new Census the precise quantity of novelists at present labouring in our midst. Lastly, we should like to have seen well-directed inquiries made as to the proportion of people who could

go into court and swear that they had seen one or more ghosts. From queries such as these science would reap invaluable stores of knowledge, while the respondents would be enabled to unbosom themselves at the expense of the nation.

THE UNIVERSITY BOAT RACE.

IT is not unsatisfactory to think that any one of the sixteen young men who rowed yesterday from Putney to Mortlake may congratulate himself on having, according to reasonable probability, very many years to live, and may hope to date the beginning of a successful career from the time when he first strengthened himself by rowing, and first began to expand his chest and enlarge his muscles in the effort to gain that post of highest honour—a place in the University Eight. Such, at least, is the legitimate conclusion to be drawn from the only trustworthy statements with regard to the effect of rowing on health which are to be found. These, as we need hardly say, are contained in the book on "University Oars," which Dr. Morgan published some ten years ago, a work which has naturally been accepted with enthusiasm by many men and by all who care for athletic pursuits, but has not received the general attention it deserved. Dr. Morgan wrote, it may fairly be presumed, with the object of vindicating what had been his own pursuit, his favourite pursuit. He sought to show that rowing, even when practised with great austerity, had no bad effect whatever on health; but was likely, on the whole, to have a good effect on health, and he certainly proved his points, unless careful reasoning and elaborate statistics, which have never been disputed or denied, are to be disregarded. But Dr. Morgan, though he hardly seemed conscious of it himself, did a great deal more in his remarkable treatise than defend the practice of rowing races, and show that, so far from tending to shorten life, it tended, on the whole, to prolong it. He showed by the facts which he took so much trouble to collect and digest how strong may be the influence of superstition amongst the most highly educated classes. For many years a superstition—and it is as absurd a superstition as that which makes a negro adorn his fetish—has prevailed that pulling in boat races, and especially in the University boat race, was likely to do grievous harm, and, in many cases, to shorten life. It may be said with perfect safety that this idea rested on no evidence whatever. It has often been said formerly, and is sometimes said now, that men who pulled in the University Eight were generally short-lived, and frequently died of disease of the heart. It would have been just as true to assert that men who had pulled in a University Eight commonly died early of *delirium tremens*. How the superstition arose it is difficult to conjecture, but it is far from extinct now, and assuredly was very generally prevalent until Dr. Morgan's book appeared. He, in preparing his work, was content to do what the Irish duellist of former days characterized as despicable, and to take refuge in facts. By dint of infinite trouble, he ascertained what had become of most of the men who had rowed in the University races from 1829 to 1869, and showed that, in so far as statistics were worth anything for such a period, they proved, not merely that University oars were by no means destined to be short-lived, but that, on the contrary, they were likely to exceed the ordinary span. With regard to one disease, indeed, the result of his researches was most remarkable. It has been, and is, very commonly supposed that rowing tends to produce disease of the heart. Dr. Morgan showed that, in the course of 40 years, over which his inquiry extended—that is to say, from 1829, in which the first race was rowed, to 1869—294 men pulled in University boat races, and that, in 1869, 39 of these men were dead. Of these 39 deaths, three only were due to disease of the heart. It is unnecessary to go into elaborate statistics, or careful comparison with the ordinary death-rate, to prove that this was a very small proportion, and that the idea that men who pull in University races are likely to injure their hearts is a pure superstition, which, strangely enough, has prevailed to a certain extent amongst educated men, but has no more real basis than the many wild superstitions with regard to disease which prevail amongst those whose reasoning faculties have never been exercised. It so happened that this year the statements by which Dr. Morgan dispelled what can hardly be described as a vulgar prejudice have had peculiar interest, and have been remarkably confirmed. It was determined that there should be a dinner to celebrate the fifty-second anniversary of the boat race, which all old University oars should be privileged to attend; and a special steamer was set apart to convey the more or less ancient champions. There was then an opportunity of judging whether men who have pulled in University eights suffer from the effect of their early efforts; and certainly, unless there has been a remarkable survival of the fittest, it must be said that the appearance of the occupants of the steamer showed that no reason exists for supposing that pulling in boat races tends to weaken men or to make them prematurely infirm. Clergymen are apt at all times of life to show a painful superiority over laymen in physical vigour; but, even allowing for the large number of clergymen amongst the Old Guard, it can hardly be denied that the appearance of the men who from all parts of the country had come to do honour to the sport they followed in other days, showed that, if boat racing is injurious, it is like the slow poison of Voltaire's coffee, and does not begin to affect a man until he is well past seventy.

The race which these veterans came to witness was in one respect a singular one, and not unworthy of the attention of those who remembered the initial boat race and all that followed. More than usual difficulty had been found in judging the respective powers of the two crews. The Oxford men were from the first considered the best; but after the Cambridge crew had been for a short time on the Thames it was thought that they were greatly improving, and that they were likely fairly to match their antagonists. The improvement, however, which they showed at first did not continue, and on Wednesday the confidence of their supporters was rudely shaken, as, after passing a scratch eight, they were apparently unable to hold their lead. On Thursday evening the best judge amongst the writers on the University race pronounced that Oxford would win by two lengths; but nevertheless yesterday morning very great doubt was felt as to the result of the contest, and not often has a University race been more uncertain at the time when the oars first dipped.

When the race began, however, this uncertainty was quickly dispelled, as, before the two crews had gone far on their course yesterday, it became clear that the prophet who has been mentioned was right, and that the Dark Blue were sure to win. For some time, indeed, the race seemed even enough. Past Craven Cottage, the Crab Tree, and Dorset Villa the boats were well together, and, as they both hugged the northern shore to keep out of the wind, and were very close to each other, the contest doubtless appeared an exciting one to the spectators on the river's bank. It was so only in appearance, however. From the first the greater strength and better finish of Oxford were apparent, and, when at the Distillery they slightly quickened and drew a little ahead of their opponents, the result of the race was pretty obvious. Although the Oxford boat was but very little ahead at Hammersmith Bridge, the struggle was virtually over there, as has very often happened in matches on the Putney to Mortlake course. The Cambridge men rowed with great valour, according to the wont of Cambridge men, and up to Chiswick kept close to their antagonists; but after this place was passed the Oxford boat drew away, and then, as usual, the winning crew seemed to get steadier and steadier, while the losing crew got somewhat wild. As usual, too, the steering of the losing boat was eccentric; but perhaps the yawing which was very marked near Barnes Bridge was due to a singular contrivance called an American windsail which decorated the bows of the Cambridge boat. It is not always well to accept Yankee inventions, and in this case the Cambridge coxswain must have devoutly wished that there had been more old-fashioned prejudice against innovations. In the end, the Oxford crew won by about two and a half lengths, and thus the prophet's prediction was all but exactly fulfilled; and, perhaps, if the Cambridge steering had been less eccentric, his forecast would have proved absolutely right. That there never was any real ground for the uncertainty which prevailed, and that the Oxford crew was decidedly the better one is now clear; but if the Cambridge men were over-matched they fought most valiantly, and when they reach that ripe old age which Dr. Morgan predicts for them, they will doubtless be able to say that, since that day, few beaten crews have made a better fight than they did. With regard to the veterans who came to see the contest, it is greatly to be hoped that none of them caught cold in the very bitter east wind which prevailed, as any accidental illness amongst University oars would tend to falsify Dr. Morgan's conclusions, and perhaps materially to retard the progress of knowledge.

THE EARTHQUAKE AT CHIOS.

AN agreeable historian of literature, with perhaps some levity, has described the queen of our King Arthur as "très sujette à être enlevée." If the matter were not too serious for a jest, the unfortunate island of Chios might be described as very subject to be devastated. Its authentic history almost begins with the sufferings it underwent in the struggle for Ionian independence against Persia, and in times which are still recent it was long known as the scene of the famous massacre to thousands who had a very dim idea of it as the possible birthplace of Homer or the source of the most famous of that Greek wine which is somehow or other so unpalatable to modern palates. The massacre of Scio, which destroyed the prosperity of the island for some quarter of a century, and fired the imagination of Delacroix and Victor Hugo, was in some sort the fault of the inhabitants, owing to their imprudent mixture of rash participation in the rebellion and absolute defencelessness at home. Had the Germans been in the place of the Turks they would hardly have perpetrated quite so hideous a massacre; but the Scioite *Frances-Tireurs* who joined the privateers of independence would probably have brought down a similar punishment in kind, if not in degree, on their friends. The disaster which in the present week has come upon the most flourishing of all the Greek islands now under Turkish sway is a wholly unprovoked one. All that part of the world is more or less menaced by earthquakes, and the singular alterations of land and sea at Santorin are among the most notable of similar phenomena in recent times. But for the most part earthquakes in the Levant are rather frequent than especially disastrous. People are prepared for them; houses and other buildings are constructed accordingly, and a trembling of the earth is a matter of little concern. The earthquake of Sunday seems to have nearly coincided

with similar but milder shocks at Zante, which is, perhaps, the chief centre of earthquakes in Europe. From the comparatively imperfect details which have yet been received, the extent and the violence of the disturbance must have been equally great. Chios is separated from the mainland by a strait eight miles wide, across which the shocks spread to the neighbourhood of Smyrna. The chief town of the island is described as being wholly in ruins, and most of the others—Chios, be it remembered, is some thirty miles long, and, though it has not recovered the massacre, very populous—as having suffered only less. The actual casualties in such disasters are generally exaggerated, and it may be hoped that the reported loss of between three and five thousand lives may be reduced. But a town of six thousand stone houses is not thrown into ruins in a moment like a structure of cards without serious results to human life and limb, and the suffering from homelessness and loss of the means of living must probably exceed by far that occasioned by the actual calamity.

There are not many questions which are more debated than the cause of earthquakes, and their connexion with one another. But that three such accidents as those of Agram, Ischia, and Chios should, merely as a coincidence, follow each other at short intervals, within a limited area, is hardly to be credited. Among the pieces of not very vigorous fun which the early days of scientific congresses produced, readers of the *Ingoldsby Legends* may remember the suggested theory that the earth was a custard pudding, underdone about the Bog of Allen and a trifle overbaked in the Isle of Portland. That there must be some slackness of crust in the central region of the Mediterranean is pretty evident from the whole history of Etna, and Vesuvius, and Zante, and recently of Agram, which is not far from the coast, of Ischia and of Chios. Although it would be rather rash to generalize too much on the subject, it certainly would appear that the neighbourhoods most subject to volcanic and seismic influences are often exceptionally fertile, and thus suffer more in proportion than they would otherwise do. Zante itself is the most flourishing of the Ionian Islands, just as Chios is the most flourishing of the islands of Ionia; but whereas in Zante the very frequency of the scourge makes it comparatively harmless (just as St. Petersburg is said to be the city in the world where cold is least felt), Chios, less well prepared, seems to have suffered more. The new city of Castro, which rose on the ruins of the old, is smaller and probably less solidly built, though solid building is a dubious advantage in an earthquake. Of course the first thing that occurs to the reader when he hears of events of this kind is a query whether science, which in Mr. Browning's sense "intends greatly" nowadays, cannot do anything, not in the way of modifying, but of foretelling, these disasters. The scourge of hurricanes and typhoons has lost much of its terrors since meteorology has been more regularly studied, and the simple signs of approaching storm have been recognized. But the sister science of seismology has scarcely made parallel advances. The obstacles in the way of these advances are sufficiently easy to discover. In the first place, the science itself is scarcely out of the hypothetical stage. It is still interesting to theorise in a facile manner about the cooling of the crust of the earth, and the repetition on a large scale of the phenomenon which about Christmas-time is apt to hoist the British cook with her own boiler, and the formation of earth waves, which behave like water waves, and so forth. Moreover, the difficulties which beset accurate observation are exceedingly great. There is hardly a single regular observatory of this class of phenomena except the famous one of Professor Palmieri at Vesuvius, and to make observation really capable of being fertile there ought to be scores and hundreds all over the earth's surface. The perpetually quaking Littoral of the Andes, the huge volcanic district of Malaysia and the Northern Pacific, especially the latter, must be regularly observed before general inferences become possible. Even then the inquiry would be a somewhat unsatisfactory one, because the surface disturbances, which alone are capable of observation, are only symptomatic, mere effects, of other phenomena (if the misuse of the word may be pardoned), which do not appear. On the whole, the general tendency of mankind in earthquake regions is to acquiesce in its earthquakes, perhaps, as Mr. Buckle held, with superstition and awe, certainly with a kind of more or less business-like fatalism. You get out of the ruins of your house (that is, if you can, and are not imprisoned under it like the hapless Controller of Chios, who has been heard calling for help for days from his dungeon), rebuild it, and go on till the next earthquake. The attitude, *mutatis mutandis*, is somewhat that of a Thames farmer in relation to floods, with the additional excuse that, while the floods are wholly preventable, the earthquakes are not in the least so, and could at the best only be foreseen, and their destructive effects minimized.

The business-like Greek mind has utilized this calamity for political purposes in a very curious way. The Turkish Government, under whose dominion the Sciotæ are, is never greatly given to help its subjects, holding with a semblance of logic that taxpayers ought to help the State, and that the State has no business to help taxpayers. But modern Sultans are often personally generous in such cases. Besides, Chios is in the immediate neighbourhood of wealthy Greek communities, and other communities of the same nation scattered about the world are also abundantly provided with resources. That the Greek merchants of London and Lancashire alone could put Chios on its legs again without feeling the loss is tolerably certain. More than this, it so happens that Chios is under the immediate rule of the most energetic and capable of Turkish provincial Governors. Midhat Pasha is at Smyrna, and, although Midhat has his enemies, even those enemies do not deny that when he takes a

thing in hand he is apt to go through with it. He has taken Chios in hand, and, with the aid of private charity—in which, if it be required, England is not likely to be backward—and of the assistance of foreign men-of-war who have already been sent to the spot, there is little doubt that things will speedily be put as straight as fate permits. The Greek Government, however, which is drilling its troops and buying its torpedoes for the purpose of attacking Turkey, has thought fit to send official assistance to Chios. A better act could hardly have been done with a worse grace. If the Government of King George encouraged its subjects to be privately liberal with their gifts to those of the same faith and language as themselves, nobody could find fault with it; but official interference at such a moment is in singularly bad taste. A certain number of Frenchmen have never forgiven England for sending, as they are wont to put it, "Des pommes de terre dans notre agonie," ten years ago. It is indeed difficult in this case to be quite sure whether the insult of supposing potatoes to be proper food for a high Gallic stomach, or the injury of giving bread instead of a stone (that is to say, a stone flung at the Prussians), is the crime charged upon luckless Albion. But if England had at the moment been straining her utmost to prepare an invasion of France, and ostentatiously endeavoured to confer benefits on some of the persons whose allegiance she wished to have transferred to her, there might have been some ground for wrath. However, the Sciotæ grin, and that is the principal point. If Midhat is wise (and he is not generally thought to be foolish), he will carry out Captain Dalgott's principles, and lose no opportunity of securing "provant," whether it comes from an enemy or a friend. After all, revolt in Chios is very little to be feared. The Greeks of these Eastern islands may take pleasure when they are in safe neutral keeping, as the Cypriotes are, in passing patriotic resolutions, but they are not, as a rule, with the exception of the Cretans, polemically given. Indeed, the peacefulness and industry of the inhabitants of Chios make the catastrophe which has fallen on them all the more to be regretted. There are so few parts of the Turkish Empire where the people, undisturbed by foreign agitation or intestine strife, really cultivate the garden honestly and industriously, that the grievous blow inflicted on one of them is particularly to be lamented. It is, indeed, hardly possible that the ingenuity even of an English demagogue should discover the earthquake of Chios to be the work of the fiendish Turk, or see in the transference of the island to Greece an infallible preventive of such disasters in future. But the blow is an additional strain upon Turkish finance at a moment when it is already strained to the uttermost, and must cripple the resources of a small but prosperous part of the Sultan's remaining dominions.

RAILWAY OUTRAGES.

THE excitement which followed the murder of Mr. Briggs by the notorious Müller in a railway-carriage led to the adoption of certain precautionary measures by which a passenger who found his personal safety in danger might communicate with the guard. It will be noticed that this arrangement assumes that the arrival of the official and of assistance are identical. A case in which the Company's servants would send on the victims of a murderous assault, together with their assailants, to the next station without interference rather than delay the train does not seem to have been hitherto contemplated; but it appears, for all that, to be the custom on the Metropolitan District Railway. A recent police case illustrates this, as well as other dangers of travelling "by underground." The report states that an elderly man, named Hickling, and his wife got into a third-class carriage of the District Railway train at the Mansion House Station, the compartment being occupied by six labouring men, who began to use such foul language that the husband was obliged to remonstrate, and hoped they would not offend his wife's ears with such shocking conversation. The men at once set on the couple, kicked them, blackened the wife's eye, and injured her by a kick in the side. The unfortunate Hickling himself was kicked more than a dozen times, and had, according to his testimony at the Westminster Police-court, been spitting blood ever since. His face was smothered in blood. The wife screamed out for mercy, but as well as being knocked down and kicked, had her purse, money, and ticket stolen. At Westminster station the guard of the train was called, but the men were not ejected from the carriage, and it was during the journey from Westminster to St. James's Park that the worst part of the assault was committed. It would have been prudent at least to have separated the injured persons from their brutal assailants, and so have prevented the "worst part of the assault"; but we learn from the guard's testimony that, though his attention was called to the disturbance, and he requested the men to leave the carriage, they would not do so; he added that "the train was delayed three minutes." Another witness, James North, Station Inspector at St. James's Park, stated that, when the train came in, and he was told what had occurred, he advised the complainant and his wife to get out and change into another compartment. Prosecutor did not at the time charge any of the men, and he (witness) could not keep the train waiting. When at length a constable did arrive, five of the men ran away and the sixth was arrested. Mr. Partridge very naturally said he thought the

officials ought to have prevented their escape by shutting the spring gate, adding that he supposed there were not sufficient officials on the station, and asked what would have been done supposing murder had been committed? The inspector indignantly answered that there were enough officials present for ordinary occasions, and replied to the question about murder that of course they would stop everything for that. It is at least satisfactory to know that if murder had actually been committed the inspector would have taken the somewhat unusual occurrence into consideration, and stopped everything, though of course it is unreasonable to suppose that the train could be allowed to be delayed more than three minutes for so ordinary an incident as that of kicking an old man and his wife nearly to death. The one ruffian who did fall into the hands of justice received the somewhat inadequate sentence of six months' hard labour.

A correspondent of the *Daily News* makes the gruesome suggestion that two instances which have lately occurred of mutilated bodies being found on the metals of the same line of railway without any clue as to how they came there may be referred to assaults similar to that related above, and puts forward the uncomfortable hypothesis that they may have been thrown out of window to avoid detection, on the well-known principle that "dead men tell no tales." We are loth to accept this theory with the sweeping condemnation of the labouring class which it implies, but we must confess that the British "labouring man" is not altogether a desirable travelling companion. He is certainly addicted to using foul language, and, as the case in question proves, he is wont to resent any remonstrance on this score with unnecessary emphasis. He is also prone to carry the principle of non-intervention rather too far, and would perhaps no more think of interfering with a fellow-workman who happened to be assaulting an inoffending person than one country gentleman would dream of interfering with another in the interests of a hunted fox. Such an instance did actually occur last Christmas Day, when a hawk at Wakefield maltreated his wife before two hundred people, who calmly declared that it was no business of theirs, and doubtless thought that a man had a perfect right to correct his own household. As this person shortly afterwards emphasized his remonstrances with a red-hot poker, and killed the poor woman, he naturally passed the limit of the law's forbearance, and was very properly sentenced to death and executed for the crime. The too muscular and combative labourer chiefly affects third-class carriages, and the obvious suggestion occurs that respectable people should avoid this particular class. Unfortunately difficulties exist in the way of carrying out this plan, not the least being that "respectable people" very frequently cannot afford to travel by a higher class. It certainly does seem a hardship upon such persons to expose them to the chance of being kicked to death and thrown out of window, if they happen to entertain an objection to shocking language, and are imprudent enough to express it. But even first-class carriages, as things go, are not absolutely safe retreats. Not long ago an enterprising young highwayman bought a first-class ticket on the "Metropolitan," for a friend who was carrying his employer's money-bags, with the sole intention of offering him, like Fair Roesmond, the choice between a bowl (or, rather, bottle) of poison and another lethal weapon. It is true that, by an error of judgment, he selected a walking-stick as his alternative, not reflecting that such an implement is, as a Yankee would say, "onreliable" as an instrument of murder. But there are objections even to being beaten about the head with a hickory stick. A more practical recommendation, which we would suggest, with the deepest respect for the Metropolitan Railway Companies, is that they should put a more liberal interpretation upon the number of officials necessary for "ordinary purposes," and attach a little less importance to slightly delaying a train. It is true that this might entail a little extra expense, and perhaps necessitate the running a train less per diem; but it would probably come cheaper in the end.

Any one who has a fair knowledge of gymnastics, and who is able to recognize at a glance each of the numerous trains that dart in and out of the Underground stations, stands a fair chance of arriving at his destination without a broken neck. But the inexperienced traveller who hesitates is lost. While he is fondly looking about for some official to direct him, his train moves on, and should he at the last moment discover it, and make a dive for a compartment, he will not unlikely fall out upon the platform and be taken up and fined "for attempting to enter a railway-carriage while it is in motion," if even worse do not befall him. What is yet more germane to the matter before us is that he may arrive at and leave station after station without the possibility of communicating with any official except the man who slams the doors, who, if the perturbed one protrudes a suppliant hand, will probably jamb it between the hinges. A whole compartment full of roughs may therefore maltreat an uncongenial fellow-passenger with impunity, if they take the simple precaution of holding him down while the train stays at a station; if the worst comes to the worst, they can, as suggested, pitch him out upon the metals in the tunnel.

These are no mere fanciful alarms; the danger exists as really as did the possibility of murder in a single compartment under the old system upon the longer railway journeys, and should be at once guarded against. In this case the remedy is, as Mr. Partridge suggested, the employment of a more efficient staff, and, we would add, a slight extension of the time allowed for halting. A constable ought to be in attendance on every platform, and it might form a part of his duty to give information to passengers.

The attack on the unfortunate couple, Hickling and his wife, is a disgrace to the railway authorities, and ought to call for a more searching investigation, such as takes place when a collision or any other untoward "accident" has happened. The evidence given at the Westminster Police-court conclusively proves that a violent assault was committed without provocation; that the victims appealed for protection; and that the officials, after becoming cognizant of the fact, took no steps to rescue them, but allowed them to proceed in the same carriage with their now more infuriated and brutal assailants. The escape of five of the inculpated persons shows still greater stupidity or negligence; for, if it were impossible to arrest the offenders then and there, the telegraph might have been used, and the means of egress at the next station barred until the constables arrived. Considering the violent nature of the attack, it seems strange that the other persons who witnessed it, and who gave evidence before the magistrate, did not themselves interfere; but the cowardice or indifference of the spectators is no excuse for the incompetence and barbarity of the officials. The system under which such an event was possible ought to be thoroughly overhauled, and it should be once for all definitely understood that the persons of travellers are to be respected, even at the risk of delaying the train for a minute or two. Such a delay under the block system, by which we believe the trains are run, could not involve any greater misfortune than the general delay of the traffic for the day to the extent named; if it does, so much the worse for the system, and so much the greater the necessity for its reform. The old war between the safety of the public and the amount of the shareholders' dividends is still being waged, and almost every victory won for the former is gained at some sacrifice of life and limb. Poor Hickling's injuries will at least have called attention to a new and unexpected danger, and to the existence of defects either in the system or the working of the line which demand instant remedies.

THE DRAIN OF GOLD TO NEW YORK.

THE persistent drain of gold to New York is causing some anxiety amongst business men. During the past two years we have been accustomed to large shipments in the autumn; but usually at this season the export ceases, and in a couple of months more we should rather expect to see money accumulating in New York, and perhaps flowing back to Europe. This year, however, the shipments have continued, and there is some apprehension lest they may increase now that the spring is upon us, and the currency is tending to expand there as well as this side of the Atlantic. During the past two years the export of gold from Europe to the United States has not been less than 30 millions sterling, while the whole production of the American mines has been retained at home for fully four years. There has thus been an unbroken absorption of gold to the amount of at least 60 millions sterling during four years in succession, and yet the demand for the metal seems not to be satisfied. For since New Year's Day nearly 2½ millions more have been withdrawn from the Bank of England for New York, and there have also been shipments from Paris and from Hamburg. Here in England we have not found any inconvenience from this steady outflow. There are still about 28 millions sterling of gold in the Bank of England—that is, not much less than twelve months ago—and more than there has been at the same season during three out of the past four years. But we have escaped inconvenience at the expense of France. The Bank of France, indeed, is in danger of being drained of its whole gold supply. At the beginning of 1877—that is, only four years ago—the gold in the Bank of France amounted to 60 millions sterling. Last week it did not quite amount to 2½ millions sterling—in other words, in the four years the Bank has lost fully three-fifths of its gold. The loss in reality is very much greater; for the circulation of the country is being steadily drained of all the full-weighted gold pieces, until little but under-weighted coins now remain. It is this circumstance which suggested to Prince Bismarck the famous simile we referred to a few weeks ago, of a coverlet thrown over two persons for which it was too small, and for which each was pulling to get as much as possible for himself. It is worth while, then, to inquire what is the cause of this extraordinary demand in the United States.

The permanent cause is the extraordinary prosperity of the United States. During the extreme depression which followed the panic of 1873 the unemployed labourers of the great towns betook themselves to the West, and there settled upon the unoccupied lands, and pushed cultivation further and further into the wilderness. A series of abundant harvests rewarded their labours, and bad seasons in Europe caused an exceptionally great demand for the produce. The agricultural classes throughout the United States in consequence are now enjoying a prosperity seldom witnessed in any country, and their prosperity has reacted upon the whole community. The value of land there depends more largely than elsewhere upon the existence of railways. A farm is worth little unless its produce can be conveyed to the Atlantic seaboard to be shipped to Europe; but no matter how far inland in the great continent it may be, if it is within easy reach of a railroad there is always a market for its produce, and consequently the farmer is well to do. Therefore there is an extraordinary rage for railway building all over the Union. The panic of 1873 in a measure stopped railway con-

struction for several years; but since the return of prosperity the mania has revived in its full force, and North, South, East, and West lines are being completed, extended, or newly laid out with hot haste. This rage for railway building is giving an equally extraordinary impetus to the iron and coal trades. So late as 1876 the whole production of pig iron in the United States but little exceeded 2 million tons, but last year it exceeded 4½ million tons. In the four years, that is, the production has been more than doubled. And, indeed, comparing 1879 with 1880, we find the production increased considerably more than one-third. Last year, in fact, the production was about two-thirds of the whole production of the United Kingdom. It will be recollected that this production is entirely stimulated by the demand for railways, and the employment of labour and profit on capital which it indicates is on the same scale in all the works ancillary to railway building, as, for example, in the production of iron and steel rails, in the manufacture of locomotives, and the like. It is to be borne in mind, moreover, that the price is in truth a monopoly price, there being a protective duty upon iron of about 25 per cent. Thus, in every department, both in agriculture and in manufactures, the population of the United States is now fully employed. The rates of wages and profits are exceptionally high. Probably the world has never before seen so great a population enjoying such extraordinary prosperity.

Fifty millions of English-speaking people, free from foreign apprehensions, and consequently relieved from the necessity of keeping up a great army and navy, inhabiting a vast continent, are devoting their whole energies to money-making, and consequently are prospering beyond precedent. Everybody who cares to work has money to spend. High prices and high wages have to be paid, and large profits and good incomes are spent freely. There is, therefore, an immense demand for money in all its forms, not alone at the centres of industry, but throughout the length and breadth of the continent; in the remotest villages of the least settled territories as well as in New York itself. This, in a large measure, accounts for the strange fact that, notwithstanding the extraordinary export of gold from Europe to the United States to which we referred above, the gold held by the associated banks in that city is actually less now than it was two months ago. On the 12th of February the gold held by those banks exceeded 13½ millions sterling; but last Saturday it was very little more than 11½ millions; a decrease in seven weeks of 2 millions sterling, although, as we have stated above, the export of gold from London alone in the past three months exceeded 2½ millions sterling, and there has also been a considerable export from France.

The extraordinary prosperity of the United States and the activity of business account, as we have said, for a large part of the export of gold to which we are referring; but a new cause has come into operation within the present year. When the Congress that came to an end at the beginning of March met last December, it proceeded to pass a Bill for the refunding of the Five per Cent. and Six per Cent. which fall due this year, and it decided, contrary to the advice of the Secretary of the Treasury, to refund in bonds bearing not more than 3 per cent. interest. As it foresaw that such bonds would not be likely to be taken in the open market, it proceeded to create an artificial market for them, by compelling the national banks to take these bonds. The national banks are bound to lodge, as security for their bank-note circulation, bonds of the United States. For every 100l. worth of such bonds they are allowed to issue 90l. of notes, and by the existing law they are free to lodge any bonds of the United States, whatever rate of interest they bear. By the Bill, however, which Congress passed in its last session, it was provided that the new 3 per cent. bonds alone should be lodged as security for the notes. The sharper of the bank managers foresaw that, if this Bill passed, the old bonds which they held would certainly fall in the market. Since so large an amount had to be got rid of to make way for the new bonds, the market must inevitably be over-supplied, and they proceeded, therefore, quietly to sell some of their own old bonds. There was another motive actuating them. They resented the legislation of Congress, and they wished to show that such high-handed proceedings could be checkmated by the banks. The banks accordingly proceeded to withdraw the bonds lodged in the Treasury as security for their note circulation, and to do this they were obliged to pay into the Treasury the nominal value of those bonds, either in gold or in legal tenders. The amount so paid in was really small. It was not quite 3½ millions sterling, but it created a scare throughout the United States. If the banks should not only surrender their bank-note circulation, but also pay into the Treasury an equivalent amount of legal tenders for the surrender of this circulation, the total currency of the United States would be enormously contracted, prices in consequence would fall heavily, and the people engaged in business would be unable to obtain the accommodation which they required, and would consequently be placed in a position of the most extreme embarrassment, if not, in fact, compelled to suspend payment. There was, therefore, an alarm very nearly approaching to panic, which was only put an end to by the vetoing of the Bill by the late President. Unfortunately, the vetoing of the Bill did not repair the mischief which had been done. In consequence of the scare the prices of stocks on the New York Stock Exchange fell from 10 to 17 per cent. Those who were compelled to sell lost heavily, and the banks themselves, it is understood, suffered severely. It will easily be seen that, if a borrower from one of the banks was

obliged to sell out at a price 10 or 17 per cent. below that at which he had raised money upon his security, the whole margin which he had given would probably have disappeared, and he would find himself in a position of the most extreme embarrassment. In a great many cases probably the borrower would be unable even to satisfy the full demands of the banks; and the banks themselves, finding the security they held so much diminished, would often be seriously inconvenienced. The result has been very heavy losses in all the great towns, and no doubt in many of the smaller too; while a feeling of uncertainty has been generated very unfavourable to the banks. People have been made to understand that a quarrel between Congress and the banks may suddenly deprive them of all means of obtaining the accommodation which they require in their business, and such a discovery generated a suspiciousness which is not easily allayed. This feeling of alarm has been prolonged by the decision of the Government not to allow the banks to undo what has been done and to resume the circulation which they had surrendered. In consequence, there is some contraction of the currency, though not a very great one. But the mere contraction is of less effect than the feeling of uncertainty and doubt which is prolonged, and which, above all things, is unfavourable to the banks. Lastly, there is uncertainty as to how the Government may provide for the bonds falling due, and what effect its action may have on the currency. How long this feeling may last it is impossible to say, but as long as it continues many of the banks will find it necessary to strengthen themselves by keeping large gold reserves. The banks in New York hold the reserves for the whole country, and they are being constantly drawn upon by the banks of the interior for more and more gold, so that, although they have received 3 or 4 millions sterling in gold during the current year from England and France, without reckoning the gold which has been produced in the United States itself, they yet hold 2 millions sterling of the metal less than they did seven weeks ago; and while their reserves are thus low, and the feeling of uncertainty continues, it is possible that gold may continue to be taken from Europe. It is possible, we say, for we do not think it is very probable, since the country is really fully supplied with gold already. But, on the other hand, it is to be borne in mind that in the United States, as well as here at home, there is always an expansion of the country currency in the months of April and May which would tend to keep down the reserves in the New York banks, and consequently may prolong the demand for gold.

THE SPRING EXHIBITIONS.

IN the midst of the bustle and excitement incident on the sending in of works of art to the Royal Academy, the Society of Painter-Etchers opened its first exhibition. So much has been said about this new Society, and the principles of its construction have been subjected to so much hot discussion, that its formation has attracted considerable public curiosity. Some three months ago an invitation was sent to "every exhibiting painter or etcher in the United Kingdom"—these big words at least are employed by the Council in its prefatory note—and the result is the exhibition before us. We notice, however, the omission of some distinguished names among English etchers, those of Mr. Whistler, for instance, and of Dr. Evershed. However, the present show is of necessity tentative, and when we consider the difficulties that stood in the way of the executive Committee, the result is distinctly encouraging. Mr. Seymour Haden is the President, and Sir William Drake the honorary Secretary, of a Society that already includes on its council such men as Messrs. Alma Tadema, Legros, Marks, Poynter, and Ernest George. In future, the exhibitions of the Society must not contain etchings that have been previously published or exhibited; in the present instance only, owing to the pressure of time, works already familiar to the public are permitted on the walls. Of the etchers whose work is thoroughly well known and appreciated, Mr. Seymour Haden is represented by twelve examples; Mr. Legros by the same number of those admirable etchings in which, to our mind, he attains the very perfection of poetic simplicity; Mr. Ernest George by five of his singularly attractive studies of architecture; and Mr. Herkomer by his own portrait and those of his children, and by a mezzotint, which seems a little out of place here, though beautiful in itself. Having specified these, we may briefly notice, in the order of the catalogue, a few specially striking works. Mr. Otto Haecher (7-21) has learned, more than any recent etcher with whose work we are acquainted, to catch the spirit and style of Méryon in the treatment of buildings; the examples here exhibited are old bits of Venice. Mr. Colin Hunter's "Gare Loch" (118) is a study of sea-coast under a wild sky, treated in a very broad and heroic manner; his "Towing Fishing-Boats" (122) is scarcely less successful. M. Meissonier's tiny scraps, "From Rabelais" (124) and "The Sergeant" (125), should not be overlooked. Of ten examples of Mr. R. W. Macbeth, several are almost too literal renderings of pictures long since familiar to us; "A Sardine Fishery" (134) is the most pleasing. Three American etchers, Mr. Duveneck, Mr. S. Colman and Mr. F. S. Church, demand special mention for the fresh and original feeling that pervades their very skilful etchings, Mr. Colman's "Study from Nature upon Long Island" (182) being particularly charming. Mr. Helmick's portraits of Carlyle (207 and 208) are very interesting, and would be still

more valuable if they were dated. Without doubt, two of the finest studies in the whole exhibition are two noble studies of cathedrals by Mr. A. H. Haig, "The Quiet Hour" (250) and "The Vesper Bell" (251). Of the etchings by Mr. O. Storm de Gravesande, the most striking is "The Old Pier at Flushing" (305). Mr. Alma Tadema exhibits his well-known "Tesselschade Viischer at Alkmaar" (367); and Mr. Tissot a number of characteristic works, too familiar to our readers to be mentioned in detail. A very fine study in the nude (406), by Mr. Poynter, must not be overlooked. On the whole, we can sincerely congratulate the Society of Painter-Etchers on its first exhibition.

The Society of British Artists in Suffolk Street also held its private view on Saturday. We never had occasion to examine so large a number of works so universally unworthy of attention. Mediocrity and pretension have their own way unopposed at Suffolk Street, and there is something almost pathetic in the collection of so many pictures, some large, some small, but alike in this, that they are all relatively bad. From this wide condemnation we can in conscience make but two exceptions, Mr. J. D. Watson's "A Moonlight Walk," and Mr. Henry Moore's "On the Move," agreeable specimens of the style familiar to those two accomplished artists. The sculptures were numerous, but as bad as the paintings. It is amazing that an artist of the repute of Mr. Acton-Adams should exhibit so fatuous a work as the marble bust of Mr. Bright in the North-West Room.

It was a happy thought that prompted the countrymen of Petitot and Liotard to give us an opportunity of seeing what Switzerland is doing in contemporary art, and no one should fail to visit the "Exposition des Beaux-Arts Suisses," now open in Bond Street, if only to see the marvellous portrait of an old man, by M. Charles Vuillermet, which hangs in the place of honour. This powerful work is on a level with the best art now being produced in Europe. The wonderful freshness of the eyes and vigour of the face, the solid painting of the dirty hands complacently folded in one another, and the skill shown in the treatment of fur, cloth, and velvet, are of such a quality as is rarely to be met with in a modern master. The extraordinary beauty of this single work should not prejudice the visitor against the more mediocre and every-day merit of many of the other Swiss pictures. In painting their own mountains these artists, among whom we regret not to find M. Loppé, are rarely successful. The large picture of the Eiger Mountains, taken from the Great Bernese Oberland, by Albert Lugardon, is particularly hard and crude. M. Veillon has a very fresh and broadly-treated morning view of Monte Rosa from the Riffelberg (26), and M. Ch. Ziegler is quiet and true in his impression of Planpraz in the Valley of Chamouni (39). But, as a rule, the less ambitious landscapes and the figure-pieces demand more praise than the mountain panoramas. M. Henri Ilbert exhibits a delightful composition of a party just returned from a christening (19), beginning to carouse in the quiet village street. The most prominent work in the Gallery, "William Tell saving Baumgartner," which has been borrowed from the Council Hall in Berne to be brought to London, is the work of M. Léonard Lugardon; it is a dusky and violent composition, reminding English visitors of the historic art of Fuseli and Hilton. M. F. Bocion's "Drying Nets on the Savoy Shore" (34), which hangs beside it, looks doubly modern by contrast, and is in every respect a more wholesome and sincere transcript from nature. A large picture by M. Eugène Burnand (52) is full of vigour and spirited draughtsmanship; it represents the engine of the village of Moudon, in the Canton de Vaud, rushing to the scene of a fire. The head of the restive horse on the left-hand side is particularly worthy of notice. M. A. Beaumont exhibits two interesting studies of living birds, "A Covey of Partridges" (6) and "A Brace of Woodcocks" (57), which are full of character, and well painted. A case of Genevese enamel-paintings, including a very beautiful old clock, has more interest than a collection of small works in sculpture by M. C. Toppfner, whose native cleverness seems to be spoiled by affectations in the modern Italian spirit.

Mr. Tooth's Gallery contains a variety of bright and interesting works, especially one fine specimen of M. Bastien Lepage, and paintings by Mr. Boughton, Mr. Varley, and others. In the place of honour hangs a laborious landscape by Mr. Leader, the merit of which is certainly questionable.

The exhibition of types of English beauty begun last year at the Graphic Gallery attracted so much curiosity and controversy, that the proprietors have determined to keep it open, and to add to it a series of similar pictures contributed on the same understanding by leading French artists. There is no doubt that this was a happy thought, and that the foreign element greatly enhances the interest of the exhibition. The English artists hold their own against the French better than might have been expected, making up in quietness and refinement for what they lack in brilliant effect. M. Carolus Duran sends a very florid laughing lady, painted of course with great *flair*, but of a complexion too studiously cold in tone; while M. Côt exhibits a dark-eyed woman of serious Spanish type, wrapped in a black lace mantilla; Mr. Alma Tadema's eager damsel with the gold hair dividing the joyous from the pensive maiden. M. Henri Lévy is represented by a very haughty dame, theatrical and self-conscious, from whom we retire in dismay, to take refuge with M. Goupill's gentle and indolent beauty, who smiles at us coquettishly from the orb of an immense hat of pink silk. The sweet and fresh young face that M. Gustave Jacquet has painted will, in all probability, be the favourite among English visitors. The Gallery

also contains an ambitious patriotic painting, by Mr. O. E. Fripp, of the death of Lieutenant Oghill and Melville at the battle of Isandlwana. As a work of art, the picture is poor and stagey. One of the officers stands in a very extraordinary position, striding over the prostrate figure of his comrade, while five Zulus advance with their bucklers and assegais to destroy him. The uniforms of the officers show no traces of the fact that they had had a hard day's fighting, had been thrown from their horses, had been soaked in the river, and scratched by rocks and bushes. The composition would serve very well as the illustration to a newspaper, but it is unworthy of the prominence here given it as a painting.

The Graphic Gallery well rewards a visit, if only for the sake of the brilliant display of works in black and white which adorn its walls. In no branch of art has the younger school in England shown so much singular excellence and progress as in that of design, as it is fostered by the large engravings in the Graphic. Several of the most prominent of our younger painters learned the elements of their art in the service of this newspaper, in which they were trained on a rough-and-ready system of their own devising. Mr. Herkimer has publicly acknowledged his great debt to this training, and we have no doubt that Mr. Small, Mr. Fildes, Mr. Frank Holl, Mr. Wirgman, and many others would say the same as regards their own start in the profession. An examination of the recent drawings on the walls of the Graphic Gallery gives us the impression that the falling off in the illustration of the paper which has been lamentably obvious within the last year or two is the fault, not of the artists, but of the engravers. If we compare the published copy of Mr. O. Green's head of a fireman with the powerful drawing here exhibited, we are startled to see how careless and inadequate is the present system of reproduction. The Graphic at one time took so high a place as an educator of public taste, that it is little to its credit that in its present condition of prosperity it should be content to supply its purchasers with engraving that does an injustice to the artists it employs. Among the drawings here we note Mr. Arthur Hopkins's "Garden Party at Marlborough House," "Look Ahead, Sir," and "Dancing the Reel o' Tulloch"; Mr. Small's "At the Royal Academy," and both his studies of "Steeplechasing"; Mr. S. E. Waller's "European Happy Family," and Mr. O. Green's "Firing the Royal Salute from H.M.S. Hercules," as works of so much vigour, delicacy, and originality, that they absolutely demand worthy rendering from an engraver.

RECENT MUSIC.

THE latest Bach Choir concert contained three pieces only, a Sanctus in D Major by Bach, the cantata *Alexander's Feast*, by Handel, and Brahms's Requiem. The Sanctus, which is one of four published in the Eleventh Volume of the Leipzig Bach Society, was written by Bach during his residence at Leipzig between 1723 and 1750, and exhibits all the thoughtful concentration of his great genius during these the most musically prolific years of his life. It was written for four voices, with accompaniment for violins, cornetto, violas, and a figured basso continuo, the chords of the last being only indicated, to be filled up by the organist, which on this occasion had been skilfully accomplished by Mr. E. Prout. The Choir showed by their performance that they had given the work their earnest study, although the lights and shades might have been more clearly marked.

Handel's magnificent setting of Dryden's "Ode on St. Cecilia's Day," known as *Alexander's Feast*, followed. The custom of celebrating St. Cecilia's Day, November 22, has been universal, and has existed in very many countries. The earliest celebration on record was held under the auspices of a Society in Normandy called "Le Puy de Musique" as far back as 1571. In England the custom does not seem to have been established till much later. In 1683 "The Musical Society," we are told by the *Dictionary of Music and Musicians*, "held the first series of annual celebrations. Their practice was to attend Divine worship (usually at St. Bride's Church), when a choral service and anthem, with orchestral accompaniments, were performed (often composed expressly for the festival), and a sermon, usually in defence of cathedral music, was preached. They then repaired to another place (commonly Stationers' Hall), where an ode in praise of music, written and composed expressly for the occasion, was performed, after which they sat down to an entertainment"—presumably a dinner. These festivals were continued annually, with a few exceptions, until 1703, when they became occasional. *Alexander's Feast*, which had already been set for the festival of 1697, by Jeremiah Clarke, was produced by Handel for one of these occasional festivals, which took place in 1736, not, however, on St. Cecilia's Day, but on February 19, at Covent Garden Theatre. Though, as we think, undeservedly one of the comparatively less known of Handel's works, *Alexander's Feast* is really a great work as it now stands with Mozart's accompaniment, and the popularity of such numbers as "Bacchus ever fair and young" and "Revenge, revenge, Timotheus cries," show that the public are willing to listen to the music when they have a chance. The solo parts on this occasion were sustained by Mrs. Osgood and Messrs. Lloyd and Santley, and it is perhaps unnecessary to say that their performance was worthy of the high repute which each of these singers has earned. As far as the Bach Choir are concerned, we

may here remark that it would tend greatly to the better rendering of the works they undertake if, as a body, they would attend a little more to the conductor's beat. From the want of this presumably there appeared an irresoluteness in their attack at several points during the performance, which marred the effect that might otherwise have been produced. A well-known conductor once told us that he expected each member of his choir to look at him at least once in every bar of music in which he took part, and there can be little doubt that his expectations were reasonable. If this matter were more attended to we should not have to listen to an orchestra laboriously dragging a chorus after it, and, as we have said before, effects could be produced which otherwise are impossible. This fault was most marked, however, during Brahms's "Deutsches Requiem," a work which, above all things, requires particular attention in these points. The lovely number, "Behold, all flesh is as the grass," became almost wearisome in its want of preciseness, and in the pieces where the choir has to sing with the solo voices the fault was too apparent. We have no desire to criticize an amateur choir severely; but, bearing in mind what amateurs can do, and have done, in choral singing, we think it not altogether unfair to point out a fault like this. The Bach Choir is composed of excellent material, and we doubt not that, with more attention to such points as this, it might become one of the leading choirs in the country.

It might almost be said that the English musical public is suffering from an epidemic of Berlioz. Whether the special favour shown to the composer's works arises through mere curiosity or from a genuine admiration of his extraordinary genius time alone can show; but, at any rate, the fact remains that they attract large audiences whenever they are performed. The Philharmonic Society performed for the second time this season, and, by desire, the dramatic symphony *Romeo and Juliet*, by this composer. With such a finished orchestra as Mr. Osins has the good fortune to conduct, it was evident that justice would be done to the work; but, although we can speak in nothing but praise of the performance as far as the orchestra, choir, and soloists are concerned, we must admit that we were somewhat disappointed at the results. Whether our expectations were larger than they should have been we cannot say, but it certainly seems to us that the work does not rank, as the analytical programme of the Philharmonic Society says it does, "amongst the highest efforts of modern music." *Romeo and Juliet* was written in response to a wish expressed by Paganini, which he backed by a munificent donation of 20,000 francs, that Berlioz would write a work "of hitherto unknown design and dimension." Berlioz laboured, as he tells us, for seven months persistently at the work, and at least succeeded in producing that which Paganini desired. Its design is broad, and its dimensions, for the age in which it was composed, are Titanic. To quote the programme, the work "demands a gigantic orchestra, including at least four harps, a stringed band of sixty performers, and a full complement of brass and percussion, a large chorus, a small chorus of thirteen picked voices, besides three soloists, and the task which he sets these various executants is commensurate to their number." Paganini, as Berlioz pathetically tells us, never even heard or read the work, for, just as it was ready, he died at Nice.

The work begins with an "Allegro fugato," one of the most striking parts of the whole work, representing the fight between the Montagues and Capulets and the subsequent interference of the Prince. The prologue is delivered by the thirteen picked voices mentioned above, and leads to a very characteristic air, the first words of which, "First vows of love, first ecstasy," sufficiently indicate the tenour, and, after a short choral recitative, to a Scherzetto on the subject of Queen Mab. One of the most prominent features of Berlioz's genius is eccentricity combined with an almost perfect mastery of the exigencies of his art, and this is certainly largely shown in this remarkable Scherzetto of Queen Mab, where the composer produces effects which it is difficult to describe. "Romeo alone," the name given to the early portion of the second movement, is remarkable for the ingenious way in which two sections, a Larghetto and an Allegro, are blended together, though distinctly traceable in the latter part of the movement. This is followed by a few bars, indicative of a calm night, which lead to a double chorus of male voices of revellers. Here, as in the Angels' Chorus in *L'Enfance du Christ*, Berlioz wrote the choruses to be sung behind the stage, and we are glad to say, on this occasion, the result was better than it was at the performance of the sacred cantata. A love scene ensues, an instrumental piece of great beauty, when the composer suddenly returns to Queen Mab in another Scherzo. The funeral procession of Juliet follows this number, and it is too evident that the Scherzo had been written to make a division between the pathetic love scene and the funeral procession. The consequence is that the Scherzo suffers in one's esteem as a stop-gap, and being a subject already treated is rather meaningless; added to which there is an unpleasant use of bells and jingling instruments which injures the effect of the music. After the funeral procession, Friar Laurence makes an explanation, and effects a reconciliation between the rival families. "The Oath of Reconciliation" is a very striking piece of dramatic composition, and brings the symphony to a fitting close. Perhaps our disappointment in *Romeo and Juliet* may be such as will always follow the performance of programme music. The notes that may represent the groans of a person suffering from poison to one mind may simply suggest something rather comic than otherwise to another, if these notes are not accompanied by the dramatic effects of the stage; and it must be conceded that to be forced to search in the pages of an analytical programme

for the meaning which the composer wishes to give to certain startling passages is somewhat taxing to the patience, and calculated to interfere with the just appreciation of the music. Miss Hope Glenn, who sang her solo in admirable style; Mr. Boyle; and Signor Ghilberti were the soloists.

REVIEWS.

TURKISH ARMENIA AND EASTERN ASIA MINOR.*

MR. TOZER, favourably known by his two volumes on the *Highlands of Turkey* published in 1869, began his later excursion at Samsoun and ended it at Trebizond. These two places, roughly speaking, lie two hundred miles apart, on the southern shore of the Black Sea. But before he got back to his place of re-embarkation the author had made a circuit of fifteen hundred miles over fertile valleys and brown hills, and had stayed at the towns of Amasia, Yeuzgalt, Kaiserieh, Sivas, Kharput, Bitlis, and Erzeroum. He also crossed Lake Van in an open boat, and climbed the heights of Mount Argæus and Mount Sipan. The whole of this tour, with the exception of the lake in question and two or three steep ascents, was accomplished on horseback. Mr. Tozer certainly possesses some of the essential qualifications for a traveller in the East, and his style is remarkable for accuracy and clearness. He was proof against flies and heat, dirty lodgings, and dusty roads. He was an adept in getting the most out of Greek servants, Mahomedan policemen, and Turkish Pashas. The only thing that seems to have given him serious annoyance was the importunate curiosity of the Armenian community, though this intrusion appears to us venial on the part of some Orientals who see one new European face in about two years. A Fellow and Tutor of Exeter, as might be expected, is a good classic and is familiar with the geography of Strabo and the Retreat of the Ten Thousand. We gather from this and his previous work that he is a proficient in modern Greek. Of the Turkish language he has but a slight knowledge, and, in fact, he makes no pretensions to the title of an Oriental scholar—for instance, he seems to have little or no appreciation of the component parts of Turkish, and of the influx of Persian and Arabic or Aryan and Semitic words into what is a branch of the Turanian family. Neither, again, is it desirable that an Oxford Don should develop into a politician and pamphleteer; and we much prefer, as Sydney Smith once said, that he should have correct and orthodox views of the Preterpluperfect Tense, the Paulo Post Futurum, and the Middle Voice, than that he should print crude speculations about Russian interference and Turkish misrule. It is impossible, however, that the narrative of travel by a well-read and intelligent Englishman should not afford some material for the discussion of these perplexing topics. Mr. Tozer seems to have made light of physical discomforts and lugubrious prophecies. Several times he was warned against brigands and Kurds. But he mixed familiarly with these wild mountaineers, drank their coffee, and slept in their tents. Rumours of other highwaymen invariably died away or had no real existence, though on one occasion Mr. Tozer and his companion were themselves mistaken for two "gentlemen of the road" by some peasants who watched them anxiously from behind a rock. The belief that they were railway surveyors was widespread and not evanescent. At the hands of German and American missionaries they experienced great hospitality, nor were Armenians, Turkish Pashas, and Dere Beys, or hereditary Governors, at all backward in their kind treatment of the strangers. It was a great relief to exchange the dirt and inconvenience of a second-rate serai, or a tent pitched on some heaps of refuse in a native bazaar, for the airy and cool apartments of a polite Oriental or a European who had made his residence as comfortable as circumstances would permit. The whole trip was compressed into about two and a half months; and though it was very hot in the defiles and valleys and bitterly cold in the hills, the travellers were never drenched with rain, nor do they seem to have suffered from malaria. These travellers were no sportsmen. There is an occasional mention of waders and divers, plovers and herons, and Mr. Tozer, on seeing a fine hare in the forest of Argæus, may have wished for a gun and for a fishing-rod when he heard of delicate trout in the mountain streams. But partridges and quail and splendid eagles sailed away unmolested by gentlemen wholly taken up with rock-chambers and sacred manuscripts, and the resemblance between Egyptian hieroglyphics and the inscriptions of the Hittites. To say the truth, the importation of historical and antiquarian disquisitions into a traveller's journal is occasionally hazardous. Readers who wish to know how far the population suffered from famine, or what are the precise disabilities of Greek and Armenian subjects, or to what lengths the uncontrolled despotism of a *Kaimmakam* may reach, turn away disappointed from speculations about the geography of Strabo and the horseshoe arches of early Arab builders. It is fair, however, to state that Mr. Tozer has carefully read and compared all the works of recent writers on these difficult topics. He nowhere undervalues the labours of his

* *Turkish Armenia and Eastern Asia Minor*. By the Rev. Henry Faithshawe Tozer, M.A., F.R.G.S., Tutor and late Fellow of Exeter College, Oxford, and Author of "Researches in the Highlands of Turkey," &c. London: Longmans. 1881.

predecessors; nor does he propound new theories with the air of an infallible authority; and his classical and Scriptural allusions are appropriate, suggestive, and correct. Amongst other strange traditions, we are reminded of an alleged immigration of some Hindus into the plain of Mush, in the country of the Kurds, near the celebrated monastery of Surp Garabed, or St. John the Baptist. The account of Zenobius, as quoted by Mr. Tozer, is that two Hindu brothers named Demetr and Keisanéy, were banished from their native country on account of treason against their king, Dinaakey; that they founded a city in the plain of Mush, which they named Vishap or Dragon; that they begat three sons, Kuar, Meghti, and Horain; and that they left descendants who were black, long-haired, and extremely ugly and unpleasant to the sight. Demetr is obviously Greek, or a Greek equivalent for some Sanskrit word. Keisanéy might be a metamorphose from any of the Hindu names beginning with *k*—Kalicharan, or Kashinath. Kuar is clearly Kumar or Koonwar, the well-known term for the eldest son of a Raja; and Horain would be easily corrupted from Hari Narayan. We have been unable to hit on any Sanskrit word for dragon or serpent which bears any resemblance to Vishap, and we think it far more likely that Hindus should have given to any town of their own creation in a foreign land, the not uncommon appellation of *Vishnupur* or the city of Vishnu. The first syllable of Meghti means *cloud*, but any endeavour to penetrate the real Sanskrit hidden under the loose phraseology of a Greek of the time of Hadrian is in reality mere guesswork. It is better to leave this and other problems to be discussed at their leisure by careful students of the book. The sphinxes in the neighbourhood of Euyuk and the bas-reliefs with priests intent on sacrifice; similar relics at Yazili-Kaya in that neighbourhood; the rock-chambers on the river Ilalya, which the Turks now call Kuzzil Irmak or the Red River, from the colour of its deposit; the cuneiform inscriptions at Palu, with the dwelling-place of St. Mesrop, the Armenian saint who invented the alphabet of that language and translated the Scriptures into it; the trilingual inscription at the Castle of Van on the lake of that name; and the discovery of a Roman tablet, of the date of Nero, at the town of Kharput—are all interesting in their several ways; but they are not amongst the ordinary incidents of travel; they do not excite the imagination of intending explorers like descriptions of scenery, and we own to a preference for those parts of the book which treat of mountains and defiles not yet overrun by American sight-seers and members of the Alpine Club.

A glance at the illustration of the rocky pinnacles of Mount Argæus ought to be sufficient to send a thrill of delight through the heart of Mr. Whymper. From a ridge where the crevasses were still filled with snow, Mr. Tozer looked up at lofty pinnacles of red porphyritic rock, "some fifty feet above him, but judiciously made no attempt to scale peaks which he nevertheless did not venture to pronounce impracticable. Nothing in the shape of arête or icy slope can, indeed, deserve that term in these days, especially as there can be no difficulty about breathing at a height of thirteen thousand feet. To an unpractised climber it would seem either that any one of the peaks could be scaled by a "bould cragsman" such as Edie Ochiltre in his younger days, and Francie of Fowlsheugh who unluckily broke his neck on the Dunbuy of Slaines, or else that it would be easy to fly a kite and send an arrow with a line attached to it over one of the projections, and then make the ascent by thicker ropes hauled up afterwards. To reach the base of the pinnacles Mr. Tozer had to pass the previous night in a tent at an elevation of 8,000 or 9,000 feet, start by moonlight at two in the morning, and breakfast on the summit, after witnessing a glorious sunrise. One part of the journey was perilous owing to loose stones and friable rocks, but the view was splendid, the eye taking in Anti-Taurus to the east, the Allah Dagh to the south-west, sundry small lakes, the town of Kaiseriéh, and a long tract of undulating plains. The ancient idea that the Euxine and the Mediterranean could be seen from the summit is entirely exploded, and Argæus has long fallen into the category of extinct volcanoes. Not less interesting is the account of Lake Van. An inland sea, of which the waters are salt, 5,000 feet above the sea level, ninety miles in length, and at its broadest thirty miles, with a volcano at one spot, an ancient castle with chambers cut in the rock at another, and an inscription in the same material, "completely inaccessible both from above and from below," must be not only worth seeing but also worth going to see. Here too was another mountain to be ascended, with crevasses full of water, and occasional masses of snow. A thick mist took off something of the traveller's enjoyment, but Mount Ararat was conspicuous in the distance towering above everything else. When Sipan with its Mahometan traditions about Noah and the ark, had been "done," the lake had to be crossed. There was some talk of a small steamer sent out in pieces to the American mission, but it had not been launched or it was not available, and the passage from the foot of Mount Sipan to the town of Van was accomplished in a flat-bottomed boat of primitive construction. The oars and sails were much out of order, but a little ingenuity set everything to rights, and the transit caused no other inconvenience but the sea-sickness of certain Turks, fellow-passengers. The town of Van, at the south-eastern corner of the lake, is notoriously unhealthy owing to filth and marshy low ground; and the missionaries and Vice-Consuls of different nations wisely live out of the town. The remainder of the journey by Erzeroum, Baiburt, and Trebizond was marked by

no special incidents beyond that of the visit to the Kurdish encampment already noticed.

We have said that Mr. Tozer inclines to classics and antiquities rather than to politics; and we cannot blame him for not having shot off his arrows in a direction of which he never thought. But occasional sketches are sometimes of more value than elaborate pictures; and the following observations appear to have forced themselves on Mr. Tozer's mind. Turkish administration was corrupt and venial, and Christians were often at a disadvantage before a native tribunal. But, if justice had to be bought, Christians were the wealthiest and could better afford to buy it. Taxation was heavy, though provisions were cheap and plentiful, except, of course, in seasons of famine; and the vexatious and stupid practice of collecting the tax in kind at the season of harvest, and not allowing the cultivator to store a perishable crop until the tax-gatherer had inspected it, was still in force. No one connected with Settlements of Land Revenue expects that taxation in kind could at once be converted into money payments; but the adherence of Turkish officials all over the East to the system that secures the minimum of return with the maximum of worry and oppression, is one of the most hopeless features about the government of the Sultan. There was a disposition to welcome Russian advance. The youth of the nation had, indeed, been sent in numbers to perish at Plevna and elsewhere; but those who returned spoke of their kind treatment as prisoners. It is fair to note that the disappearance of the population in some provinces has been attributed neither to famine nor to Pashas, but to the rapacity of Seljukian nobles, who, centuries ago, effected the ruin of agriculture and turned arable lands into pastoral tracts. Mr. Tozer has a word to say in favour of the Dere Beys or hereditary Pashas. No doubt they are autocratic and independent, but they had more interest in the welfare of the population than a succession of hungry Governors, changed every five years. The appointment of new English military consuls had naturally caused some sensation; and Mr. Tozer, adopting some of the commonplaces of the present day, is driven to look to a "development of local self-government" as a remedy for misrule. This sort of reform, we will venture to say, has never yet sprung up in a community ground down by irresponsible despotism. It requires a just, strong, and beneficent ruler to teach an abject community how to govern themselves; and the very slow progress made by us in India, under ten times more favourable circumstances, ought to warn men against putting any trust in Ultra-Liberal slipslop and cant. Some remarks about the objects of missionaries, and the importance of their promoting education without interfering with the existing churches in Armenia, are conceived in a really liberal and judicious spirit. Those who feel inclined to follow the author will do well to imitate his candour and sincerity; and, if they wish to profit by any of his counsels, they will try and select any month except the Ramzan for their tour. Mahometans, debarred from eating and even smoking between sunrise and sunset, turn night into day. Every one is sleepy or sulky in the morning when the time for action is come. Breakfast is not ready; horses are not shod; tents are not struck; minutes lost are not recovered; and vows, with their snares, pitfalls, and rare dispensations, are never more entangling and annoying than in this movable Mahometan fast.

THE PRACTICAL FISHERMAN.*

THE angler's library is a very large and, if the angler began collecting in recent years, a very expensive one. Works devoted to this subject fill pages of the old booksellers' catalogues, and copies of the first edition of Walton cost at least fifteen pounds. Mr. Keene has added a cheap and compendious volume, which is worthy of the angler's notice because it is practical, full of agreeable anecdote, and rendered amusing by the high spirits and genial conceit of the author. He may not have "killed more salmon with the rod than any one man ever did," like Lord Home, but he has been a mighty slayer of perch in Virginia Water and of trout at Chertsey. He has had experience of most kinds of known and of several sorts of, to us, unknown angling. He is thus able to describe "wrinkles" of a strangely sagacious character. He has fished with cherries, and cheese, and potatoes, and peas. "An admirable bait for pike," he says, is "the end of a calf's tail tied on a double hook and large green beads for eyes." As the Germans make "cures" out of everything down to boiled pine twigs, so pike will bite at anything. Why not an ox-tail with large brass buttons for eyes? Mr. Keene may yet have excellent sport with this singular lure (the idea is not copyright) in Virginia Water.

Though there is plenty of method and of ichthyology in Mr. Keene's book, we prefer to follow his remarks in a discursive spirit. He himself is very discursive, and, like all anglers, rejoices in stories about his own feats and strange experiences. Mr. Keene defends his favourite pastime against the unworthy sneers of Byron, Dr. Johnson, and Plutarch, who calls angling "a filthy, base, illiberal employment." Plutarch, like Habakkuk, was "capable of anything." We rather side with the moribund "Mr. T," who, hearing on his deathbed that a great Thames trout had been captured, "feasted his eyes upon it, and soon afterwards closed them for ever." So popular is fishing, that there are

* *The Practical Fisherman.* By J. H. Keene. London: Bazaar Office. 1881.

over eighty clubs in the metropolitan district, the members of which, we presume, divert themselves with the perch, the gudgeon, the roach, and other familiar creatures. It is reckoned that there are fifty thousand anglers in England and Wales, and, if we may judge from bitter experience, about two millions in Scotland. In that country the rivers, which were deserted fifteen years ago, are now almost as crowded as the picture galleries on private view days. The landlords in one of the Border districts have very generously thrown open their trouting water, we believe, to all the townspeople who will pay a purely nominal subscription. Thus it is hoped to enlist the public against the abominable practices of poachers, who net the pools and streams, deprive their neighbours of a healthy and salutary pastime, and do their best to drive them to the diversions of the public-house.

Mr. Keene, like most writers on sporting topics, is fond of classical quotations, and dabbles in the thin water at the edge of the history of angling. He thinks the ancient Egyptians were artistic anglers, but does not mention that those among them who, worshipping the pike and the braise, would eat no fish at all because the hook might have caught one of their sacred animals. As a proof that the Greeks knew a thing or two he quotes the hard passage, *Odyssey* XII. 252, but does not explain the motives that induce the angler "to cast into the deep the horn of an ox of the homestead," or "the horn of the shelterless ox," as a Cambridge scholar prefers to render it. Did a little piece of horn protect the line from the bite of a fish, or were horns thought valuable as ground-bait? They seem almost as attractive as a calf's tail with green beads for eyes. Mr. Keene also reprints some of the queer magical compounds in which the mediæval anglers expected to find advantage. The foot of a heron's leg is certainly a difficult substance to procure, though more attainable than the *prima materies*, which one must obtain before beginning certain experiments in alchemy. The Apothecary Royal of Louis XIV. has very professional ideas of sport. "Take of man's fat and cat's fat, of each half an ounce; mummy, finely powdered, three drachms; cummin seed, one drachm; distilled oil of aniseed and spike, of each six drops; civet, two grains; and camphire, four grains. Make an ointment *secundum artem*. When you angle with this, anoint eight inches of line next the hook." Mr. Keene does not know where the three ounces of mummy are to be procured; and, indeed, the specific is no longer so popular as it was in the reign of Louis XIV.

Mr. Keene cannot make up his mind as to the sense of hearing in fish. If carp come to the whistle of the keeper, they must hear much like other animals. As a rule, fish are not disturbed by noise which produces no great vibration of the water, as is done, for example, by firing a rifle in their neighbourhood, or trampling heavily on the boards of a punt. Mr. Keene doubts, as most anglers are inclined to do, whether fish are very sensitive to pain. He mentions a case in which he and a friend hooked and caught the same perch. Apparently, one of them hooked the fish foul, by accident. We have seen a perch take the bait of two anglers, fishing near each other, so that both raised their rods, and drew out the perch suspended in the middle. Mr. Keene also notes the senseless voracity of a carp of six pounds weight that "took no less than three potatoes and hooks belonging to three different anglers, myself included." In another case, a pike, well hooked, broke away, and a few minutes afterwards was captured with the broken tackle in his mouth. Mr. Keene has two examples of this, and it is Mr. Henderson, we think, in his *Life as an Angler*, who declares that he has hooked a pike, landed it, returned it to the water, and recaptured it again and again. We ourselves are acquainted with a case in which the same almost incredible eagerness and indifference was displayed by a perch. He lived in a small pond, was almost tame, and appeared to enter readily into the spirit of the sport. Mr. Keene appears to hold that fish rather like being caught; it is a new sensation in the annals of an uneventful life. "It appreciates at once that its movements are not absolutely free. But I conceive that this resistance only heightens the enjoyment of its capture of the bait." Thus the fish supposes himself to be "playing" the bait, while the sportsman reckons that he is playing the fish. We wish we could heartily share the faith of Mr. Keene.

Space does not permit us to follow his account of all the fish of Britain. He is much attached to perch-fishing, which we have always regarded as a sport for children. But if, in angling for perch at Chertsey, a man may come across and land a six-pound trout, as Mr. Keene did, that is another affair. His most important chapters, naturally, are those concerned with salmon and trout. He mentions the capture (in the Dart) of a parr weighing almost a quarter of a pound. But was this a genuine parr? Many burn trout are marked with the same blue spots, like the impressions of finger-tips, which are notable in the parr. But the young of the salmon has other distinctions; for example, he has a peculiar, silvery hue, and only one row of pink spots, while in our experience he does not exceed a very small size. Mr. Keene, of course, is exercised about the food of the salmon. Nothing is ever found in the stomach of the fish, yet he not only rises at flies which are like nothing in nature, but may be captured with worm and minnow. Now, even if he leaps at flies in curiosity, or in a bad temper with the gaudy object, he can only take worms as food. Thus it appears that the salmon cannot be like the poet "lunching on a lily," or like Charles Baudelaire when he stayed with a friend all day and declined refreshment, saying, "I never breakfast," "I don't eat dinner," "I am forbidden supper by my physician." The salmon eats something or other, and the

bold theory has been suggested that his gastric juice is "instantaneous," like a photographic process, and leaves no traces of his food behind. We cannot decide the differences of opinion about flies which divide piscatorial thinkers. The local keeper is the best guide, and will suggest the proper "Butcher" or "Harriet" when a man's own experience is at fault. Mr. Keene prefers to fish up salmon streams, in which opinion, we think, he stands almost alone. But he is not bigoted in his adherence to Mr. Stewart's and Mr. Henderson's doctrine of fishing up trout streams. There can be no reasonable doubt, in spite of Mr. Pennel, that all the advantages are on the side of fishing up. You approach the trout from behind, and are thus enabled to fish the thin shallow water at the foot of pools where trout lie, and in June take the worm greedily. We agree with Mr. Keene in dialiking, or rather detesting, worm-fishing; but it is certain that the best and largest trout are to be taken thus in the finest condition, when they refuse to look at the fly. Again, a hooked fish is dragged down into water already fished over. We doubt if the gambols of a hooked trout very much disturb his neighbours. But it is better not to give him the chance. No logic is so satisfactory as experience. Examine the baskets of anglers who fish up, and of those who fish down, stream, and a conclusion will instantly be reached. In large rivers, like the Tweed, a compromise may be suggested. The near side should be fished up, but it is so hard to wade against a deep and strong stream that we may be allowed to fish down the opposite bank, which is generally pretty distant, so that the angler is less likely to be observed by, and to frighten, his prey.

Mr. Keene goes at length into the controversy about trout flies. English anglers seem to prefer close and frequently changed imitations of the fly on the water. In Scotland we are convinced that Mr. Stewart's opinion is right. "A black, brown, red, and dun-coloured fly, used together, and varied in size according to circumstances, will at any time kill as well, and even better, than the most elaborate collections arranged for every month of the year." Mr. Stewart's Scotch experience was so ample, and his skill so great, that anglers going North had better submit to his advice. But Southern trout may be more curious and sophisticated. People with local experience ought to know best. Mr. Keene is not a strenuous disciple of Mr. Stewart. Much practical lore may be gained from his chapters on tackle. We may close our notice of a good-humoured and lively book with a quotation of Mr. Keene's story about the Thames trout and the cockroach. He had tried the trout with every imaginable bait, except the calf's tail and a young swallow, which Mr. Colquhoun has known to prove very deadly. At last the happy thought "cockroach!" occurred to his mind:—

No sooner the thought, than the rod is put together. The finest gut bottom is attached, a No. 7 hook thereto spliced, and a cockroach lightly impaled. By standing on the crown of a willow, some 15 yds. off, I could see the head of my quarry, though he could scarcely see me by reason of the natural exigencies of the laws governing refraction and reflection. Very quietly I let my bait down on the water, and paid out the fine line to within 3 ft. or 4 ft. of the nose of the trout. Now had arrived the time for finessing; with the utmost circumspection, with a slow, fluent, gliding motion, the cockroach was lowered on—on—on—till within a few inches of the fish's mouth. Then I withdrew it, as if to take it entirely from the water. No notice took he. My heart again failed me, well nigh at least, for I had tried by this time persistently for some weeks to capture this lordly fish, and as each failure was added to its predecessor my desire of possession naturally grew greater and greater. However, I very, very gently moved up a few yards, and again watched the bait down towards the stolid fish. This time the cockroach had sunk deeper in the water, and, with a sort of chuckle, I watched it gradually approach his muzzle in the same plane, and not as before, rather above. As it neared him, to my inexpressible joy, I saw his under lip show as if it had, by some mechanical impulse connected with the bait, automatically moved. Nearer passed the bait onwards, the jaw lowered yet, and, like a child taking a sop, like an unfledged bird taking in a worm, it passed behind the portals of that polished head. With suppressed breath and palpitating heart I counted—one, two, three, four, five—then, with a side movement, I struck; not violently, but swiftly; not mightily, but strongly. Ye gods, he was hooked, and out yards in the stream he sped!

Of course he was only landed after the usual interregnum of splendid struggling, and I became the hero of the hour in the possession of this splendid fish.

BRAEMAR.*

ADMIRING the grandeur and beauties of Braemar almost as much as the writer of the volumes before us, we were disappointed to find that her book was a novel. We had hoped for something in the style of Mr. Hill Burton's *Range of the Cairngorms*, a charming little monograph on the loftiest group of the Grampians, which we believe is out of print. There is a wide field for a fervent and sympathetic artist in painting scenes in the rugged wilderness of forest and grouse moor that lies around the sources of "Highland Dee." We imagine that the natural and truthful story of a summer residence in such pleasant headquarters as Castletown of Braemar might be made very delightful reading. That was also the idea of the author of this story of *Braemar*, and she has evidently in the course of a long companionship made herself absolute mistress of her fascinating subjects, while she shows anything rather than a lack of enthusiasm. But we think she has made a mistake in introducing her descriptions, drawn closely after nature, into a love tale which, though clever,

* *Braemar; or, Two Months in the Highlands.* By L. B. L. London: Tinsley & Co. 1881.

is little more than commonplace. She distracts our attention and her own by attempting too much, and by tying herself to the delineation of some ordinary characters we could very easily dispense with. She forces them into endless expeditions and picnics, illustrative of each variety of the scenery, from the Linn of Dee and the Falls of the Garry, to the summit of the mighty Ben Muich Dhui. She even sends them beyond the legitimate bounds of Braemar into Athole, making them ford flooded streams in the solitudes of Glentilt, and come back by the high road through the Spital of Glenshee. So that we are made to follow their fortunes from chapter to chapter in a something that is between the novel and the guide-book; while she even indulges us with descriptions at second-hand—and we confess that they are very creditably done for a lady—of such manly Highland pastimes as deer-stalking and salmon-leistering. Thus, notwithstanding that the volumes are brightly written in detail, the general effect is rather inartistic. The exactness of realism, too, is oddly blended with the creations of the fancy; so that it is difficult or impossible to trace the line that separates the one from the other. The landlord of the "Pyle Arms Hotel," and the grieve of Colonel Farquharson, of Invercauld, are real characters of course; and this leads us to ask whether the worthy "Minister Tam," who fills the Free Church pulpit in the village, is likewise an actual character? As a Free Kirk minister exists, as surely as the innkeeper or the grieve, we must assume "Minister Tam's" identity with that incumbent. But, if so, we wonder whether he is gratified by having his *sobriquet* published and his amiable peculiarities paraded for the entertainment of subscribers to the circulating libraries. Then there is a fine old gentleman, an uncle of the heroine, who, by the friendship of the Earl of Fife, has the occupancy of a cottage at Inverey, with the privilege of salmon-fishing in the river; and, to do the author justice, he is depicted so graphically that we fancy we should recognize him, without a moment's hesitation, if we saw him casting his fly over the pools. His son, who rents a shooting in the neighbourhood, can take the liberty of inviting his friends to join in a deer-drive, when Lord Fife hospitably provides the refreshments. Whether the Messrs. Glendinning, senior and junior, exist in the flesh or not, we know that Lord Fife and Colonel Farquharson are positive entities. But, as we believe that between them those two great landowners monopolize all the country around Braemar, we question whether the young lady who is the narrator of these chapters of autobiography can really have inherited the nice little property which must form an *enclave* in their broad domains. Perhaps that, however, may be supposed to be one of the legitimate doubts by which the novelist deepens the halo of interest she has thrown around her story.

So we may pass out of the shadows of possible or probable actualities into the unmistakable realms of romance. Miss Gladys Erskine, the heroine of her own story, paints herself by suggestion and in her actions rather than in words. We should rather that she is decidedly pretty, or even beautiful, with something of the free, though maidenly, bearing of a queen of the forest or a "Lady of the Lake." She is very unconventional in her manners, sentimental, and somewhat gushing. She has considerable firmness of purpose or strength of will, which, however, can easily be bent or swayed through her affections; while the consciousness that she is a "well-to-do maiden" gives her a certain commanding assurance. She has been more or less self-contained, for the simple reason that she has been isolated from those domestic endearments to which she might readily have expanded. Her stepmother is cold-hearted and aggressively practical; her half-sister is a feather-headed and volatile little flirt. She loves her brothers, but, after all, a pair of engaging urchins in the schoolroom could scarcely suffice to fill the void in the fresh and emotional nature of a romantic beauty emerging from her teens. And as time is precious in what is merely a two-volume tale, we are not surprised to see signs in the very opening of the story that Miss Gladys is no longer fancy-free. Eligible suitors are necessarily rare in Braemar, where the summer lodgings are chiefly tenanted by respectable Aberdonians with their wives and families; and it is clear from the first that the stalwart Mr. Angus Glendinning merely regards his pretty cousin with the well-regulated fondness of a brother. Glendinning has given his heart away elsewhere, to furnish matter for a subsidiary love plot. Clearly, then, it is extremely convenient that Gladys should find a lover ready to her hand, under her own roof, or, as we should say with greater propriety, under the roof of her stepmother. And a man admirably fitted for the *rôle* is there in the person of the gentleman who is tutor to her brothers. As Miss Gladys has been represented to us, it seems natural enough that, when her fancy has been charmed by the man of her dreams, she should not look too closely into his position and circumstances. She is rich enough for two; and, having never mixed much in fashionable society, she has a soul superior to the arbitrary conditions it prescribes. Nursed in the grand solitudes of Braemar, her nature, in place of being depraved, has been elevated; and she flatters herself that her instincts can recognize a member of nature's nobility. Nor is it easy to deny that in this case her choice has been worthily made. Mr. Wentworth, the tutor, is emphatically a gentleman. Personally we should not have cared much about him, though that may be masculine envy. He is dogmatic and often rough in his independence and self-assertion. He almost bullies the heiress, who, although she sometimes sulks and sometimes flashes out, nevertheless yields to him generally with humble submission. In short, Mr. Wentworth naturally strikes us as a prig who is in a fair way of being made more offensive by female

deference; while looking at him from the artistic point of view, we should say he is closely copied from Louis Moore in *Shirley*. It is true that we may find some excuse in his bluntness of perception for Wentworth's rough behaviour to the young mistress of the house. He adores her; he is fretted by the consciousness of the worldly distance dividing the lady of lands and houses from the dependant toiling for his daily bread; and he not only believes that she does not return his admiration, but that, with aggravated bad taste, she prefers somebody else. As we know, he is wrong; but Gladys is no more clear-sighted than Wentworth as to the cause of his jibes and sneers and irritating intervals of coolness. So they go on playing the game of cross-purposes till the party have explored all the beauties of Braemar, and the author is disposed to let them come to an understanding. Then, indeed, the *dénouement* broadly differs from that of Miss Brontë's novel. The tutor Wentworth is not what he has seemed to be. The mystery of his recent conduct and movements is explained by the announcement that he has come into a noble property. In fact, when he is savagely snubbed by Gladys Erskine's connexions for his presumption, he silences them, and summarily turns the tables, by proclaiming himself lord of broad lands in Perthshire; while his moral character and motives are still more triumphantly vindicated from imputations of selfishness, by his being disclosed as the anonymous and generous benefactor who has been enriching acquaintances right and left by the gift of farms in England and thousands of pounds sterling.

We have told the love story lightly, but without the slightest idea of ridiculing it. Though somewhat romantically conceived, and occasionally over-tinged with sentimentality, it is very much above the average. As for the pictures of Highland scenery, manners, and character, which go far towards making up the bulk of the volumes, they are generally as picturesquely conceived as they are true to nature. If we have a fault to find with them, it is that the author is too fond of following the method of the Grecian painter who drew a veil over the anguish of the hero's father, which he did not dare to depict. Since L. R. L. makes a point of sketching the scenery of hill and dale, stream, rock, and waterfall, it is hardly fair to fob us off in the chapter on Ben Muich Dhui by refusing to tire her readers with the narrative of her ascent of the giant of the Grampians. As she is right in believing that she excels in landscape-painting, she was absolutely bound to make the attempt, even under penalty of a failure which could hardly be ignominious. By way of specimen of her powers of description, we may end with her visit to the Linn of Dee, since each tourist who has passed a day or two at Braemar may correct her sketch from his impressions and recollections.

The linn or fall is in a deep ravine in the rock, so narrow that it is hardly many feet across; and through this the wild Dee comes springing down from its mountain bed, chafing at its restricted passage, whirling deep chasms in the granite, and passing clear and deep to the wider bed below. Huge masses of foam are hurled by the fall and the rush of water into the rock basins beneath, and the river raves with a deafening noise as it passes on, while strange sudden destruction seems to be coming on the rough rocks and on the spectator, as it leaps and whirls onward, boiling in its prison, with a concentrated rage. . . . Mr. Wentworth is horrified at my delight, as I stand in the foam and spray and watch it whirl and leap in its dark, fathomless basin; but then I am familiar with it, and have no fear, but such love for its beautiful, awful, foaming beds of water as I cannot describe. It is a grand freak of nature, this tumbling river through its dark fir trees—through its narrow contracted bed in the fissures of mountain rock.

DUNCKER'S HISTORY OF ANTIQUITY.—VOL. IV.*

THIS volume of Professor Max Duncker's *History of Antiquity* deals with the Aryan tribes who crossed the Indus and fought their way across Hindustan. The subject is one on which a vast literature has grown up already, but which, nevertheless, is by no means exhausted; and even for scholars, who cannot make the history and philosophy of India the task of their lives, a work which gives a masterly survey of the great political and religious systems which have grown up in that vast peninsula must be a welcome boon. Of Professor Max Duncker's survey we affirm without hesitation that it is in a high degree masterly, and that it must retain a permanent place among the most important works bearing on the subject. Our remarks on the first three volumes have sufficiently shown our sense of the general excellence and usefulness of the work; but the present volume seems to stand on a higher level, and to furnish the best account of the fortunes of the Aryan tribes in India, thus far written within the compass of a few hundred pages.

Nor need we qualify seriously the opinion which we have expressed of Mr. Abbott's powers as a translator. In the translation of the previous volumes we found scarcely a flaw. If in this fourth volume we have some sentences which are, to say the least, dark and mysterious, it may be because the task of reading the author's thoughts in an English dress was here and there far from easy. The Brahman yoke, wherever the people were made to feel its full weight, was beyond doubt fearfully oppressive. It was the more irksome, we may well suppose, in a climate which weakens while it strains the powers of endurance, and the Brahmins in imposing it may have discreetly considered how far they might go with safety. But, if this be

* *The History of Antiquity*. From the German of Professor Max Duncker. By Evelyn Abbott, M.A., LL.D. Vol. IV. London: Richard Bentley & Son, 1880.

Professor Max Duncker's meaning, it is not very clearly brought out in the following sentence.

The conception of such endless torment must have pressed the more heavily upon the people as the hot climate in which they lived naturally awakened in them the desire for repose, a desire which increased with the increasing oppression of the State and religious duties, and was strengthened by the fact that these causes at the same time allowed the resistance which every healthy and strong nation can make to such oppressions and demands to slumber.—P. 333.

If the "causes" here spoken of are, as they seem to be, the despotism of the civil power, and the annoying multiplication of religious duties imposed by a tyrannical priestly order, it is not these causes, but the slackness of the kings and priests in the exercise of their power, which encouraged the passive disposition of the people. Nor can we think that Mr. Abbott would have allowed some odd phrases and repetitions to remain had he subjected his translation to a careful revision. It is scarcely good English to tell us that

the theory which the Brahmans had elevated to be the highest duty was without sympathy or pity; it could only allot to every man, in the alternation of birth and decay, the fruits of his deeds. No doubt the people, impelled by the necessity to have above them conceivable, comprehensible, healthful spirits, elevated Vishnu and Siva from among the faded and dishonoured forms of the ancient duties to be the protecting powers of their life, in opposition to the god of the Brahmans.

Lack of care gives us a sentence here and there thus constructed:—

Even for those who were not in a position to liberate themselves wholly from the misery of the earth and the torments of regenerations, by entering into the way of illumination, were to have their pains and sorrows alleviated as far as possible.—P. 352.

It might also be well to explain for the benefit of some readers that the word *donb*, which is here printed without any sign to show that it is not English, denotes a Mesopotamia. Some also might be glad to know that it is made up of the numeral *two* and the word for water, which is found in the names of a multitude of European, as well as Asiatic, streams.

But we need say nothing more about trifles which can easily be got rid of or set straight in later editions, and which are but slight blotches in a translation which may for the most part be read with singular ease. This, indeed, must be the case when the translator is reproducing the work of so clear a thinker as Professor Max Duncker. The question of the origin and significance of caste is commonly treated with an indistinctness which is sometimes very irritating; but certainly it would not be easy to draw a more vivid picture of the historical conditions out of which it grew up than that which we find here. The Aryans, when first they set foot in the Punjab, were a nation of warriors, simple, hardy, and independent, but pre-eminently conscious of their relations to the gods who were to them the givers of all their good things. The obligation, indeed, they regarded as not altogether on their own side. The gods might live without the help of men; but they were decidedly better off with it. Their strength was increased by the Soma juice, and still more by the sacrifices and prayers of their worshippers. If the latter were intensely earnest, they acquired over the gods a power which it was scarcely possible for them to resist; and they could, therefore, address them, if need were, with remonstrances couched in tolerably familiar language. They can pray Indra to come down and "drink himself full with the most inspiring of drinks"; they can beseech him for health in sickness, for long life, for victory in battle; but it is on the understanding that the return for the rich sacrifices shall be made, and they do not scruple to remind the gods of the fact. "If I were the lord of cattle, the master of such wealth as thou art, Indra, then would I assist the minstrel; I would not leave him in need." The gods literally grew by prayer and sacrifice; and the worshippers can say plainly, "The suppliants have strengthened Indra by their songs of praise to slay Ahi. Increase, O hero Indra, in thy body, praised with piety and impelled by our prayers. The hymns whet thy great strength, thy courage, thy power, thy glorious thunder-club." The thought which underlies such words, as Professor Max Duncker remarks, has furnished also the basis of fetishism, but here it has already advanced far on quite another track. Fetishism applies direct external compulsion to the being worshipped; with the early Aryans of India the power of the invocation depended on the sincerity of the worshipper, on the form of his prayer, or the correctness of his sacrifice. In this fact lay the germ of the mighty system which was to cast its shadow over India not for centuries only, but for millenniums. The creed of the Aryan warrior was simple enough. He had not yet learnt to trouble himself with questions relating to the origin of the gods, or to the distinction of these gods from the one great primary cause. He was ready to address each of them in terms which assigned to them an incommunicable greatness and majesty; and thus the gods exhibited that flexibility of character which is the most marked feature in the hierarchy of the Vedic deities, while the worshipper retained the sturdy spirit and stout hand which had won for him a home on the plains of the Punjab. But in his strength lay his weakness. If Indra and Agni were invoked to bestow on the suppliant wealth of horses and cows, fruitful pastures and rich harvests, there was no reason to bestow a thought on any counteracting influences; but in the earlier stage of Aryan settlement in India it was more often necessary to invoke their aid against the enemy. The sacrifice was offered to insure victory in the fight; but these offerings might be made on the other side also, and it was of the first im-

portance to nullify, if possible, the sacrifices and prayers of the enemy. This could be done partly by greater intensity of adoration, but partly also by scrupulous exactness—in other words, by a careful correctness of ritual. This notion, Professor Max Duncker remarks, had its natural effect. "The singers of these prayers, who knew the strongest forms of invocation, or could weave them—the priests—early obtained a position of importance." As time went on, their position as a class became more and more marked; but this class was distinctly subordinate to the Kshatriyas, or warriors; nor had any attempt been made by the minstrels or singers of one tribe to form a college with those of any other tribe. Still, in each tribe there were the warriors, and by their side was growing up a class of sacrificers, who soon became alive to the advantages involved in claims of priestly influence. The first step was to suggest the benefit accruing from the presence of a minstrel or singer at each sacrifice; and the suggestion was gradually petrified into a command. But the life of the Aryan was strictly the life of the family; and those who cared specially for exactness of ritual must become disciples of the minstrels—in other words, be adopted into their families. Again, as they advanced further from the Indus, and left behind them an Aryan population in a country enjoying undisturbed peace, the work of tilling the soil became for those who were so left behind not less needful than skill in exercises of war. Hence another portion of the Aryan population was gradually formed into an agricultural class, known as Vaisyas; and thus the three classes of warriors, priests, and farmers began to exhibit something like a distinct character. But, separated from all these by an impassable gulf, were the conquered inhabitants of the country, the dark-skinned woolly-haired people, the *varvara*, who became barbarians for the Greeks and Latins. On these the Aryan warriors, minstrels, and husbandmen looked down with infinite contempt. They were simply beasts in human form, designated by the common name Sudra, which, as not being a Sanskrit word, Professor Max Duncker regards as "the original name of the ancient population of the Ganges, just as the tribes of the Vindhya have to this day the common name of Gondas." Already, therefore, there were two sharply defined masses, facing each other, the Aryans and the Sudras; and among the former were three classes, still, it is true, in somewhat shadowy outline, but tending more and more to the same sharpness of distinction and the same exclusiveness on the score of difference of blood. The Kshatriyas were undoubtedly the dominant body in the State, and the kings invariably belonged to their class; but the minstrels or Brahmans started on their career of aggrandizement with the immense advantage conferred by their religious position. "Without them, without the accurate knowledge of the old songs and customs of sacrifice, as given by Manu and Pururavas, without precise acquaintance with the prayers in which efficacy rested, efficient sacrifices would not be offered." When this belief was once fairly implanted in the minds of the people, the revolution which ensured the ascendancy of the Brahmans was substantially achieved; but the one momentous fact—a fact seldom seen, and still more rarely understood—is that it was a revolution, not a mere growth or development. The Brahmans had to destroy as well as to build up, and this process of revolution has been traced by Professor Max Duncker in a manner deserving the highest praise. It may be safely said that he has neglected none of the factors in a very intricate problem; but he has treated with special success the crowning invention of Brahman, the world-soul, first impersonal, then personal and conscious—the impersonal Brahman being the great ocean into which the whole Cosmos shall in the end be absorbed. Brahman is the one source of holiness; it is the holiness which manifests itself in the personal Brahman, and below the latter are the deities which the ancient Aryan had worshipped as supreme. In this subordination the priestly order found more than the framework of their system:—

If the Holy nourishes, leads, and constrains the gods, it is mightier than the gods, the mightiest deity, and therefore the most divine. If the Holy constrains the gods and at the same time gives them power, in it alone the special power of the gods can rest, in so far as it is in them. The greater the portion they have in it, the mightier are they. The self-concentrated Holy is the mightiest power, the essence of all gods, the Deity itself. Thus the oneness of nature in the gods, their unity and the connexion between them, was discovered. Yet this Holy, or Brahman, was not in heaven only, but also existed on earth; it lived in the holy acts and in those who performed them; in the ritual and prayer; in meditation and heavenward elevation of spirit; in the priests. Thus there stood upon the earth a holy and an unholy world in opposition to each other; the world of the priests and of the laity, the holy order of the priests, and the unholy orders of the Kshatriyas, Vaisyas, and Sudras.

Then came the procession of the three Aryan castes and of the outcast Sudras from the mouth, the arms, the thighs, and feet of Brahman, the condition of each being irrevocably fixed by a great intervening gulf, which could never be passed except by the process of new births succeeding to the present life. The painful renewal of existence would never cease until all creatures returned into Brahman; but it was possible for the Kshatriya in a future stage to reappear on earth as a Brahman, for a Vaisya to become a Kshatriya, and so forth, if he had sufficiently fought with and overcome desire—that is, separated himself from the sensuous world and all its filthy concerns. But the process was almost endless, and the pain and suffering involved in it overwhelming. The burden was found to be too great for the Aryan, even after he had been enervated by the heat of the Indian sun. Buddhism was a protest against this oppression, against this prolonged torment, not against the object for which the Brahmans professed

to be working. In both systems the outward world, and therefore also the human body, were absolutely and intensely evil; but Buddha saw that, according to the Brahman doctrine, absorption in Brahman was the reward of meditation, and that this reward might be won by Kshatryas, Vaisyas, and Sudras, in the course of a long series of transmigration. If it were so, the eternal distinction of the castes was a fiction; and, therefore, the gates which lead to the blessed extinction might be thrown open to all. But in both systems the extinction, as Professor Max Duncker rightly insists, was identical:—

The question was really the same, whether the soul was destroyed when in the one case it was plunged in Brahman, and in the other annihilated by Nirvana, whether those who sought after liberation had to become masters of their senses like the Brahmans, or to release themselves from sensation and the body and existence like Buddha.

But for human suffering the Brahman cared little or nothing; Buddha cared a great deal. He had a gospel to preach to all, a gospel of final annihilation, which would enable the penitent to say:—

I have entered upon the way of Nirvana. On this way are dried up the ocean of blood and of tears, the mountains of human bones are broken through, and the song of death is annihilated. He who follows this path without faltering escapes from pain, from mutability, from the wheel of revolution, from regeneration. He can boast, "I have done my duty; I have annihilated existence for myself; I cannot be born again; I am free; I shall see no other existence after this."

Towards this happy absorption men may be helped on by the kindness, the sympathy, the tenderness of their fellows; and in this sense the religion of Buddha may be called a religion of love. But this is, as Professor Max Duncker is careful to point out, quite another thing from the love of the Christian. It is not the highest commandment for its own sake alone, and because Love is eternal in God. With Buddha it is simply the means of alleviating the sorrows of the world and the wretchedness of mankind, and when its work is done, it will come to its natural end. In logical strictness there is no room for caste; and the removal of caste left room for the free play of natural kindness. So, too, as the Buddhist philosophy which extinguished instead of conquering desire lost its charm, the distinctions of caste naturally revived, and the whole work of the enlightened sage was swept away, except in so far as the goal toward which the Brahman still strives is indistinguishable from the annihilation in which Buddha saw the one escape from the unceasing torments of existence. Professor Max Duncker's chapters on this new reformation are full of instruction and full of interest, and with those which precede them form a complete history, political as well as religious, of the Aryan tribes in India.

PROSPER MÉRIMÉE.*

THE author of *Colomba* and *Carmen* must be allowed to have been, on the whole, singularly fortunate in the matter of posthumous autobiographic revelations. There is no need to mention a contrary instance which is fresh in the minds of all English readers, and no need to do more than allude to the singularly unfortunate fate in this respect of Mérimée's chief rival, Sainte-Beuve. The difference between the two greatest literary supporters of the Second Empire (for the mistake of considering Théophile Gautier as an Imperialist has been sufficiently proved) was harshly put in a well-known saying—"Mérimée était gentil-homme; Sainte-Beuve ne l'était pas." Something of the same distinction, however, inevitably suggests itself to the reader of the posthumous works of the two men. It is not that there is not plenty of crudity and plenty of indiscretion in Mérimée's letters to his friends, male and female, known and unknown. But the indiscretion and the crudity are such as are, on the whole, fairly covered by the fact that the documents in which they occur were never intended for publication, and that they are, in fact, merely so much written fireside conversation—chronicles, so to speak, of the smoking-room and the drawn cloth, if cloths were drawn now. On the other hand, every fresh volume of Mérimée's correspondence, while it adds to the evidences of his capacity as a writer of easy, polished French, takes away from the somewhat evil character which he laboriously managed to establish for himself in his lifetime—that of a mere cynic, *l'épicurean*. He was certainly a cynic, and he was certainly an Epicurean, in the conventional sense of the two terms. But a man who succeeded in causing disinterested attachment in so many different persons can hardly have been a cynic in the offensive sense, and a man who showed so much disinterested affection in return can hardly be counted as a mere Epicurean.

The last batch of Mérimée's correspondence, that recently edited by Mr. Fagan of the British Museum, and containing letters to the late Antonio Panizzi, perhaps promises rather more than it performs in undertaking to give an important portrait of "Mérimée politique," and an important collection of side lights on the policy of Napoleon III. It is true that the Librarian of the British Museum and the senator-antiquary-man-of-letters did serve in an odd kind of way as a side channel of intercourse between the ruler of France and the Government of England. Panizzi—conspirator as he had been, and fervent Italian patriot as he continued to be—was a Bonapartist, if not an Imperialist, and he was on intimate terms with many men of eminence in England,

notably with Mr. Gladstone. Mérimée was really attached to the Empress Eugénie in spite of her clerical proclivities, and seems to have regarded Napoleon himself as at least a barrier against *la stupidité égalitaire*, as Gautier put it. But nothing of any real political importance is to be found in these letters, unless it be a fresh illustration of the tortuous, vacillating, unsystematic, and unforeseeing policy of the Third Empire. In politics, as in other things, what is unintelligible before it is found out to be merely unintelligent is sometimes taken to be profound, and it is matter of history that this was the case with Napoleon III. More really interesting is the glimpse given of Mérimée's own political state. With all respect to the memory of a great writer and, in a way, a great intellect, this attitude must be admitted to be nearly as muddled as one as that of his master. Mérimée does not appear to have had the positive dislike to politics which Gautier had, and which sometimes made the latter get up from table and leave the room when the subject was introduced. His great reading, moreover, and his acute intellect must have made him thoroughly acquainted with history, the necessary vestibule of politics. But he seems always to have contented himself with a mere haphazard bundle of prejudices on general points and of improvised pinions on particular ones. He disliked democracy heartily, and with a keen sense of its dangers and faults; but he disliked the chimera of clericalism quite as much. Giant People with newly-developed fangs and newly-sharpened claws, and Giant Pope toothless and claw-clipped, were almost the same to him—a state of mind which, in vulgar parlance, may be said to argue a certain insensibility to the time of day. His anti-clericalism sometimes leads him into most ludicrous little outbursts of spite. He is applied to by Mr. Newton for some necessary testimonial, on an occasion not stated, addressed to the Archbishop of Canterbury. "Je ne connais pas l'archevêque," he writes, "et j'ai pour tous les gens de sa robe le goût que vous savez. Voici cependant une lettre officielle dont vous ferez l'usage qu'il vous plaira. Demandez à sa grandeur sa bénédiction apostolique. J'aimerais mieux une de ses vieilles bouteilles légères par quelque bonne dévotion." We certainly have plenty of "bonnes dévotions" in England, but it would surprise us very much to learn that any one of them has recently replenished the cellars of Lambeth. Yet Mérimée knew England as no true Frenchman in a hundred knows it, and would have been the first to laugh at the resuscitation under inappropriate circumstances of a hackneyed sneer in any other case. The same defect pervades his political utterances, acute as they often are. He cannot get out of his head the fixed idea that English policy is egotistical, and French policy a generous policy of ideas, though not one single war under the Empire was undertaken without a direct eye to the main chance, and though the wildest believer in our egotism can hardly accuse us of having acted for our interests in 1859, in 1862, in 1864, or in 1866. Nevertheless, there are incidental utterances of remarkable acuteness, and occasional anecdotes or reported sayings worth preservation. The sharpest of the latter is a *mot* of M. Thouvenel's on the Eastern question, to the effect that Turks, Greeks, and Slavs were only "trois couches de fumier superposées," and that, toss the heap about as you might, there would always be "du fumier" at the top.

If, however, there is no very great amount of pasture to be found here for the politician and historical student, the same cannot be said as regards the lover of literary biography. Mérimée is revealed in these volumes hardly less fully than in the famous *Incommensurables* letters, though from a slightly different point of view. He made the acquaintance of Sir Antonio Panizzi accidentally by a suggestion that the Museum should buy some manuscripts from Stendhal's sister, who was in reduced circumstances. This was in 1850, and for twenty years the correspondence continued, chiefly interrupted by the numerous visits which Mérimée paid to his friend for the purpose of enjoying "the excellent salt beef of the British Museum." It was a grief and pain to many loyal Britons to find some time ago that Mérimée was not always satisfied with English fare, and that (of all unexpected places) they did not give him enough to eat at Oxford. It is still more grievous to find in this book an insinuation against a personage of so exalted a rank at this moment that we can only recur to the modest practice of the last century. Mérimée refers contemptuously to the dinners of the present *Prima M-n-str* as consisting of "beaucoup d'argenterie et de l'agneau." But then he was never fair to Mr. Gladstone, who was associated in his memory with deans, family prayers, and other frippery of *l'enfance*. Creature comforts are frequently mentioned in these letters. The salt beef perpetually recurs, and indeed it is not a French institution. The two friends interchange criticisms and discoveries of wines suitable for dyspeptic stomachs, and when Mérimée establishes himself at Cannes, the mutton thereof comes in for frequent mention. Books, of course, have their fair share, and archæology is not neglected, while absolute gossip and chit-chat fill a good many pages, the humours of Biarritz in especial coming in for notice. One of these latter recalls a little too much that period of the Second Empire when the ambition of everybody was, as the Prince Titiane has it, to *gobichonner*, and when, on the equally veracious authority of M. Octave Feuillet, ladies ran races up and down drawing-rooms with their feet in their husbands' hats. To punish a lady visitor for outrageous admiration of Count Bismarck by dressing up a lay figure in the likeness of that statesman, and ensconcing it in her bed, is a practical joke, not indeed unpardonable, but rather worthy of a festive regiment after mess, or a bevy of undergraduates, than of the inhabitants of a palace. However, the *Gelächter* of the Second Empire,

* Prosper Mérimée.—*Lettres à Panizzi*. 2 vols. Paris: Calmann-Lévy. 1881.

which once seemed *unauslichliche*, is *längst erloschen*, and there is something more pathetic than unpleasant in even its wildest outbursts.

We do not know whether any more of Mérimée's correspondence is likely to see the light; but this last instalment may be said to complete his mental and literary portrait. M. Taine has said that Mérimée was "the dupe of his own mistrust." These neat little sayings have been ingeniously compared to Mr. Browning's "sharp spurt of a lighted match," which they resemble about equally in sound and in quantity of illumination. There is some truth in this particular *mot*, of course. Mérimée was an affectionate person, who was afraid of not being cynical enough until he became too cynical—a person of wide and varied sympathies and interests, who, for fear of getting too much engrossed, gave himself the appearance of feeling neither interest nor sympathy. But we have no reason to doubt that any loss of enjoyment of the frank and childlike sort which he may have experienced in consequence of this attitude was made up to him by an increase of enjoyment in what Dean Gainsford used to call "surveying his fellow-creatures from a proper elevation." He says somewhere in these letters that he always thought mankind were fools, and becomes more sure of it every year he lives. A man who says this kind of thing feels a distinct thrill of satisfaction as he says it, and has felt several such thrills every time he makes the reflection which thus finds words. Of course, if such a temperament reaches the point of real misanthropy, it becomes self-tormenting instead of self-sufficing. But Mérimée's never did this. He was fond of his friends and his *inconnues*, and his friends and his *inconnues* were fond of him. He knew perfectly well that all good judges regarded him as one of the best writers of French living, and that, with the exception of Gautier, whose style was too different to imply rivalry, the specially French domain of the *nouvelles* knew no master save himself. He enjoyed his medals, his ruins, his books, his salt beef at the British Museum, his "little wine of Champagne, red and not foaming," which, like Talbot Twyden's, but more truly, was "not a heavy wine, not an expensive wine, but had a bouquet and a pureness," and was good for "les maux de l'estomac." Admirable as his definitely literary work is, it is apt to leave a somewhat uncomfortable impression, because the author is in full-dress or undress, and never forgets that he appears in the character of a cynic. In these and the other volumes of letters which have been published this exaggeration disappears; and we have not, indeed, a sentimentalist, but a very human, and not at all doggish, person, whom we already know to have produced excellent literature, and whom we now know to be an eminently good fellow. The only charge that has been brought, not without some foundation, against the Mérimée of the letters is the somewhat Rabelaisian character of passages here and there, a fault which we shall not attempt to excuse, but which, as has been already remarked, becomes much less when it is remembered that publication was far from the author's thoughts. The same may be said of the allusions to living persons, for the publication of which the writer is, of course, not responsible at all, and which are offensive solely because of their publication.

BUDDHIST BIRTH STORIES.*

AMONG the various contributions to the comparative study of folk-lore, Mr. Rhys Davids's translation of the Jātakas must hold a foremost place. The inquiry into the relationship of the popular tales of different nations is one of the most fascinating branches of modern research. It is still in its infancy, and the student is always encouraged by the hope that he may strike out some fresh line or establish some unexpected connexion. No subject provides a more promising field for the exercise of individual fancy and controversial hypothesis. And, beyond this, the subject-matter is of itself interesting apart from its scientific aspect. It is in the nature of popular tales to possess those qualities of dry humour and practical wisdom which must always commend them to the general mass of mankind, and without which they could not have held their place in the traditions of the household; and they commonly offer even higher elements of interest in the side lights they throw on the social life of the people. The history of popular stories may often be obscure, and may demand learning and labour to unravel, but it can never be wearisome or wanting in human interest. As a picture of the early stages of a people's life, and the fullest and most authoritative picture to be obtained, a collection of folk-lore has a value and a charm almost unrivalled in literature. It is such a collection that Professor Fausbøll, the finest Pāli scholar in Europe, is now editing, and that Mr. Rhys Davids, who has already made himself a name among students of Buddhism, is translating for Messrs. Trübner's valuable "Oriental Series." The first volume alone of the translation has as yet appeared, containing only forty out of the five hundred and fifty Birth Stories; but it presents enough of genuine importance to enable us to appreciate the gain to the science of folk-lore which must accrue from the completion of the work. We can recognize even in this section the truth of the translator's statement that, "In the Jātakas we have a nearly complete picture, quite uncorrupted and unadulterated by European

intercourse, of the social life and customs and popular beliefs of the common people of Aryan tribes closely related to ourselves, just as they were passing through the first stages of civilization."

As an early social photograph, the Buddhist Birth Stories possess a peculiar interest and value; and this interest is increased when they are regarded as the progenitors of many or most of the household tales which are still current in Europe. To students of Mr. Tylor or Mr. Spencer, or to those who have listened to Mr. Halston's delightful *causeries*, it is superfluous to say that the whole tendency of folk-lore research has been more and more in the direction of an Eastern origin for our popular tales, and that India is generally admitted to be the birthplace of most of the stories which delighted our childhood, and still delight the healthier and less sophisticated among our children. The natural but humiliating result of the advance of knowledge is the discovery that even our household tales are borrowed, and that the familiar anecdotes of rustic tradition, pointed with wise saws and adorned with wholesome morals, have travelled to us through many lands, and boast a pedigree of many stages. There was a time when we were content in the belief that the irreproachable La Fontaine himself invented the ingenious and instructive tales which improved at once our morals and our French; and when our eyes were partly opened and we read *Æsop* in the original, we rejoiced to think we were enjoying the very stories which beguiled the weary hours of Socrates's imprisonment. Those innocent days are now past, and we are constrained to admit—if not the rash assertion that there never was such a person as *Æsop*, unless a pog on which stories were hung can be called a person—at least the fact that the fables ascribed to *Æsop* have nothing to do with the venerable storyteller on whom they are fathered. "*Æsop's Fables*" are the creation, or rather the translation, of the middle ages. An old Hindu story-book, which we possess only in a mediæval form, found its way westward by way of old Persian or Pahlavi to Syriac and Arabic. The Arabic version was known as *Kalila and Dimna*, after the names of two jackals who play conspicuous parts in the first story of the collection, and the Arabian translator ascribed the work to the sage Bidpai. From this version, which became a prime favourite among the story-loving Arabs, and thus came into contact with Europe, Greek, Hebrew, and Latin translations were made, from the eleventh to the end of the thirteenth century, and the "*Fables of Bidpai*" soon became famous over all Europe, and were done into Spanish, German, Italian, French, and English, whilst a Persian version, the *Anvār-i Suhaili* is a standard text-book among Indian students. The second Latin version bore the title "*Alter Æsopus*," or "the New *Æsop*" (not "*Æsop the Old*," as Mr. Rhys Davids by some extraordinary confusion renders it), and thus testifies to the tendency of compilers of story-books to connect their works with *Æsop* the typical story-teller; as a compiler of a jest-book naturally christens it after Joe Miller. Now the collection of moral tales commonly known as "*Æsop's Fables*" is the work of a Byzantine monk of the fourteenth century, named Planudes; and thus the Latin version of *Kalila and Dimna* had been done half a century before "*Æsop's Fables*" came into the world. Many of Planudes's tales have been traced to Indian sources, and the remainder will probably be identified in the progress of the investigation. Enough, however, is already proved to enable us to assert that *Æsop's fables*, as we now have them, are not Greek at all, but are the descendants of Indian folk-stories of very great antiquity.

A similar conclusion is to be drawn with regard to the Barlaam and Josaphat romance, which is ascribed to St. John Damascene, has been the source of much religious edification to centuries of pious souls, and has been so completely received into the bosom of the Latin Church that the names of "the holy saints Barlaam and Josaphat, of India, on the borders of Persia, whose wonderful acts Saint John of Damascus has described," have been duly canonized, and have their proper day, November 27th, as any one may read in the Martyrologium of Cardinal Baronius, authorized by Pope Sixtus V. for general use in the Catholic world, at page 177 of the 1873 edition, endorsed by his Holiness Pius IX. The Greek Church in this particular is not behind its Western rival, but assigns a different day to "the holy Josaph son of Abener, King of India," and omits Barlaam. Now Josaphat or Josaph is nothing but Bodisat, the title of the chrysalis-Buddha before he has become Buddha, and the religious romance of St. John of Damascus is simply a Greek version of the life of Gotama. It was Professor Max Müller "who first pointed out the strange fact—almost incredible were it not for the completeness of the evidence—that Gotama the Buddha, under the name of St. Josaphat, is now officially recognized and honoured and worshipped throughout the whole of Roman Catholic Christendom as a Christian saint!" And just as Barlaam and Josaphat is an offshoot of Buddhist literature, so the wide series of tales represented by the *Pancha Tantra*, *Kalila and Dimna*, or "*Fables of Bidpai*," "*Æsop's Fables*," and La Fontaine's, are mainly traceable not only to an Indian, but to a Buddhist, source. "*Sindbad the Sailor*" and other tales of the *Arabian Nights* have their birth in Buddhist Jātakas; Boccaccio, Chaucer, Gower, and Spenser have been indebted to this treasure-house of Buddhist folk-lore; even the three caskets and the pound of flesh in the *Merchant of Venice* are ideas found in this wonderful old story-book. These are but a few examples of the manner in which the household tales of Europe can be traced back to Buddhist India, as Professor Max Müller has shown in the charming lecture on the Migration of Fables published in the *Contemporary Review* of 1870. Mr. Rhys Davids has made no sparing

* *Buddhist Birth Stories; or, Jātaka Tales, the oldest collection of Folk-lore extant, being the Jātakathavāṇanā.* For the first time edited in the original Pāli by V. Fausbøll, and translated by T. W. Rhys Davids. Translation: Vol. 1. (Trübner's Oriental Series.) London. 1880.

use of this lecture in his learned, though somewhat disjoined, "Introduction"; and no one can study this interesting essay without being convinced that the Jātakas, or Buddhist Birth Stories, which he is translating are certainly one of the chief sources of European folk-lore, and form probably the oldest and largest collection of popular tales in existence.

The fables included in the Jātaka book undoubtedly belong to the oldest Indian folk-lore; but they are universally ascribed by the commentators to Buddha himself. There is nothing improbable in this attribution, if it be understood merely in the sense in which the Homeric legends are ascribed to Homer. From all we know of the life of Gotama, it was quite consonant with his method to make use of the household stories of his people in order to bring home to them the practical bearing of his moral teaching. A great deal of the Birth Stories, however, probably grew up after his death, and it is beyond doubt that in its present form the Jātaka book represents a long process of accretion. Each story consists of several parts, and these are by no means of equal antiquity. The real Birth Story, or "Story of the Past," is introduced by a "Story of the Present," and is followed by a conclusion. The introductory story tells some episode of Buddha's life; how some disciple acted in such and such a way, and how Buddha accounted for it by the fact that the same person in a previous existence had behaved in a precisely analogous manner. The Birth Story itself is the account of this passage in the previous birth, put into the mouth of Buddha, who generally utters a stanza pointing the moral. The conclusion "establishes the connexion" between the two episodes and identifies the characters. The introductory "Story of the Present" is clearly later than the "story of the past," and is the work of the compiler or commentator; and the verses included in the latter (and sometimes in the former) are older in literary form than the stories, though the stories undoubtedly represent in substance popular fables which existed long before the verses were composed. The history of the book in India is at present obscure; but Mr. Rhys Davids gives the following outline of its probable development:—

From the facts as they stand at present it seems to be the most probable explanation of the rise of our Jātaka book to suppose that it was due to the religious faith of the Indian Buddhists of the third or fourth century B.C., who not only repeated a number of fables, parables, and stories ascribed to the Buddha, but gave them a peculiar sacredness and a special religious significance by identifying the best character in each with the Buddha himself in some previous birth. . . . When stories thus made sacred were popularly accepted among people so accustomed to literary activity as the early Buddhists, the natural consequence would be that the Jātakas should have been brought into a collection of some kind; and the probability of this having been done at a very early date is confirmed, firstly, by the tradition of the difference of opinion concerning a Jātaka book at the Council of Vesali (c. 350 B.C.); and, secondly, by the mention of a Jātaka book in the ninefold division of the Scriptures found in the Anguttara Nikaya, and in the Saddharma Puṇḍarika. To the compiler of this, or of some early collection, are probably to be ascribed the verses, which in some cases at least are later than the Stories. With regard to some of the Jātakas, among which certainly may be included those found in the Pāli Pitakas, there may well have been a tradition, more or less reliable, as to the time and the occasion at which they were supposed to have been uttered by the Buddha. These traditions will have given rise to the earliest introductory stories, in imitation of which the rest were afterwards invented; and these will then have been handed down as commentary on the Bible Stories, till they were finally made part of our present collection by its compiler in Ceylon. That (either through their later origin, or their having been much more modified in transmission) they represent a more modern point of view than the Birth Stories themselves will be patent to every reader. There is a freshness and simplicity about the "Stories of the Past" that is sadly wanting in the "Stories of the Present"; so much so, that the latter (and this is also true of the whole long Introduction containing the life of the Buddha) may be compared more accurately with mediæval "Legends of the Saints" than with such simple stories as "Æsop's Fables," which still bear a likeness to their forefathers, the "Stories of the Past." The Jātakas so constituted were carried to Ceylon in the Pāli language, when Buddhism was first introduced into that island (a date that is not quite certain, but may be taken provisionally as about 200 B.C.); and the whole was there translated into and preserved in the Singhalese language (except the verses, which were left untranslated) until the compilation in the fifth century A.D., and by an unknown author, of the Pāli Jātaka Book, the translation of which into English is commenced in this volume.

As an example of the general character of the stories in their several parts, and also of their bearing upon European collections of popular tales, we may notice the *Baka Jātaka* (No. 38) or "The Cruel Crane Outwitted," in which the case of two cheating tailors is told in the "Story of the Present"; the "Teacher," i.e. Buddha, thereupon remarks that this was not the first time the one rogue of a tailor had taken in the other, and tells the "Story of the Past" in which a crane who had treacherously devoured a pondful of fish is himself outwitted and killed by a crab whom he had tried to deceive like the fish. Then comes the moral stanza, uttered by the Bodisat, who had been looking on in the form of a Tree spirit:—

The villain, though exceeding clever,
Shall prosper not by his villainy.
He may win indeed, sharp-witted in deceit,
But only as the crane here from the crab.

And, finally, by way of conclusion, the Teacher "established the connexion and summed up the Jātaka by saying, "At that time he [the crane] was the Jetavana robe-maker, the crab was the country robe-maker, but the Genius of the Tree was I myself." This fable can be traced through a numerous progeny; it is found in the Arabic *Kabala* and *Dimna*, the Persian *Anvār-i Suhaili*, the Greek *Stephanites kai Ichneutes*, the French *Liore des Lumières* and *Cabinet des Fées*, in La Fontaine, the Arabian Nights, the *Pancha Tantra*, *Hitopadesa*, and many other collections of household

stories; but it is not included in the so-called *Æsop's Fables*. The moral it inculcates is of a well-worn type; but this is not observable with regard to all the series. On the contrary, as Mr. Rhys Davids has well pointed out, the Jātakas teach two special lessons which are not of a common order. One of them is the strong influence of inherited character, the central doctrine of Buddhism and a vital element in ethics; the other is the common nature of men and animals, which is illustrated by many anecdotes, and leads to frequent injunctions to kindness and sympathy with the brute creation, one of the most striking aspects of the Birth Stories.

A work so important as the Jātaka book deserves a good translator, and it will be allowed that Mr. Rhys Davids has thus far acquitted himself very satisfactorily. Of his Pāli scholarship there can be no doubt; and his English is, as a rule, simple, straightforward, and free from affectation; and if he shows a doubtful familiarity with Latin and Greek, it is not a matter of much consequence. He has tried to put the Jātakas into English which shall faithfully represent the tone of the original, and the endeavour has been as successful as the difficulty of the task allowed. The fault lies on the side of unnecessary colloquialism rather than of fine writing, and there are a good many vulgarisms that ought to have been expunged. As a whole, however, this translation of the Buddhist Birth Stories is ably performed, and its worth to students of folk-lore, and to all who care to win a glimpse into early Aryan life and manners, ought to secure it a wide popularity.

WILLIAM LAW.*

THERE was, some ten or twelve years back, in Worcester Cathedral a verger who, if he observed a stranger standing alone within the enclosure of Prince Arthur's mutilated tomb, would ask, as if in unconsciously audible meditation, "What would have been the consequences to English history if that young prince had not died?" Impatient hearers were apt to cut the verger's soliloquy short before he had entered on his hypothetical chronicle; but the speculative question, which he had probably picked up and appropriated, is one of a not uncommon type. From the nature of the case it admits of neither test nor solution, while the basis upon which all such speculation must rest is the more than questionable assumption that the course of public events may be determined by the hazard of the die upon individual lives. Upon this thesis the "affirmatur" and the "negatur" are characteristically maintained in the old ballad of "Chery Chace" by the Scottish and by the English King:—

"God have merci on his soll," said King Harry,
"Good Lord, yf thy will it be!"
I have a hondryth captayns in Ynglonde," he sayd,
"As good as ever was here:"
But Persé, and I brook my lyffe
Thy deth well quyte shall be."

In the "more modern" ballad the "one hundred captains" had grown to five.

Yet while the proposition, so stated, is confessedly foreign to national sentiment, its converse, in the influence of the course of public events in the determination of individual lives, is measurable in its range from the vaguest conjecture to the limits of approximate certainty, as in the case where the results of a general election may crown or disappoint the hopes of a great lawyer. And it is from such a point of view that a peculiar interest attaches to the life of William Law, so carefully and anxiously investigated and recorded by Mr. Overton, the ecclesiastical historian, in conjunction with Mr. Abbey, of England in the eighteenth century. As a religious biography Mr. Overton's work is not calculated, and was probably not intended, to meet a popular taste. Touching, as it does at various points, the almost contemporary biography of John Wesley, it brings out the more clearly in contrast the essential distinction between the two men and their respective careers. Wesley was personally before the world; Law, save by his writings, was absolutely hidden from it. Wesley's life and work were independent of political history, and, unless we may imagine an eighteenth-century Inquisition, must, under any circumstances, have been independent of it; Law's whole future had been staked from the first on the success of the Jacobite cause, and, if that cause had prospered, it is a reasonable conjecture that "the Sage of Putney" must have looked upon the Thames from the Middlesex shore opposite, even if its stream had not carried him onwards to Lambeth. Mr. Overton has described Law's life as it was, without entering upon any speculations such as this; but he has exhibited him as a born ruler of men, hampered in the range of his action by the restraints of a despotic conscience; dying, in obedience to its dictates, the domestic chaplain of two old ladies in a Northamptonshire village, just after the accession of a third Hanoverian sovereign had established the national tradition of the dynasty; and leaving behind him in the constitution of a local charity school a minute model of ecclesiastical administration at which, even in these days of Board Schools, the reader will scarcely be tempted to smile, because of the unintended mournfulness of suggestion as to the wider sphere denied to the energies of a mind and character which must have made its mark on public life.

Mr. Overton describes the subject of his biography as "Nonjuror

* William Law, Nonjuror and Mystic; Author of "A Serious Call"; a Sketch of his Life, Character, and Opinions. By J. H. Overton, M.A., Joint-Author of "The English Church in the Eighteenth Century." London: Longmans & Co. 1881.

and Mystic." The second phase of this description may be taken as the consequence of the first, the forced inaction of the non-juring clergyman giving an inward direction to all the current of his thought. His biographer repeatedly complains, perhaps with some show of reason, that it is not by his mystic writings, which may have been intellectually the greater works, but by his *Serious Call to a Devout and Holy Life* that the name of William Law has obtained a hold on Englishmen. It is due, no doubt, to this popular prejudice that the "Serious Call" is the only work of Law's to which Mr. Overton has allowed a place on his title-page. But the "Serious Call" was concerned with men's practical lives, and was written when the author was himself in some degree mixing with the life of the world as private tutor or "governor" to an undergraduate fellow-commoner at Cambridge, Edward Gibbon, the father of the historian. As to Law's academical position at this time, there is an obscurity which Mr. Overton has left without explanation.

William Law was the third son of a family residing at King's Cliffe, a large village or small market-town in Northamptonshire, where his father, a man of gentle blood, "was a grocer: but his social standing"—Mr. Overton writes in an amusingly apologetic tone, supported by a foot-note—"was different from that of an ordinary village tradesman in the present day." His stock-in-trade, and the capital invested in it, may very probably have differed as much from those of the "ordinary village tradesman" of our time as the requirements of their respective customers. The fine ladies might possibly have fancied a dish of tea at their country houses; and tea, in old Thomas Law's time, cost sixty shillings the pound. At any rate, after his eldest son had been amply provided for, there was a large house in King's Cliffe awaiting the inheritance of the third. William was born in 1686, and, entering Emmanuel College, Cambridge, as a Sizar in 1705, "he took his B.A. degree in 1708, was elected Fellow of his College and received Holy Orders in 1711, and took his M.A. in 1712." If the "Rules for my Future Conduct" were really, as there is no reason to doubt, drawn up by Law on his entering the University, his "education" must not only have been "very serious," but of a very high order. They are as admirably composed as they are thoughtful and devout; and, while they contain the germs of his subsequent mysticism, they are in entire keeping with the Puritan traditions of his college. But "the last four years of Queen Anne's reign (1710-1714) were marked by a vigorous revival of those doctrines which had led many conscientious men twenty years earlier to demur to the Revolution Settlement"; and the High Church and High Tory movement numbered Law among its most ardent disciples. His Puritan piety, like the Evangelical piety of a later date, had prepared the ground for a growth of religious and political opinions which almost seem to have pictured by anticipation an eminent life of our own day. Indeed, at various points in Mr. Overton's work the resemblance between Law and Cardinal Newman seems to come out as strikingly as elsewhere the utterances of the Sage of Putney recall, though in different matter, those of the Sage of Cheltenham. In "fierceness" the junior Fellow of Emmanuel left little for the junior Fellow of Oriel to desire. He "made a speech at the Trypos" in which "he asked the laity . . . whether, when the children of Israel had made the golden calf the object of their worship, they ought to keep to their God *de facto*, or return to their God *de jure*? whether the sun shines when it is in an eclipse? whether a converted son be not better than a converted successor? with other things of the same nature." For this speech Law was degraded "from M.A. to a Soph," as John Byrom writes in his journal; Hearne, who omits the "Soph," adding that "the Lord Treasurer" (Harley) "was zealous for his degradation." Mr. Overton has not intimated whether he was ever reinstated as M.A., although Law seems always to have retained the title. Possibly he made his peace with the Lord Treasurer by a vehement sermon in defence of the Peace of Utrecht which he preached three months afterwards, on July 7th, 1713, and in which the Queen and the Ministry are sufficiently magnified. It is the only sermon of Law's which is extant, and "it is," Mr. Overton remarks, "as unspiritual a composition as one can well conceive." The preacher appears as M.A. on the title-page.

But a few months later "the best of Queens" was dead, and Law was called on to make his choice between his principles and his prospects. He had no hesitation, and in a manly and touching letter to his eldest brother he announces his decision not to take the oath either of abjuration or of allegiance. He lost his Fellowship, and with it all possibility of preferment. John Byrom, his future disciple and a concealed Jacobite, had a less troublesome conscience. He desired, and obtained, a Fellowship of Trinity:—"How is it likely this young fellow should ever come among us? I saw a book in our library where his birth is made very suspicious." During the whole reign of George I. the personal life of Law is in obscurity. He was almost certainly in London, and there is a tradition that he was "a curate there"; perhaps based on such clerical or pastoral duties as would involve no concession of principle, since he is not likely ever to have "prayed for King George." But early in this period, in 1717, his "Three Letters to the Bishop of Bangor" (Hoadly) "raised him at once to the highest rank of writers in controversial divinity," while in 1726 his book on "Christian Perfection" showed him as an equally powerful writer on matters of practical religion. For such a man, if his time came, there could have been no doubt as to the worldly future. And from a single passage in Byrom's Diary we may infer, not unfairly, that he was biding his time, depressed with hope deferred

as years went by, perhaps really open to the charge of "roughness and morose and sour behaviour" which in 1738 John Wesley brought against him. Byrom writes:—

Aug. 1, 1739.—To Somerset Gardens. Mr. Law there. He said that they talked of the Pretender's coming; and he talked in his favour. [Then follows a sentence in cipher.] And as we came away, gave him (the father) a most excellent character for experience, wisdom, piety. I said that I saw him once. He said, Where? I said, At A. He said, Did you kiss hands? I said, Yes, and parted. He said that Mr. Morden and Clutton had been with him: that there should not be so much talk about such matters: that he loved a man of taciturnity.

On a later occasion Byrom relates that in the course of a somewhat impatient conversation with himself Law said "that when our king came over I should go into orders." At the period of these conversations he was in a very unsettled condition. The refuge of his earlier home in the reign of George II. was taken from him; that of the home of his closing years was not as yet prepared. In 1727 he appears as settled in the house of Mr. Gibbon, the grandfather of the historian, at Putney, as private tutor to his son, domestic chaplain and spiritual director in the family, and the centre of a small body of personal friends and of a large number of chance visitors who looked on him as a sage and prophet, or came to him for advice. Ten years later Mr. Gibbon died; and it was not till 1740 that Law retired to his own house at King's Cliffe, where in 1743 he was joined by the two wealthy ladies who looked up to him as their spiritual father, Miss Heester Gibbon, sister of his pupil, and Mrs. Hutcheson, a widow whose husband on his deathbed had entrusted her to Law's care. Both survived him, and both were buried near his grave. Both, under his direction, spent the whole of their then large united fortune of about 3,000*l.* a year in the exercise of the strange and unbounded almsgiving which Mr. Overton has described in detail, and which even then provoked adverse criticism as charity misapplied. Law died in 1761; and it was during the later years of his life that his earlier character of nonjuror and High Church controversialist merged in that of the "mystic divine." If the view in which we have regarded his life be true, the time for which he had watched and waited had never come; he had ceased to look outward across the sea, and would turn his gaze inward and upward for the rest.

Mr. Overton's chapters on mysticism are as valuable in relation to the religious thought as his biography of William Law is in relation to the Church history of the eighteenth century. The very name of mysticism is, indeed, in its popular acceptation misleading. The mystics, or, as they were commonly styled at the time with an unconscious exactness of expression, the enthusiasts, were not a sect, nor were their tenets a creed. They were men who presented in extreme, perhaps at times in disproportionate prominence, a habit of mind without which a creed cannot be realized. Mr. Overton has indicated with admirable clearness their leading thought in its two divisions: "Omnia videre in Deo: Deum videre in omnibus." The High Churchman and the Methodist in the last century, Evangelical devotion and the Oxford movement in our own, meet in this twofold canon and its developments. Of its second portion a well known and striking illustration is found in Keble's hymn for Septuagesima, "There is a book who runs away read," while the same thought underlies Newman's early doctrine of angelic ministration, and is familiar in almost every page of Isaac Williams's poetry. Upon the first portion of the rule and its expression, the following passage supplies material for an obvious and remarkable comparison. Law's acquaintance with the writings of Eckart, the mystic of the fourteenth century, "is shown, among other ways, by one of Byrom's mystic poems, which were nothing else than Law in verse. One of the prettiest of these odd compositions is entitled "The Soul's Tendency towards its True Centre," and commences:—

Stones towards the earth descend:
Rivers to the ocean roll:
Every motion has some end:
What is thine, beloved soul?
Mine is where my Saviour is:
There with Him I hope to dwell:
Jesus is the central bliss:
Love the force that doth impel.

A passage from Eckart is quoted as the source from which these ideas spring, "The fire rises up to heaven," &c., and Mr. Overton asks, "If Byrom versified Law, had not Law read Eckart?" In every important collection of Evangelical hymns forty or fifty years ago will be found one beginning "Rise, my soul, and stretch thy wings." It was widely popular, and the echoes of its vigorous marching tune, Dartford, may stir some older memories even now. Its second stanza runs:—

Rivers to the ocean run,
Nor stay in all their course:
Fire, ascending, seeks the sun,
Both speed them to their source;
So my soul, derived from God,
(*al.*) a soul that's born of God }
Faints to view His glorious face,
Forward [*al.* upward] tends to His abode,
To rest in His embrace.

The authorship of this hymn is attributed by Lord Selborne to Robert Seagrave; in the *Congregational Hymn Book to Cennick*; and by the late Mr. Josiah Pratt to Madan. The two last-named versions show the common variation from the text in the *Book of Praise*, which is not without significance; but it is observable that all the three names are those of contemporaries of Law, and that only one of them is mentioned by Mr. Overton in connexion

with him, while that one, Madan, finds his place among "Law's Opponents." The "mystic" doctrine shows at least a wide standing-ground, with nothing of sectarian limitation. The eccentricities of expression and thought in Law's later years are the natural consequences of the isolation of his life; but his singular dialectical skill and his power of dealing with men are as plainly shown on the little field of the dispute about the charities of King's Cliffe as they had been in the earlier times of the Hoadly controversy. The influence which he exercised on his own and succeeding generations by his writings is known; and behind the veil of his obscurity we seem to trace the outline of another range of influence which might have been his had the events of his time drawn him from the seclusion of the Putney home where he drinks his modest "two glasses of red wine after dinner—one, Church and King; the other, All Friends."

FLOWER O' THE BROOM.*

THE principles which govern the selection of titles for modern novels have apparently undergone a considerable revolution during recent years. Formerly the title of a book was generally explained before the reader had got past the first few chapters; and, under any circumstances, there was no difficulty in connecting it with some leading character or chain of events. It is not impossible that this fashion may come round again some day. Future generations may be favoured with another series of "Robbers," "Smugglers," "Pirates," and other homely titles suggestive of the avocations of everyday life; but, in the meantime, the great art of finding an effective name for a novel appears to consist in making its connexion with the narrative as far-fetched as possible. In the book before us we are not vouchsafed the smallest clue to the title until near the end of the third volume, and then only in an incidental sort of way, which suggests the idea that the question was reserved till the last moment, and the title *Flower o' the Broom* pitched upon simply because it would sound as well as any other.

The principal character in the story is Elizabeth Milner, and forty or fifty years ago this would have been its inevitable title. Elizabeth Milner is the daughter of a soft-hearted and apparently soft-headed young doctor, who, during his temporary attendance upon a ladies' school, falls in love with Miss Eleanor Turton, a young lady boarder, possessed of "a lovely face, a passably good figure, a conveniently hard heart, and an ardent craving for liberty." The latter highly creditable impulse the young doctor proceeds to gratify by promptly eloping with her to London, where they are married in one of the old City churches. But, as might have been expected, the result is not particularly satisfactory. Mrs. Milner soon finds that existence on the narrow means afforded by the income of an obscure medical man, who is wholly dependent upon his profession, but has no regular practice, is not likely to be a perfect realization of her boarding-school dreams, and the inevitable reaction follows. She gets tired of her husband, who is "wildly, insanely jealous," and "flies into furies over her coquettish airs." After six months of this sort of thing, he can stand it no longer, and gets an engagement as doctor on board a P. and O. steamer. During his absence a daughter is born, whose advent if anything rather increases Mrs. Milner's dislike to her husband, especially as the infant's eyes are supposed to resemble his; and she takes to a religious flirtation with the incumbent of a ritualistic church. Just, however, as she is beginning to be talked about, her husband returns, and in a transport of fury hurries her and his infant daughter on board his ship, where they live together for three years, when he catches a fever from one of the sailors, and dies. We were not previously aware that the regulations of the P. and O., or any other line of passenger steamers, admitted of the presence of the female relatives of the officers on board their ships. Having thus disposed of her first venture, Mrs. Milner becomes companion to old Lady Bonham, of Hershaw, who is destined to become one of the principal characters in the story. Here she succeeds in captivating the Rev. Mr. Devereux, an amiable young clergyman of good family, and apparently with some small means of his own, with whom she settles down in the quiet living of Thornton, in the fens. Mr. Devereux is very much in love with his wife, and puts up with her whims and fancies with most exemplary meekness; while she, apart from a certain sense of gratitude to one who has relieved her from a position of dependence, is as fond of him as her selfish nature will allow; so that, on the whole, they may be considered a fairly affectionate and harmonious couple.

At the beginning of the story the Devereuxs have been settled at Thornton for some years, and are blessed with a numerous family. Elizabeth Milner is now grown up, and appears in the character of nursery governess to the Devereux children, and general household drudge. It is an understood thing that she is not supposed to care for society or amusement, but to exist simply for the purpose of making herself useful to others. Her mother has, in fact, never got over her prejudice to her eldest daughter on account of her supposed resemblance to the late Mr. Milner, and continues to exercise a petty tyranny over her, which Elizabeth bears with an evenness of temper that is one of the leading traits in her character. Her stepfather, however, is sensible enough to see what a treasure they have got in their midst, and, when allowed

to do so, treats her with the utmost kindness and consideration. Elizabeth on her part entirely accepts her position; and, when not occupied in superintending the education or darning the stockings of the younger children, is perfectly happy in looking after the poor of the village, who are one and all devoted to her. The principal local dignitary is Mr. Grenvil of Vennover who is himself a paralytic old man, and is soon put on one side, but who has a son, Brooke Grenvil, who is destined to enact the part of hero of the story. Brooke Grenvil is a good-looking young athlete, who lives by strict hygienic rules, and has rowed stroke in the Oxford Eight. He and Elizabeth have always lived more or less in each other's society, and are on the easy footing of old friends. But, although nothing in the way of love-making has ever gone on between them, it would appear that Brooke has always looked upon Elizabeth as, in a general way, his ideal of all that is perfect in woman, and one day, actuated by a sudden impulse, he proposes to her offhand. Elizabeth, however, having always been brought up with the fixed idea that the somewhat impaired fortunes of Vennover must be renovated by a marriage with an heiress, is very properly surprised and shocked at such an ill-advised proceeding on Brooke's part, and mildly, but firmly, refuses him. Apparently, however, her lover's disappointment at his rejection is not lasting, for within a week afterwards he is desperately in love with Narcissa Brooke, a young lady who has come to stay at Vennover with her grandmother, Lady Bonham of Hershaw, the old lady with whom Mrs. Devereux had formerly lived as companion. This young person is the source of great anxiety to her grandmother, a most unpleasant old woman, the great object of whose declining years, when not occupied in saying sharp things to those around her, is to prevent a marriage between her granddaughter and her late husband's nephew, Anthony Bonham. There is, however, a sort of tacit understanding between the two that they are to be married some day, although Lady Bonham's views on the subject will not admit of an open engagement. Anthony Bonham is as much in love with Narcissa as an indolent and self-indulgent disposition will allow him to be; but Narcissa, it need hardly be said, is really as indifferent to him as she is to every one else. For she was

satiated with adoration, often weary of her life, worldly to the very core of her heart, apt to wonder vaguely why she had been born and born a beauty, yet resenting any infringement of her claims to supremacy with inconsistent anger, superbly tolerant of rivals, cold, beautiful, yet passionate, a dangerous woman to love, a still more dangerous woman to cross.

When to this description are added such items as

a slim rounded body, having a peculiar serpentine undulating grace. . . . Hair as intensely dark as a moonless midnight grew low on a broad forehead, under which eyes as dark kept a strange outlook on life. A fathomless face, with its mouth so red and finely cut at the corners, and its severely oval contour,

we know in a moment the sort of person with whom we have to deal. In fact, we are disposed to welcome her as an old friend, and our mind reverts instinctively to that interesting series of heroines which has culminated in the "Lady Regula Baddun" of *Strampore*.

After a somewhat prolonged stay at Vennover, during which Elizabeth and Narcissa become friends and Brooke Grenvil becomes more and more hopelessly in love with the latter, the scene is changed to Hershaw. Narcissa returns thither with her grandmother, and Elizabeth is also carried off to act as that hardened old lady's companion, as her mother had done before her. Here we find Anthony Bonham, who, in spite of a cold and nonchalant exterior, is evidently very fond of Narcissa; and the flirtation between them is renewed in a necessarily furtive manner under the watchful eye of Lady Bonham, who, there is every reason to suspect, has got Elizabeth to Hershaw as much with the idea of distracting Anthony's attention from Narcissa as of being her own personal companion. Brooke Grenvil also turns up from time to time, more in love than ever, and much to the annoyance of Anthony, who upbraids Narcissa with encouraging him. And, as he eventually detects her in the act of impressing "a long, firm kiss" upon Brooke's upturned face while he is engaged in taking a stone out of her horse's foot, it may perhaps be said that he was not altogether without some grounds of complaint. He does not, however, become particularly excited over it, and he and Narcissa discuss the incident in the calmest possible manner. Shortly afterwards Lady Bonham, whose death has been anxiously expected for some time, is seized with what is evidently her last attack, and on her death-bed endeavours to make Anthony promise her not to marry Narcissa. This, however, he respectfully, but firmly, declines to do; and the old lady's last hours are in consequence neither peaceful nor edifying. When the will is opened it is found that, by an ingenious arrangement, they are both practically disinherited in the event of their marrying each other; whereas, if Narcissa marries Brooke Grenvil, she is to have 30,000*l.* She does not hesitate to let Anthony understand that she means to do this, and they part for good. In the meantime, an unfortunate event has occurred at Thornton. It has been hinted earlier in the narrative that Elizabeth is not likely to be able to satisfactorily fulfil her destiny until her amiable stepfather shall be dead, and she herself thrown upon the world. He is accordingly drowned one afternoon while out sea-fishing with his youngest daughter Dolly. Were it not evident that the immolation of this estimable divine is essential to the development of the story, we should be inclined to look upon it as a wilful waste

* *Flower o' the Broom*. A Novel. By the Author of "Rare Pale Margaret." London: Sampson Low & Co. 1881.

of life; but, as it is, we are compelled to accept it as inevitable, and can only regret that two such amiable characters should be so abruptly removed from the scene. Elizabeth now becomes parish schoolmistress at Thornton, and the remainder of the family go to live at Southsea, where we are quite content to leave them, as they do not materially interfere with the rest of the story, the course of which readers may discover for themselves.

As we have already observed, the explanation of the title *Flower o' the Broom* only appears towards the end of the story. Narcissa meets Elizabeth in a lane, where the latter has been having a confidential interview with Brooke, to whom she has just given a sprig of broom as a token that she is not angry with him. She has gathered another sprig in an absent sort of way, when Narcissa comes round the corner, and catching her in the act exhibits an emotion which the circumstances would at first hardly appear to justify. It seems, however, that there is a popular saying, of which Elizabeth, although she has lived all her life among country people, displays a lamentable ignorance, that the first person one meets after plucking a sprig of broom dies within the year. We do not desire to discuss the origin or infallibility of this tradition; but anyhow, Narcissa does die within the year, so on this occasion, at least, the fidelity of the legend is vindicated.

The chief fault in the story is a certain incompleteness about the principal characters. That of Narcissa, as we have already pointed out, is now somewhat hackneyed; and as there is not a single redeeming point about her, it is impossible to get up any interest in such a soulless, passionless creature. That of old Lady Bonham is cleverly drawn. But she is quite unnecessarily bad; and although she has a very natural distrust of her granddaughter, whom she appreciates at her proper value, it does not appear that she has ever taken the smallest trouble to make her otherwise, or even wished her to be so, and she has, therefore, only herself to blame for the result. And, although the character of Elizabeth Milner is more carefully worked up, and is in fact a pleasing and natural sketch of an honest and true-hearted English girl, without any direct pretensions to good looks, but possessing the attractions of a good figure, good health, and a sweet temper, there is yet a want of force about it which at times renders even her manifold perfections a little monotonous. Of the male characters, Brooke Grenvil, who may be considered the hero, is unsatisfactory, and wanting in finish; and few lady readers will, we think, have much sympathy with him. The best character in the story is that of Anthony Bonham, the lazy and indifferent, yet honourable and self-controlled, rival of Brooke Grenvil. But even he is somewhat disappointing, and he is dismissed just as we are beginning to feel an interest in him. On the whole, however, the authoress—for that the story is written by a lady there can be no reasonable doubt—has succeeded in producing a very readable book, and one that contrasts favourably with much of the light literature with which the public is at present deluged. Such as it is, the story is gracefully told, and there are not wanting indications of considerable descriptive power. The quiet, peaceful scenery of the Fen country is depicted with a touch that shows a close and intelligent study of nature; and nothing could be prettier in its way than the description of the home life at the quiet country rectory. With a little more force and finish about the characters, and something more of a plot, *Flower o' the Broom* might have taken a high place among recent novels; but even as it is, and although it cannot be said to be a story of absorbing interest, it is a book which we think will be read with pleasure by many, and which certainly none will throw down with the uncomfortable feeling—too common, unfortunately, in many cases—that a useful hour has been wasted in a vain attempt to unravel an impossible plot, or to wade through a succession of equally impossible situations.

MINOR NOTICES.

A LIVELY volume was to be expected from the author of that capital story *Ula*, and expectation is not disappointed in Mr. Eden's latest production, called *Found, though Lost* (1). This is, in the true sense of the word, a romance, the author of which could without much difficulty have spun out his materials into the regulation three volumes. In abjuring padding and long screeds of "word-painting," and confining himself to one volume of about three hundred pages, Mr. Eden has deserved well of his readers, who will surely appreciate the considerable merits of his book all the more for its leaving them at the end in a state the opposite of satiety. The story opens in the time of the Carlist war of 1854, and deals chiefly with the fortunes of Xavier Warrington, at that time a mere boy, son of an English father and a Spanish mother, and those of Mariquita de Guzman, adopted daughter of the Conde de Mendoza, with whom in due time Xavier falls in love, and to whom he is betrothed. Mariquita is one of the richest heiresses in Spain, and the Minister of the day looks with an unfavourable eye on her proposed marriage with an Englishman and a heretic. Here, as the experienced novel-reader will discern, is matter for much complication, and the author has made the best use of the opportunities just suggested. The story is from first to last an exciting one, and is told with ease, vigour, and picturesqueness. We do not propose to reveal any of the complications of the plot, but we may note that they give the

author occasion for describing not only parts of Spain and its life, but also Manila and, among other things, an earthquake which takes place there. We may note, in conclusion, that a Romany band plays an important part in the story, and that Mr. Eden has had the commendable courage to describe the gipsy, not of conventional fiction, but of actual life. One fault we have to find with Mr. Eden's style, and that lies in his making his Spaniards, who talk for the most part in English (which of course stands for Spanish), employ every now and then a Spanish word or phrase; which is manifestly unreasonable. A greater fault than this, however, might be excused by the brightness and freshness of the story.

Out of some notes, not originally intended for publication, taken during his stay in Chili (2), Mr. Boyd has constructed an amusing and interesting volume, which appears at an appropriate time. His own description of the volume, that it "may serve to while away an idle hour, and to give some information about a country little known in England," is certainly more than borne out by the pages which follow it. The book is indeed full of matter, and is not the less attractive for being composed in the easy style which is natural to a traveller's jottings. We cannot here do more than call attention to a few of the more prominent points of a volume which is throughout interesting. Mr. Boyd has some very curious things to tell us about the coal-mining of Chili. "When the mining laws of Chili were framed in the beginning of the century, coal was not known, or if known to exist, was not worked. The mining regulations do not extend, therefore, to this mineral, which belongs to the owner of the soil." But, as it happens, the greater part of the coal seams worked as yet lies under the bed of the Pacific Ocean, for which there is no owner. The early workers consequently asked no leave or license from any one, but with human inconsistency regarded those who followed them as intruders, and resorted to all kinds of means, more foul than fair, for preventing their opening out new collieries. It was related to Mr. Boyd that a proprietor whose mine lay on the dip side of the adjoining one, and consequently could be, and was, inundated at the pleasure of the owner of the latter, was in the habit, if his pumps were unequal to getting rid of all the water sent in, of sending imploring messages to his neighbour to let in no more water for a day or two. "The evil of this want of system is the direct loss to the nation of so much coal wasted in the shape of pillars or ribs to protect the workings of each colliery against its neighbour." It is curious to note that, when Chilian coal was first raised, it was considered unsuitable for locomotive driving purposes, and for years English coal was employed on the railways, at a great cost, until a mechanical engineer, by a simple contrivance, which is not described, in the grate of the locomotive, enabled the Chilian coal to be used. Mr. Boyd appears to have been, on the whole, not particularly comfortable at the *establecimiento* at Lebu, at which he stayed when visiting the coal-mines; but there were some compensations for greasy *canelas* and dried-up meat, in fair Bordeaux, good wine of the country, exquisite coffee, and good cigars. Towards the end of the book there are some interesting and spirited passages concerning some incidents of the war, and especially the kind of *sen-duel* between the *Huascar* and the *Cochrane*. We may conclude our notice by quoting a "tip" of Mr. Boyd's which may be useful to those mountaineers who share our dislike of snow-masks and veils. "When we had reached a certain altitude [on the volcano of Renegado], we found the snow lying deep on the ground, and frozen on the surface, in spite of a vivid summer sun. The rays of the latter were very trying on account of the reflection from the snow; to guard against this we resorted to the usual custom in the Cordillera, of blacking the eyelids and cheekbones with burnt cork."

Of the other party to the war touched on by Mr. Boyd an account is given by Mr. Duffield in his *Prospects of Peru* (3). The author begins by giving a brief and clear account of some of the circumstances which led to the war, and goes on to contrast the Peru of modern times with the Peru of the Golden Age. He gives a very interesting and succinct account of the conditions of life under the sway of the Incas, conditions which in many respects might be termed ideal, and quotes a very significant passage from the confession attached to the will of Mancio Sierra Lejesama, one of the first Spanish conquerors of Peru, which confession was made in Ouzco on the 13th of September, 1589, before Gerónimo Sanchez de Quesada, notary public, and has been preserved by Espinosa in his *People's Dictionary*. "His Catholic Majesty," said Lejesama, "shall understand that the said Incas governed these kingdoms in such wise that in them all there was no thief or vicious person, nor an idle man, nor a bad or an adulterous woman, nor were there allowed among them people of evil lives; men had their honest and profitable occupations, in all that pertained to mountain or mine, to the field, the forest, or the home, as in everything of use all was governed and divided after such sort that each one knew and held to his own without another interfering therewith; nor were lawsuits known among them; the affairs of war, although not few, interfered not with those of traffic, nor yet did these conflict with those of seed-time and harvest, or with other matters whatsoever. . . . And by the permission of God our Lord we were able to subject this kingdom of many people, and riches, and lords, making servants of them as now we see. I trust that His Majesty understands the motive which moves me

to this relation, that it is for the purging of my conscience by this confession of my guilt. . . . So great is the dissoluteness now among these natives, and their offences against God, owing to the evil example we have set them in all things, that from doing nothing bad they have all, or nearly all, been converted in our day into a people who can do nothing good." The little volume contains, amongst other matters of interest, a careful and curious account of the present state of the guano deposits, and of the prospects of Peruvian industry in the future.

Mr. Foster's work (4) must represent an unusual amount of pains and care. Its genealogies are fuller than any that we have seen in other works of the kind; and an interesting feature of the book is found in the pages headed "Baronetage—Chaos," where, as may be guessed from this title, doubtful titles and pedigrees are assembled together, and may afford much entertainment to people who delight in puzzles. It would be ridiculous to expect every detail to be up to date in a volume of this calibre; but it seems a pity that there should be no mention, so far as we can discover, of the lately-recognized De Longueil Barony. The heraldic drawings are particularly good.

It would be superfluous to dwell upon the well-known merits of *Debrett's Illustrated House of Commons and Judicial Bench* (5), edited by Dr. Mair.

The eleventh annual volume has been issued of that useful work the *City of London Directory* (6), the whole of which has been revised and corrected to within a few hours of going to press.

An Unlucky Lie (7) is an ingenious, and not unamusing, little story of complication and practically harmless intrigue, the ingenuity of which is somewhat marred by the author's having chosen to lay the scene in Germany and to deal with German life, in his treatment of which he displays an odd mixture of knowledge and ignorance. Mouser is not a likely German name; nor is it probable that a German girl should keep up a flirtation and correspondence with a young man named Banne before her marriage. Nor, again, is it desirable to make a German finish up a speech delivered in English which stands for German with *Auf Wiedersehen*. Again, the attempt at humour is often too palpably forced and unsuccessful. Yet, with all its faults, the story has some freshness of invention.

No one better qualified than Professor Fleeming Jenkin could well have been chosen to perform the task of preparing a little treatise (8), the avowed object of which is "to induce beginners to regard the facts of electricity and magnetism not only as interesting or curious in themselves, but as the groundwork of a science, or rather as part of the groundwork of the general science of physics." It could perhaps be wished that the type of the book were as clear as Mr. Jenkin's style.

Mr. Gibson's little volume (9) is one of the many and significant results of the universal competitive examination system, with Peacock's dislike of which we are not alone in sympathizing. Mr. Gibson's book has at least the merit of meeting in a careful way a want the creation of which may possibly be regretted.

Mr. Brandram has abridged, by means of paraphrasing several passages, "certain selected plays of Shakespeare" (10), with the object of "introducing the plays for the first time to the notice of young readers in a manner at once appropriate and interesting." The plays might perhaps have been left to introduce themselves.

Readers acquainted with the first volume of Messrs. Stewart and Long's *Plutarch* (11) will welcome the appearance of the second, which is marked by the same care and industry that belonged to its predecessor.

The introduction of dry plates has probably stimulated amateur photography in no small degree, and the many people who now take up photography as water-colour painting used to be taken up—probably in most cases with better results as regards photography—will find Mr. Wheeler's (12) practical and exhaustive treatise an invaluable guide.

Mr. Loftie's name is warrant enough for the excellence of the unpretending little volume (13) lately issued by Mr. Stanford for the use of the traveller who finds himself for the first time in London, or, it may be added, for the resident in London who

knows nothing or little of the interests and attractions with which Mr. Loftie deals. Mr. Loftie's aim has been to provide his traveller with matter for a week's attention without overburdening him, and, it is perhaps needless to say, that he has attained his object. The historical part of the volume, in which the author, as he points out, differs from some authorities in vogue, is particularly interesting.

A third edition has appeared of Messrs. Silver and Co.'s *Handbook to South Africa* (14).

A new edition has appeared of the late Mr. Clay's well-known book on *Whist* (15).

Winmore & Co. (16) is a curiously empty, conventional, and "day-after-the-fair" little story, the *motif* of which is supplied by the failures which can no longer be strictly called recent, of certain joint-stock banks. We have in it a prosperous father who has risen from a comparatively subordinate position, a daughter, a young curate in love with the daughter, and a selfish and smart young merchant half engaged to the daughter. It will not be difficult to guess what is made of these materials in a hundred and twenty small pages.

Mr. Jerrold (17), without incurring the least suspicion of being a fanatical vegetarian, has done good service to all people who are not fanatical meat-devourers in pointing out in his latest volume the way both to grow and to cook a number of vegetables which are at present too much neglected. It is curious that the influence of French cookery should have availed as little as it has yet done to introduce in this country the habit of serving artfully-cooked dishes of vegetables by themselves, and not as a mere adjunct to meat. We may hope that Mr. Jerrold's volume will do something to encourage a practice which, entirely apart from any vegetarian theories, is calculated to improve the too frequently stupid and conventional *menu* of an English dinner-party.

The interest of Mr. Hulme's book (18) concerning Marlborough is more than purely local, inasmuch as it throws light upon various customs and manners of a bygone time. The writer has been careful in consulting his authorities, and the book may give entertainment not only to old and present Marlburians, but also to all people who care for such matters as we have above indicated. The illustrations are well designed and executed.

We note with pleasure the issue of a third and enlarged edition of Mr. Hunt's admirable and entertaining work, *Popular Romances of the West of England* (19), with Cruikshank's familiar and delightful illustrations.

What every Mother should Know is a thoroughly practical and sensible little treatise (20), which can be cordially recommended as completely fulfilling its purpose of telling mothers how much and how little they can safely take into their own hands, with the guidance here given them, before it is necessary or possible to obtain medical advice.

We can only note with pleasure, for the present at least, the appearance of a new and enlarged edition of Mr. Gilchrist's admirable *Life of Blake* (21), which was reviewed at length on its first appearance in these columns.

The Irish Presbyterian Mission Press has printed (Surat, 1880), and Sorabshaw Byramji Doctor has compiled, a *Student's Persian and English Dictionary*, "the design of which," to quote the preface, "is to provide students of Persian with a dictionary of portable size. It is mainly intended for students in High Schools and Colleges, who have long felt the want of a cheap and useful work of reference." The compiler then acknowledges his obligation to some well-known dictionaries, which he mentions by name. On looking through the work, we find that he has for the first three letters made a clumsy selection from Johnson's *Persian and Arabic Dictionary*, after which a simpler method seems to have occurred to him. He has apparently taken Professor Palmer's small and portable Dictionary, published by Messrs. Trübner and Co., and printed it without acknowledgment, but with a good many errors and omissions.

(14) *S. W. Silver and Co.'s Handbook to South Africa*. Third Edition. Revised and corrected to Present Date. London: S. W. Silver & Co.

(15) *Laws of Short Whist, and a Treatise on the Game*. By James Clay. New and revised Edition. London: De La Rue & Co.

(16) *Winmore & Co.: a Tale of the Great Bank Failure*. London: Marshall Japp & Co.

(17) *Our Kitchen Garden; the Plants we Grow and How we Cook them*. By Tom Jerrold, Author of "The Garden that Paid the Rent," &c. London: Chatto & Windus.

(18) *The Town, College, and Neighbourhood of Marlborough*. By F. E. Hulme, F.L.S., F.S.A. Illustrated. London: Stanford.

(19) *Popular Romances of the West of England*. Collected and edited by Robert Hunt, F.R.S. With Illustrations by George Cruikshank. Third Edition, revised and enlarged. London: Chatto & Windus.

(20) *A Manual of What every Mother should Know*. By Edward Ellis, M.D. London: J. & A. Churchill. Melbourne and Victoria: Robertson. Christchurch, New Zealand: Simpson.

(21) *Life of William Blake; with Selections from his Poems and other Writings*. By Alexander Gilchrist. New and enlarged Edition, with additional Letters and Memoir of the Author. 2 vols. London: Macmillan.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

(4) *The Peerage, Baronetage, and Knightage of the British Empire for 1881*. By Joseph Foster. London: Nichols & Sons. For the Compiler.

(5) *Debrett's Illustrated House of Commons and the Judicial Bench, 1881*. Compiled and edited by R. H. Mair, LL.D. London: Dean & Son.

(6) *The City of London Directory for 1881*. London: W. H. and L. Collingridge.

(7) *An Unlucky Lie*. By Athol A. Johnstone. London: Newman & Co.

(8) *Manuals of Elementary Science.—Electricity*. By Fleeming Jenkin, F.R.S. London: Society for Promoting Christian Knowledge. New York: Pott, Young, & Co.

(9) *The Preliminary Army Examination made Easy: a Complete Guide to Self-Preparation for the Above*. By John Gibson, M.A. London: Stanford.

(10) *Shakespeare*. Certain selected Plays abridged for the use of the young. By Samuel Brandram. London: Smith, Elder, & Co.

(11) *Plutarch's Lives*. Translated from the Greek. By Aubrey Stewart, M.A., and the late George Long, M.A. 4 vols. Vol. II. London: Bell & Sons.

(12) *Practical Photography; being the Science and Art of Photography developed for Amateurs and Beginners*. Illustrated. By O. E. Wheeler. London: "Bazaar" Office.

(13) *Tourist's Guide Through London*. By W. J. Loftie, F.S.A. With Map and Plans. London: Stanford.

THE SATURDAY REVIEW

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 1,328, APRIL 9, 1881:

The Land Bill.
 Lord Beaconsfield's Illinois. Russian Reform.
 The Budget. France and Tunis. Church Patronage. Turkey and Greece.
 Lectors of Obedience. The New Mint.
 The Extraordinary Papal Jubilee.
 The Advantages of Democracy. Questions Left Out.
 The University Boat Race. The Earthquake at Chios. Railway Outrages.
 The Drain of Gold to New York. The Spring Exhibitions.
 Recent Music.
 Turkish Armenia and Eastern Asia Minor.
 The Practical Fisherman. Braemar. Duncker's History of Antiquity—Vol. IV.
 Prosper Mérimée. Buddhist Birth Stories. William Law.
 Flower of the Broom. Minor Notices.

CONTENTS OF No. 1,327, APRIL 2, 1881:

The Transvaal—Turkey and Greece—The *Freiheit* Prosecution—The Thames River
 Bill—Central Asian Affairs—County Mayo—Our Ironclad Soldiers—Russia—
 Local Government.
 Old English Church Windows—Pollard-Triangles—Comacina—Fires in Theatres—The
 Recent Litter Case—Archbishops on Archbishops—The Basingstoke Brawl—The
 National Gallery—The Franco-American Draft Resolutions—The Theatre.
 Anthropology—A Child of Nature—Salisbury's Dryden—Redhouse's Menavi-
 science and Slingshot—Japp's German Life and Literature—Texts, Translations,
 and Classical Aids—In Luck's Way—French Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

**DORR'S GREAT WORKS, "CHRIST LEAVING THE
 TABERNACLE," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE
 PHARAOH,"** each 43 by 22 feet, by "Dream of Ulster's Wife," "Christian Martyrs," &c.,
 at the DORR GALLERY, 35 New Bond Street. Daily, Ten to Six. Is.

**THE ANNUAL SPRING EXHIBITION of High-class
 PICTURES by BRITISH and FOREIGN ARTISTS,** including Professor LUDWIG
 CARL MEYER's picture, "An Engagement outside Cairo," is NOW OPEN, at ARTHUR
 TOWELL & SONS' GALLERY, 5 Haymarket. Admission, Is.

**FRENCH GALLERY, 120 Pall Mall.—The TWENTY-
 FIFTH ANNUAL EXHIBITION of PICTURES by Artists of the Continental
 Schools (including Portraits of the Right Hon. W. E. Gladstone, Prince Bismarck, Count
 Moltke, Dr. Dingeldey, and other works by Franz Landeck), is NOW OPEN. Admission, Is.**

**DECORATIVE ART EXHIBITION, to OPEN in May, at
 the NEW GALLERY (500 feet long), 103 NEW BOND STREET, under the
 patronage of H.R.H. Princess LOUISE, Marchioness of Lorne, and over Sixty Noblemen and
 Gentlemen, and conducted by a Committee of Artists, Writers on Art, &c. The Exhibition
 will include Decorative Paintings, the Arts and Sculpture; Works of Art in the Precious and
 other Metals, Pottery, Porcelain, Enamels, Glass, Carvings, Mooses, and other Inlays; Art
 Furniture, House Decoration, Embroidery; Tapestry, Textiles, &c. &c. Applications for
 space should at once be made to the Director, Mr. T. J. GULLICK, a large portion of the space
 being already applied for. The Committee will allot the space according to merit, but where
 merit is equal preference will be given to the earlier application.**

**ROYAL LITERARY FUND.—The NINETY-SECOND
 ANNIVERSARY DINNER will take place in Willis's Rooms, on Wednesday,
 May 4, at 6.30 for 7 precisely.
 His Excellency the Hon. JAMES RUSSELL LOWELL, United States Minister,
 in the Chair.**

Second List of Stewards.

John Dard, Esq.
 Rev. W. F. Bateman, M.A.
 Dr. L. and Beale, M.A., F.R.S.
 J. P. Buchanan, Esq., Q.C.
 George Buxton, Esq.
 William Blackwood, Esq.
 Rev. Dr. Haile, Esq.
 Henry A. Briggs, Esq., M.A.
 J. Jemmett Browne, Esq.
 H. C. Boulenger, Esq.
 Walter H. Cassels, Esq.
 John T. Cusack, Esq., Q.C.
 Robert Dyer, Esq.
 Joseph Ellis, Esq.
 John Evans, Esq., F.R.S., D.C.L.
 Robert Freeman, Esq.
 Thomas Dixon Galpin, Esq.
 George Godwin, Esq., F.R.S.
 John Henry Girdle, Esq.
 W. J. Hopkin, Esq.
 Thomas Hughes, Esq., Q.C.
 Henry Irving, Esq.
 Louis J. Jennings, Esq.
 Blanchard Jerrold, Esq.
 Frederick Locker, Esq.
 George H. Longman, Esq.

The Third List of Stewards will be published next week. Tickets, six each, may be obtained
 from the Stewards and from the Secretary.
 7 Adelphi Terrace, W.C. OCTAVIAN BLEWITT, Secretary.

STATISTICAL SOCIETY.
 The next ORDINARY MEETING of the present Session will be held on Tuesday,
 the 12th instant, at the Society's Rooms, King's College Entrance, Strand, W.C., London, when a
 Paper will be read, on "The Methods of Electing Representatives," by H. H. DROOP, Esq.
 The Chair will be taken at 7.15 p.m.

**CRYSTAL PALACE COMPANY'S SCHOOL OF
 GARDENING and PRACTICAL FLORICULTURE.—Principal—Mr. EDWARD
 MILNER, Div. 1, Landseape Gardening, Chief Instructor, Mr. EDWARD MILNER. This
 School is designed to afford students of the Art of Landseape Gardening an opportunity of
 entering the profession by a scientific mastery of its details, acquirement from practical instruction.
 It is also intended to present similar tuition to gentlemen who are likely to be the owners, the
 conservators, or the managers of great estates, or who desire to cultivate artistic and natural
 taste, as a means of enhancing the value as well as the pleasure derived from the possession of
 land. A further purpose of the Directors is to utilize the exceptional capabilities of the
 Crystal Palace to this end under the most favourable conditions. Div. II, Practical Gardening
 and Floriculture. Chief Instructor, Mr. W. G. HEAD. This Division of the School is designed
 (a) For the educational training or preparation of young men intending to be Professional
 Gardeners or Nurserymen; (b) For the tuition by Special Lectures and Demonstrations of
 Students or Amateurs in the practical application of the Science of Botany in Gardening, and
 particularly Floriculture. Students will be received from May 1. Full Prospectus in the
 Office of the School, in the Library, Dyasian Court, or of the undersigned.**

F. K. J. SHENTON,
 Superintendent of the School of Art, Science, and Literature.

**GUYS HOSPITAL MEDICAL SCHOOL.—The SUMMER
 SESSION will commence on Monday, May 2. The Hospital contains one Bed, and
 includes special apartments for Diseases of the Eye, Ear, Skin, &c. Classes are held in the
 Hospital for Students preparing for the Examinations of the University of London, and other
 Examining Boards. For Prospectus, and further information with reference to Classes,
 Scholarships, &c., apply to the DEAN, Guy's Hospital, S.E.**

UNIVERSITY COLLEGE, NOTTINGHAM.

The Town Council of Nottingham have resolved to appoint FOUR PROFESSORS, as

ONE PROFESSOR, who shall undertake one or more of the following subjects—Classics,
 Literature, History, Political Philosophy, Moral Science; and
 THREE PROFESSORS, who shall undertake one or more of the following subjects—
 Mathematics (including Theoretical and Applied Mechanics), Physics, Chemistry, Physiology,
 Biology, Geology.

The work of the College will be divided into Four Departments, whose arrangement will
 depend, to some extent, on the subjects undertaken by the Professors elected, but it is intended
 that the three scientific departments shall severally comprehend:

1. Mathematics and Mechanics,
2. Chemistry,
3. Natural Science.

and that the subject of Physics shall be placed as a subject of principal importance in one or
 other of those departments.

Applicants are invited to specify the subjects which they would be prepared to undertake.
 Applications for the above appointments to be addressed to the Town Clerk, Municipal Office,
 Nottingham, on or before the 7th day of May next. Particulars of salaries, duties, and conditions will be sent upon application to the Town Clerk.

Candidates are especially requested to abstain from canvassing.

SAM. GEO. JOHNSON, Town Clerk.

Municipal Office, Nottingham, March 22, 1881.

**THE Council of Firth College, Sheffield, intend to appoint a
 PRINCIPAL, who shall also be Professor either in the Literary or in the Mechanical
 Department of the College.**

These Departments will comprehend respectively the following subjects:
 1. Classics, History, Literature, Political Economy, Moral Science.
 2. Mathematics, Mechanics, Engineering, Geology, Physics.

Applicants are requested to state in which of these Departments they would be prepared to
 act as Professor, and which of the Subjects in that Department they would be prepared to
 undertake.

The salary of the said Principal will be £200 per annum, with Half the Fees of his own
 Classes.

The Council will only make the appointment in event of suitable candidates presenting
 themselves.

Candidates are requested to give full particulars concerning age, experience, and any
 acknowledged distinctions they may have gained, together with any other information likely to
 affect the decision of the Council. The names of three gentlemen to whom references may be
 made should be given, but no testimonials need be sent unless they are asked for.

Applications to be sent on or before the 25th day of April next, to

ENSON DRURY, Registrar.

Firth College, Sheffield, March 21, 1881.

WARDENSHIP, TRINITY COLLEGE, GLENALMOND,

PERFISHURE.

The BISHOPS of the EPISCOPAL CHURCH in SCOTLAND desire to receive appli-
 cations, with Testimonials, from CLERGYMEN in Presbyter's orders for the above office, vacant
 by the death of the Rev. W. PRINCE ROBERTSON, D.D.

Full information as to Duties, Emolument, &c., may be had from the SECRETARY, No. 10,
 Blackfriars Street, Perth, to whom also all applications are to be sent not later than April 25.
 Perth, April 2, 1881.

ROYAL AGRICULTURAL COLLEGE, CIRENCESTER.

For the Science and Practice of Agriculture.

For Intending Land Owners and Occupiers, Land Agents, Surveyors, Colonists, &c.

The R.A.C. Farm, surrounding the College, is a mixed farm of about 200 Acres.

Chairman of Committee of Management—The Right Hon. the Earl of DUCIE.

For Prospectus of College and Farm, List of Scholarships, Prizes, Diplomas, &c., apply to

the PRINCIPAL.

**RADLEY COLLEGE SCHOLARSHIPS.—There will be an
 ELECTION to TWO SCHOLARSHIPS in June next: Sewell Scholarship, value £25,
 during any at the School, and a Junior Scholarship, value £10, for four years, to which an
 Exhibition of £50 may be added.**

Boys must have been under 11 on January 1, 1881. Examination begins June 15. For
 further particulars, apply to the WARDEN, Radley College, Abingdon.

CHELSEA COLLEGE.—TWELVE SCHOLARSHIPS.

Eight £40; Four £20. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Chelsea.

**CLIFTON COLLEGE CLASSICAL, MATHEMATICAL,
 and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition
 at Midsummer 1881, value from £25 to £50 a year, which may be increased from a special fund
 to £100 a year in cases of Scholars who require it.—Further particulars from the HEAD-MASTER,
 or SECRETARY, the College, Clifton, Bristol.**

ROSSALL SCHOOL.—ENTRANCE SCHOLARSHIPS.

Twelve to be competed for, June 28. Value from 70 Guineas (covering School Fees) to
 £20. Ages under 14 and 15½. Candidates may be examined at Rossall or Oxford, as preferred,
 in Classics or Mathematics.—Apply to Rev. the HEAD-MASTER, Rossall School, Fleetwood.

DOVER COLLEGE.

President—Earl GRANVILLE, K.G.

A Chapel and another new Boarding House have recently been completed. Each Boarder
 will now have a separate Bedroom.

The 2nd place for Cooper's Hill, entries for Woolwich, Sandhurst, &c., have been obtained
 during the last year.

Tuition from 15 to 18 Guineas. Board, £40 &c.

For particulars apply to the Rev. W. BELL, M.A., the Head-Master, or W. KNOCKER, Esq., the Honorary Secretary.

SOMERSETSHIRE COLLEGE, BATH.—Senior and Junior

Departments.—The Senior Department is divided into Classical and Modern sides. The

SUMMER TERM commences Saturday, April 30.—Applications for admission to be made to the

HEAD-MASTER.

ISLE of WIGHT PROPRIETARY COLLEGE, RYDE.

Head-Master—The Rev. Canon TEESDALE, M.A., New College, Oxford.

Assistant-Masters—R. WEIR, M.A., Trinity College, Cambridge; the Rev. J. G. CHERMIE, B.A., St. Catherine's College, Cambridge.

Modern Side—HAROLD R. BROWN, B.A., St. John's College, Cambridge.

Most healthy situation. Swimming and Gymnastics taught. Racquet and Five Courts.

Boarders received by the Head-Master and by Mr. H. WEIR.

NINETEEN: TERM commences April 20.

For terms apply to the HEAD-MASTER, Isle of Wight College, Ryde, or to the Secretary,

TRAYOR R. OWEN, Esq., The Cottage, Melville Street, Ryde.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-

CLASS SCHOOL for BOYS of GENTLEMEN. The religious training is upon

definite Church principles. Boys are educated with much care and thoroughness. They

receive individual teaching and help wherever needed. Candidates for Matriculation at the

Universities are specially prepared. Terms, £25 a year.—For references, prospectus, or any

further particulars, apply to the Warden, Rev. H. BOURN, D.C.L.

LANDAFF CATHEDRAL SCHOOL.

Pastor—Very Rev. C. J. VAUGHAN, D.D. Preparation for Eton, Harrow, &c., and

Public Examinations. Term begins May 15. Address Rev. the MASTER.

ABINGDON SCHOOL, Berks (Six miles from Oxford).—

This old Foundation (1863) has complete new buildings in fine position. University and

other Scholarships. Apply to Rev. E. SUMMERS, Head-Master.

STRATFORD-ON-AVON.—TRINITY COLLEGE SCHOOL.

The Master, RICHARD F. CURRY, M.A., is assisted by Seven Resident Graduate

Masters, who are paid in Modern Languages, Classical and Modern Greek, Junior

Department for Young Boys. Exhibition to the Universities. Large Playing Fields, Gym-

nasium, 1500 Courts, &c. Terms, 50 and 60 Guineas. Apply to the WARDEN.

CARSHALTON HOUSE SCHOOL, Surrey.—BOYS carefully

prepared for Civil and Military Examinations.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon.,

assisted by a Cambridge M.A. and competent Teachers, prepares PUPILS for the

Universities, Woolwich, Sandhurst, and all Competitive Examinations. A few Vacancies.

PREPARATION for SANDHURST, WOOLWICH, and**COOPER'S HILL.—Individual Tuition. Special attention paid to the speaking of****Modern Languages.—For terms, address Mr. B. VIDAL, Roseville, Farnham Grove, Surbiton,****Surrey.**

THE LAND BILL.

FEW candid inquirers will presume, after a week's study of the Irish Land Bill, to assert that they thoroughly understand it. The prominence which is given to the right of selling the tenant's interest seems to prove that the framers of the Bill, or perhaps its single author, appreciated but imperfectly the economic tendencies of the scheme. Mr. GLADSTONE was misled into the use of a fallacious argument by a hasty suggestion of the ATTORNEY-GENERAL. It required no WOODFALL descending the steps of a law bookcase to confirm the proposition that leasehold interests, for however short a term, are assignable by the ordinary law. In default of a stipulation to the contrary in his lease or agreement, every tenant for a year may sell the remainder of his term, but he acquires no claim to the goodwill of his holding, and the landlord may recover possession at the expiration of the term of notice. The purchaser of Irish tenant-right will either retain the land for fifteen years after the expiration of the current tenancy, or be entitled to compensation for disturbance. The vendor will, in spite of Mr. GLADSTONE's protestations eleven years ago, have acquired a share of the inheritance, which he may afterwards transmit to his assignee. In some cases the price will be equal to ten or even fifteen years' purchase of the fee simple; and, as Mr. GLADSTONE himself cannot create an estate out of nothing, the whole amount which may be sold will, where the Ulster custom has not previously prevailed, have been carved out of the property of the landlord. It is evident that the value of the tenant-right will vary inversely with the rent. A holding under a liberal landlord may be reasonably worth a considerable sum. It may be admitted that the owner is not robbed of the balance because he would not have exacted the full rent either from the actual occupier or from a successor; but he had the satisfaction of knowing that his tenants had a beneficial interest in their farms, dependent to a certain extent on their good conduct and on their ability to cultivate the land properly. The indefinite right of ownership is to be commuted into a saleable commodity gratuitously vested, not in the landlord, but in a stranger.

Not only Land League orators, but more plausible theorists on Irish land tenure, have habitually complained of rack-rents, or, in other words, of large and excessive charges imposed on the occupier of the soil. It is admitted that on the majority of estates, and especially on the largest properties, the rent falls far short of the amount which might have been exacted; but many cases remain in which the owner has probably in fixing the rent taken advantage of the necessities of the tenant. Mr. GLADSTONE's free sale will subject nearly the whole land in the country to a rack-rent, or, in other words, to the payment of its full annual value. The purchaser of tenant-right will have to pay the rent, which may perhaps be moderate, and also the interest of the purchase-money, which will be at least equal to the margin between the rent and the full annual value. The operation of the power of free sale on tenants who have not exercised their privilege has already been illustrated by a well-known result of the Act of 1870. The transfer of property, with or without, as Mr. GLADSTONE calmly observed, the consciousness of the legislator, gave the occupier possession of a marketable security on which loans could be raised. Vast sums have consequently been borrowed at usurious

interest from local money-lenders, whose annual claims are now added to those of the landlords. A loan at the ordinary rate of interest is not necessarily a loss; but, when money is borrowed at seven, eight, or ten per cent., the debtor is necessarily impoverished. There can be little doubt that when tenant-right is gratuitously conferred on every occupier, a large portion of the value will soon be pledged to usurers. It cannot be denied that, on the whole, the recipients of the boon will be enriched by the acquisition of sixty or eighty millions which now belong to the landlords; but the ultimate gain to the tenants will, for the reasons which have been given, fall far short of the losses suffered by the victims of spoliation.

The fixity of tenure which is indirectly created by the Bill will be subject to one nominal limitation. Eviction is still to be the remedy for non-payment of rent, after the amount due to the landlord has been abridged at the discretion of the Court which has to supply the deficiencies of legislation. It might be supposed from a perusal of the Bill that, when rents had once been adjusted to an arbitrary standard, there would be no further difficulty in recovering a just and undisputed debt. Mr. GLADSTONE and his colleagues in framing the measure have reckoned without the Land League, and have forgotten the successful intimidation with which they have lately had to deal. There is no reason to believe that the new rent will be more sacred than the old; and the agitators candidly give the Government warning that their hostility has not been bought off by concession. Mr. PARNELL, turning, after the manner of demagogues, a not improbable conjecture into a positive assertion, informs an excited mob that the comparative liberality, which he acknowledges as characteristic of the Bill, is wholly due to the obstruction which was offered to the measure for protecting life and property by himself and his colleagues. The historical or apocryphal series of twenty-two successive drafts corresponded to as many acts of submission to the dictates of the Land League. In February the occupier would, according to Mr. PARNELL, have abstracted from his landlord a mere fraction of the estate. In April he has, thanks to the PARNELLS, the BIGGARS, and the MCCARTHYs, established a claim to sixty or eighty millions, which may, by a repetition of the process, be greatly increased hereafter. It is unnecessary to inquire whether there is any kind of foundation for statements which are at least largely exaggerated. The provisions of the Bill are somewhat less outrageous than the conclusions of the BESSBOROUGH Commission, which were probably framed without reference to Parliamentary obstruction. Mr. PARNELL's threats are more worthy of consideration than his complacent bluster. He announces as a supplement to the comparatively modest proposals of the Government the intention of forcibly expropriating those whom he chooses to call bad landlords. If his words are to be literally interpreted, it might be supposed that a direct invitation to the populace to robbery and violence was one of the crimes against which the Protection Act was directed; but Mr. PARNELL is perhaps too formidable a person to be molested by a Liberal Government. At the instigation of himself and his fellows, large numbers of landowners have been plundered and threatened; and he now seems to profess a determination to continue the reign of anarchy, and the process of spoliation, when so-called fair rents have been assessed by the tribunals to be con-

stituted by the Bill. If there were any advantage in arguing with the enemies of society, it might be asked how, after the passing of the proposed Act, one landlord can be better than another. The whole body will be reduced to the condition of annuitants or incumbrancers with scarcely any power of exercising influence on the prosperity of their tenants. By the term bad landlords Mr. PAENELL means to designate all persons entitled to the receipt of rent. While he announces that, in punishment of their assumed guilt they are to be forcibly expropriated, he furnishes an instructive comment on the clauses of the Bill which make payment of rent a condition of tenure. If force only means legislative compulsion, it would be interesting to learn whether the expropriated owners are to receive compensation.

The litigation which will, under the provisions of the Bill, be inevitable and universal, may perhaps be necessary, on the fundamental assumption that the ownership and occupation of land are no longer to be regulated by contract. If the parties concerned are to be superseded in the regulation of their own affairs, some kind of judicial tribunal must be substituted. In the present case it may be admitted that the landlords or their representatives had, before the introduction of the Bill, for the most part assented to the theory of arbitration. The clause which provides for the deduction from the rent of the tenants' contingent right to compensation for disturbance seems so extravagantly unjust, that it may perhaps have been misunderstood. The vastness of the task which will be imposed on the Land Commission and the auxiliary Courts has perhaps not been fully appreciated. Some of the problems which will be submitted to the Commission are wholly insoluble; but probably it will not become necessary to examine whether a landlord is justified in rejecting as a tenant the assignee of a former occupier on the ground of bad character. In those instances in which the defect of character consists in notorious perpetration of murder, the prudent landlord will, for obvious reasons, decline to raise the objection. In the ordinary case of fixing the rent, the County Court of the Commission will soon fall into grooves which may or may not coincide with rules deduced from sound principle. In all cases in which judicial functions are exercised outside the range of positive law, the fortunes of litigants are regulated by "the length of the judge's foot." It will be in the power of the Commission, which need include but one actual or former judge, to increase or diminish by an indefinitely large percentage the remnant of property which is left by the Bill to Irish landowners. The Commissioners will probably be suspected, either by their own social equals or by the disaffected peasantry, of partiality and injustice. It will be well if they add extraordinary courage and independence to superhuman sagacity.

THE SUBMISSION OF THE TEKES.

THE supposed delight of saying "I told you so!" is limited to very small minds, and we do not profess the slightest pleasure at learning that the value of Sir CHARLES DILKE's statements as to the attitude of the new Czar towards Central Asia was correctly appraised in these columns. Lord HARTINGTON's saving caution sufficiently demonstrated the importance of that statement the night after it was made, and when it had served its turn. There is a well-known weapon, called a trade musket, which is, we believe, still manufactured by the constituents of Mr. CHAMBERLAIN in considerable numbers. The object of this weapon is not to go off with safety to the bearer, but to be sold; and, when it has been sold, the responsibility of the maker and seller for it is held to have entirely ceased. It has fulfilled the law of its being, and that is sufficient. In the same way, Sir CHARLES DILKE's statement, made, it is believed, on the authority of the German Foreign Office, that ALEXANDER III. had recalled General SKOBELFF, and had put a stop to the operations which General SKOBELFF had been conducting, had a very definite object—that is to say, the frustration of the arguments of the opponents of the Government and the confirmation of its supporters. We do not in the least suspect Sir CHARLES of inventing it or of asking the obliging German authority for it. It was sufficient that it lay in his way, and he used it with judgment and effect. Nor need we concern ourselves about the quarrel which the very remarkable

sequel of this incident has caused between the chief morning and the chief evening organ of the supporters of the Government. The *Daily News* is unquestionably justified in the interpretation it puts upon General SKOBELFF's despatches. The exact itinerary and whereabouts of that officer during last week are points of not the very slightest importance. The simple fact which is of importance is that, whereas he was said to be recalled more than three weeks ago, he has not been recalled at all, and that whereas it was announced that a stop was to be put to the operations in Central Asia, those operations have been allowed to mature in the complete submission and subjugation of the Turkomans of the Akhal Tekke district. This is certainly putting a stop to operations after a fashion; but it is the fashion of a man who, kneeling on his victim and promising to stop his operations, should give the final squeeze, and then, getting up, placidly announce that those operations were concluded.

There is, therefore, absolutely no room for controversy as to the facts of the case, as far as the value of the statement by Sir CHARLES DILKE is concerned. The Candahar division, quite innocently no doubt, was as much obtained by false pretences as the surrender of Potochefstroom, or rather much more so; for Commandant CRONJE simply withheld the truth, while the informant of Sir CHARLES DILKE's informant volunteered falsehood. There is nothing in this, as we have said, in the least calculated to surprise either those who know the antecedents of the question or those who know its present state. The actual annexation of the country up to Annau is indeed not announced, though it is implied; but if it does not follow, it would be, to say the least, surprising. That the Russian Government should, merely out of affection for the *beau jeu* of the English Government, surrender a hardly won, a long desired, and, in very obvious contingencies, a most valuable possession, would be one of those "magnificent" acts of which the benighted foreigner has not hitherto realized the wisdom, though he doubtless admires them very much when they are committed by others. If ALEXANDER III. commits it, he may be more than forgiven for the somewhat awkward use which he seems to have permitted to be made of his name to suit the purposes of Mr. GLADSTONE's Government. Sir CHARLES DILKE's statement must have reached St. Petersburg by telegraph early in the evening, and there would have been almost time for it to be contradicted before the House rose, while there would have been much more than time for a contradiction to have been made at the opening of the second night of the debate. This, however, would have been equivalent to taking the trade musket back—a thing which the true dealer never thinks of doing. He may, out of the abundance of his uprightness, caution the poor savage (just as Lord HARTINGTON did) that the gun is not exactly London proof; but this is more than enough, and a great deal more than can be fairly expected. It is perfectly possible for the savage, as for the English member of Parliament, to protect himself by a slight inquiry into facts, and if both prefer to accept the facts without inquiry, they must take the consequences. On the last night of the Session Mr. GLADSTONE announced, with a proud jocularity, his opinion that honourable members opposite him "must have had enough" on the occasion of the Afghan debate. In this particular little incident it might seem to a casual observer that, not merely Mr. GLADSTONE's opponents, but his supporters, had rather more than enough, at least in the way of worthless assurances.

As, however, a Central Asian darkness—the phrase may perhaps be suggested as a useful variation on the hackneyed connexion of darkness with Egypt—seems to rest on not a few of the advisers of the public as to what actually has happened, it may be well once more, and in a very few words, to point out what General SKOBELFF's announcement that his operations are ended really means. To the *Times* this announcement means the "abatement of anxiety," if it be not a possible subject for actual "rejoicing." Unfortunately, the reasons for this are given. So long, it seems, as operations went on, it was possible to believe that an advance on Merv, and a consequent menace to Herat, was intended. Now that operations have ceased, the fear of such a menace is, of course, removed. The writer apparently does not know that it is no more necessary for a Russian general holding what the Russians hold, and desirous of going to Herat, to go to Merv, than it would be necessary.

for a French general holding Antwerp, and desirous of going to London, to go to Brest. The submission of the Akhal Tekkes, if it is attended by actual occupation of their whole country, brings the Russians within a march or two of the river on which Herat stands, and (which is more important) to the border of a fertile frontier district of Persia, through which the road to Herat by Sarakhs is easy, well watered, well provisioned, and totally free from any likelihood of resistance by independent tribes. If—which is in the last degree improbable—such actual occupation does not take place, the submission still converts the warlike nation which has so long barred the Caspian road to India into friends and dependents of Russia. It is open to any one, therefore, to say that the threatening of Herat is a matter of no importance to England; it is open to no one to say that the cessation of General SKOBELFF's operations does away with all menace to Herat. General SKOBELFF has ceased operating simply because his work in this direction is done. The other claw of the vice which PASKIEWITCH's conquests fixed half a century ago on the North-West of Persia is now firmly gripping the North-East. The Turkoman steppes are bridged; the Turkoman spirit broken. It is true that the Russians have not yet gone to Merv, but as everybody who has the slightest acquaintance with the subject knows, and as not one in ten of the persons who write about that subject seems to know, in order to go to Herat they have no need to go there. Merv is on the road to Herat from Khiva and the North, it is not on the road to it from Tchikislar and the West. If somebody would succeed in convincing our modern Dukes of NEWCASTLE of the fact that Cape Breton is an island, he would do a very good deed. We almost despair of performing the feat, but it is at least worth while once more to attempt it. There is no need here to discuss the endless questions of Russian designs on India, of the best way of meeting those designs, of the importance of this place or that place as a bulwark. The designs of Russia may be as virtuous as the statements she permits to be made about her by Sir CHARLES DILKE are inaccurate; it may be physically impossible for her to cross Afghanistan; the Indus may be the natural and impregnable fosse of the peninsula. Let it all be so for the present. But at least do not let us be told, because General SKOBELFF says his operations are at an end, that the Russians are not within striking distance of Herat; because he is not going to Merv, that he is nowhere near Afghanistan. The exact contrary is the case. Unless the Russians relinquish the entire Akhal Tekke oasis, of which, as it appears, they have accepted the submission; unless the chiefs who have just sworn allegiance to the EMPEROR are released from that allegiance; everything of importance that they set out to gain in this quarter when they dreaded our attack in Europe has been gained by them, and every real obstacle which barred their course to Herat has been removed.

THE STATE OF PARTIES.

AT the end of the first year of his Administration Mr. GLADSTONE may console himself for some disappointments by observing that his majority in the House of Commons, and perhaps in the constituencies, is still unimpaired. During the present Session he has scarcely found it necessary to make any demand on the fidelity of his followers. Almost all of them voted for the Government through the long and tiresome struggle with the knot of obstructive Irish members; and a little section which objected to any measure for enforcing the law in Ireland did the Minister the service of retaining within his political connexion the extreme democratic faction out of doors. In the contests to which the Government is pledged the late seceders will be the most zealous adherents of Mr. GLADSTONE. The representatives of the landless classes will eagerly concur in proposals for limiting the freedom of disposal of real property, and for increasing the tax on successions. The same members will unanimously approve the extension of household suffrage to counties, in the well-founded confidence that the new-comers will swell the ranks of democratic agitation. Many Liberal members probably regard with unqualified dislike the tasks which nevertheless await them; but they fear their constituents; and there has hitherto been no occasion for a schism. Since

the meeting of Parliament there has been but one strict party division; and the issue on which it was taken offered no temptation to a breach of discipline. But few members could affect to hold independent opinions on the retention of Candahar; and it was easy to throw the responsibility of a decision on Lord HARTINGTON and his colleagues. In questions of military expediency, or of Indian policy, it would be practically impossible for the House of Commons to reverse the decision of the Government. It is possible that the minority may not have regarded with unmixed regret the certainty that it would be defeated. Accordingly, both parties stood by their colours, with the result of showing that the balance of power has not materially shifted since the general election.

That a disruption of the Liberal party impends in the not distant future is nevertheless almost too certain to be announced as a conjecture. No judicious supporter of existing institutions will desire to precipitate an almost inevitable secession. The party which may conveniently be designated by the almost obsolete name of Whig has done great service to the country both in the promotion of beneficial changes and in the restraint which it has long imposed on the zeal of more hasty reformers. It is a still greater merit of the Whig aristocracy that they have prevented the dangerous coincidence of political party lines with social divisions. The Liberal magnate renders the same service to the public good at one end of the scale which is supposed by those who believe in his existence to be performed at the other extremity by the Conservative working-man. The Whigs were the natural leaders of the great body of moderate Liberals who considered constitutional and legislative improvements as expedient, both on account of their direct operation and as the best security against revolutionary measures. As long as political contests turned on the removal of restrictions and on the gradual and limited increase of popular power, there was room for a party of Whigs or of moderate Liberals. When property is threatened, and when the absolute supremacy of numbers is likely to be established, it becomes every day more difficult for the best section of the Liberal party to share in the movement. The most remarkable indication of the uneasiness felt by Mr. GLADSTONE's moderate supporters was to be found in the division of the House of Lords on last year's Disturbance Bill. The measure, though it was zealously pressed by the Government, would have been defeated by a majority of Liberals, if the Conservatives had abstained from voting. Two of the most eminent supporters of the Bill, the Duke of ARGYLL and Lord DERRY, delivered powerful arguments against its principle, while they justified or excused their votes in its favour by reasons of immediate and temporary convenience. Both of them may, perhaps unconsciously, have been influenced by political motives. Lord DERRY was probably unwilling to vote on the first opportunity against the party to which he had openly, if not ostentatiously, proclaimed his adhesion at the general election. The Duke of ARGYLL might well be excused if he placed some strain on his convictions for the purpose of avoiding or postponing his separation from his colleagues and his leader.

The painful sacrifice of personal feeling and of political prospects can now be no longer deferred. A sincere believer in economic science, or rather in its fundamental assumption, has found it impossible to support a measure which, as he said, places ownership in commission or abeyance. The objection was, he added, fundamental in its character, and it affects more or less directly several of the leading proposals of the Government. Although the Irish Land Bill, like the less violent measure of 1870, is justified on the ground of exceptional circumstances, Radical politicians loudly declare that the same principle is to be applied to England and Scotland. It may be added that other kinds of property are seriously threatened. Several witnesses before the Committee on railway rates have boldly expressed the opinion that the Parliamentary tariffs of Railway Companies ought to be summarily reduced. The Duke of ARGYLL is only the first of many who will drop out of the ranks of the party during the accelerated progress of innovation. Of all Mr. GLADSTONE's followers, the Duke of ARGYLL has been perhaps the most cordial and most faithful. In Lord PALMERSTON's days, it was known that Mr. GLADSTONE's influence in the Cabinet had little proportion to the weight which he already possessed in the House of Commons and the country. In

his frequent differences with his colleagues, he was believed to have no supporter but the Duke of ARGYLL. At a later period the Duke concurred without any public display of reluctance in the sweeping measures of Mr. GLADSTONE's first Administration, including the Irish Land Bill of 1870. The impetuous leader of the Liberal party has cause for serious reflection in a separation which is undoubtedly painful to both.

Haith he so long held on with me untired,
And doth he now take breath?

The remaining members of the Cabinet have persuaded themselves that the anomalies which some of them cannot but fully recognize must be overlooked under the pressure of urgent necessity. If the Land Bill passes without material change, the theories which it involves will soon find fresh application.

The appointment of Lord CARLINGFORD to fill the vacancy in the Cabinet is natural and judicious. No member of the Government will be better qualified to aid in the Ministerial deliberations which will coincide with the discussion in the House of Commons; and probably Lord CARLINGFORD will take a prominent part in the House of Lords debates. The LORD CHANCELLOR, to whom the conduct of the measure will probably be entrusted, will be the better able to conciliate the peers because he will sympathize with many of their scruples and objections. Lord CARLINGFORD, who knows Ireland better, belonging himself to a family of landowners, will command attention when he explains the reasons which induce many members of his own class to welcome almost any settlement of a dangerous controversy. Mr. GLADSTONE himself has perhaps been actuated by a desire to save something for the landowners as well as by anxiety to satisfy popular demands. The Duke of ARGYLL resigned because he thought suppression of freedom of contract injurious both to landlord and tenant. Lord CARLINGFORD accepts office in the persuasion that an arbitrary compromise is better than a continuance of agrarian agitation. As it was said of the Peace of Amiens, nobody can be proud of the settlement, but some may perhaps be glad. It is not to be expected that any Liberal member of the House of Commons will follow the example of the Duke of ARGYLL by dissenting from the Land Bill. As long as it is the subject of debate the majority will be unbroken, though some members of the petty faction which opposed the Protection Bill may affect to regret the absence of still more stringent provisions for the spoliation of landowners. Even Mr. PARNELL's followers will shrink from the responsibility of rejecting large concessions, though they will reserve to themselves the right of demanding more hereafter. The most anxious period of the Session will arrive when the Bill is introduced into the House of Lords. The guidance under which the former Land Bill and the Irish Church Bill were allowed to pass into law will be unfortunately suspended or withdrawn. It may be hoped that those who remain will follow the precedents of 1869 and 1870. There is no hope of substituting a more moderate measure for the Ministerial Bill; and the delay of a year would be probably attended with violence and anarchy. Even in Lord DERBY's cynical and impolitic confessions of the inability of the House of Lords to resist popular demands, there is an element of truth which deserves consideration, though it may be presented in a distasteful form.

THE BANKRUPTCY BILL.

SESSION after Session we have been told by the Government of the day, and year after year we have been told by all persons practically acquainted with trade, that the existing Bankruptcy law is a disgrace to the country, and gives rise to almost incredible scandals. Every year some solemn attempt has been made to remedy the evil, and every year has witnessed a new failure in legislation. Now Mr. CHAMBERLAIN has made a new attempt. He has once more told us the old stories of fraud and misconduct. It is impossible they should move us much, for we have heard them so often before. The tidings of a new Bankruptcy Bill no longer rouse in us indignation, but only a mournful wonder whether one more failure is or is not to be put on the long list. This time there is a slight gleam of new hope. It looks as if the Bill might possibly be seriously meant, and as if it might be really got through Parliament. This is not

because the Bill is a better Bill than its predecessors. It may be a better Bill or it may not; but its merits have scarcely anything to do with its prospects. It is simply because Mr. CHAMBERLAIN brings it in that it has a chance of success. Lord CAIRNS did his very best to reform the bankruptcy law, and no one could have been a better judge as to how it ought to be reformed. Lord CAIRNS knows law, he knows business, and he has plenty of courage. He was exactly the man to draft a Bankruptcy Bill, but he was not the man to carry it. No one in the House of Lords can carry such a Bill. To carry it there is needed some one who can not only bring it before the House of Commons, but make the House of Commons attend to it; and it is very difficult to get the House of Commons to attend to a matter so complicated and so uninteresting, and with which most men are so unfamiliar, as bankruptcy. It is impossible to say that Mr. CHAMBERLAIN will get a chance this Session of making the House attend to his Bill; but it may be safely said that, if Mr. CHAMBERLAIN gets a chance, he will make the House attend to it. This Bill has prospects which other Bankruptcy Bills have not had, because it is in the hands of a pushing man, and his first and best chance of pushing himself is to carry this Bill. He has an opportunity of showing what is in him, and of justifying his very rapid rise in the ranks of his party. And what very greatly improves the prospects of the Bill is that he is not the sort of man to let his colleagues smother his Bill if he can help it. The harmony of the Cabinet would be broken if a Bill brought in by Mr. CHAMBERLAIN, associated with his name, justifying his advancement, and opening for him an avenue to fame, was suffered to die the easy death of a Vaccination Bill. It has often been a subject of controversy whether we ought to think most of men or of measures. The dispute is an idle one in these days, because we have found out that there are no such things as measures without men. A Bill may be the embodiment of human wisdom on the subject with which it deals, but whether it is born to die or to live depends entirely on the hands in which it is placed. This Bankruptcy Bill differs from other Bankruptcy Bills of recent years, because it alone seems born to live.

There are two leading evils in our present bankruptcy system. Every one admits them and every one deplors them. They are easy to specify and not very difficult to deal with. Mr. CHAMBERLAIN's Bill goes far to remedy them, but so has every Bankruptcy Bill which has been proposed since the greatness of these evils was brought to light. Under the present system the wrong kind of persons are made trustees; when they are made, they behave in the wrong way; and, what is peculiarly aggravating, they make enormous sums of money out of their misbehaviour. They are appointed by collusion, they manage the estate only to rob it, and they keep their plunder, enjoy it, and spend it without ever being brought to account for what they have done. Every one who knows anything of bankruptcy knows how it has happened that such an absurd state of things has come into existence. The Bill of 1869 proceeded on the assumption that the trustee would be an active and important creditor, whose only thought would be how to get in all that could be got in for himself and the other creditors. In practice it has been found that active and important creditors will not trouble themselves about the estates of these bankrupt debtors. They write off the debt as bad and have done with it. As the creditors will not interest themselves in the matter, the bankrupt has it all his own way. In his hour of distress he has one supreme consolation. He has a lucrative piece of patronage in his gift, and he gives it to the man who can best give him what he wants in return—a comfortable, speedy, and honourable whitewashing. The trustee starts the bankrupt clear; and the bankrupt, who has done with his old estate, prefers his useful friend to his creditors, and presents him with the estate. The chief aims of a Bankruptcy Bill are, therefore, to spoil this game, to keep a tight hold over the trustee, and to make the path to whitewashing straight and narrow. Mr. CHAMBERLAIN's Bill has several ingenious provisions for turning the trustee's bed of roses into a bed of thorns. Before the trustee is appointed, an official is to take charge of the estate for a time long enough to give him a fair idea of the mode in which a trustee who meant to rob would set to work. The Court is to control the choice of the trustee. The payment of the trustee is to be made according to a schedule, and all the trustee

realizes is to be paid into the Bank of England. Watched by an official who has been behind the scenes, always liable to be removed, paid a pittance, and divested of his money, the trustee of the future will, it must be owned, be entirely different from the trustee of the past and present.

The bankrupt is to be taken care of; that is, his past conduct is to be scrutinized, and if necessary punished, by a body of watchful officials, who in London will be under the supervision of a new first-class judge, full of commercial law and a member of the High Court. That the trustee and the bankrupt will be well looked after under Mr. CHAMBERLAIN'S Bill is incontestable, but so they would have been under the scheme elaborated by Lord CAIRNS. What is really new in Mr. CHAMBERLAIN'S scheme is that this wholesome supervision is to be exercised by an army of officials, and these officials are to be appointed or guided by the Board of Trade. Very much officialism, and that officialism commercial, not legal, is Mr. CHAMBERLAIN'S contribution to the novelties of bankruptcy law. Under his scheme the penetrating power of officialism will be very great. Nominally it is only of very small estates that officials are to take permanent charge, a trustee being supposed to be appointed for larger estates. But who will want to be a trustee? A serious creditor who even now prefers to write off his loss is not likely to be tempted to activity by the prospect of being watched at every turn, humbly paid, and made to pay over and account for every penny. A friend of the bankrupt will have no opportunity of befriending him by accepting the office. No one who is otherwise busy will think of encumbering himself with a thankless burden. The trustees will be outsiders, who take to a calling that promises them an honest, but anxious and humble, livelihood. They will be like so many more officials, and it is not obvious why the creditors should trouble themselves to appoint a semi-official outsider as trustee rather than retain in office the official who would look exactly like his twin brother. Thus the end and beginning of Mr. CHAMBERLAIN'S Bill is officialism. This used to be the basis of bankruptcy in old times, and it was abandoned because it was found that, under the reign of officialism, nothing moved forward. The system of checks and counter-checks was so admirable that the machinery refused to go at all. Mr. CHAMBERLAIN replies that this was because the secret of the true motive-force had not been discovered. The propulsive powers of the Board of Trade had not been demonstrated. The Board of Trade is so full of life and movement that it can make others live and move. And if it is asked how we are to know that this is so, and how we are to satisfy ourselves that this particular Government office is so unlike other Government offices, memory must take us back to the days of Mr. PLIMSOLL. That agitated person, when his mind was rent by the thought of an over-loaded vessel being suddenly sent to sea, proved practically that it was possible to ring up the Board of Trade in the middle of the night. This recollection ought to cheer creditors, and they may feel less dread of the procrastination of officialism if they can but rely on making Mr. CHAMBERLAIN or his successors turn out of bed in case the assets of a bankrupt are not being properly got in or distributed.

FRANCE AND TUNIS.

THE debate in the French Chambers on the Tunis expedition was of so very poor and party a character that it could not possibly throw any light on the intentions of the French Government or the wishes of the French people. It was a mere railing of Bonapartists against Republicans; and when the Bonapartist protested that he could not bear the thought of a new Mexican expedition for the sake of new sections, the comedy of political hypocrisy could go no further. M. JULES FERRY stated that the object of the expedition was to punish the Kroumirs, and also to take such further measures as the safety of Algeria might seem to demand. The Chamber, confiding in the prudence and the energy of the Government, passed to the order of the day. The majority of the Chamber, in other language, trusted that the Government would not get France into a scrape, but also trusted that the Government would not put France to the expense of a costly expedition without being able to show something for the money. All the world finds it very natural and very innocent in France to

put down the Kroumirs if she thinks it worth her while to do so. They are very disagreeable neighbours to the French in Algeria; they have committed an outrage deserving exemplary punishment; and, as the BEY most certainly could not put them down if he would, and would not if he could, France is at perfect liberty to act for herself. It may cost France some little trouble to do the work she has taken on her, for the Kroumirs are only one of the wild tribes occupying the borderland between Algeria and Tunis; and the French, in attacking one of these tribes, will probably find it both necessary and convenient to attack all. The country is wild and difficult, and it is only as it nears the sea that it has any value as a possession. But, whether it is worth having or not in itself, it may be expected that France will feel obliged to take it. It is always difficult to keep wild tribes down by inflicting on them casual punishment. It is still more difficult in this case to have any assurance that the borderland will not be the cause of endless quarrels between France and the BEY, unless France brings him into permanent subjection; and, lastly, France has had granted to her, and will insist on keeping, an easy line of communication between Algeria and the capital of Tunis, and this line necessarily passes through the borderland. The annexation of the borderland will no doubt cost a considerable amount of money; it may cost as much or more not to annex it; and the French Government will have to decide on which side the balance of advantage lies. When the tribes are put down and their territory annexed, or not annexed, as France may decide, the turn of the BEY will come. At first the BEY thought that he might do exactly as he pleased. He felt sure that either Europe would combine to warn France not to meddle in his affairs, or that, if he wanted to offer active opposition to France, he would have the support of at least one European friend. An Italian army protecting him by land and an English fleet protecting him by sea was the beautiful dream which the BEY cherished when he first had to consider what he would do. He found that no English fleet and no Italian army would come to his help. He was summoned by France to send troops to assist in the work of putting down the Kroumirs. What he might perhaps have liked to do was to send the tiny force he commands to help the Kroumirs. But this, when left to his own resources, he had not dared to do. He has therefore chosen one of those halfway courses which commend themselves to feeble minds or feeble sovereigns. He has despatched a small body of troops to the frontier. They are to go there as slowly as possible, and when they get there they are to look on, assisting neither France nor the Kroumirs. The probable end will be that France, when it has given the Kroumirs the lesson they need, will call him to account.

When the BEY is called to account, and, in the language of M. JULES FERRY, such measures are taken with regard to him as the interests of Algeria demand, the question may arise whether the limit of these measures is to be solely the good sense of France, or whether they are to be bounded by the supervising influence of other Powers. Mysterious rumours have been afloat that, at any rate, England could not be one of these Powers, as she was bound by a secret compact with France to let her do in Tunis whatever she might think fit. Lord SALISBURY was said to have pledged England to this effect, and to have pledged her so solemnly and so tightly that there was no escape from the engagement. There were, however, two things to be observed as to this reported convention. In the first place, Lord SALISBURY, who must have known what he had said and written, persistently denied that he had ever made any such engagement. In the next place, the present Government, having looked into the matter, and being in possession of the secrets of the Foreign Office, were clearly of opinion that England had not been committed. They felt free to act as they thought best, and authorized the Italian PRIME MINISTER to say that they were not in any way fettered. The Paris Correspondent of the *Times* took this as a kind of challenge to himself. Lord SALISBURY and Sir CHARLES DILKE and Signor CARIOLI all seemed to have forgotten him. He would show them that he was not to be overlooked. He knew the great secret, and could tell it to the world. Accordingly, he published a reproduction of a letter from Lord SALISBURY to M. WADDINGTON written in 1878. He had only once seen the letter a long time ago, but his faith-

ful memory enabled him to give it word for word. It seems a very improper thing that a confidential despatch from the English Foreign Office should be communicated to a newspaper Correspondent, and that it should be so communicated that he feels at liberty to publish it to the world at any time, near or distant, when he fancies its production would do him credit. But, although it is extremely improper that the Correspondent should have been in a position to publish this letter, it is not altogether inconvenient that it should have been published just now. It sometimes saves trouble to get rid of a mare's nest once for all. If the Correspondent's memory serves him, Lord SALISBURY wrote in 1878, repeating the substance of a conversation held at Berlin, that England had not any special interests in Tunis which would lead her to watch with jealousy that growing influence of France which naturally arose from the possession of Algeria; and that, even if the Government of the BEY fell, the attitude of England would not be changed. Subsequently Lord SALISBURY wrote to the BEY, strongly urging him not to give France any good ground of offence. Lord SALISBURY evidently meant, what was perfectly true, that England has no special interests in Tunis, as she has in Egypt, to make her claim an equal right with France to approach the BEY in that peculiar manner in which all European Powers approach the Porte, and every vassal of the Porte, when they want to get anything done. If France, in the protection of its legitimate interests, found it necessary to do what both Powers did a little later in Egypt, and bring about the fall of the BEY's Government, England would no more interfere to save the BEY than Germany or Austria did to save the KHEDIVÉ. There was not a word said about annexation, or about what was to be the final form of French influence. Lord SALISBURY was not invited to discuss, and did not discuss, any such remote contingencies. All he was asked to say was, whether England claimed any special interests in Tunis which would make her consider French interference in Tunis as directed against her; and Lord SALISBURY being asked the question, and wishing to oblige the French Government, answered, with perfect accuracy, that England had no special interests. It would have been as much open to him the next day as it is to Lord GRANVILLE now to point out to France, if France was about to take any decisive step, that the moment was not a right one, or that what was proposed was liable to misconstruction, or that it would lay France open to great embarrassments in the future.

Italy has chosen a curious, but characteristic, manner of getting out of the difficulty in which she was placed by the impossibility of her doing anything, and by the national passion demanding that something should have been done. A Ministerial crisis worked off the excitement of the moment, and Signor CAIROLI fell for not having done something which none of his opponents could explain to him. He asked for explanations from France, and was told that France was going to punish the Kroumirs, and that this was her business, and not the business of Italy. He asked for explanations from England, and was told that England was quite free to make any recommendations to France that she thought advisable. There was nothing more to be done. But the Italians were in that state of nervous irritation in which men cannot settle down into peacefulness unless they have hurt some one. They looked out for some one to hurt; Signor CAIROLI was in the way, and so they hurt him. They were like sportsmen who have had a long tramp and have found nothing to shoot abroad, and so determined to close a day of idleness and annoyance by killing a tame rabbit at home. It does not seem much of a triumph; but, before we condemn or ridicule the Italians, we may remember how very near a parallel we offered when we sacrificed Lord PALMERSTON in order to work off our indignation at the French colonels. As it happens, the Italians have gained in an unexpected way by displacing Signor CAIROLI. There is no possible Government to take his place. There is no one to criticize, to remonstrate, or to combine while France is acting. No one can be blamed for doing, or not doing, this or that, for there is no one to blame. Meanwhile, the French have had time to reflect over what they are doing, and the more they look at it, the less they like it. They see the pitfall they are digging for themselves by becoming too much of an African power. They are beginning to talk of the annexation of

Tunis as if it had never been proposed by any but lunatics. Their views of a protectorate are getting gradually more and more modest. The good sense and perhaps it may be added, the nervousness of the French are the best safeguards against the execution of wild and dangerous schemes. They even like the work of punishing the Kroumirs less than they did. To that, however, they are committed, and that they must carry out. But they are addressing themselves to their task in a frame of mind which is calculated to relieve the apprehensions of those who fancied that France was about to set on foot a new reign of trouble and disturbance.

ARMY DISCIPLINE.

THE Lords brought the first part of the Session to a close with the moan which in ordinary years is not heard until August is nigh at hand. It must be admitted, however, that there was some ground for this particular complaint. When they are asked to sit on a Wednesday in April, they naturally feel that they are being hurried. Moreover, the question was one on which they had an unusually good right not to be hurried. A House which, as Lord CHELMSFORD pointed out, has in it so many officers, including the COMMANDER-IN-CHIEF, ought to be given a little time for discussing a Bill which gravely affects the maintenance of discipline in the army. It may be observed, however, that their lordships were not specially anxious to make the most of the time actually allowed them. Lord STRATHEDEN and CAMPBELL showed a well-founded sense of the difficulty of keeping a House beyond dinner-time, when he suggested that on the day when the Bill was to be put through Committee they should meet at four o'clock instead of five. As all the Opposition leaders were away, it was held impossible to take this course, there being seemingly no reasonable ground for believing that peers who are not present at debates read the morning papers, or have any recognized means of learning what takes place in their own House. When the day came, however, it turned out that they had time, not only to pass the Army Discipline Bill through Committee, and read it a third time; but to discuss at some length three other questions, and get away, after all, by twenty minutes to eight. It appears, therefore, that the military element in the House either had not very much to say or was content not to say it.

On the whole, perhaps, it was best not to debate the Army Discipline Bill at greater length. When the House of Commons makes up its mind to abolish flogging against the opinion of military experts, there is no way of preventing it. Lord DENMAN, indeed, moved an amendment by which flogging would have been retained, and even tried to tempt the House to adopt it by the prospect of a conference. But even a conference seems to have lost its charms. Perhaps the formalities which accompany it have too plainly ceased to be anything but formalities to be any longer pleasant to go through. The real state of the case was described by the Duke of CAMBRIDGE with that cynical common-sense which sometimes characterizes the speeches of Royal personages. The COMMANDER-IN-CHIEF is equally convinced of the impossibility of finding a substitute for flogging and of the impossibility of continuing to flog. He knows of no other means of dealing with bad characters in a summary and effective manner; but at the same time he sees that there is "a strong public feeling against the use of the lash," and that being so, he thinks it best to try to find a substitute for it. It is a curious tribute to Mr. CHILDERS's new punishments that in neither House have they been thought worthy of serious discussion. The truth probably is that no one believes that they will ever be inflicted. War cannot go on if one half the army is to be employed in guarding the other half. The COMMANDER-IN-CHIEF did not even pay them the compliment of a passing mention. He treated the discovery of a substitute for flogging as an event altogether future. What will happen will probably be something of this kind. The discipline of the army when in the field will get worse and worse, until at length it becomes so bad as seriously to impair the efficiency of the force and imperil the chances of ultimate success. If a resolute and capable officer is then in command, he will restore flogging, and take the consequences. No doubt if he is defeated, those consequences will be unpleasant. He will be censured by the military authorities, be debarred from all chance of

future employment, and perhaps be subjected to prosecutions for assault on the part of the men whom he has flogged. Victory, on the other hand, will hold him harmless against these dangers. If Sir FREDERICK ROBERTS had found it necessary to resort to flogging on the march from Cabul to Candahar, it is not likely that much would have been heard of it when he came home. An instance of this kind is given in the *Times* of Tuesday. We there learn that when Standerton was besieged by the Boers Major MONTAGU found it necessary at the outset "to use the cat on occasion; but when the men found that they had a master-hand over them all went smoothly and well. The strictest discipline was maintained, and all co-operated in this most gallant defence." It would be interesting to know Major MONTAGU's opinion as to how things would have gone if the masterhand had not had the cat within reach. If, on the other hand, the officer in command is not resolute and capable, he will go on with the inadequate punishments which he is permitted to inflict until such time as his demonstrated unfitness for his post brings about his recall. Unfortunately this recall may not be determined on until the time for averting disaster has passed away.

There is, indeed, another possibility, and that is, that officers will resort to penalties which are really cruel, though in form they do not go beyond the prescribed limits of punishment. Even the absurd provisions about making a man move after a horse or a waggon at a walking pace, or carry extra burdens, or sit in irons, might easily be carried out in a way which would cause acute suffering. If a man is tied to a horse of an uncertain temper, he may never be forced to go beyond a walking pace; but he may take every step in terror of his life. If a man is fastened to a waggon, the soldiers in charge of it may have no instructions as to noticing his stumbles, and on bad ground he may easily fall and be dragged some distance before it suits them to make the discovery. It is not likely perhaps that discipline of this kind will be resorted to in the English army, but it is said to be not unknown in other armies, and when great things have to be done with bad instruments, even English officers may be induced to try experiments to which, in cold blood, they would never resort. Unfortunately, if this should happen, the additional suffering caused will fall on the wrong men. The bad characters of the army will not have clamoured for the abolition of flogging, but it will be they who will pay the penalty. The persons who ought to bear the extra pain are the humanitarians who have insisted on superseding a punishment which, as administered of late years, was not cruel, by punishments which, if they are to be effective at all, must be made cruel. It would have greatly tended to the diffusion of sound opinion on this question if the opponents of flogging could have been tied for a few minutes to a kicking horse, or put in irons which are accidentally a little tight, or made to carry a cannon ball or two under an unusually broiling sun, with a guard with fixed bayonets charged to take care that the prisoner does not loiter on the road.

For some months to come it will remain quite uncertain whether any substitute for flogging is to be provided, or whether, when a crime hitherto punishable with flogging has been committed, the offender will be left to public opinion, or to his own conscience, or to some other imaginary sanction. The new rules cannot, it seems, be framed in two months, since "communications will have to be sent to officers abroad in order to ascertain their opinion as to the best substitutes for corporal punishment." It turns out, therefore, that the Government have done away with flogging, not when, but before, they have satisfied themselves that it is possible to find something to put in its place. It would have been more decent if Mr. CHILDERS had waited until these communications from officers abroad had been received. It would have been more frank if he had admitted that the Government were going to abolish flogging whether a substitute was found for it or not. It is plain, from what has been said about the new rules, that the military authorities are not in the least satisfied that irons, or tying to the cart's tail, or carrying heavy extra weights, or any other of the punishments which, by a pleasing fiction, are supposed not to "degrade" those on whom they are inflicted, will answer the purpose hitherto served by the cat. These proposals merely indicate the direction which, as at present advised, they intend their researches

to take. In the meantime the mischief is to be done on the chance that some day or other a remedy may be found for it. The Radicals want a plaything, and the discipline of the army must at once be put into their innocent hands.

AMERICAN POLITICS.

MR. GARFIELD has found by early experience, or perhaps he already knew, that the President's chair is not a bed of roses. It is true that he has no tragic reverses to apprehend, for the actual injury to public interests and the inconvenience to himself are not of an overwhelming character; but it is mortifying to come into immediate collision with the checks and drawbacks which limit the opportunities of a great position. As a veteran manager of elections and political combinations, Mr. GARFIELD is probably not taken by surprise. If he hoped to be independent of allies and rivals, he only shares the disappointment which awaited many of his predecessors on their accession to office. General GRANT, after his first election, was compelled to dispense with the services of the Ministers whom he had deliberately selected. From that time forward he submitted to the control of the Republican leaders in the Senate, who share with the President the responsibility of many discreditable appointments. Mr. GARFIELD's Cabinet nominations have been approved by the Senate; but he has since found himself committed to a troublesome feud arising out of a question of patronage. Mr. CONKLING, Senator for New York and a principal leader of the Republican party, was defeated in his efforts to obtain for General GRANT the nomination at Chicago; but it is the custom to distribute offices among the different sections of the majority; and Mr. CONKLING perhaps thought that his claims on the President were strengthened by the promotion of his rival, Mr. BLAINE, to the highest Cabinet office. Jointly with his less known colleague, Mr. PLATT, Mr. CONKLING considered that he had a right to dispose of the State offices in New York; and it seems that the President so far acknowledged the justice of the demand as to discuss with the New York Senators the pretensions of certain candidates. He nevertheless, without further consultation, appointed certain lawyers as attorneys for the districts of the State; and it seems that he gave additional offence by preferring nominees who were considered followers of Mr. CONKLING, though they were not in the present instance dependent on his patronage. It must have been provoking for Mr. CONKLING to receive congratulations on supposed proofs of his influence while the Senator himself was aware that he had taken no share in the appointments. While Mr. CONKLING was nursing his indignation, he was exposed to a severer shock by the nomination of a certain Mr. ROBERTSON to the place of Collector of the Port of New York. The office is the most lucrative in the Union; and, with the exception of seats in the Cabinet and of two or three diplomatic posts, it is regarded as the most considerable place in the gift of the President. The outgoing Collector is supposed to be but insufficiently consoled for his dismissal by the valuable office of Consul-General in England. In the controversy which has arisen, nothing is said of Mr. ROBERTSON's qualifications for the discharge of his important duties. It is more to the purpose to observe that, in local politics, at the Chicago Convention he has been a determined opponent of Mr. CONKLING. The President is accused of having yielded to the influence of Mr. BLAINE; and comparatively impartial Republicans complain that the appointment will have created a split in the party. Nevertheless both Houses of the New York State Legislature have passed resolutions in approval of the President's choice, in spite of the charges that the Democrats will at the next State elections profit by the schism in the Republican ranks.

The nomination of Mr. ROBERTSON still lies on the table of the Senate, where it is understood that Mr. CONKLING will use his utmost efforts to defeat his appointment. The trial of strength with the President or with the Secretary of State is delayed by a contest between the two great parties for the control of the Senate, which involves the appointment of its officers. At the meeting of Congress the Republicans and the Democrats were thought to be equally matched; but the balance has since been shifted by the accession to the Republican party of a Mr. MAHON,

who had been elected Senator for Virginia as a Democrat. In their indignation at his apostasy the Democrats are indulging in obstructive practices after the American fashion; and until they are finally defeated no business can be done. The Republicans, though they cannot afford to repel their new ally, are not proud of his adhesion. Mr. MAHONE is said to owe his election to negro support; and so far the Republicans are pledged to approve his pretensions; but he is also the champion of readjustment, which, in the political dialect of Virginia, means partial repudiation of the State debt. The professed advocates of national good faith cannot afford to discredit themselves by connivance at schemes for defrauding State creditors; but, on the whole, they are perhaps not dissatisfied with the advantages which they derive from MAHONE's questionable proceedings. When the officers of the Senate are appointed, the nomination to the Collectorship of New York will be considered in secret session. As the Republicans will be divided, the decision will rest with the Democrats, who will have to choose between the triumph of thwarting the PRESIDENT and the pleasure of disappointing Mr. CONKLING. Either result would be agreeable to a party in Opposition, which has in any case the opportunity of annoying one section of its adversaries. It probably matters little, except to the nominee, or to the candidate who may be substituted if he is rejected by the Senate, whether Mr. ROBERTSON or another functionary collects duties at New York; but the struggle for patronage between the PRESIDENT and the leaders of the Senate attracts general interest. In former times appointments made by the President were, if they were in themselves unobjectionable, approved as a matter of course by the Senate. In Mr. ANDREW JOHNSON's incumbency, the quarrel, which finally resulted in the impeachment of the President, induced the Senate habitually to reject his nominations. General GRANT, though he had the Presidency in view, supported the dominant party in every attempt to limit Mr. JOHNSON's power. The independence of the President in the disposal of patronage has not since been resumed. Politicians favour the assumption by the Senate of a control over nominations as a security for strict adherence to party lists. Those who are not mixed up with the business of politics would be rather disposed to lean to the President, who may be reasonably expected to consider personal fitness for office. Like several of his predecessors, Mr. GARFIELD announced in his inaugural address a desire to render the Civil Service independent of party. Mr. CONKLING's success would reaffirm the popular doctrine that office should be treated as a reward for party services. New York politicians apparently incline to the side of Mr. CONKLING, in the fear that a dispute with the PRESIDENT may impair the local influence of the party.

The issues which are involved in the contest seem to foreigners trivial, but unfamiliar political customs ought not to be treated with hasty contempt. It is the peculiar felicity of the United States that American citizens can afford to occupy themselves with controversies which may be decided either way without serious political disadvantage. It is much better that a legislative body should be at leisure to amuse itself with a question of petty patronage than that, like the English Parliament, it should be employed on measures which go to the root of the doctrine of property. The Customs' duties of New York will be collected whether Mr. BLAINE or Mr. CONKLING gains an advantage over a rival. In the meantime, the country enjoys unbounded and growing prosperity; and one Secretary of the Treasury after another is enabled to announce large and rapid reductions of the National Debt. Almost exempt from domestic anxieties, the United States are also happy in the non-existence or trivial importance of foreign relations. There is, indeed, always a diplomatic squabble with England or with Canada; and the Secretary of State has the opportunity of indulging in patriotic protests and threats; but it is highly improbable that for an indefinite time America should be engaged in any serious quarrel. The Republic is perhaps already the strongest of political communities; and its population and resources are constantly increasing. The Government of the country is perhaps not theoretically perfect, but the results are, on the whole, satisfactory. It is a proof of the excellence of a machine that it can be regulated and superintended without the exercise of extraordinary skill. It is because the Americans manage their own affairs, both individually and in townships, counties, and States, that

they can afford to suspend the functions of central legislation and administration while Mr. MAHONE passes from one party to another, and during the conflict between the PRESIDENT and a dissatisfied Senator. Politicians can even afford to pay transient attention to the grievance of an Attorney-General who complains that he is saddled by the PRESIDENT with a colleague as Solicitor-General who has not the good fortune to enjoy his confidence. Readers of provincial papers will recognize the prevalence of personal and local controversies of exactly the same kind in country towns. The national affairs of a European State are more exciting, and perhaps more dignified; but they may perhaps not indicate a sounder condition of society. The country which has no history is said to be fortunate; and the nearest approximation to such a state of things is the occupation of rulers and Parliaments with questions of parochial magnitude. The unconfirmed Collector of New York is a symbol of political security.

THE POLICE OF PARIS.

THE Municipal Council of Paris and the Government of the Republic have lately been at issue on the merits of the PREFECT of POLICE. The affair began by a demand for an interpellation as to the safety of the streets, addressed to the Municipal Council on the 19th of March. M. ANDRIEUX, who was present at the sitting of the Council, denied the right of the Municipality to question in any way the police administration of the city. The Council paid no attention to this protest, and fixed the debate for the 22nd. When that day came, a letter was read from M. ANDRIEUX, declining to take any notice of what might be done in regard to the interpellation. The Municipal Council thereupon passed an order of the day declaring that, in refusing to answer an interpellation, the PREFECT of POLICE had failed in the duties of his office, and that M. ANDRIEUX's administration did not afford the necessary guarantee for the security of Paris. On the 28th this order of the day was annulled by the Government as being in excess of the powers of the Council; and on the following day a new order was voted, in which the Council regretted that the relations between the Prefect of Police and the City of Paris were incompatible with the proper administration of municipal affairs, and pressed on the Government the impossibility of allowing this unfortunate state of things to continue. From that time till the beginning of this week Paris was divided into two camps—those who wished the Government to treat the question as merely a personal one, and to either dismiss or obtain the resignation of M. ANDRIEUX; and those who wished them to limit still further the powers now possessed by the Municipality. On Monday the controversy came to a head. An interpellation was brought forward by M. PASCAL DUPRAT, representing the deputies of the Seine, in which the Government was called on to dismiss M. ANDRIEUX and so restore peace to the capital. In replying to this demand, the MINISTER of the INTERIOR said that, though it was impossible to grant it, the Government agreed with the authors of the interpellation that things could not be left in their present state. The Government would not dismiss M. ANDRIEUX, but they would take measures to prevent any further conflict between the Prefect of Police and the Municipal Council. In future, if the Bill they propose to bring in should become law, the Prefect of Police will be entirely subordinate to the Minister of the Interior. The Municipal Council will no longer have anything to do either with him or with the police under his orders. As the capital will thus be deprived of the control of its own police, it will be only fair that it should no longer pay for it. The Police Estimates will consequently be transferred from the Budget of the Municipality to that of the State. An attempt was made to get an order of the day passed which might be represented as condemning by anticipation the Government Bill, but when put to the vote it was defeated by 354 votes against 65.

As things have actually turned out, the incident is not of much importance. But at one time it seemed possible that it might end in a way which would have made it very important indeed. Beneath all these expressions of the wish that the Government and the Municipality should swear eternal friendship over the body of M. ANDRIEUX an important principle lay hid. If the

Government had dismissed M. ANDRIEU in consequence of a hostile vote in the Municipal Council, they would in effect have made the PREFECT of POLICE responsible to the Municipality. They could not have sent one Prefect about his business because he did not enjoy the confidence of the Municipality, and then have appointed another without ascertaining that he was likely to be more fortunate. In point of fact, the Minister of the Interior would have nominated the Prefect of Police, just as the President nominates the members of the Cabinet; but he would have been just as much bound to choose a Prefect agreeable to the Municipal Council as the President is bound to choose a Cabinet agreeable to the Chamber of Deputies. The deputies of Paris were perfectly aware of this consequence. It suited their purpose to treat the question as purely personal, but they knew that the issue involved in it was much more than personal. They hoped, probably, that the Government would be induced to go along with them by the apparent simplicity of the solution they proposed. Here, they said, is a case of a wrong-headed man who has quarrelled with the very people he ought to make it his business to get on with. There is no need to raise any question about the respective rights of the Prefect of the Police and the Municipality. But for M. ANDRIEU this quarrel would never have arisen, and if he is made to give place to a more conciliatory successor, it will be at once laid to rest. With a new Prefect of Police nothing more will be heard of these general principles which have been so needlessly dragged into the discussion. The question will be reduced to its proper dimensions, and will then be seen to affect nothing more serious than the popularity of a particular official.

Fortunately for their subsequent comfort, the Government did not allow themselves to be taken in by this ingenious reasoning. It is quite true that, if they had dismissed M. ANDRIEU, the ground of contention with the Municipality would have been removed, and for the time the Council would probably have been wise enough not to push their victory any further. But M. ANDRIEU's successor would perfectly have understood that he was made Prefect on the understanding that he was, above all things, to keep on good terms with the Municipal Council. Though he would not have been responsible to it in name, he would have been responsible in fact. He would have been liable to be dismissed by the Government whenever he happened to displease the Council; while he would certainly have been retained in office provided that he contrived to satisfy the Council. From this it would not have been a very long step to a change which should have placed the appointment of the Prefect of Police in the hands of the Municipal Council. If he was their servant, why should not they have the selection of him? For form's sake, perhaps, the Government might have been given a veto on the Council's choice; but when all the candidates for a post are virtually of one way of thinking, very little is to be gained by a mere veto. If the control of the Paris police had been made over to the Municipal Council, a great many Frenchmen would have thought that the Commune had come again. Nor would they have been very far wrong. If the Commune itself had not come again, the materials for its creation would once more have been brought together. It is quite inconsistent with the good government of a city like Paris that its police should be under the control of the Municipality. In no great capital would such an arrangement be safe. The police of the City of London are subject to the Corporation, but then the City proper is but a fraction of London, and the Metropolitan police are subject to the Home Secretary. The capital is the seat of government, the place in which the members of the Legislature and the officials who compose the Executive are all brought together, and the central Government is bound to take precautions to ensure their personal safety and their political and administrative independence. What is true of all great capitals is true in an especial manner of Paris, for Paris, unlike other great capitals, lives in a state of perpetual hostility to the Government for the time being. So long as the Legislature sat at Versailles, and the Executive could at any moment be transferred thither, this fact was comparatively unimportant; but, now that the Chambers have been brought to Paris, Paris must accept the necessary drawbacks of the position it has regained. In the past the Legislature and the Government have too often

been merely hostages in the hands of the people of Paris; and it is the first business of the Government to take care that nothing of the kind shall happen again. With the police of the city under the control of the Minister of the Interior, and no National Guards to form a nucleus of insurrection, the relative strengths of Paris and France will be reversed, and the capital will fall by degrees into its natural position of subordination to the central Government. The dismissal of M. ANDRIEU would have been the first step in a course which, if persisted in, would infallibly have reproduced the disorders which play so large a part in the history of revolutionary Paris.

STOLEN GOODS.

THE fate of the Bill to amend the law respecting the recovery of stolen goods which the LORD CHANCELLOR has presented to the House of Lords will be determined by the number of friends that dealers in that kind of property command in the House of Commons. Exception may undoubtedly be taken to some of its provisions, if the dealer in second-hand articles is to be accounted innocent till he is proved to be guilty. The draughtsman evidently regards this presumably useful, and even respectable, trade with deep-seated suspicion. Nothing which is not new is likely, in his view of matters, to have been honestly come by. The circumstance that a thing has been the property of some one else before it came into the possession of the second-hand dealer is treated as *prima facie* evidence that it was not willingly parted with. We are not disposed to deny that this exceptional severity of treatment may have become necessary. When Lord SELBORNE explains the Bill to the House of Lords, he will no doubt go fully into the statistics of theft, and show that the laws which he proposes to amend are inadequate to deal with it. It may at once be conceded that, if the trade of receiving stolen goods could be put down, the trade of stealing them would be hopelessly crippled. A thief, more than any other man, is anxious to convert his booty into some medium of exchange. Jewels and plate are only dear to him in so far as they can at once be sold. Consequently, if there were no one to buy them, the thief's occupation would be gone. It is true that, even if the trade of receiving stolen goods could be put down in this country, it might continue to flourish elsewhere; and, provided that the payment were equally assured, a thief might be as well pleased to have a correspondent abroad as an agent at home. But the extinction of the home trade would operate as a very great restriction upon theft. It could only be carried on at a great outlay, and consequently upon a great scale. A gang of thieves who disposed of their goods in Amsterdam or Paris must be experienced travellers and fair linguists, and have a good store of ready money. There is no need, therefore, to refrain from legislating against dealers in stolen goods within the United Kingdom because we cannot legislate against them beyond the United Kingdom. If it can be made an exclusively international industry, its extent will be immensely reduced.

The Bill begins by enlarging the powers of the police as regards searching for stolen goods. An inspector applying for a search-warrant will only have to state on oath to the magistrates that he has reason to believe that certain articles specified by him to have been stolen, or some of them, are in such and such premises, and will be excused from stating the reasons for his belief and from specifying which of the articles he suspects to be in the place he names. The inspector, having got his warrant, may proceed to search for the goods, and may apparently bring before the magistrates any articles whatever which he finds on the premises searched. They are then to be regarded as in pound, and if there is *prima facie* evidence that they are stolen, they may be detained until the owner can be discovered. If the person in whose possession they were found is unable to give a satisfactory account of how he came by them, he will be liable to a fine of 5*l.*, or, if the court shall be of opinion that they are stolen, to imprisonment for a month or to a fine of 50*l.* The dealer may also be fined 5*l.* if the court is satisfied that he had reason to suspect that the goods were stolen and did not give information to the police, a provision which may occasionally defeat a well-arranged story or an excellent imitation of a *bona fide* sale. The effect of these clauses will be to make search-warrants more easily obtainable,

and consequently searches more sudden and frequent. In many cases the police know perfectly well that the goods they are in search of are in some one of a very few places. But they do not know in which of these places they are, and consequently they cannot state specifically the reasons why they believe them to be in this or that place. Under the Bill it will be enough if they have reason to believe that they are in some one or more of them. The result will probably be that, whenever a robbery has been committed, all the places in which stolen goods are known to have been from time to time received will be searched as a matter of course, and as all goods whatever may be brought before the magistrates, the risk of keeping anything of the kind will be greatly increased.

The Bill does not deal only with the powers of police officers. It provides for an elaborate system of supervision of all second-hand dealers who have once got into trouble. For the future they must be licensed, and before they can be licensed they must produce a certificate from a magistrate. Considering that a similar provision is already in force as regards pawnbrokers, it would be unwise to expect too much from its extension; but the Bill does seem to supply several reasons why a pawnbroker or a second-hand dealer should wish to avoid registration. A registered pawnbroker or second-hand dealer must not open a new shop without giving notice to the chief officer of the police of the district which he is leaving and of that to which he is removing. He must keep his books in a prescribed form. He must not do business before nine in the morning or after six in the evening—a restriction which, to many pawnbrokers, would involve very serious loss. He must keep all articles received by him in the state in which he receives them for three full days before disposing of them. Consequently a registered pawnbroker or second-hand dealer will not only be a recognized black sheep, but a sheep whose colour is constantly being brought home to him in inconvenient ways. It will be easy enough, however, to avoid registration if a man is so minded. He will be safe so long as he has not been convicted of an offence under this Bill, or under the Pawnbrokers' Act, and even after conviction it will rest with the court to determine whether registration shall be imposed by way of additional penalty.

For certain purposes pawnbrokers and second-hand dealers will be impressed into the service of the police. Where they have received written notice that an article has been stolen, together with such a description of it as may enable them to identify it if it be in their possession, they will be bound if any article answering to the description subsequently comes into their hands to give information to the police, and to describe the person from whom it was received. They are also to permit a constable to inspect all the articles in their shop which are of the same description as the one specified in the notice. Perhaps these provisions are not likely to be found very formidable in practice; but by another clause any pawnbroker or second-hand dealer who suspects that an article offered to him is stolen may seize and detain the person offering it and give him in charge to a constable. It is clear that this will render the disposal of stolen goods in a neighbourhood with which the thief is not familiar, or to a person with whom he has not already done business, an undertaking of some delicacy. He cannot possibly tell what motive the dealer may have for being exceptionally honest in this particular instance. A man may be, as a rule, quite willing to buy stolen goods, and the thief may know him by repute in that character. But he may not wish to open an account with new customers, or he may be anxious to recommend himself to the goodwill of the police. On either or both of these grounds it may best suit his purpose to detain the thief, and to get whatever credit there is to be had by so doing. Unfortunately it is not thieves only that are likely to suffer if this part of the Bill becomes law. The dealer who takes it into his head to detain a person offering goods in pawn will be fully indemnified for what he does. He will probably assign as his ground for making the seizure that the prisoner has not given a satisfactory account of the means by which he became possessed of the article offered. But when a woman who has been reduced to poverty has taken to the pawnshop some gold or silver article which she possessed when she was better off, she may be wholly unable to comply with this condition. All she can say will be that the thing is hers, and that she has always had it, and unless the pawnbroker is

a person of some discrimination, he will not be likely to know whether this statement is true or false. No doubt the constable into whose charge she is given, or, at worst, the magistrates before whom the constable takes her, will find out the mistake. But the effects of an error of this kind are not removed when the error itself is set right. The prospect of a night in a police-cell, followed by an appearance in court the next morning, will be a very serious addition to the annoyance with which a visit to the pawnshop is invested in the imaginations of decent people. It is not easy to suggest any precautions which would render this provision less liable to abuse; but, unless some can be devised, it would be better to leave it out altogether. It contradicts a little too directly the spirit of the old doctrine that it is better for ten guilty men to escape than for one innocent man to suffer. With this alteration, and with some simplification of its clauses, the Bill will probably be found useful.

DR. PARKER AND THE CONGREGATIONAL UNION.

WE have been told on the authority of very credible ear-witnesses, though we cannot vouch for the accuracy of the statement, that the Thursday preachments at the City Temple are, and are apparently intended to be, beyond comparison the most effective comic performances to be found in the metropolis. The congregation according to our informants, assemble on these occasions, whether to laugh with the preacher or to laugh at him it might be invidious to inquire, but at all events to be amused, and they do not go away disappointed. We seem also to have heard some strange stories about the close connexion of the platform and the press in the matter of a periodical called the *Fountain*, bordering in fact on transactions which, had they occurred in a State-paid and bloated Establishment, might not possibly have earned from the righteous indignation of the *Nonconformist* and *Independent* the ugly name of simoniacal. It is difficult not to be reminded of those current rumours, on reading in last week's issue of that sturdy organ of "the dissidence of Dissent" a remarkable correspondence on "the Chairmanship of the Congregational Union," in which Dr. Parker's name figures with a prominence which even to himself—and he is not open to the charge of hiding his light under a bushel—can hardly be altogether satisfactory. The Congregationalists or Independents, according to *Whitaker's Almanack*, stand third numerically among Nonconformist bodies in the United Kingdom, yielding only to the Roman Catholics and the Wesleyans. They are also much the oldest of dissenting sects, dating from the time of Queen Elizabeth. It was only however in 1831 that their churches were formed into the Congregational Union, the chairmanship of which is now in dispute. This chairmanship, as we gather from the correspondence, is an annual office, candidates being nominated in the March of the previous year, though the friends of an enterprising nominee sometimes think it prudent "to take time by the forelock," or have at least so acted in the present instance. That there is anything actually irregular in this novel procedure is not alleged by their critics, who however naturally think it odd that, not content with justifying their precocious zeal, they should claim that "priority" of action gives them a right to suppress by anticipation all future opposition. It is with this singular claim of Dr. Parker and his friends that the first part of the correspondence deals, but it throws incidentally a somewhat lurid light on the grave underlying differences involved in the pending contest for the annual Papacy of Congregationalism. Mr. Alexander Hannay, who opens the discussion, is evidently, though he does not say so, the Secretary of the Committee of the Union, and he certainly appears to have been very hardly treated by "Priority," who maintains that the Committee, "instead of pursuing the traditional rule to inform the second nominee that Dr. Parker had already been nominated, have helped to get up signatures to promote a struggle"; that the officials of the Committee have departed from the usual course of procedure; and that either officials or Committee have even been guilty of malversation of public funds for promoting the interests of the rival candidate, Mr. Macfadyen. In all these assertions Mr. Hannay declares that there is "not so much as a grain of truth." The departure from traditional usage was in fact entirely on Dr. Parker's side, whose nomination, signed by fourteen persons, was sent in to the Committee on June 10, 1880, though no official notice of it could be taken till March 15 of the following year. Their real cause of complaint is that, when it became known that another candidate would be nominated at the proper time, the Committee did not inform Mr. Macfadyen that Dr. Parker was already nominated; to which there is the double answer, first, that no formal nomination had as yet taken place, and, secondly, that, were it otherwise, the Committee have no duty and no right to interfere to prevent a contest for the chairmanship. "On the contrary, the rules which provide for the present mode of election were adopted expressly with the view of giving the members of the Union a choice in the election of chairman between several nominees." As to the charge of misappropriating funds, which is rather hinted at than openly alleged, and this by an anonymous writer who offers no shadow of proof for his insinua-

tion, Mr. Hannay contents himself with a simple denial of an imputation which he reasonably characterizes as "in a high degree culpable and cowardly."

The next letter is from "a Member of Committee," who writes, "for the honour of Congregationalism and the prosperity of the Union," under severe provocation, with commendable self-restraint, but gives us rather a closer insight into the kind of tactics that find favour with Dr. Parker and his friends. He observes that his previous objections to Dr. Parker's appointment are greatly intensified by the fact of his having himself descended into the arena and become the advocate of his own claims. "For any man to try and persuade a large body of Christian gentlemen that they have confidence in him, or that if they have not, they ought to have, is a novelty, and one which I am extremely sorry to see introduced into Congregational practice." He adds, not unjustly, that, if Dr. Parker is right in contending that the opposition to him is of a purely personal character, "it is sad enough, but it is a conclusive reason against his appointment." The complaint of Dr. Parker and his friends "that there is a fixed determination on the part of the leaders of the denomination to exclude him from the chair on unworthy and insufficient grounds," is dismissed as simply incredible in itself, and nothing short of an insult to "brethren of so high a standing in the Churches." Like Mr. Hannay, the Member of Committee fails to detect any grievance in the fact that the premature action of Dr. Parker's fourteen supporters, who "resolved to take time by the forelock," and nominated him nine months before the appointed period, was not allowed to bar the way of the 438 representative members who subsequently, at the regular time, nominated Mr. Macfadyen. "The contention that the act of a few gentlemen in Kent ought to bind the Congregational Union, and that if their nominee be not elected there must be some personal animus, cannot be seriously advanced." Still less ground is there for the continued references to "the official mind"—meaning thereby the Secretary—as inspiring the opposition to Dr. Parker. "The truth is he has been perfectly neutral." Towards the close of the letter we are allowed to catch a glimpse of the real point of the controversy. Dr. Parker's abilities are not disputed, and "if the chair of the Union was simply to be a prize for intellectual power he ought to have been placed in it before this. But," adds the writer significantly, "it does sometimes happen that able men have idiosyncrasies which disqualify them for cordial association with others." One of these "idiosyncrasies" he proceeds to specify, which would go far to make Dr. Parker's election "an act of ecclesiastical suicide"; but he is careful to intimate that "there are other parts of his public action" open to exception, and that "his theological, political, and ecclesiastical vagaries" generally unfit him for the chairmanship. To most persons the one point dwelt upon at length would seem to be tolerably conclusive:—

Dr. Parker has declared open antagonism to the Congregational Union. He has sketched a Reform Bill, which really means an abolition of the Union as it is altogether. He objects to its constitution, objects to its policy, objects to its property—in fact, objects to everything about it except its name, and would take that as the title of a confederation which in character and aim would be totally different from the body which now exists.

Our readers may perhaps think they have heard nearly enough of Dr. Parker by this time; but the sting of the correspondence is in its tail, and the letter from Dr. Parker to Dr. Allon, with his reply, "which was returned *unopened*," let us look in behind the scenes. The name of Dr. Allon—who seems to have been lugged head and shoulders into this unsavoury dispute, and plainly tells us that he "loathes" the whole subject—will be familiar to many of our readers, as that of an accomplished scholar, editor of the *British Quarterly*, the leading organ of English Nonconformity, and author of at least one striking volume of Sermons which has obtained the high commendation of reviews neither Dissenting nor theological. Dr. Parker's letter to him, which, it will be observed, commences abruptly without any of the conventional forms of courtesy and is subscribed simply "Joseph Parker," is so very curious a document, especially as addressed by one minister of religion to another, that we shall place it as it stands before our readers:—

[Not Private.]

TO THE REV. DR. ALLON.

As the stories which you related to me, and which you are repeating to others, are doing me injury, and are so far fulfilling your intention, I hereby give you notice that I intend to publish the same, and to reply to them in detail, especially your frivolous stories about—(1) The controversy with Campbell. (2) The case of Pearson. (3) The visit of — to the City Temple. (4) The ridiculous story about Coley's visit. (5) The impression upon — of my book announcement. (6) Dale and Rogers covenanting with you for my silence. (7) Your inability to get any one to open a service for me in your church. (8) The "little man" who said none of his people would be there—and other pitiful rubbish which you pile up against me wherever you can create an opportunity for doing so.

Having done this, I shall trace your public life, and try upon you the effect of your species of undignified and unbrotherly criticism:—(1) Your "Consecration" sermons. (2) Your last Union address and the criticism it evoked. (3) Your right to have any connection with a *case-book*, and what your musical brethren think of it. (4) Your sermon on Naboth—where did you get it? (5) Your controversy with Campbell, which was never settled. (6) What your brethren said when it was supposed you might settle in Liverpool.

My object in giving you this notice is to give you an opportunity of modifying or withdrawing your stories, through the medium of a third party, if you wish to do so.

My very heart sickens at the process before me; but it must be carried out in honourable self-defence.

March 29, 1881.

JOSEPH PARKER.

The reply, which was returned unopened, is a good deal longer, and written in a very different tone. It begins with the usual formula "My dear Sir," and is signed, "I am yours truly, Henry Allon"; it is, in short, what can hardly be said of the other, the letter of a Christian and a gentleman. But, quiet and courteous as he is throughout, Dr. Allon makes mince-meat of his angry assailant, most of whose charges turn out to be wholly gratuitous, while of others "I have tried in vain even to surmise the meaning." And the attitude now assumed by Dr. Parker becomes the more marvellous in view of his previous relations with Dr. Allon:—

You came to me to ask why you were not held by your brethren in that degree of respect which you desired. I might have refused the invidious and painful task of telling you, and your letter makes me very much regret that I did not do so. But you solicited my confidence, and I thought it most manly and most kind to tell you frankly how things publicly said and done by you were regarded; and, that you might know all, I mentioned every name and circumstance so far as I knew it. I went even to the verge of impropriety in telling you the opinions and expressions of certain gentlemen, concerning things said by you in the pulpit, expressed to me in conversation. You understood and acknowledged my motive, and when I said that I had gone farther than I ought to have done in repeating to you these opinions you thanked me, and said that the confidence should be honourably respected. Your letter indicates your notion of what honour is.

Dr. Allon adds that he spoke only of matters of public notoriety concerning Dr. Parker as a public man, and that he has nothing to modify or withdraw. As to the story connected with Mr. Coley's name, who is now dead and cannot be appealed to, it seems that Dr. Parker "explicitly denied that there was a particle of truth in the incident—namely, that you apologized in the pulpit for your cold, and said that 'this great brain had been seething all night,' and asked your audience to 'excuse your usual action.'" We can only say that, if the story is not true—and Dr. Allon of course feels bound under the circumstances to accept Dr. Parker's disclaimer—it is at least *ben trovato*. On what most people will consider a much graver matter Dr. Parker appears to have preserved a discreet silence:—

Why, in your communications, do you not propose to justify yourself from the much graver matters of public offence about which I chiefly spoke—viz. your disavowal from the pulpit of responsibility for the *Fountain*, your covenanting for sales of the *Fountain* as a condition of preaching for your brethren, the matter of the advertisements, the candidature for the City, the chapter on Immortality, the letter to the *Times*, &c.—which, as I told you, had seriously hindered the confidence of your brethren.

Dr. Allon goes on to remind Dr. Parker that, little as he liked many things said and done by him—among which may perhaps be included his public avowal of sympathy with Mr. Beecher on a somewhat notorious occasion—he made a point of welcoming him on his first arrival in London, and had done his best ever since to maintain and induce others of his brethren to maintain friendly relations with him. These good offices, however, Dr. Parker promptly repaid by lampoons in his magazine, "and it is not easy to keep terms with a man who regards as an enemy every one who presumes to differ from him." Nor is Dr. Allon anxious to conceal his opinion that a man who has, whether rightly or wrongly, so entirely failed to conciliate his brethren, and who has always been in avowed antagonism to the Union, is not quite suited to fill its chair, which "ought not to be either the prize of a faction fight, the gratification of a petty vanity, or a reformatory for a cantankerous and foolish man." On the whole it is certainly a very pretty little "faction fight," and may suggest some lively reflections to Mr. Matthew Arnold, when he next takes up his pen to comment on the gracious amenities of Protestant Dissent. It would not of course be less unfair to select Dr. Parker than enthusiastic to select Dr. Allon as the typical mouthpiece of Congregationalism, but it is not unfair to take this pitiful wrangle over the claims of rival candidates for the Chairmanship of the Union as a characteristic example of the internal dissidence of Dissent. "Popery and prelacy" may have their abuses and their scandals; but it is evidently not in episcopal Churches only that Diotrephes loveth to have the pre-eminence, and perhaps even a *congé d'élire* may be thought less unedifying than a contest which offers, on the testimony of those directly concerned, such unpleasant facilities for a public display of factiousness, "petty vanity," and "cantankerous" folly. We do not forget that the Independents had an element of greatness among them when they were represented by Cromwell's Ironsides, though even in their best days there was not too much of "sweetness and light" in their presentation of the Christian graces. But the glory of Cromwellian fervour, such as it was, has long since departed, and if the City Temple exhibits the most vigorous phase of modern Congregationalism, it can hardly be denied that Ichabod would be a not inappropriate epigraph to inscribe over its portals.

NEW CALENDARS AND OLD SONGS.

THERE is always something pleasant to persons not wholly soured in the contemplation of the joy of a fellow-creature, even if that fellow-creature be a modern Radical. To be informed, therefore—the announcement should surely have been made in rubric—that "the present week should be marked with a red letter in the calendar of the British Empire" is at first calculated to make even the cynic forget all his woes, from the east wind to the Land Bill, and enquire the reason for this festivity. When, however, he ascertains the reason of the jubilation, the case becomes a

little different. The happiest time, the maddest, merriest day of all the glad New Year to the modern Radical, is, it seems, the day of the evacuation of Candahar. This it is that he celebrates with trumpets and shawms. It would be a pity, and indeed it would be useless, to argue with him on the grounds of his *nunc est bibendum*. We prefer to congratulate him on the almost endless prospect (bar the unexpected) of such festivities which is before him as long as it shall please Heaven to spare the Government of Mr. Gladstone. The peculiar kind of enthusiasm which Lord Beaconsfield so happily described as capable of being aroused only by the abandonment of a national policy or a national possession, has of late years found but little vent. The *Alabama* award, the results of the San Juan and Delagoa Bay arbitrations, were only partially satisfactory, for there was a show of honour and reason about them. The retreat was the fortune of war or of law, a matter in which the loser could comfort himself with the familiar better luck next time. The action of the late Government, however, and indeed of some scores or hundreds of Governments since England became a nation, has provided an inexhaustible store of things to be renounced, and the present Government revels in the luxury of renunciation. Candahar to-day, the Transvaal to-morrow; perhaps (the modern Radical whispers to himself with trembling bliss and awful joy) Cyprus the day after. It is almost too much for him, and if it goes on it will be quite too much for the Kalendar. We must suggest that the extravagance of reddening (by the way, the colour is, after all, not inappropriate) a whole week for a single evacuation is not to be thought of. There are only fifty-two weeks in the year, and there are a great many more than fifty-two foreign possessions in the rent-roll of the English monarchy—a phrase which we for our part prefer to the British Empire as being truer to fact and doing less injustice to Ireland. Behind Candahar there is Quetta, Scinde, the Punjab, India; behind the Transvaal, Natal and the Cape; behind Cyprus, Malta and Gibraltar. Very few years of a Radical Government would make the year all red-letter days, and impose a double debt on each, after the manner reprobated by Charles Lamb in his youth. It must, however, be admitted that the new Kalendar will have a sufficiently picturesque appearance. The Church has a Kalendar, the army and navy used to have one pretty thickly red-lettered, the Comtists have got one—why should not the modern Radical have his? Enterprising stationers will doubtless fall in with the hint, and have Radical Kalendar Notepaper ready very shortly. The motto will of course be, “*Quo regio in terris nostri non plena pudor!*” and a few general headings will suffice:—“Day of the retreat from —,” “Day of the capitulation of —,” “Day of —’s defeat at —,” and so forth. The use of these at first may be a little galling to the less thoroughly regenerate members of the party. The Liberal candidate for West Cheshire, with a candour beyond praise, has just confessed that “to him, as the son of an old soldier,” the Transvaal business gives an unpleasant twinge. But Mr. Tomkinson, and, no doubt, thousands more, get themselves out of the difficulty with the invaluable *distinguo* which their chief knows so well how to use. To them, as sons of soldiers, sons of Englishmen, &c., the things are painful, very painful; but, as admirers of Mr. Gladstone and enemies of the wicked Tory, they rejoice in them wholly. For to do Mr. Gladstone’s behest is all that is required of the faithful Radical, and to undo what Tories have done is *ipso facto* right.

It is probable that, if the modern Radical is not weary of well-doing, the unpleasant squeamishness of which Mr. Tomkinson complains will soon depart from him. Renunciation and vapulation are nothing when you are well used to them; indeed they acquire, as the meek in spirit frequently assure us, a positive relish. Evidences of this are to be found in a quarter which has not of late been suspected of actual Radicalism. The *Times* has been frequently accused of Philistinism, time-serving, and the like; but its reflections on the Easter holidays this year are scarcely to be accurately described by any of these terms. “We are all,” says the writer, “patriots in spite of ourselves”; and he proceeds to show beyond all doubt that, if he is a patriot—which is matter of argument—it is very much in spite of himself. All the fighting which has taken place, or has been within an ace of taking place, in the last four years has really, he says, been about questions affecting us very remotely, or indirectly, or problematically. The interest of the British people in Turkey, in Cabul, in Zululand, and the Transvaal is so slight that “we have to draw largely on the faith of the average Englishman to make him think it any at all.” “It requires a fine sense” (we suppose, to perceive it, for the scribe gets a little hazy here in point of grammar)—a sense which has “something of the over-sensibility which made our gentlemen a hundred years ago wear swords, and use them,” about such a matter as giving and taking the wall. This is certainly a most interesting confession. It will be observed that disputed points of history or politics are not here concerned. We may, for the sake of argument, suppose that the Turkish Empire was not really threatened; that Lord Lytton was wrong about the intentions of Shere Ali and of Russia; that the annexation of the Transvaal and the Zulu war were mistakes. The *Times* moralist’s principle is not affected by this. His doctrine is that, supposing the existence of disputed facts, England had really nothing to do with them except by a Quixotic straining of the point of honour. Maintain the independence and integrity of Turkey? What a plague had we to do with that? Defend India from encroachment? India is a very long way off. Protect the natives of the Transvaal and the colonists of Natal? This was the business of

the colonists of Natal and the natives of the Transvaal, not ours. In short, there is no such interest as the interest which a bond in honour creates. To defend clients, to protect the weak, to meet aggression half way, and with a steady countenance, not in the last ditch like vermin at bay, all these things are mere antiquated superstition.

L’honneur est un vieux saint que l’on ne chôme plus,

says the most vigorous of French satirists, and the *Pall Mall Gazette* and the *Times*, a remarkable pair, chorus the statement. If you want a holiday, says one, celebrate the retirement of Great Britain from a position which Great Britain was pledged to keep. If you have anything to do with these fine sensibilities, says the other, why don’t you wear a sword like your barbarous ancestors, and draw on the first impertinent person who jostles you in Fleet Street? Honour, and even interest, are old songs. The first interest of man is to keep a whole skin, and there is nothing so honourable to him as to run away. A clean pair of heels is the noblest and most beautiful part of the human figure, and it cannot be too lavishly exhibited. Putting the two doctrines together, it is difficult not to think that a certain ingratitude is shown by the compilers of the new *acta sanctorum* to their political foes. You cannot have the luxury of renouncing unless some one has previously acquired. The delight of running away is impossible unless there is a *terminus a quo* from which to start. Theologians of dubious orthodoxy have advised a lavish indulgence in sin that the graces of repentance may be fully enjoyed and displayed. But Tories save Radicals this doubtful manoeuvre. They construct the Empire for their rivals to pull down, and commit the sins of which the others luxuriously repent.

It is probably the abundance of this kind of repentance which enables the Radical party and their chief to dispense with any other. Mr. Gladstone’s discourse of dismissal for the Easter holidays perhaps made up in instruction for what it lacked in grace. The Premier was in great spirits, the reason for which he stated with much ingenuousness—it is because his majority is so very large. He does not repent (at least now, for a certain remark about “polemical utterances,” as well as others about the Transvaal and so forth, recur to the mind) of anything he said in his electoral campaign, and why? Because he has a large majority. Why should he care for Mr. Chaplin’s sense of humiliation? “It is not shared by the majority of this House.” Why should he not shorten the short holidays by bringing the Irish Land Bill in on Monday? The majority does not mind. Why should not Mr. Grant Duff snub members who make him answer in the affirmative a question which it is disagreeable to him so to answer? Mr. Grant Duff’s “tone was that of a large portion of the House.” Perhaps the poet of the *Pall Mall* (we do not mean either the author of the “Buck-Buck-Buckinghamshire Buffoon,” or the author of “Leading Cases,” but the constructor of the admirably poetical lines on Candahar the other day) will give us a version of the *Battle of Blenheim* for which the subject possesses great capabilities. Mr. Gladstone, interrogated on the consistency of his speeches of 1870 and 1881 as to Irish land property, on the attitude of the Government towards the Transvaal last year and this year, &c., might reply with irresistible force:—

“Why that I cannot tell,” quoth he,
“But I’ve a great majority.”

The attitude (Mr. Gladstone does not like the word attitude) is a pleasing one, and tells us how many other songs have grown old. Time was when Ministers (Sir Robert Walpole is, we admit, an exception) did not content themselves with proudly counting rows of obedient noses. However, we shall perhaps be reminded that “time was” is an idle expression, and that “time is” is the only one to which a sensible man pays any attention. Things may be a little disorganized, but are there not consolations? Have not the Boers magnanimously given up Potchefstroom? It is true that by the terms of the original agreement all the British garrisons were to be maintained, and all the captured material given back, so that in their apparent atonement for Commandant Cronje’s fraud the Boers have not sustained one atom of damage, and have gained for themselves compliments about their “descent from the chivalrous Huguenots of France.” But the very phrase of chivalrous Huguenots is a rest and refreshment, because it shows the blessed mantle of historical ignorance in which the modern Radical is wrapped, unless indeed, we are to have a new definition of chivalry as well as of honour and red-letter days in Kalendars. It is perhaps, on the whole, only proper that all such things should become new together. Let us have New Morality, New History, New Kalendars, and a great clearance of old songs of all kinds. For, indeed, what is the good of them? We have, as the *Times*’ philosopher justly remarks, to draw very largely on the faith of the average Englishman to make him attend to them, and he might have added that just now the bill seems to be dishonoured even when it is drawn. What is the use of drawing on Aldgate pump? Let us rather acquiesce in the new dispensation, and content ourselves with, on our part, dishonouring the bills which other people draw on us. Treaties are old songs; prestige is an old song; the British Grenadiers is an old song terribly in need of re-editing by the gifted bard above referred to. Let him give us an excellent new ballad, replete, as the advertisements say, with sentiments of mildness and meekness, recapitulating all the places from which pre-British Grenadier ought to scuttle, and dated 1881, the view of giving the merit of O’Neil’s Farm.”

As to the charge of misappropriating funds, hinted at than openly alleged, and this by an writer who offers no shadow of proof for his insinua-

A DREAM OF THE ACADEMY.

DOGS hunt in dreams, according to Lucretius, Mr. Tennyson, and other learned writers, and most men know the discomfort of pursuing the labours of the day through the visions of the night. Mathematical students are wearied by the fancy that they are an unknown quantity; chemists dream that they are essences so subtle that they can only detect themselves in the spectroscope; sportsmen find themselves shooting with guns whose hammers refuse to let themselves be raised; and gamblers attempt impossible systems, on roulette tables of previously unknown description. Thus it is only to be expected that Queen Mab should be with art-critics, especially after the fatigues of "Studio Sunday." By the way, does the institution of Studio Sunday exist in Scotland, and what has Dr. Begg to say on the subject? These important inquiries we have no time to follow up. It is our business to repeat the story of a singular Dream of the Royal Academy, which visited an art-critic after Studio Sunday. He is rather what Mr. Carlyle would have called a "high-sniffing" art-critic. He is apt to complain bitterly of the way in which our artists, having made a hit, try to repeat it, and do repeat themselves, every year of their lives. He is also fond of writing about harmonies, notes, dominants, counter-point, and similar vanities, for all of which things a nemesis befell him in the vision which we go on to describe.

Our reviewer dreamed that he was the Press. He felt within him that resistless impulse to write prose hymns to Mr. Rossetti, which distinguishes one critic, combined with the love of rare adjectives we admire in another, the gossip of a third, the Lemprière classicism of a fourth, and the contempt for all work not likely to be popular in Whitechapel observed in the chief exponent of the comic 'Arry, or "Yah" style of criticism. He snatched up the stairs of the Grosvenor Gallery, and found himself in the rooms of Burlington House. What he saw, and how he liked it, will best be learned from the following article, which this unfortunate and probably overworked man composed in his vision. Swift once woke with the impression that he had said a very good thing in a dream. By an effort of memory he recovered it, and it was "I told Apronia she must be very careful, especially about the legs." The visionary criticism, though somewhat bizarre, was more coherent than the *mot* of the Dean.

"On another occasion we intend to return to the minute consideration of the pictures of the year. To-day it will be sufficient to discuss the most prominent works of the most admired artists. The Hanging Committee has assigned to that sterling popular favourite, Mr. Burne Jones, the post of honour. In Mr. Burne Jones's pictures, we have, as usual, work understood of the people. His rollicking humour and exuberant vitality have never been better illustrated than in his immense and learned composition, "The Baste that pays his Rent." The "Baste" is not, as our readers might imagine, the pig, but the tenant who "sneaks behind his neighbours' backs," and barely fulfils his contracts. Mr. Burne Jones has depicted a subject full of Irish humour, a "carding" match. The "baste," a tenant whose raiment has been partially removed, is being "carded" by two sturdy fellows with blackened faces. About a dozen others look on with torches in their hands. In the extreme distance may be seen a troop of mounted Constabulary, riding in an opposite direction. This is not only a most laughter-moving piece, but a valuable contribution, like most of Mr. Burne Jones's works, to contemporary history. Many years hence the student of the past will seek, and find, in Mr. Burne Jones's paintings, a precious guide to the manners and humours of the nineteenth century. Mrs. Butler, the famous artist of the "Roll-Call," sends a picture "whereby hangs a tale." It is no secret that the Prime Minister has expostulated with Mrs. Butler, in a friendly way, on her choice of glorious scenes from the remote past of ancient British history. Mrs. Butler has, therefore, at Mr. Gladstone's repeated request, designed a triptych representative of some of the more recent triumphs of British arms. The work is denominated "Scuttling," and, being a triptych, is naturally in three compartments. The first compartment shows us our forces in full retreat from Canthahar. The general is leading, at a great pace, and "go as you please" is the order of the day. The colours may be observed sticking out of the pockets of the officers, to which, by a recent general order, these emblems of our martial race are to be confined in moments of excitement. In the central compartment we have a view of the English troops returning, at the double, unencumbered with their arms, from the vicinity of Laing's Nek, which forms the background. On the top of the Nek is a small Boer boy, in an attitude of derision. English farmhouses are burning on every side; but Sir Evelyn Wood clasps, with an air of satisfaction, a document legibly marked "Apology." The third compartment, designed in the spirit of prophecy, represents the retreat of our gallant fellows before a corporal's guard of Wasiris. As but little can be learned about these, our most recent foes, the artist has given them yellow complexions and a Mongolian cast of feature. We predict that Mrs. Butler's triptych will be the centre of admiring crowds. Arrangements have already been made to have "Scuttling" engraved, and orders for proofs (before letters) have been received from Holland, St. Petersburg, and the Shields Liberal Association.

The bits of tender memory and tears of infinite desire invade modifying or withdrawing the brimming eyes as we gaze for the brief party, if you wish to do so. My very heart sickens at the process before out in honourable self-defence.
March 29, 1887.

mortal poem, "Helen in Leuké." The arras on the Academy walls is, fortunately, securely hung, otherwise it could never resist the weight of Mr. Frith's admirers, as they throw themselves with eager clutch and blind, adoring ecstasy on anything that seems to promise physical support. In the presence of delight-someness like this, once more vouchsafed by the Master to our eyes, words, howsoever vehement, are vain. Mr. Frith has chosen, somewhat to our bewilderment, his subject from "Pausanias, lib. iii. ch. xix." We have looked up Pausanias in our Lemprière, and we find that he was a Spartan general, starved to death in the Brazen House of Minerva Athene. Lemprière does not say that Pausanias left any writings. Be this as it may, Mr. Frith quotes thus:—"Leonumos, being wounded, was commanded by the Delphic Pythia to fare to the Isle of Leuké, and there should he be healed of his wound, who, having gotten back out of Leuké, said that there he beheld the spirits of the sons of Telamon and Oileus, and that Patroclus dwelt with them, also that Helen abode there, and was the wife of the ghost of Achilles." Mr. Frith has represented the beauty of the most beautiful woman of the world, heightened by fatigue and disease, transfigured and transformed by death and decay. In the midst of harmonies of silver air, in which the sickly moon strikes the dominant note, the gracious ghost of Helen stretches her weary and passionate arms to embrace that shadowy shape which, in days of common sunlight, was the swift-footed Achilles. All that we had to pardon in Achilles, all that we had to overlook in Helen, the brawny sinew, the coarse colouring, the glittering eyes, have been purified away. Both yearn eternally in the loveliness that can never be lost, the shadowy effulgence of the grave. Never let Mr. Frith paint otherwise than thus. Almost we could wish that Helen would strike him with blindness as she did Stesichorus, that his palette might never be profaned with colours less colourless, nor his canvas occupied with figures less limp and lifeless.

Mr. Whistler sends "My Last Duchess," a portrait of her Grace the Duchess of Stilton. Seldom has this courtly painter been so fortunate in a subject or an inspiration. Reviving the gracious classicism of the last century, the Reynolds of our age has represented her Grace as Juno with her peacock. The Peacock, a real fugue of Bach's, in the coruscating harmonies of his ecstatic notes of colour, occupies the entire foreground. Her Grace is faintly indicated, we might say hinted ('tis a mere innuendo, a breath, a vapour on the glass), in the middle distance. As Michael Angelo commonly left a corner of the unbewn rude primeval marble in his sculpture, so Mr. Whistler has neglected to glaze the hands and face of the Duchess. There is something sublimely precarious in this *Rohheit*, as Winckelmann phrases it, something worthy of the artist. Mr. Whistler also contributes two etchings in dry-point and counter-point, and an exquisite little painting in *niello*, after the manner of the early Spézia school. The etchings he calls "Portrait of a Gentleman" and "Portrait of a Painter-Etcher." The painting in *niello* represents a singular incident from the apocryphal book of Tobit with gracious *naïveté*.

We must return on another occasion to Mr. Burne Jones's popular canvasses, "In Training" and "Out of Training"; the first representing a boating breakfast, the second revelling in the humours of a Bump-supper. To Mr. Poynter's "Court of Thetis," a bevy of sea nymphs gathered in a cave with "a ceiling of amber, a pavement of pearl," criticism may object that the Nereids are somewhat elderly, and scarcely display the charm of divine and deathless youth. But as most of the faces are fashionable, and all familiar, such criticism is obviously provincial, and cannot be listened to in the centre of taste. Mr. Millais's "Grandfather's Clock" is a most affecting work. It illustrates the beautiful lines:—

It stopped short, never to go again,
When the old man died.

The long white locks of the aged sire overflow a footstool, worked (observe the texture) with a kitten in Berlin wool and beads, on which pillow he has laid his weary head. The churchwarden pipe, dropping from his hand, has shattered into pieces, a beautiful emblem of "the end, the end, the end of all." The clock, a marvel of imitative design, is an eight-day article of inlaid mahogany, and the brass-work of the face is worthy of Van Eyck in its elaborate reproduction of nature. The hands point to noon. A cock is seen through the open window, perched on a farmyard wall. It is the cock which popular superstition, from Siberia to Ceylon, from Finisterre to Cape Matapan, "owes to Æsculapius" at the moment of a mortal's death. This masterpiece was painted for the proprietor of the copyright of the song, "Grandfather's Clock." It will be reproduced, in chromolithography, on the cover of that true *volks-lied*. This, indeed, is to bring art home to the people.

We come last to Prinsep's "Idyl," and precious *idyl* it is. Two girls with none too much on, prinsepally idling by a bay, and a cove playing the pipe to them. The ladies do not seem to object to 'baccy; perhaps, as the scene is in Sicily, they are Bacchantes, or rather meces. No extra charge for that joke.

With 'Arry's yabs ringing in his ears, our shuddering critic awoke, and beheld it was a dream.

MR. HORSLEY ON SUICIDE.

FEW of those who read the very remarkable article which the chaplain of the Clerkenwell Prison has contributed to the current number of the *Fortnightly Review* will be surprised to learn that women are more prone to suicide than men, but probably a good many readers will be surprised by the information he is able to give respecting the causes which drive women of the poorer classes to attempt self-destruction. No one can be better qualified than he is to speak on the subject, inasmuch as, owing to his position, a large number of those who in London try to commit suicide are, to a certain extent, under his charge. Persons who have committed this offence are, as we need hardly say, usually kept for a short time in the House of Detention, and the magistrates who commit or remand commonly intimate in a set phrase which has become familiar, that they ought to receive the advice of the chaplain. The chaplain, to use Mr. Horsley's words, "visits them daily, sees and writes to their relations, finds homes or other institutions for deserving cases where help is necessary, in other ways helps them temporarily as well as spiritually; and in each case he writes to the committing magistrate his opinion of the case with a recommendation, which is always carefully and kindly considered, as to its disposal." Mr. Horsley, then, as Chaplain of Clerkenwell Gaol, has had to question, exhort, and remonstrate with would-be suicides innumerable, and to learn the motives which had prompted them to attempt their lives. From the note-books which, in the performance of his duties, he had to keep he has now taken "three hundred cases of separate individuals, not picked cases, however, but taken simply as they come"; and these may certainly be considered to indicate very fairly the causes of suicide amongst the poor. As has just been said, women are more given to this crime than men; and the facts which relate to women are therefore the most interesting. Very remarkable they are, and in some respects very surprising, as it is clear that the sufferings which might be thought to be most poignant with women do not often cause them to attempt suicide. It might be expected that amongst the classes in which a husband's infidelity is frequently made clear beyond all doubt, a paroxysm of jealousy would not infrequently drive a miserable wife to seek to make away with herself. This, however, is not the case; neither does that humiliation which is thought beyond all others to wound and distress women cause them, save in very few cases, to try to kill themselves. Out of three hundred attempts at suicide recorded by Mr. Horsley, only seven were due to jealousy or jilting; and some of the number who sought death for this cause may have been men. Another cause, of a very different nature, which might be thought to be potent with the working classes, seems to have very little effect. Seeing how frequently cases of cruelty to wives come before the magistrates, it would be natural enough to expect that hapless women subject to habitual brutality would try to end their wretched lives; but this is not so. Putting aside the statement of attempts by intoxicated women, Mr. Horsley's table shows only three attempts due to the conduct of "a bad husband," and two to "brutality of paramour." He mentions, it is true, five cases of women with bad husbands who tried to kill themselves when drunk; but attempts of this kind are of a different nature from those which are deliberately made. The small number of real attempts may be to show that habitual ill-treatment of wives among the poor is not so common as might be supposed from the records of the police courts. A further fact recorded by Mr. Horsley is not perhaps less remarkable. The pangs of conscience are rarely so acute as to cause women to try to destroy themselves. Mr. Horsley only records one case in which the remorse of an unfaithful wife caused her to attempt her own life.

As to the motives which do largely influence poor women who try to destroy themselves, Mr. Horsley's statements are not quite so clear as might be wished. He does not separate the sexes, so that in cases where the description of the reason does not indicate the sex it is not possible to discover the proportionate number of men and women. Out of the 300 attempted suicides mentioned by Mr. Horsley, 144 may be dismissed at once as due to drunkenness. Next in number, though with a great interval, are the cases in which the causes were unknown, and next are those in which the attempts were due to destitution, debt, disease, or distress. This seems, if the expression may be allowed, the most natural kind of suicide, and it is not surprising that out of 300 cases 40 were due to these causes. Domestic disagreement comes next on the list, and here ordinary expectation proves to be right, as women are found to be infinitely more sensitive than men. No less than fifteen women are shown to have attempted suicide in consequence of drunken quarrels with their husbands, but only two men were sufficiently moved by disputes of this kind to attempt to kill themselves. Curiously enough, amongst the lower classes neither husbands nor wives seem to have much power of driving their partners to desperation by incessant worrying or bullying. Mr. Horsley only mentions two cases as due to annoyance. In one of these the offender was the wife, in another a drunken husband who had deserted his helpmate.

As may be seen from the above extracts, Mr. Horsley's statistics are very interesting, and, with regard to women, not a little different from what might be expected. What, however, will probably most surprise those of his readers who are not acquainted with other statistics relating to this subject, are his statements

respecting the influence of the seasons on this crime. Attempts at suicide, strange to say, are more frequent in the pleasantest part of the year than in the most disagreeable. This fact has several times been pointed out, but Mr. Horsley is able to put it in a very strong light, and moreover to suggest a reason for what seems at first sight unaccountable. He says:—

It appears, from books kept by my predecessors and by myself, that in the decennium 1868-77, there were nearly exactly 1,900 cases brought to the notice of the chaplain. Of these, 377 came in during the first quarter of the year, 542 during the second, 561 during the third, and 420 during the last. The first or winter quarter is thus 284 under the third or summer quarter; or, to divide the year into halves, there were in the half year, October to March, 797 cases, and from April to September, 1,103, a difference of 306. All crime is greater, or at least the total amount of crime is greater, during the summer half of the year, but yet the disproportion is not so marked as that we find in the one item of suicide. I believe, considering that nearly half the cases are those of seeking a watery grave, the difference of the temperature of the water has much to do with the matter.

It is quite possible that this very simple explanation is the true one. The notion of a plunge into cold water is, to the majority of men of the poorer classes, and still more to the majority of women, most unpleasant in the winter. It may be thought that this is a very tiny matter to any one who is bent on self-destruction, but the strange fancies of people who attempt or commit suicide have often been noticed, and, after all, but little can be required, in the majority of cases, to turn aside those who have just succeeded in bringing their courage up to the point of facing death. Respecting the age at which people are best able to make this effort, Mr. Horsley gives some facts which are as remarkable as those which he gives respecting the influence of the seasons. Taking periods of ten years, he shows that suicide follows the law which seems to govern all kinds of crime, and that the decade from twenty to thirty years is the worst. Out of his 300 recorded attempts, 124 were by persons within these limits of age. When this period, which seems to be so perilous for those who have any bent towards self-destruction, is passed, there is a great change. The number of cases in the decade from thirty to forty being only sixty-one, or half that of the preceding ten years of life. The longer men live the more they seem to get reconciled to life, or, at all events, the less desirous of quitting it abruptly. Between forty and fifty Mr. Horsley gives forty-four cases; between fifty and sixty only twenty-four. After sixty the desire for self-extermination appears to become very faint. As has often been noticed, the less life is worth having the more men seem to cling to it. True now, as in his own time, are Dryden's words:—

Strange cozenage, none would live past years again;
Yet all hope pleasure in what yet remain,
And from the dregs of life think to receive
What the first sprightly running could not give.

It is worth noticing, however, that there are exceptions to this rule, and that the unadvisableness of living any longer does occasionally occur to old people. Mr. Horsley mentions the cases of two persons—of which sex he does not say—who, at the ages of eighty-three and eighty-eight respectively, came to the conclusion that they ought to leave this world. This view, however, is quite opposite to that which is usually taken by old men and women; and it is a curious proof of the perversity of human nature that, just as the old cling to life, so the young seem ready to quit it. It appears from Mr. Horsley's tables that the age at which suicide is most common amongst the humbler classes is twenty-two—that is to say, precisely the age at which the vital powers are at their highest, at which life should be most enjoyable and should seem to offer most promise. It might, of course, be thought that disappointments in love have much to do with suicides at this age; but this cannot possibly be the case, for, as has been shown, poor men and women, however foolish they may be in some respects, are not so foolish as to kill themselves for love. It is, then, most difficult to see why twenty-two should be, to use Mr. Horsley's expression, the favourite age. If people are more excitable then than they are later in life, they are also more hopeful, and loss and misfortune mean little to those who have all their best days before them. One explanation, however, of the fact recorded by Mr. Horsley suggests itself. A large number of the women who came under his care were courtesans, and probably even at twenty-two most of these unhappy women have become quite reckless and have lost utterly all hope for the future.

Want of space prevents us from noticing other remarkable facts brought forward by Mr. Horsley respecting suicide amongst the humbler classes of the community. It is to be observed, that, striking and interesting as the facts he records are, they point to no general conclusion of any importance save that drink is a great cause of suicide, and this has long been known. He does himself, indeed, draw one very definite conclusion from his observation of those who had, with more or less earnestness, attempted their own lives. He is of opinion that attempts at suicide should be more severely punished, and gives the following reasons for this view:—

It is worthy of note that the impression (greatly justified by facts) which prevails among the class from which most of these cases come, that the punishment for the crime is merely a week's detention and a lecture, has a bad effect by causing the persons to think lightly of the crime, and even to repeat it on the next occasion of irritation or apprehension.

An alderman was once derided for expressing his intention of putting down suicide, but he probably meant, what is undoubtedly true, that some

real punishment, inflicted as a rule, would be a strong deterrent to those who are unable or unused to see moral crime in what is ignored or treated lightly by the law of the land.

I firmly believe that if it became the exception instead of the rule for such offences to escape a period of hard labour, the numbers of attempts would at once, and to a remarkable extent, diminish.

Here we find it quite impossible to agree with Mr. Horsley. No doubt there are every year a certain number of half-hearted attempts at suicide, and if the offence were more severely punished many of these would not be made; but, on the other hand, the certainty of severe punishment in case of failure would make those who really are sick of life much more determined in their efforts to put an end to themselves. Mr. Horsley himself remarks in the beginning of his article that during the last three years the number of suicides has been steadily decreasing, while the number of attempts at suicide have been steadily increasing. Were such a law as he desires enforced, this state of things would in all probability be exactly reversed. There would be fewer attempts, but more cases of self-destruction. A man who was really anxious to die would certainly be stimulated in his attempt to remove himself from the world by the thought that, if he did not succeed, a degrading punishment awaited him. Men are not likely to be reconciled to life by the prospect of a long term of imprisonment; and, though suicide is undoubtedly a crime, it is repugnant to the instincts of humanity to treat unfortunate wretches who have been driven to it as if they were criminals of the ordinary stamp.

INDEPENDENT ART.

AN exhibition has been recently opened at No. 35 Boulevard des Capucines, "par un groupe d'artistes indépendants," as they style themselves in their prospectus, although they are none other than our old acquaintances the "Impressionists," who have, however, become disgusted with the name under which they first challenged public attention. Nor is this disgust to be marvelled at, for the term "Impressionist" has been applied to Courbet, and to others like him, who knew how to draw, and who were not ignorant of the art of painting as it is generally understood by ordinary mortals; and these two accomplishments stink in the nostrils of "independent art." The first things that strike a spectator's eye on entering the independent gallery are the frames in which it has seemed good to the exhibitors to hang their works; and one asks oneself in sheer bewilderment whether it can be possible that the independent artists have succeeded in finding an independent frame-maker to aid them in their task, for it is out of the question that any sane workman should have consented to make such monstrosities. Frames of scarlet, frames of mauve, and frames of violet follow each other in hideous succession, forcing the wearied eye to turn for relief to the pictures they enclose, and making one think that this ugly manifestation of eccentricity may, after all, be the result of a well-hatched plot on the part of the artists to force one to look at their productions. Of the technical qualities of these it is so difficult to think seriously—or to think at all—that we devoted most of the time that we spent among them in endeavouring to find out the hidden impulses which drive men to represent nature in such a manner. In this matter we believe that we have had some success. The conviction in which the independent landscape-painter clothes himself as in a garment appears to us to be that the world which we inhabit is a much steeper place than we work-a-day people have supposed it to be; and that its denizens—man and beast and creeping thing, together with its vegetation—suffer under a chronic tendency to fall from right to left. Of this doctrine we may cite, from among many others, two triumphant manifestations—"Le Quai des Célestins" by M. Guillaumin, and "Le Boulevard Rochechouart" by M. Pissarro. It is simply fearful to think of what might happen if, in obedience to any natural law, the things which M. Guillaumin has portrayed in the picture we have mentioned were to come to pass. The quay in the left of his picture falls violently to the left, dragging with it the river Seine, whose waters are discoloured with "streaks of green and purple, like those on a tiger's forehead," as Blake has it in his "Marriage of Heaven and Hell"; while the trees on the right protrude menacingly like the crest of some savage monster, and the "Pont Marie" totters in the background, to the imminent danger of an omnibus about to cross it. M. Pissarro's "Boulevard" is, if possible, more disquieting to behold; miserable human beings are seen vainly striving to keep their feet on the pavement of this street, which the engineers of Paris have obstinately built at right angles to the inclination of the fearful declivity that he represents; and yet we have often walked through the boulevard in question, deeming that the right-hand and the left-hand sides of it were on a level with each other. As if these strange aberrations in the art of perspective were not calculated to alarm the spectator sufficiently, the painter has summoned to his aid all the powers of a crude and violent scheme of colouring. His shadows are bright blue, and his high lights scarlet—colours apt to disconcert and to strike terror into the beholder. We wish that we had no more serious accusation to bring forward against M. Pissarro than his ignorance of drawing and his inharmonious colour; but he has exhibited other works of a more ambitious character, notably "Le Fendeur de Bois" and "Paysan du Val Hérpé," in which he does more than merely

imitate certain works of Jean François Millet. And this is an indictment which holds good against many of the "independent" artists, who in more than one instance in their figure compositions owe what little merit they possess to very uncompromising reminiscences of the masters they affect to despise. This asperser, however, can in no wise touch M. Degas, whose work is utterly unlike that of any other artist. Amongst other things, he exhibits an oblong piece of paper, covered in one corner by a horribly ill-drawn head of a soldier in coloured chalks, and in another by a rude sketch of a military cap. This production is mentioned in the catalogue as a "Physionomie de Criminel," a title which is also accorded to a sketch of an unsightly being smelling a bone, while an idiotic woman looks on approvingly—a work in the same manner by the same artist. It is to M. Degas that we owe the wondrous spectacle of independent sculpture, in the shape of a "Petite Danseuse (statuette en cire)." Here we find ourselves face to face with a wax model of a hideous young woman, devoid alike of bone and of muscle, clad in white wax stays, red wax shoes, and a real muslin frock. This appalling image is protected from the profaning air by a glass case, and is in every way worthy of being considered as the last word of independent art. We will therefore abstain from speaking of the numerous studies of persons in an advanced stage of decomposition, humorously spoken of in the catalogue as "études de jeunes femmes" and "études d'enfants," and pass on to the works of M. Raffaelli and M. Vignon. Here, at any rate, we have the consolation of being able to speak of works of real talent. The first in the catalogue of M. Raffaelli's numerous studies is an oil picture of two worn-out men playing at cards in a suburban "auberge" called "Les Déclassés." We have rarely seen a more careful and intelligent study of Parisian character than that which this picture brings to our notice. There is something in the faces of the two men that reminds us of Balzac's best pages; and the accessories, although somewhat crudely treated, are true to nature and help out the subject. "Cassant une croûte" is another admirable instance of this artist's power of seizing the character of those strangely interesting types that one so often sees in the vicinity of the old fortification lines of Paris. In "Une Grue à vapeur" and "Doux Vaches et trois Poules," M. Raffaelli shows his power of dealing with water-colour; these are pictures in which he displays his ability of seeing the poetic side of common things, and which make us the more regret that he should have exhibited such a lamentable performance as his "Chemin de fer sous neige," which purports to represent a locomotive engine leaving a station, but which at a little distance is suggestive of a deformed rhinoceros charging a row of palings. His "Locomotive en manœuvre" is, on the other hand, a very charming little study, with a singularly inappropriate title, for the subject is in reality a stretch of landscape with a dark windy sky, and the steam-engine, from which the picture takes its name, is only visible as a black speck in the distance. We hope to see more of M. Raffaelli on other occasions, and devoutly trust that in future we may find him in better company. M. Vignon, although decidedly inferior to him in originality, displays some excellent qualities; and his landscape, marked 152 in the catalogue, is in every way a good picture. His other works do not rise above the level of a respectable mediocrity; but we are so grateful to any one who evinces any artistic capability whatever in these torture chambers, that we cannot forbear mentioning them with approbation. Neither can we leave the Gallery without referring to M. Raffaelli's "Bourgeois lisant les faits divers," which we have overlooked in our notice of his works. This picture, which represents an old gentleman of the lower-middle class reading the account of a savage murder, displays a sense of humour on the part of the artist which is rarely to be met with out of England. An extract from the account in question, let into the frame, enables one to see, at a glance the exact words with which the old man is comforting his soul—a contrivance of doubtful taste, but which is not the less effective in its way. There is some truth of colour in M. Rouart's "Vue d'Antibes"; a quality which consoles one a little for his weak drawing, and M. Tillot exhibits some tolerable landscape sketches. Lest we should come away with anything approaching to a pleasant impression, the "Indépendants,"

more cruel far
Than wildest wolves and savage tigers are;

have reserved a dismal surprise for us in the shape of "La Chateuse, Médaille," a sort of glorified wooden soup-plate, with a blue-eyed howling monster carved in relief on it, who bears some distant resemblance to a woman. This "knavish piece of work" is suggestive of the first efforts in wood-carving of some North American Indian; and one is surprised that it is not signed "Raging Wolf" or "Spotted Tail." With sore eyes and a troubled brain we turned from these unearthly nightmares. In the courtyard below a blind fiddler was playing a choice selection of fashionable airs; he, at any rate, was following the rules laid down for the guidance of his art, to the best of his ability, and his strains, in which some vague notion of a harmonious ensemble was conveyed, fell like a pleasant shower upon our withered soul, and we went forth marvelling at the case of that man to whom it befell that a street musician should repair the havoc that had been made in his spirit by a group of independent artists.

In this article the name of Camille Muller, the self-taught

artist of "Le Tréport," naturally finds its place. Even at the premature age of nineteen, he leaves behind him a number of portraits, and of still-life pictures, which make one regret his loss. His work, always excellent in intention, despite the faults of extreme youth, shows none of the hesitation of the beginner. His drawings, often correct and always vigorous, and his remarkable power of dealing with masses of rich colour, incline us to the belief that, had he lived, he would have achieved lasting fame in the annals of French art.

SPIRITS IN PRISON.

THE very moderate sentence passed by Mr. Justice Hawkins upon Susan Wills Fletcher alias Sister Bertie, is doubtless unpleasant to that person, who is vouched for under the hand of a friend as one of the best and sweetest women she has ever known. Sweet is a very ambiguous term—sugar of lead is decidedly sweet; but, if Mrs. Fletcher was the best woman that her courageous friend has ever known, the moral character of the friend's circle cannot be regarded as altogether high-toned or wholesome. For the first time (if we put out of sight a very inadequate imprisonment endured by a follower of Slade, who was unwise enough to choose Yorkshire as the scene of his operations) positive punishment has been inflicted by English law upon those who avail themselves of the most degrading and dangerous delusion of modern times to rob the dupes of that delusion. The remarkable adducity with which Mrs. Fletcher ventured into the lion's den after the experience she had had in America of the changed sentiments of Sister Juliet, was sure to be wrested into a proof of her innocence. It is hardly necessary to say that the principal and most dangerous ground of confidence which swindlers of this kind have is the reluctance of their victims to make open confession of their folly. It is a pity, certainly, that husband and wife should be separated; and a twelvemonth or two of prison quiet, and perhaps a little hard bodily labour, would no doubt be an excellent alternative for Mr. William Fletcher, after the excitements and unhealthy spiritual exertions of his life as a medium. Mr. Morton, too, the lawyer-colonel, who was in England last week and to be found in just the place he might have been looked for in—a curious instance of the intelligent activity of the English police—would have been a pleasing completion to the trinity. But, if prevention be the end of punishment, the fate of the best and sweetest of women is likely to be as effective as the fate of her accomplices.

The history of the case, like the history of most such cases, may be said to have tended a good deal more to amusement than to edification. We desire to speak with all respect of Dr. "Mac"—doctor of healing, if not of medicine—who has certainly been instrumental in bringing one rogue to justice and in baffling the machinations of two others. It would appear that Mrs. Hart-Davies is in absolute need of somebody to lean upon, and hitherto Dr. "Mac" appears to have been a sufficiently trusty staff. Her previous supporters have, we fear, proved but broken reeds. Her husbands leave her under circumstances doubtless susceptible of the fullest explanation; her lovers, if only co-dévant lovers, go off in the most irritating fashion with her sworn sisters, and her "brothers" are the rottenest reeds of all. The affection of a young trusting heart, as this lady pathetically describes her *épanchement*, seems to have been more than once cruelly deceived. As to the Fletcher story itself, it might almost have been written without knowledge of the actual facts by an intelligent novelist. A remarkably excitable and impressionable person is discontented with her present relations in life, has Spiritualist leanings, and thinks with regret of her dead mother. This is the great handle which Spiritualist rascality invariably works. The only perceivable idiosyncrasy in Mrs. Hart-Davies was her extraordinary gullibility, the implicit faith with which she received the announcements of the Fletchers, and the rapidity with which she divested herself of her worldly goods in their favour. None of the more exquisite impostures were required; it was sufficient for the mediums to fall into a trance, to look at a divining ball, even to write in a letter that the deceased lady "had walked across the room with the grace of a true queen," and the thing was done. Mrs. Hart-Davies at once made room for the Fletchers, man and wife, in her capacious heart. They made a trinity, in which Fletcher represented Wisdom (*i.e.* that of the serpent), Mrs. Fletcher Work (and indeed she seems to have performed the tasks allotted to her with creditable thoroughness), and Mrs. Hart-Davies Love, a commodity of which she seems always to have had a great deal to give away or exchange. The affectionate consideration of the maternal spirit discovered that certain valuable property which she had left to her daughter was altogether too magnetic, that it was exercising a bad effect on her health, and that it had much better be transferred to Sister Bertie and Brother Willie. The transfer was effected with speed and completeness, and the woe to which the best and sweetest of women put the jewelry and the lace were, to say the least, peculiar. No sooner, however, had the too magnetic ornaments found themselves (sometimes with very little else, it would seem, to keep them company) on the person of Sister Bertie, than the affection of that sister and the other saint, her husband, began to cool. A long journey was undertaken in company (always a rash thing), and Mrs. Hart-Davies saw with disgust (or without it, whichever the student of human nature may prefer) "a handsome Captain," a former admirer

of her own, make tracks at the port of debarkation with Sister Bertie and remain absent for some days, occupied doubtless, under her guidance, in cultivating relations with the spirit world. Then Dr. Mac appeared on the scene, and things were not so pleasant for the Fletchers. Of the Doctor's powers of healing we can give no opinion, but he seems to know a rogue when he sees him, and to have a very shrewd notion of the proper method of treatment to be applied to that phenomenon. With the assistance of the American authorities a good deal of the property was disgorge, and, on the woman Fletcher making her appearance once more in this country, proceedings were taken with the result which everybody knows. The history is in the main a very old one. Grovelling superstition, which actually anticipates the attempts made to deceive it, and holds out its throat to the knife and its pocket to the spoiler, is nothing new in the history of the world. Neither is the fact that such superstition occasionally "takes the rue" after a time and discovers its own folly; nor the fact that jealousy is a very useful instrument in bringing about such repentance. The principal points of novelty in the individual story are the fact that most of the plunder was recovered, and the fact that one at least of the plunderers has met with something like her deserts.

Unluckily there were certain special features in this matter which are indeed almost always more or less clearly discernible in such affairs, and for which readers of the *Tale of a Tub* and beholders of Hogarth's "Enthusiasm Delineated" are pretty well prepared. Mr. Justice Hawkins, with great propriety, restrained the cross-examination of counsel as much as possible when it tended in this direction, but (as properly) he referred in his sentence to a possible aspect of the matter which, if less legally criminal, is morally more disgusting than the most barefaced spoliation of a credulous dupe by designing rascals. Even in Spiritualist trials and investigations, there are recorded few things more nauseous than the "scrunches," the "cuddling rests," the "pawing," the inquiries about "having babies in the spirit world," the allusions to "handsome captains," the confessions by a wife in the character of go-between that her husband has for some time ceased to regard his spiritual sister in a merely sisterly light, and so forth. The fact, however, that sooner or later this particular cloven hoof always peeps out in these cases of ghostly imposture, though it is not in the least surprising to physiologists or historical students, is perhaps worth bearing in mind by those who have a hankering after Spiritualism, and who regard it as a precious buttress to religion, a field for pure and unmaterial delights, and so forth. The correct way, according to a great scientific authority, to discover whether a spirit is properly "materialized" is to take her in your arms. The average visitant from the other world (and it is curious how much oftener these visitants are of the sweeter and better sex) is quite *apprivoisé*, and does not object to the harmless test. It is, perhaps, from this originally scientific and experimental practice that "scrunching" and "cuddling" have come to hold so large a place in the operations of spirits and Spiritualists. Or it may be contended that the reaction from the high ethereal delight of spirit communion requires such methods, and is, indeed, helped by them. "I touch heaven when I touch a human body," says Walt Whitman, among whose oddities, to do him justice, Spiritualism does not seem to be counted. Mr. and Mrs. Fletcher and their likes appear to have hit upon the same method of reaching the celestial regions, though it is less euphoniously expressed in their favourite term of "scrunching."

No one of course supposes that persons far gone in Spiritualism will be in the least affected by this exposure; that, indeed, they will be any more affected by it than by the scores and hundreds of exposures, equally clear, if less disgraceful, that have occurred before. But it is perhaps worth while to point out that the trial ought to do good from the very fact that it does not directly attack Spiritualist belief. Any believer in the general doctrine that there is no wisdom in the grave, which, as based upon the reported utterances of spirits, may be said to be a sound general principle, may hold, if he likes, that Mr. Fletcher was a wicked man who did not really see the spirit of the late Mrs. Hengley, or that he was a wicked man who did see her and perverted her commands to his own base purposes. But even such a person, unless he or she is as far gone as Mrs. Fletcher's compurgatrix, who holds her to be the best and sweetest of women, must admit the extraordinary "shadiness" which hangs over the whole affair. The nauseous language, the indecent photographs, the sordid cupidty of the mediums, the pitiable confessions that the victim has to make, these are things likely to make a deeper impression on the sort of mind which, as a rule, falls a victim to Spiritualism than repeated exposures of phosphorus-bottles and flax wigs, slip-knots and false-bottomed cabinets, slate pencils under the nail, and hands made of sawdust and flesh-coloured kid. The latter appeal to the judgment, which in such cases very frequently does not exist; the former to feelings of shame and taste, which frequently do. To be gulled is, after all, nothing very terrible. But to be degraded into taking a vicious and vulgar Yankee adventurer for a saintly prophet, a greedy harpy and possible *extrême-remède* for a sweet spiritual sister, this is an experience of which few women, we should think, would altogether care to run the risk. The very fact, that in this particular case it is hardly possible to feel any sympathy for Mrs. Hart-Davies is the strongest argument in this direction.

...the King should be invited to come to Lay-
bach, and then invite the Great Powers to put him on his throne
again. They stated that France and England might be expected
to give their consent, "since the principle on which the invitation
was in perfect harmony with the agreement formerly concluded
there." This may have been very true; but England was not in
the same mood. The King had become very unpopular, owing to
the "Glenalton" trial; the Opposition was much strengthened; Lord
Castlereagh could no longer do everything he wished; the Duke of
Wellington had a great objection to interfering in the affairs of
small nations, and England finally decided to decline. Metternich
was, however, perfectly convinced that he, and perhaps he alone,
knew what was wanted to save society; and in the end of 1820
he laid before the Emperor Francis a sort of elaborate confession
of his political faith, the keynote of which was "a league between
all Governments against factions in all States." Full of this for-
mula, he had the delight of meeting in October 1821 a
thoroughly kindred spirit in George IV., who was then visiting
Hanover. The King praised the Emperor, whom he styled "Our
Emperor," and Metternich to the skies, and ended with a frightful
explosion against his own Ministry, especially against Lord Liver-
pool, but entirely excepting Lord Castlereagh, whom he described
as a faithful, vigorous man, quite devoted to the good cause, as
proof of which he concluded by saying to Metternich, "He under-
stands you; he is your friend; that says everything." The two
friends got on so well together that Metternich wrote that he
made it part of his business to prepare for the fall of the Liverpool
Ministry, and to reconstruct a Ministry, under Lord Castlereagh's
leadership, "devoted to the cause or us, which is the same thing."
Metternich appears to have believed in perfect good faith that
England stood in the same relation to Austria that Prussia did,
and that he and George IV. could make any Ministry they liked in
England, and keep it in office. Things, however, turned out badly.
Lord Londonderry committed suicide in August 1822, just when he
was coming to Verona, where a new Congress was met to declare a
new sentence of monarchs against Spain. Metternich was sincerely
shocked at the sad occurrence; but he had the satisfaction
of pronouncing over his departed friend what to him seemed the
highest eulogy that earth had to bestow—"Londonderry was the
only man in his country who had gained any experience in foreign
affairs; he had learned to understand me."

A remarkable letter from Metternich to the Emperor Francis,
written in 1829, concludes the fourth volume of his Memoirs, and
sums up the chief results of the years which had intervened
between the first break-down of Metternich's policy in 1823, to the
time, when, as he fondly hoped, the end had come of the sad
struggle to which he had been exposed by the perversity of Russia.
Canning had broken altogether away from the wholesome sway of
right principles. Then Russia had openly shattered the peace
which was the chief aim of Metternich to preserve. England
had failed with Russia in declaring in favour of Greece, and
France had ultimately assented, and thus the Triple Alliance was
formed together outside of the old European alliance, and pro-
ceeded on principles which Metternich thought detestable. In-
stead of all Governments combining to put down all factions, some
Governments were combining to help a faction. This was a chal-
lenge to Metternich and his policy of the most direct kind.
Metternich knew that it was, and candidly explained in his letter
why he had not accepted it. He would very much like to have
imposed peace on Europe, but he had not the means. Austria had
not got the money or the men to impose on her neighbours the
policy she thought best for her and for them. He had been made
very happy by the opportune death of Canning, but he was obliged
to own that this release from the utter misery which Canning had
caused him was not so fruitful of blessing as he had hoped; for the
Duke of Wellington, otherwise so admirable, had no true notion
of foreign affairs, and had got so firmly into his head the notion
that the old European alliance was dead that Metternich could not
persuade him that it was as much alive as ever. The Duke hap-
pened to be right. The day for ruling Europe by Congresses in
which all Governments combined against all factions had gone by,
never to return to the last hour of Metternich's long life. But
Metternich could never believe that he was mistaken. In 1829
he thought that everything looked very bright. There had been a
temporary departure from his policy, but the bad time had
passed. In England there was the Wellington Ministry, which, if
not very wise, had at least a firm grasp on right principles, and
the Marquess of Hertford—with whom Metternich was delighted,
and whom he pronounced to be among the most independent,
thoughtful, and clever of his English acquaintances—had told
him confidentially that he and his friends were going to exert
their vast dormant power, and put down the movement for
Reform once for all. Russia had ended its perturbing action
against Turkey, and in France Polignac was Minister, and he
was one of whom Metternich could say, "he holds our opinions
thoroughly." As Metternich summed up the situation, "Every
power that is inclined to return to the original principle of the
European alliance, as well as to the system of which it is the basis,
must join with Austria; and that this sooner or later must be
done, is evident from the nature of things, and from the unmis-
takable necessities of this age." These were the views of the one

man in Europe on the eve of the French Revolution of the
English Reform Bill, of the liberation of Belgium, of the French
occupation of Algeria. Somehow the nature of things and the
necessities of the age would not operate as they ought to have
done. Canning, as Metternich wrote on one occasion, "tried
to kill me, whereas I killed him and his policy." The sense in
which Metternich meant that he had killed Canning was evidently
that his principles and that of Canning had come into collision,
and that he had triumphed, and among the scalytes of Canning
whom he had killed must have been Palmerston. Throughout
Europe there was no one prophesying more blighly as to the
future than this man, who was profoundly convinced that he was
gifted with almost more than human wisdom. This very blind-
ness, however, this limit of his range, this conviction of his
wisdom had largely contributed to his success during the years
when he was successful. He was no doubt favoured by the times,
for Europe was stunned by the long Napoleon wars, and dreaded
above all things new disturbances; but it was Metternich who gave
shape to the thoughts of the ruling classes, and who fashioned
others to his will, because, while others doubted, he never doubted;
while others shrank from action, he was resolute; and because he
alone had an intense and unchanging persuasion that he had
got hold of great truths and was born to establish their
dominion.

WOOLING A SWEETBRIAR.

IN a recent novel we have a lively picture given us of a dress-
maker's work-room, with a young man who occupies his
leisure hours in reading out highly-spiced romances to the busy
"young ladies." In such a circle we feel certain that *Wooring a
Sweetbriar* would have received a hearty welcome. The dress-
maker's apprentices would have revelled in the descriptions of
aristocratic life, in the elegant costumes of the ladies, in the jocular-
ity of the gentlemen, only—for constancy is the ideal virtue (in
fiction) of the working classes—they would have been shocked at
the levity with which the fascinating hero pays devoted attention
to a beauty and an heiress, while his affections were unalterably
engaged elsewhere.

We should certainly have felt very much surprised had a novel
with such a silly name as *Wooring a Sweetbriar* turned out clever
or interesting; but we were not prepared for anything quite
so improbable or dull as this tale proves to be. It opens at a
"quiet place" in Paris where "respectable citizens" come and
drink coffee and smoke and listen to the band, and here the
heroine, Linda Cavaye, accidentally renews her acquaintance with
her father, who has been for twelve years in India. Now a place
frequented by "respectable citizens" is the very last spot that
would have been favoured with the presence of "the Hon. Captain
Frederick Cavaye, younger brother of the Earl of Glenlindon,"
who "showed his breeding in every line of his chiselled features,"
still less was it likely to have been visited by his friend Sir
Edward Gore, who, "though a baronet with a goodly line of distin-
guished ancestors, bore no outward visible signs of his good birth."
The experienced novel reader will find no difficulty in detecting
Captain Cavaye's character and position in the story, after discover-
ing his military rank. No man could be a captain at forty-two,
even before the recent regulations, without being a scamp
who has but a secondary part to play. Had he been in-
tended for the hero, he would have been a colonel fifteen
years before, or, had he been the virtuous parent, we should have
found him a general, if not a K.C.B. Captain Cavaye, therefore,
beneath his "pleasant exterior" conceals every vice that was ever
united by a mature captain and a younger son of an earl. His
"breeding" extends no further than his looks, for he grossly insults
his sister-in-law and her husband, who have brought up his
daughter for twelve years, and then abruptly carries Linda off to
visit among his own relations, with the avowed object of marrying
her as speedily as possible. On the journey homewards he ex-
poses her to the offensive admiration of Sir Edward Gore, who
informs her pleasantly that "he would rather be scolded by her
than kissed by any one else." Captain Cavaye does his best to
make her ask for money from any one who seems likely to give it
to her. Twelve years' absence from this attractive person does not
seem to have done as much for Linda as we could have wished. She
first engages herself to her cousin, Will Jones, though of course
the reader at once knows no heroine would be allowed to
marry a young man with such a plebeian name, but, on her arrival
in England, promptly falls in love with another cousin, Lord
Kilmara, the future Earl of Glenlindon. Lord Kilmara is deeply
in debt, and has no pecuniary expectations except from his aunt, so
he dares not propose to her, though this trifling omission does not
prevent many endearments from passing between them. Un-
happily, however, Lord Kilmara does not confine his caresses to
the lady with whom, for the time being, he really fancies himself
in love. Partly to blind his rich aunt, and partly to amuse him-
self, he flirts vigorously all though a ball with another young lady,
Eva Venables, and suddenly, on the balcony, seizes her in his arms
and kisses her wildly. This Eva Venables is the type of every-
thing that the author thinks gentle and womanly, but she resents
the insult very mildly indeed, though she herself is the fiancée of
one Charles Egerton, and is madly in love with him. This young

man is as penniless as all the characters in the book that have not 60,000 a year. Eva's father is a very poor curate, whose head is not unaptly turned by succeeding to a baronetcy and to the above-mentioned large income. It would be an immense relief to all thoughtful and imaginative people if these turns of fortune's wheel could be accomplished in some other way than by the invariable drowning of a distant cousin and his two sons, heirs to the title and estate. Could not the family go up in a balloon, and discover something wrong with the apparatus; or might they not be all seized with a sudden feeling of patriotism, and volunteer, and be killed in one of our foreign wars? Any variety would be welcome. Sir Dalton Venables and his two sons, however, dispose of themselves in the regulation way, and Eva becomes the heiress to the family property. Her father has always disapproved of her engagement with Mr. Egerton, and now availed himself of the first excuse to act like the father in the poem:—

Once he loved you, loved you blindly,
But papa behaved unkindly,
Gave poor Reginald his congé,
One evening in the salle à manger.

Linda meanwhile had been pursuing her career of conquest and, let us add, of kissing, in an uninterrupted way. The only man she did not flirt with was Sir Edward Gore, who, besides being short, ugly, and horsey-looking, knew not how to draw the line between "broad familiarity and coarse rudeness." We should have imagined that there was no such line to be drawn, and that if there was, that it was equally unperceived by the rest of the characters; but then we are ignorant of the manners and customs of the circles in which the Cavayes moved. Sir Edward still wished to marry her, and her father still urged the match; but Linda held out, in spite of threats, and even blows, so Captain Cavaye takes her with him to try her luck in the happy hunting grounds of Edinburgh. Here she makes friends with a young lady of sixteen, "well meaning, but utterly unprincipled," and spends her days on the tops of drags, and her evenings in ball-rooms. In reading *Wooring a Sweetbriar* we could almost fancy the days of Erasmus had returned, so regularly on every public occasion do the principal persons salute each other, though without the purity and sweetness of their dispositions suffering in the least. The result of this behaviour in the case of Linda is that one young man with whom she has gone these lengths, and then refused, commits suicide—a fact which is thrown in her teeth in ordinary conversation for the rest of her life. We will give a specimen of the delicate observations made to her by the Rev. Sir Horace Venables, a few months after the event had occurred:—

"I fancy you knew a gentleman of the name of Edwards, in Edinburgh, Miss Cavaye, did you not?"

He had met a friend the day before, who had related the story of poor Edwards's death—with a good deal of exaggeration respecting Miss Cavaye's share in it—to him, and he was anxious to ascertain how far the report was correct; for, if it proved to be so, Miss Cavaye was not exactly the sort of friend he would choose for his daughter, though she was Glenlindon's cousin. So he took the above delicate way of approaching the subject, staring hard at Linda with his cold grey eyes as he spoke.

The girl, who had also been indulging in a reverie, roused herself with a slight start, and answered steadily, though the blood suddenly forsook her lips:—

"Yes, I did."

"He shot himself, I believe?"

"He did." Linda's quivering lips could hardly frame the simple words.

"They say he was crossed in love, or something of that kind."

This time the girl essayed no answer whatever, and Sir Horace suffered the subject to drop, convinced by her evident unwillingness to speak on it, that she was in truth the heroine of the Edwards's suicide which had created such a sensation, and on whom the newspapers had heaped such unsparring abuse, though they had not given her name.

It would be too dismal to follow the manœuvres which drag their weary length through three volumes. The scene is changed periodically from England to the Riviera; but not only are the actors the same, but their mode of acting also. On learning that Eva has become an heiress, Lord Kilmarra, now the Earl of Glenlindon, at once flies to Cannes to pay court to her; and this under the very eyes of Linda Cavaye, with whom he is still "in love." He begins by asking her why she is so unkind to him, and then refers, in the best taste, to the subject of the ball-room kisses:—

"I have wanted to apologise to you for a long time for anything that you may have thought rude in my manner that night. You cannot tell how I regret having offended you. I do not know what possessed me to act as I did; except that you looked so tantalizingly pretty; and I had known you so intimately ever since you were a child, that I had come to regard you almost as I did any of my cousins. I never thought you would be so angry with me; Lady Flora Wilton and heaps of other girls would only have laughed and treated it as a joke. I think you took it rather too seriously, Miss Venables; and then, when you refused to dance with me, I got angry too, and was too proud to apologise, as I had intended doing. But say you forgive me now, and I will never do anything that can vex you again."

After much perseverance on his part, he is unwillingly accepted, just when Linda's fortunes are at the lowest ebb, for her father has committed forgery, and is now living by cheating at cards at Nice. When all their money is gone, and Linda has declined either to ask any one for more, or to act as decoy to the young men about the place, Captain Cavaye deserts his daughter, who rushes to Geneva to throw herself into the arms of Lord Glenlindon. He tells her that he regrets to say he has promised to marry the heiress; but, as Linda promptly falls ill of brain fever, he reconsiders the situation, and everything ends happily.

Such is the outline of *Wooring a Sweetbriar*. We cannot stigmatize the characters as unnatural, because in many cases they represent a state of society which does undoubtedly exist, a society which, while keeping the letter of the commandments, perpetually breaks them in the spirit. There is hardly one relationship in *Wooring a Sweetbriar* which is not distorted into something hideous. Aunts are jealous of their nieces, young men openly accuse the girls of whom they think most highly of throwing themselves at their heads and laying traps for them, young ladies are unable to resist their own vanity and to be true to what they know is right. Dignity or reticence is, of course, absolutely wanting among people of this sort, and they seem to have lost the sense of care for their own reputation, which outlasts care for the reputation of others. It is not often a father is so lacking in decency as to tell a stranger who remarks upon the delicate looks of his daughter that she is fretting "about her old lover," or that a gentleman tells his friend, just after he has proposed, that his fiancée is "a stupid little thing." But if we were to begin to dissect the taste of the book our task would be endless.

ODGERS ON LIBEL AND SLANDER.*

MR. BLAKE ODGERS has acquitted himself of an exceedingly difficult and troublesome undertaking in a manner deserving of almost unqualified praise. And if our own approval is thus far guarded in its expression, it is not because we have actually noted any material error or defect, but because it is impracticable for a reviewer to examine critically the whole of a book dealing exhaustively, as this does, with a large and intricate subject. In those parts to which we have given closer attention we have found Mr. Odgers an accurate as well as a diligent writer. The burden of diligence he has imposed upon himself is no ordinary one. His object has been to bring together in an orderly form the whole of the existing authorities on the law of libel and slander, and to state as nearly as possible their results. Thus his work is a Digest in the old sense, in so far as it collects all the cases; but it is also a Digest in the newer sense which has come in of late years, in so far as it extracts the meaning of the cases and embodies it in general propositions. The second part of the task, though it covers less space than the first, is really the more important. As Mr. Odgers truly says in his preface, "A huge collection of reported cases piled one on the top of the other is not a legal treatise, any more than a tumbled pile of bricks is a house"; accordingly he has "attempted to strike a balance, as it were, and state the net result of the authorities." Too many of the books in common use offer us little better than a tumbled pile of bricks. The operation of putting a long series of decisions in order and getting some sort of net result from them is more troublesome than any one would believe who has not done it himself. Mr. Odgers has here carried it through manfully and successfully. So far as we can see, he has never shirked a doubtful point or taken refuge in ambiguous generalities. In dealing with really unsettled questions it might perhaps have been an improvement to state with equal precision and particularity (as Mr. Justice Stephen has once or twice done in his *Digest of the Criminal Law*), both of the opposing views which may still be tenable. On the head of blasphemy, for example, we think Mr. Justice Stephen's method gives a clearer notion to the reader of what a judge and jury would be likely to do at the present day. But it must always be to some extent a matter of individual judgment how far an attempt to reconcile apparently discordant authorities is worth making.

It would be impossible for us to follow Mr. Odgers through all the matters treated of in his book. We shall select one or two which raise questions of principle not without general interest. The distinction in English law between written and spoken words, as affording a cause of action, has been more than once commented on as unsatisfactory, and there is much reason to believe that, as regards its actual history, it is a casual result of the manner in which jurisdiction in cases of libel and slander was acquired by the civil courts. An ingenious argument to this effect was contributed to the *American Law Review* in 1872 by Mr. St. John Green, and has been adopted by Mr. Melville Bigelow in his *Leading Cases on the Law of Torts*—a valuable work too little known in this country. Mr. Odgers, on the other hand, thinks the distinction justified by the reason commonly given, that written or printed matter has naturally and necessarily more publicity and permanence than spoken words. But this omits to notice that the quality of the persons to whose knowledge a defamation comes may be far more important to the party's feelings or reputation than their mere numbers. A libel in a newspaper may be extremely offensive and injurious to a well-known man conversant with educated people, when the very same statement, made in the same manner of an obscure man whose kinsfolk and friends are illiterate, might do him far less harm than oral communication. To speak ill of a man in a newspaper which his acquaintance do not read surely is a less injury than to speak ill of him to their faces. It is a strange conclusion, again, that a slander should be deemed less mischievous because (as may be the case) it is so vile that the utterer cannot get it printed and dares not commit

* *A Digest of the Law of Libel and Slander; with the Evidence, Procedure, and Practice, both in Civil and Criminal Cases, and Precedents of Pleadings.* By W. Blake Odgers, M.A., &c. London: Stevens & Sons, 1881.

himself to writing it. On the whole, we think the rule of law should be the same for spoken and for written words, and the manner and extent of publication, whether by speaking, writing, or printing, whether by private communications or by the public press, whether in an ordinary course of dealing or with a special purpose of injury, should be considered only for the purpose of awarding damages. Or, if there are to be fixed differences, the principal one in our opinion should be, not between written and spoken words, but between matter published and matter not published; understanding publication in its common and popular sense, not in the technical and often unnatural one which it has gradually acquired in this branch of the law. There are one or two other points as to which Mr. Odgers does not think it needful to be astute to justify the existing state of things. Such is the rule that spoken imputations of immorality, however gross, are not actionable without special damage; though perhaps a reason for this, too, might be discovered with a little ingenuity. For mere foul-mouthed abuse will hardly beget in impartial bystanders any other opinion than that the person uttering it is in a state incompatible with being the witness of truth; and thus the person to or concerning whom the words are uttered is not damaged. But if the hearers of such matter perchance lightly believe it, they show themselves to be a sort of people whose good opinion is not worth having, and, by consequence, the loss of it is no damage; unless, indeed, the party's known character be such as to make the description antecedently credible, which is as much as to say that he or she has no character to lose. If this plea for the common law fail to carry conviction to our readers, we can but assure them that there are worse in Blackstone. As regards the special question of the position of newspaper editors and publishers who have issued libellous matter in good faith, in the course of truthful reports of speeches made at meetings and the like, Mr. Odgers does not agree with the recommendations lately made by a Select Committee of the House of Commons. He thinks that no further extension of the description of privileged matter or occasions is needed; and that the best reform of procedure would be to abolish prosecutions by indictment altogether in libel cases. The procedure by information would then remain as an auxiliary to the ordinary civil remedy, which Mr. Odgers proposes should not be, as it now is, excluded by it. A criminal remedy of some sort must be retained, as Mr. Odgers points out, if only because many libellers of the worst kind are not worth powder and shot in a civil action, and indeed regard it as a desirable advertisement.

An excellent feature of Mr. Odgers's work is that he wholly sweeps away the cumbrous and idle fiction of "malice in law." What is called "malice in law" means, as he justly says, nothing else than the absence of lawful excuse. But where there is lawful excuse there is no wrong; so that, in this sense, every actionable wrong is malicious, and to say that it is maliciously committed is mere surplage. The fact that you bring an action shows that you maintain the defendant's word or deed to be both wrong on the face of it, and not justifiable by any matter of excuse or privilege applicable to the conduct complained of. Probably the habit of alleging malice arose from the opinion found in some of the older cases, but now overruled, that to make spoken words actionable some proof must be given that they were spoken with ill-will; in other words, that what is now called "malice in fact," or "express malice," was a necessary ingredient of the wrong. Mr. Odgers's handling of the matter is identical in principle with that of Mr. Justice Stephen in his *Digest of the Criminal Law*, where, however, the word "maliciously" is retained, perhaps in order the more effectually to expose its absurdity. Fair comments on subjects of public interest are dealt with by Mr. Odgers, we may here note, not under the head of privilege, but in connexion with the general question, What amounts to defamation? The correct view, he maintains, is not that criticism of matters of public concern is privileged, but that fair criticism of such matters is no libel. For, "if such criticism was privileged in the strict sense of the words, it would in every case be necessary for the plaintiff to prove actual malice, however false and however injurious the strictures may have been; while the defendant would only have to prove that he honestly believed the charges himself in order to escape liability; and this clearly is not the law." This reason is, we think, a good one. It would be still better, though a text-writer could hardly attempt it, to get rid of "privilege" altogether as a technical term. Fair comment on what is fairly open to public comment is no libel. Other statements which otherwise would be libellous may be justified by showing that they are true, or they may be excused by the occasion. Some few occasions afford an excuse, even if the statement is not believed to be true by the person making it. There are said to be absolutely privileged. Others have this effect only if the statement is made with belief in its truth, and with some other motive than ill-will to the person affected by it. In these cases there is said to be qualified privilege. To all practical intents the difference between occasions of absolute and of qualified privilege is much greater than between occasions not privileged in any sense, and occasions privileged in one or other of the above-named senses. Privilege, therefore, as a general term, gives an awkward or misleading cross-division; if retained at all, it should be limited to what is now called "absolute privilege." The rational title to include all the cases would be justification and excuse, under which the topics might be arranged in the following order:—1. Truth in substance and in fact. 2. Fair comment on matter of public interest. 3. Communications or reports made in good faith and on proper occasions ("qualified privilege"). 4. Statements made in Par-

liament, in discharge of official duty, or in the course of judicial proceedings ("absolute privilege"). It is well known to lawyers that the law of libel and slander, especially slander, has a sufficiently comic side. The severely technical character of Mr. Odgers's book has not allowed him to call attention to this directly. But we judge from passages like the following that the humours of the subject have not escaped him:—

Is it a publication if a man tells his wife what he thinks of his neighbours? . . . The question seems never to have arisen in England; probably because in every such case there has been an immediate and undoubted publication of the same slander, or an exaggerated version thereof, by the wife to some third person; for which the husband would be equally answerable in damages, and which would be easier to prove.

One use to which an idly curious reader might put this *Digest* is to discover how much vituperation of his neighbour he might safely indulge in without risk of an action. There is a tradition on the Northern Circuit of two members of the mess who on a Grand Night exchanged unactionable compliments for a considerable time. We know not if their exploits are fully recorded, and probably great part of them would be unquotable if they were. But we may suggest the following general description as probably safe to speak (though not to write) of a country gentleman in the commission of the peace, not called to the Bar, and carrying on no particular business:—

He is a runagate rogue, a villain, a varlet, and a cozening knave. He hath as much law as a Jackanapes; he is a bankrupt fellow not worth three half-pence; he hath but one manor, and that he got by swearing and forswearing; he is a logger-headed, slouch-headed, bursen-bellied hound, an ass and a beetle-headed justice. He is a scamping rascal, and stole the parish bell-ropes when he was churchwarden; he stole a growing tree worth forty shillings from Farmer Stiles's meadow, and a hoghead of water from his pond, and poisoned his pigs with mustard and brimstone.

We do not answer for every one of these epithets as being certainly not actionable at the present day, and in any case it must be left to the speaker's discretion whether there is any chance of special damage ensuing and being provable. Above all, variations are dangerous; for example, though you may without fear tax a churchwarden with stealing the parish bell-ropes, it will not do to say of him that he cheated the parish of their value, nor to call him a thief in general. He that would learn more of this excellent distinction, let him turn to *Jackson v. Adams* in the second volume of Bingham's *New Cases*.

THREE MILITARY BOOKS.*

MR. TOMASSON was much disappointed by the results of the Zulu war. We fear he must have been still more chagrined by the terms of peace made with the Boers. For Mr. Tomasson holds, and holds strongly, that "Africa should become to us a second India, and should be British from Table Bay to Cape Guardafui." He prophesies "such it will be, spite of all the clamour of a section at home"; he explains to all the sections "we are, to a barbarism a thousandfold greater than that of India, the pioneers of Christianity and civilization"; and he concludes his volume by inquiring of the pioneers—"Should we pause in our glorious career?" The recall of Sir Bartle Frere in response to the clamour of a section was very much calculated to throw a damper upon Mr. Tomasson's exuberant hopes. In that enterprising statesman he had recognized the nation's first and greatest pioneer, one who he might confidently expect would be giving orders at an early date to Adjutant Tomasson and the irregular horse of the flying column to free the continent of Africa from Table Bay to Cape Guardafui. "History," however, says our author, "will look after Sir Bartle's reputation"; and we have no doubt such will be the case. With history and prophecy both on his side Mr. Tomasson can afford to wait awhile for the full realization of his programme.

Colonel Buller's irregulars were composed of men of no less than nineteen nationalities, besides Jews of all nations. "Discharged soldiers and 'Varsity men, unfrocked clergyman and sailor, cockney and countryman, cashiered officers of army and navy, here rubbed shoulders." It is no wonder that it required "long months of anxious work" on the part of Colonel and officers to bring this heterogeneous material "to its best form." Mr. Tomasson must be well qualified to pass an opinion, and he tells us that Danes make the best, and Americanized Irish the worst, soldiers. It is a mistake to suppose that the most efficient irregular corps is necessarily made up of the most irregular people. Under a man like Colonel Buller, unfrocked clergymen and cashiered officers have very carefully to mind their p's and q's; and an irregular force is never so efficient as when in the matter of discipline it is most like a regular one. Mr. Tomasson gives us a spirited account of various combats in which he was engaged in Zululand—amongst others of Ulundi; various details concerning the poor Prince Imperial, whom he met more than once; and some observations on the Boer outbreak. There is an amusing anecdote concerning Oham's wives when that astute brother to Cetewayo came over to our

* *With the Irregulars in the Transvaal and Zululand.* By W. H. Tomasson, late Adjutant of Irregular Cavalry. London: Remington.

The Light Cavalry Brigade in the Crimea: Extracts from the Letters and Journal of the late General Lord George Paget, K.C.B. With a Map. London: Murray.

The Dress, Horse, and Equipment of Infantry and Staff Officers. By Captain Henry Hallam Parr, C.M.G. London: C. Kegan Paul & Co.

side. Colonel Buller had to escort the party to our camp, and on the way a river was reached, which two of the wives pretended to be afraid to cross. "Two troopers were therefore told off to take the ladies on their backs and swim over; but one, finding her cavalier rather knocking up in the transit, quickly dived off, and swam like a duck to the shore; immediately the other followed suit, and both reached the bank, leaving their bearers struggling in the stream, to be received on gaining the bank by the unmerciful laughter of their comrades. To add insult to injury, the fair ladies addressed them in Zulu, which the interpreter translated to be, 'Him no good.'" Mr. Tomasson has a bad opinion of the "ill-advised Dutchmen" till now in rebellion; but makes exception of "men like Paul Kruger and Joubert, fanatics of the Calvinist school, who, I am firmly convinced, are acting sincerely up to their convictions." Were this volume to reach a second edition, some qualifying remarks would doubtless be attached in explanation of the following sentence:—"The Boer will not fight unless driven into a corner whence there is no escape." The author was very disconsolate when his corps was broken up and his vision of a new British India became temporarily obscured. He is more to be pitied than Alexander, whose disappointment was of a negative order. Here there *was* a world waiting to be conquered. The late adjutant wonders where his former comrades are now to be found. He fears they will not be easily mustered again, for

Some are dead, and more are gone,
And others, beyond the seas,
Got arraped to death with oyster shells,
Among the Caribbees.

Mr. Tomasson's apologies for shortcomings in English composition take the form of a defiance to the critics to find any worse. It certainly did occur to us more than once that his grammar had, like his unfortunate comrades, got "among the Caribbees."

In a memorandum attached to the preface of Lord George Paget's book, the late author tells us he had lent his manuscript to many people to read, among others to Mr. Kinglake, "who had it in his possession for two years, I think, and who was so complimentary as to say that he learnt more from it than from all other accounts put together." Outside the circle of anecdote, and beyond the range of matters of interest only to the writer's own friends, there is therefore no news which has not been long ago discounted. The gallant officer took such a time to consider and re-consider whether his experiences were worth giving to the world—and, in that case, if and when he ought to give them—that the day has gone by when these would have secured any large share of the public attention. There are a few old generals, colonels, and others left who, after the appearance of this volume, will doubtless often fight Balaklava over again "across the walnuts and the wine." Leaving it to them to fight it out, we may briefly refer to a few of the writer's opinions on the proceedings of the day. It may here be remarked that, though Englishmen must ever take a deep pride in the heroic onsets of both heavy and light cavalry brigades in that battle, it should be remembered that in more recent wars an equally brilliant counterpart to these achievements has been found in the exploits of the cavalry of other armies. The French cuirassiers at Wörth charged with no less gallantry than did the Light Brigade to inevitable destruction, and, as the ground traversed was in their case less favourable, the futile heroism of the act was still more remarkable. The Prussians at Mars-la-Tour were equally heroic, and far more scientific in the calculated sacrifice of their cavalry. In the matter of the charge of the Light Brigade there is a noticeable difference from either of the two above instances, in that there was neither calculation nor miscalculation involved. The whole business was a costly blunder. Lord Raglan never meant the cavalry to go at the guns they did go at; Sir Richard Airey entrusted his chief's order to a hare-brained aide-de-camp to take to Lord Lucan; the aide-de-camp—Captain Nolan—interpreted, when appealed to, the order to suit his own view, or else really misinterpreted it; Lord Lucan felt bound to obey orders which he looked upon as absurd; and Lord Cardigan was bound to execute them, though they appeared to him monstrously unreasonable. Nevertheless, he started on his mission as became a gallant leader of a gallant following, and he had the good fortune to come back to tell the tale. Then he went to England; but, being "vain and ambitious," he made foolish speeches, as a man might be expected now and then to do on seeing the people of a great city scrambling for a hair of his horse's tail. These speeches begat counter-orations, and in due time we got the "Cardigan trial." Lord G. Paget, than whom no man perhaps was so well calculated to pass an opinion, and who, we can see from occasional remarks, was anything but partial to his immediate chief, believes that Lord Cardigan did his duty in the fight. He exonerates him from the imputation that he failed in his duty in not waiting after the ruin of his front line to lead or rally, or see what had become of his second line. He proves that when Lord Cardigan emerged from the chaos he could not, from his then position in the proper front of the guns, have discerned a single man of his supports. Mr. Kinglake is about of the same opinion. Lord George ventures the theory that Lord Cardigan might not have known for certain that his supporting regiments (at least the 4th and 11th) had ever moved forward. "It was well known," says the author, "that Lord Cardigan never looked back from the moment when he put spurs to his horse, and, for anything he could know to the contrary, the advance of those regiments *might* have been countermanded by the Lieut.-General; or their onward course

might have been impeded or turned aside by some eventuality unknown to him in this unusual contest." Certainly it was an unusual contest, and it would have been still more unusual had the supports failed to support the leading squadrons. Though Lord Cardigan could, as it happened, have done little or nothing towards directing or rallying the second line, a cooler head—we do not mean a stouter heart—would perhaps have exhibited some little curiosity as to what had become of half his command before making for home. It must be borne in mind that, on the eve of charging, Lord Cardigan several times and with marked emphasis urged the leader of his second line to give him his "best support." And with equal emphasis Lord George Paget promised his best support. Did Lord Cardigan assume, on the spur and in the excitement of the moment, that the second line had shared the fate of the first?

The author concludes his amiable, but probably just, remarks by a reflection. "I am sitting in an easy chair writing this!" and, full of daring as he was himself, he advises that people in easy chairs should be careful in their criticism of those who bore the burden and heat of a "somewhat uncomfortable day." We are unable, however, having regard to the weight of opposite opinion, to agree with him that the Light Brigade was judiciously restrained from falling on the flank of the Russian cavalry after their defeat by our "Heavies." It was their one great opportunity, and it was allowed to slip. So true is it that to be a good leader of cavalry implies the possession of exceptional qualifications, and that the occasions for utilizing cavalry come in a moment, and in a few moments may be gone altogether. Curiously enough, Lord George, after giving us cogent arguments why the Light Brigade should not have charged, winds up by avowing that, having been in second line, he could not see well how matters stood, and acknowledges that "subsequent information gained by conversations with some who were in the first line have tended to shake my confidence in my own opinion."

He is extremely partial to Lord Raglan, and we are pleased to find Lord Lucan receiving that justice which has too frequently been denied him by less competent critics. At the same time, the capital fault of that general on the Balaklava day is duly exposed. There is, indeed, no blinking the truth of Sir R. Airey's remark that, before getting the fatal order which he handed over to Lord Cardigan for execution, Lord Lucan had not made himself sufficiently acquainted with the general dispositions of the enemy and the features of the engagement that was going on. In consequence of this negligence Lord Lucan was entirely at a loss how to proceed when the crisis came.

At one time we are told the headquarters staff cordially hated the French; and once when the author was dining with Lord Raglan and the bugles of a French corps were heard in the distance, our chief exclaimed impatiently, "There they go with their eternal *too-too-tooing*, and they're good for nothing else." The staff naturally took their cue from the leader, and there can be no doubt some of the little misunderstandings between the allies arose quite as much from want of tact, courtesy, and sympathy on our part, as from exhibitions of vanity and eagerness to be first on that of the French. It is pleasant to read how, when Lord George Paget commanded a brigade at Eupatoria, and was directly under the orders of the French General d'Allonville, the excellent feeling subsisting between these two officers produced its natural effect throughout the entire force.

The book contains a number of details which can have no possible interest for the general public; on the other hand, there is a fair amount, if not of novel, of very readable matter.

It is laid down by Captain Parr that infantry officers, as a body, dress worse when in uniform than any other branch of the service. "Many officers who would never allow themselves to be seen in shabby garments when *en bourgeois*, think nothing of turning out in uniform which is very much the worse for wear." There can be no doubt that this is very often the case. "In some battalions," adds Captain Parr, "it is no unusual occurrence to see an officer in a battered forage cap and a shabby patrol jacket, with a dim scabbard and tattered sword-knot, inspect men whose apparel contrasts favourably with his own." Our own observation enables us to endorse the truth of the remark. Of course it goes without saying that officers who are slovenly and shabby in dress have an unsoldier-like appearance and demeanour on parade. Their gait, their salute, their manner of action during barrack square manoeuvres, are in close correspondence with their dress. Perhaps when the late excellent general order enjoining the wearing of uniform constantly in garrison towns has had time to work, we may be privileged to witness some improvement in the above respects. The best officers almost invariably dress well. The Duke of Wellington said of his officers in Spain that many of his best men were the greatest dandies. Sir Garnet Wolseley says, "The better you dress a soldier, the more highly he will be thought of by women, and consequently by himself." It must have frequently been observed by those who go abroad how much neater, and more like soldiers, both French and German officers look when walking about the streets of a town in uniform than our own do under the same circumstances. Even when our officers are well dressed, many of them seem to care little, if at all, whether they look like soldiers provided they have the appearance of gentlemen. British officers would, as a rule, find it difficult to look otherwise than gentlemen, but why should not they look also what they professionally are? Vicars and barristers do not strive their utmost to divest themselves of their professional "cut"; why should soldiers do so? Lord George Paget, in his "Crimean Journal"

relates, "I was riding to-day with the Duke of Cambridge about the French camp, when we fell in with St. Arnaud, and the contrast between him and Lord Raglan, whom we had just left, was very typical of the two nations. He had a staff of about twenty . . . with an orderly close to him carrying a beautiful silk tricolour standard. We rode with him to Lord Raglan, who came out in a mufti coat to meet him, and looked as much *less* like a O.-in-C. as *more* like a gentleman." It may have been only exceptionally that Lord Raglan turned out in this guise, but had he done so always when off parade it would certainly have been considered in the British camp as far "better form," and more the "correct thing," than had he moved about with the circumstance of a Commander-in-Chief in the field. And this way of looking at things has obtained wellnigh universally in our army down to the present time. The necessity, however, now laid heavily upon our officers of being practical soldiers, having a thorough knowledge of their work, and not merely walking characters upon a military stage for an occasional brief hour, will induce also in the matter of dress and professional demeanour a beneficial effect. The perpetual changes in the dress regulations are certainly calculated to discourage officers—especially those with slender means—from paying sufficient attention to their attire. In view of the heavy expense which alterations entail, every effort is made to take advantage of the permission to wear one thing out before getting the latest fashion. We fear the authorities have an idea that German victories were not wholly disconnected from the question of German habiliments. When Napoleon found the Emperor Francis and the King of Prussia engaged one day in profound discussion as to the proper number of buttons on a soldier's coatee, he took care, he tells us, to join in and affect the greatest interest in the matter.

Captain Parr is not satisfied with the appearance of the majority of infantry officers when mounted, and we are not surprised this should be the case. No infantryman should be allowed to appear mounted on parade till he has been through a riding school, till he has provided himself with riding trousers and Wellington boots, and knows how to carry his sword, and salute in cavalry fashion. There are some useful hints in the book concerning the dressing of the staff, and on the subjects of saddlery, equipment, and chargers. The dress of the service, take it all round, is smart enough to please the ladies, very good for parade purposes, and in some instances serviceable enough for campaigning work. It is to be regretted that the great personages whose minds seem for ever exercised in devising new cuts for tunics and caps, and new patterns in lace, should not rather insist on existing regulations being carried out more strictly. Commanding officers who are sharp enough to detect the tiniest irregularity on the part of the men are often strangely indifferent as to the figure their officers make on parade.

OUR COUNTRY TOWNS.*

BOOKS on the rural districts of England by sympathetic and accomplished writers have been common enough. Enthusiasts like George Borrow and William Howitt have made us familiar with scenes that might well tempt the summer tourist to take his holiday on our own side of the Channel. They have interested us in our old castles, halls, and manor-houses, in picturesque country churches undisturbed by restoration, in artistic "bits" of mediæval village architecture. We have pedestrians among us now like Mr. Louis Jennings, with the gift of describing what has charmed themselves so as to tempt their readers to follow them in their rambles. But our old country towns have been comparatively neglected, or, at all events, only alluded to incidentally. Nor is that unnatural, for to most people the enjoyment of the summer excursion consists in removing themselves as far as possible from anything resembling a city. The brain-worker, who toils amid brick and mortar, loves to get off the stones and away from an agglomeration of smoky chimneys, and to wander under shady trees, along field-paths and between green hedgerows. If he seeks even a quiet provincial town for bed and breakfast, he is inclined to hurry on his way the first thing in the morning. Mr. Rimmer has shown in what is literally a rambling volume that the tourist would often do well to linger in a spot where he may find a variety of unsuspected objects to interest him. Even so far as picturesqueness goes, there are towns in England that may vie with any of the show places in Brittany or South Germany. The pity of it is, that they are being modernized so fast that the man of taste must pay his visit to them now or never. While the remoter parts of the country stagnated, when communication with the busier world was slow and costly, the genius of conservatism was indisputably in the ascendant in them. The dreamy little place only woke up to some faint excitement on the weekly market day, going quietly to sleep again for the rest of the week. The inhabitants had neither money nor taste for embellishments, and were content to live on in the dwellings of their ancestors, keeping the old wood-work and metal-work in repair. The churchwardens sauntered along peaceably in the old-fashioned ways, and considered that their duties with regard to the venerable church were discharged when they kept the roof tolerably weathertight. But now the general growth of prosperity and the increasing acceleration of progress has been

changing all that. Towns that used to be half forgotten somewhere at the back of the world have woke up to the rattle of the railway trains; money has been flowing fast as new industries have been started. The crooked lanes have been made straight, and the narrow thoroughfares have been widened, as demolitions and reconstructions have been going on apace. That growth of activity ought to be gratifying in the extreme; nevertheless it is to be deplored by amateurs of the beautiful. So we have read Mr. Rimmer's lively volume with mingled feelings. On the one hand, it is pleasing to be reminded that time and the wreckers have spared so much that is quaint and curious; yet we know that too many of those memorials of the past are awaiting the doom that may overtake them at any moment.

Of the volume itself we can only say that it is in every respect excellent. It is written in an agreeable and gossiping style, while it contains a great deal of curious and out-of-the-way information. The author is evidently an enthusiast in archaeology and mediæval history; but he always keeps his disquisitions on these subjects within bounds, and he changes the ground he lightly travels over so fast that he leaves us no time to feel *ennuyé*. He has extracted the local essences of countless county histories; he has the local legends and traditions at his finger-ends, and he links innumerable historic worthies with the scenes where they distinguished themselves by the threads of association he has been at pains to unravel. We gather incidentally that Mr. Rimmer is a strong partisan on historical questions and that he holds advanced views in politics. But his opinions are never offensively obtruded so as to ruffle the susceptibilities of those who differ from him, and they rather serve to give an air of individuality to a piquant narrative. He guards himself in his preface against being supposed to give anything like a comprehensive idea of our old country towns. But a glance at the table of contents will show how thoroughly and fairly he has sampled some of the most interesting parts of England. In the course of his perambulations he has embraced Derbyshire and Yorkshire, the Midlands, the Potteries, the Fens and the Cinque Ports, besides making promiscuous excursions in the North country, towards the Welsh Marches and elsewhere. He has illustrated the volume himself, and the illustrations do credit to his taste and execution, while they invite one to look into the accompanying letterpress. Many of them are slight and simple enough, but without exception they are artistically selected. Mr. Rimmer likewise is careful to disclaim the idea of writing anything like a guide-book, but beyond his outlines of attractive itineraries, there is one point of no little importance on which he gives the tourist some valuable hints. Now and then he notes a house of entertainment where he was impressed by the excellence of the fare and the moderation of the charges. Mr. Rimmer, who is an Englishman to the backbone, is somewhat depreciatory of foreign cookery, and occasionally insists upon comparisons which are doubtful, if not odious. But we should be inclined to trust his judgment on an English dinner or breakfast.

In a desultory volume where so much is attractive it is difficult to make satisfactory selections by way of examples; and when we detach scraps of the text from their context, we are almost sure to do the author some injustice. But if we do the best we can, we cannot do very badly for him. There is a group of old Cheshire towns that seems to be well worth a visit. At Malpas Mr. Rimmer makes allusion to its romantic associations with the days of chivalry, and he tells a strange story of an act of fantastic heroism in the plague that desolated the place in the beginning of the seventeenth century. There is another tradition about a visit paid to Malpas in disguise by his sacred Majesty King James I., who must have been roving somewhat in the manner of his ancestor of Picaresque memory, the Knight of Snowdon, in *The Lady of the Lake*. Malpas, we are told, with its market-place and fine old church, reminded him much of one of the quaint old towns in the Rhineland. Nor is the church at the neighbouring Nantwich much inferior, while in a vignette there is a view of such a roadway "as we might have expected to find in the Tudor period. In some parts, a man with a handcart would find a little difficulty in threading the narrow lane." Nantwich, where the streets have been steadily subsiding over the excavations of the salt-mines, is "well worthy of a visit, if only to see the curious way in which the houses incline towards each other and from each other in every direction, while props are used to keep them as nearly upright as circumstances will permit." At Whitchurch there is also "an ancient market-place with many fine old houses, but the chief interest centres in the church." In that church was buried the Talbot of Shakspeare, which sends Mr. Rimmer away on a pleasant digression as to the history in the First Part of *Henry VI.* Mr. Rimmer, by the way, is a firm believer in the immortal William's historical exactness, and holds that his account of the battle of Bosworth, with the events that preceded and followed it, is as trustworthy in point of fact as it is brilliantly dramatic. And crossing Staffordshire and clearing the towns in the Potteries at a bound, we may as well follow Mr. Rimmer to Bosworth Field as anywhere else. There is a charming view of it as it appears now, with King Richard's well in the foreground, indicating the features of the landscape as they influenced the fortunes of the battle. We are taken to Hincley, which has been greatly modernized since old Hurton condemned it for want of uniformity; and to Atherstone, where Richmond slept the night before the battle at the inn of the "Three Tuns," which is still a respectable hostelry. Richard had his quarters at the appropriate sign of the "Blue Boar," in Leicester, and though the house has long since been pulled down, it has bequeathed its name to Blubber Lane.

* *Our Country Towns.* By Alfred Rimmer, Author of "Ancient Streets and Homesteads of England," &c. London: Chatto & Windus. 1881.

Mr. Rimmer takes his stand on the battlefield by the well, imagines the trees cleared away, maps out the ground with its strongly-marked features, posts the divisions of the opposing armies, with Sir Richard Stanley's command on the one flank and that of Lord Stanley on the other; and then, with constant reference to Shakespeare, discourses on the incidents of the memorable day. In a different style, he makes his chapters on the Marsh country equally interesting, dilating on its condition in the days when Hereward held out in his Camp of Refuge against the Conqueror, and referring to those successive attempts at reclaiming the fens which were finally crowned with success. The Abbey of Croyland, he says, is "even now a delight to a stranger," and the remarkable triple bridge there of which the Croyland monks were the authors and architects is worth going far to see. Local legend assigns to it a fabulous antiquity; but Mr. Rimmer unhesitatingly decides from the mouldings that it cannot possibly date back from before the beginning of the thirteenth century. The view of Whittlesea, which forms the frontispiece to the chapter, is a pretty picture of one of the pleasantest towns in the fens. Whittlesea boasts no less than three churches, one of them with a noble spire of the fourteenth century, some fine old houses, and "a quaint and ancient canopied market cross in the middle of the large open Market Square. . . . The spire of the church is very light and beautiful, and shows charmingly above the houses that surround the market-place." "Cambridge, Ely and Peterborough," are no doubt interesting enough, but seem to stand somewhat wide of the range of subjects we expect to find in such a book as Mr. Rimmer's. But, although Boston is too much of a city to be strictly included in his category, we should be sorry to spare the interesting chapter he devotes to its associations with the Puritans and its relations with its big Transatlantic namesake. As for the Cinque Ports, with which we must bring our notice to a close, there is nothing better in the volume than his description of them. Some of them, indeed, are romantic enough to awaken chords of poetry and eloquence in a more prosaically-minded narrator than Mr. Rimmer. He takes us back to the days when those flourishing maritime communities furnished their gallant contingents of ships to the navies of the Romans and Saxons, the Plantagenet kings and the Tudors. The citizens still retain some shadowy privileges, the last vestiges of their ancient glories. "The freemen of all the ports are called barons, and in former days they stood very much indeed upon their dignity, and ranked with the barons of the land." The sea that once made their fortunes has now left Hythe and Romney in the lurch; and there are broad tracts of the fertile pasture land that, according to the old Kentish proverb, give wealth without health, between highwater mark and the houses. We are still reminded of their former riches by the noble remains of their ecclesiastical buildings. And at Hythe Mr. Rimmer came upon a suggestive evidence of an industry the inhabitants had thriven by in later times. He gives a sketch of a house with a curious attic on the roof, commanding extensive views of the Channel, and still bearing the name of the "Smugglers' Lighthouse." He has no doubt that it was built to display a beacon for the guidance of those swift luggers of light draught that were on the look out to run their contraband cargoes. Hythe, having become a military station, has been greatly modernized. Nevertheless, besides its churches, it can still boast a couple of hospitals of very old foundation, while near it is a very noteworthy old cottage, which, in Mr. Rimmer's opinion, may really date from the reign of the second Richard. We might go on indefinitely directing attention to similar curiosities and to places which have their attraction for the archaeologist or artist. But we have said more than sufficient to recommend an attractive book.

THE LIBRARY ASSOCIATION REPORT.*

THE Report of the second meeting of the Library Association, held at Manchester last year, makes as comely a volume as either of its predecessors, and much of what it contains is of interest to others besides librarians. One item, we may say at starting, is of interest to every one who has published, is publishing, or is about to publish a book, and to every book-buyer as well. It is the balance sheet of the Association, which contains an account of the cost of producing the former volume. If it was, as we believe, the same size as this, it contained about 190 or 200 pages imperial 8vo., or small folio size, in double columns; it was beautifully printed by Whittingham; the paper was of the thickest and richest kind; and the total cost of 180 copies was 45*l.*, or exactly five shillings a copy. If this is so, how is it that the combination between the publishers and the retail booksellers continues to enforce upon us the enormous and prohibitive prices that we have to pay for English books? The normal price for such a volume as this, in the shops, would be at least sixteen or eighteen shillings; the cost of producing it is five. Allow half-a-crown for author's profit and the same for the trade, and you get ten shillings—the price charged in France, Italy, Germany, everywhere but in England. Who profits by the present system is

known to the gods and to the publishers; certainly the author does not.

But it is not right to begin with a digression. Coming back to the volume itself, we find abundant evidence of the good work done by the Association. The papers come, with a few exceptions, under three heads; those which deal with the technicalities of library work; those which deal with Free Libraries and their organization; and those which deal with special libraries or collections of books. The first class is naturally rather beyond our scope; the mysteries of catalogue-making and indexing are only for the initiated; and these matters are properly left very much to committees, whose reports are for the experts to read and decide upon. One of these, however, is of more general interest—namely, the report on a general catalogue of English literature. This project, which is one that touches very closely a large number of students, has not been very fairly handled as yet. The Council of the Society of Arts were asked some years ago by their President, the Prince of Wales, "to consider what would be the cost of producing a universal catalogue of all books printed in the United Kingdom previous to 1600"—a plain question, susceptible, one would have thought, of a plain answer. But, as the Librarians show, the Society of Arts diverged into quite other questions, and never found out for the Prince what he wished to know. The question that now agitates them, and the librarians also, is how a universal catalogue of *all* English literature could be produced; is it practicable, or is it likely to be too costly and too difficult? The Trustees of the British Museum have been considering "the proposal to print in future the accessions (foreign as well as English) to the general catalogue of the British Museum"—amounting, incredible as it may seem, to 60,000 entries a year—and to circulate these printed accession-lists among subscribing libraries. This might lead to what some people desire so eagerly, the printing of the complete British Museum Catalogue; or it might be a help to the rival scheme for printing a general catalogue of the whole of English literature. As to these alternative proposals, the Report says:—

This Committee is in favour of the latter rather than the former of these two proposals. It seems to us that the printing of the Museum Catalogue as it stands is quite inadequate to our needs as regards English literature, and that if the titles of the English books in such a Catalogue were to be reprinted in a subsequent Catalogue of English Literature, an immense cost and trouble would be incurred twice over.

As before, the Committee feel that the true solution of the whole matter lies in the co-operation of our great national library with the other more important libraries throughout the country. If other libraries would supply the Museum with the titles of English books which the Museum does not possess, and the Museum would consent to incorporate them into the catalogue of their own English books, the task would be achieved. We should have a General Catalogue of English Literature, and the Museum would not only have catalogued its present possessions, but also its future acquisitions, in the printed English literature of four centuries.

It is difficult not to agree with these remarks, and it is difficult to see why this is not at once done. Is it necessary to wait for the Government or the Museum to do it? It would probably answer for private enterprise to undertake it; for it is not to be supposed that the cost would be beyond the returns. Suppose—to make a pure guess at the extent of the work—the catalogue were to occupy ten thousand double-column pages, and were to be sold at ten guineas. How many buyers would be forthcoming in the United Kingdom and America and Germany? We think it a fair estimate that five thousand copies would be taken up within the first two years, and that the proprietors would find themselves with a handsome profit in hand.

The Association occupies itself a good deal with what may be called the social, or semi-political, side of library affairs, especially with the questions how to develop and organize the Free Libraries. Mr. Nicholson of the London Institution, who is always active in this department, makes some proposals about the amendment of the Free Libraries' Acts which are well worth consideration by local authorities and by literary members of Parliament. It appears that there are now four Acts, amending one another; clearly they ought to be consolidated. Not to mention technical amendments that are required, Mr. Nicholson suggests various amendments of principle, of which the following are the chief:—There should be a power of disestablishment vested in the ratepayers; corrupt practices in applying the Acts should be far more carefully guarded against; the principle of the Act of 1877, which allows the use of voting-papers, should be generally adopted; a supplemental voluntary rate should be encouraged; Town Councils and similar bodies should have the right not only to submit the adoption of the Acts to a public meeting, but actually to adopt them; there should be special legislation for London; and public free libraries should be inspected. Some of these points are certainly debatable—for example, that which gives the Town Councils the power of adopting the Acts without special reference to the ratepayers; but some others of the suggestions are open to no objection. It is clear that, as Mr. Nicholson says, in many towns the Acts are not adopted because the ratepayers think that, whether the library turns out a failure or not, they are to be saddled with it for ever. School Boards can be disestablished under certain circumstances; why should there be no power of acting in the same way with libraries? Again, anything that prevents the undue interference of the landlords of compound householders with their tenants' votes should be welcome. Mr. Nicholson says he can give the name of a landlord who, "in the presence of some of the leading supporters of the Acts, avowed that he had threatened to raise his tenants' rents sixpence a week unless they voted against the Acts"—and it is to

* *Transactions and Proceedings of the Second Annual Meeting of the Library Association of the United Kingdom.* Held at Manchester, September 23, 24, and 25, 1879. Edited by the Secretaries, Henry R. Tedder, Librarian of the Athenæum Club, and Ernest C. Thomas, late Librarian of the Oxford Union Society. London: Printed at the Chiswick Press. 1880.

be feared that this landlord does not stand alone. Much would be done to check this by universally adopting the plan of voting "allowed," but not enjoined, by the Act of 1877—namely, that "the vote of the ratepayers should be taken by voting-papers left at, and collected from each house, instead of by public meeting and subsequent poll." It is impossible to say that the majority of ratepayers feel very keenly one way or another on the question of public libraries. They are benevolently neutral, but are easily turned into hostile voters if, by a factitious agitation, by the employment of rowdies at public meetings, and by other methods, it is made to appear that the Acts are in any particular town unpopular. If the voting were done quietly, and the arguments for and against were submitted to the citizens in print, the number of towns in favour of the Acts would no doubt be much larger than it is. If so, if free libraries become more common, it will be a satisfaction to every one to adopt Mr. Nicholson's suggestion of Government inspection. Two or three inspectors could annually go through all the free libraries that are likely to be in England in our time, and the cost would be trifling. The institutions are really a great boon to most of the towns in which they are adopted; at Manchester and Liverpool they are the greatest possible boon, and the very poorest of the people take full advantage of them. They ought to be developed in all ways; partly by such legislative amendments as Mr. Nicholson proposes, and partly by such means as other writers in this volume suggest—by co-operation with the Board Schools, and by lending themselves to schemes of lectures and popular instruction generally. There seems to be no reason why they should not in large towns have branch rooms in the more distant quarters, where the books in commonest use should be deposited in duplicate, and where a sufficient number of periodicals should be supplied. It is evident that a central free library can hardly expect to draw artisans who live more than, say, a mile away.

One of the most interesting papers in the volume is that written by Mr. Nodal on "Special Collections in Lancashire and Cheshire." As might be expected, there are many collections of local books, and books on local industries; and there are also collections of a more individual kind. The Manchester Library contains nearly eight hundred volumes on the cotton manufacture; Rochdale aims at a complete library of wool literature; and Wigan at possessing all that is known about engineering. Many private persons, too, have local topographical collections, such as the Rev. P. M. Herford, of Chendale, with his three hundred volumes of Cheshire books, and Mr. Earwaker, the new historian of Cheshire, with his almost complete assemblage of maps, manuscripts, and books on the same subject. Some persons, however, find topographical subjects very dreary; to them we commend the more exciting collection of Mr. R. U. Christie, the learned author of *Etienne Dolet*, and those of Mr. Ireland, Mr. Crossley, and others here duly described. Mr. Christie's strength lies in the books of the Renaissance, though his Horaces are celebrated; his Aldines, though not quite so splendid a set as was lately to be seen in Piccadilly, are 276 in number; and his Lyons printed books are enough to make the French collectors die of envy. Etienne Dolet was not the best of publishers to deal with, but books of his printing are worth having. Mr. Christie has nineteen, "all of the highest rarity, four or five being the only copies known to exist." Mr. Crossley, the venerable President of the Chetham Institute, seems to have given his mind to Daniel Defoe among many other matters, and possesses "the whole of the 254 books and tracts enumerated in the list prefixed to Mr. Lee's *Life of Defoe*," and fifty-two others besides. A still more interesting possession is the yet unpublished MS. of Defoe's *Complete English Gentleman*; a book which the author had begun to print when his last illness came upon him. Mr. Crossley might well give this to the world. Mr. Ireland's collection contains all the editions of the *Anatomy of Melancholy*; all the works of Leigh Hunt and W. Hazlitt, &c. Mr. Salisbury has 18,000 volumes—probably an almost complete collection—relating to Wales and the four border counties; Mr. Rylands has all the Ptolemies ever published; and so the curious catalogue goes on. The reflection that strikes one most in reading it is, how easy it would be, and how desirable, to extend this sort of sketch or summary to the whole of the United Kingdom, and to publish a volume containing short authoritative accounts supplied as much as possible by the owners of all the best private libraries in England. Many of them are not large, and for that reason are apt to remain unknown; and to make them known would be really interesting to students and lovers of books. We commend the idea to Mr. Nodal, who would, we are sure, work it out admirably. Or the Association itself might do it, by means of the local librarians who already belong to it; and Mr. Nodal might be asked to act as editor-in-chief.

A MODERN SPHINX.*

ONE of the commonest (though by no means one of the worst) mistakes into which beginners in novel-writing fall is the putting of too much material into their books. The old hand sins in a directly opposite manner, being content with a minimum of

new matter smothered in "some of my own sauce," as Beau Tibbe's wife has it. But the amateur, probably because he really has something to say or because he is afraid of seeming stingy in the quantity of provender he sets before his guests, constantly spreads his action over too long a time, introduces too many characters, describes too many scenes, dwells on too many incidents. Major Rogers has in some sort fallen into this error. We should say that his book would have gained not a little if about half its substance had been cut away; by which we do not mean that there are too many words or too many pages, but that the actual matter is too copious. It requires a more practised juggler to keep a dozen balls going in the air at once than to keep half a dozen, yet somehow the unpractised jugglers seem to prefer the more difficult feat.

The scene of *A Modern Sphinx* is laid in Demerara, and is thus tolerably fresh. We do not remember to have read any Demerara novel since Mr. Jenkins's *Lutchmes and Dilloo*, which was entirely occupied with the wrongs of coolies and the wickedness of planters. *A Modern Sphinx* barely mentions the interesting "aborigin," as his defenders have been known to call him, and busies itself almost entirely with garrison life and colonial society of the upper class. It opens with the arrival of a new regiment at Georgetown, and with the ball given, according to custom, to celebrate that arrival. The reader may think (erroneously) that he has discovered the Modern Sphinx in a certain Captain Seagrave, the philosopher, the misogynist, and in a manner the butt of Her Majesty's —th Regiment. This officer is introduced at great length as being quizzed by his brother officers, especially the officer in command, a mysterious Major Catherwood, with an evilly handsome countenance and a habit of sneering. The conversation of the gallant —th is of an innocent kind, and unless Major Rogers is cryptically satirical it more than justifies Thackeray's Stubble and Spooney caricatures. All the —th except Seagrave are confirmed lady-killers, the Doctor having slain his thousands and the Major his tens of thousands. Seagrave is an exception to this weakness, or this conquering habit, whichever we ought to call it; but at the ball he falls hopelessly into the toils of a young lady who rejoices in the odd name of Creoline—which suggests a combination of crinoline and creosote. The redoubtable Catherwood, with the worst intentions and antecedents, constitutes himself his rival; and so one part of the plot is, so to speak, laid out for us. There is plenty more, however. The —th have brought with them a frisky matron, native to the place, one Mrs. Barton, who flirts abominably with her Creole cousin, a lawyer and Civil Servant, named George Grey. He has a wife still friskier, who flirts with everybody, but especially with a subaltern of the regiment, Lieutenant Burke. To these characters (to mention only an indispensable addition) has to be added Dr. FitzJames, the senior medical officer of the station, an ill-tempered and hideous little person, who frequents ladies' society assiduously (though he abuses it at mess), and keeps himself in many ways mysteriously to himself. All these persons, and a great many more for whom we have no space, dance, flirt, eat, drink, and generally intrigue a great deal. We are early informed of a bad kind of business in which Mrs. Barton and the Lawyer Grey are concerned, and which turns on the malversation of certain property which Grey, by evil practices, has got into his hands. This, with the passion of Seagrave and Catherwood for Creoline, and a great many mysterious embranglements of lost heirs and changed names and such like things, form the substance of the story.

The book, in spite of the faults of plan and construction which have been noticed, and of others in the writing, especially in the dialogue, is fairly readable, though few parts of it deserve higher praise than this. The few which do so deserve are for the most part episodic. Major Rogers has been pursued by the desire to give good measure, pressed down and heaped up and running over, even in the details of his plot. The complications, for instance, which attend the end of the unlucky George Grey are so preposterously involved that they recall nothing so much as the story of the would-be suicide who arranged a fourfold end for himself, were it not that this ingenious person finally escaped, while Mr. Grey did not. In the first place, Mr. Grey puts himself in peril of the clutches of the law, as has been already pointed out, by meddling with other people's property. Then he suddenly overhears a poor relation of his friend and cousin, Mrs. Barton, confessing knowledge of his guilt, and, "in the hurry of the moment," as Mr. Samuel Morley would say, brains her with an iron bar. Having committed this rash act in full sight of a sentry, he is shot at but missed. Then he finds Georgetown on fire, and heroically distinguishes himself in rescuing persons and properties from the flames. Then he is arrested and sentenced to death for the murder. Then a plot is formed by the foreman of the jury and several other persons of respectability to half-poison him with woorali, get him out of prison, and bring him to life again. Then, the execution of this being entrusted to Mrs. Barton, who is half-mad with narcotics, she administers the wrong sort of poison, and the unlucky, but, after all, murderous lawyer, dies for good and all. Such a concatenation is the sort of thing which is possible in real life; but it is so intrinsically improbable that it is out of the range of incidents allowable for fiction. If this sounds like a paradox to any tiro in novel-writing, let him reflect over it till he comes to understand it, for in it lies a valuable secret. We are constantly told that such and such a story is founded on fact. There could not be a worse recommendation, for at least a considerable number of facts are quite unsuitable for literary treatment. The mistake is indeed only another form of the

* *A Modern Sphinx*. By Major E. Rogers. 3 vols. London: J. & R. Maxwell. 1881.

naturalist heresy which is just now working such havoc with French fiction.

The most attractive part of the book is to be found in a description of a picnic up the country, which, though as usual a great deal too full of incident, has some liveliness. The misogynist, Captain Seagrave, who from first to last is something of a nuisance, does indeed vary it with appalling speeches of this sort:—

Listen then while I warn you solemnly of the inevitable fate that awaits you, that already seems to engulf you, and that will assuredly carry you as uncontrollably to an unknown inscrutable hereafter as the waters around us do a leadot. Yet, it seems, I can as little hope to turn the river from its source as interfere to prevent it.

It is not surprising that the unfortunate young woman to whom this rignarole is addressed remarks that her companion "speaks enigmas." Fortunately, however, the party is large, and its members do not all talk about inscrutable hereafters, though Major Rogers himself is nearly as bad as his hero. When he wishes to tell us that three young officers who managed the picnic wished to get their party comfortably arranged, he says that "they felt themselves in duty bound to concentrate the incongruous elements of the picnic party round some acknowledged focus." An acknowledged focus is certainly one of the oddest synonyms for a young woman, even if her name be Creoline, that we have ever heard. So, too, the following is a sentence which we cannot commend.

Even Dr. FitzJames' fealty to the dusky young ladies was open to much ill-natured construction as to the use he would make of the pleasantries that passed, forged as it were for the delectation of Mrs. Elrington, who sat aloof conversing chiefly with her bantering husband.

This odd dialect, however, is more tolerable when the author describes than when he "dialogues." And he had a great deal to describe in this picnic on the Essequibo. As soon as his guests have exchanged their steamer for Indian canoes, a deer is hunted by a jaguar across their path, and, the party scattering in pursuit, Major Catherwood and Mrs. Grey are left alone. They lose their way, of course, and another jaguar turns up "promiscuous," followed by an ant-bear. Dim reminiscences of the early works of Captain Mayne Reid, we must confess, crowded on us when we came to this. The ant-bear and the jaguar have a battle royal, and Major Catherwood, not over-fairly, seizes the opportunity of the conclusion of a round to finish the jaguar with his gun-barrel, and to knife both it and the bear. This is entirely contrary to the best traditions of English sport, and after reading it we can quite believe that Major Catherwood was a bad man. He is exhausted, and goes to sleep by Mrs. Grey's side, which, as she wants him to flirt with her and is a little afraid of more jaguars, annoys her a good deal. Then he wakes up, and they discover an Indian hut cheerfully occupied by a corpse, a pot of woomali, and a mourner, who is with great difficulty persuaded to guide them out of the wilderness. We cannot follow this remarkable picnic any further, except to remark that a canoe accident, with half a dozen deaths by drowning and a general succumbing to "Yellow Jack," complete its delights. Altogether it must be acknowledged that the author's preliminary and moralizing description of picnics is justified by his instance. "This sort of entertainment," he says, "is an anomalous one, anticipated with transcendent delight, enjoyed in limited measure, and frequently recalled with unmitigated disgust." The last clause, in particular, seems thoroughly applicable to Essequibo picnics, if we are to suppose that jaguars, ant-bears, dead men's corpses, drowning, and yellow fever are usual or frequent incidents of them.

We have already declined to enter into the intricacies of Major Rogers' *dénouement*, wherein Dr. Fitzjames turns out to be a very surprising kind of medicine-man, and most of the remaining characters are served heirs or heiresses to peerages, great estates, and other desirable hereditaments. Whether it was desirable to reproduce in a novel the tolerably well-known story of the strange being who is here called Dr. Fitzjames may be an open question. The chronology of the book is a little difficult, and characters which have but little to do with the general action wander about its pages in a miscellaneous condition. Altogether, the book is what German critics would call a very inorganic one. Considering the awkwardness of the writing, the involved and congested condition of the plot, and other faults, it is rather odd that the readability which in a manner it does possess should remain to it. Perhaps this may be set down as due to the fact that Major Rogers, in writing on Demerara, writes about a subject with which he is familiar. An ounce of observation certainly goes further in novel-writing than a pound of anything else—another point which might with advantage be borne in mind oftener than it is.

GERMAN LITERATURE.

IT is seldom indeed that a competition for a prize essay produces such a performance as Professor Schanz's work on the commercial policy of England at the close of the mediæval period (1), more especially under Henry VII. and Henry VIII. The proposal emanated from the University of Göttingen, but so substantial a result could hardly have been looked for by that

learned body. In two thick volumes Professor Schanz traces the relations of England with every Continental State with which commercial intercourse, on any scale worth mentioning, was maintained by her during the period under his notice, with the addition of a most voluminous index of *pieces justificatives*. By this method of treatment the author is led to enter successively into the commercial affairs of each of the Continental States in its turn, and the result is a series of admirable monographs, full of condensed information, and far more lively and entertaining than could have been expected by any one unversed in the subject. We trace the relations of England to such great commercial and industrial communities as the Flemish cities, the Hanse Towns, and Venice, all at that time greatly her superiors in wealth and civilization. We see how reasons of State policy contributed to foster commerce, as when, for instance, Edward IV.'s desire to marry his daughter to a Spanish prince led him to grant Spanish merchants equal privileges with his own subjects. We follow the intricate negotiations between the Venetian Ambassador and Wolsey, and the decay and ultimate extinction of the Venetian commerce, once so important. We admire the sagacity of the Hanse Towns in supporting Edward IV., notwithstanding his previous unfriendly conduct towards them; and learn the narrow escape which Iceland had of becoming an English possession when Christian II. of Denmark sought in his distress to pawn it to Henry VIII. The historical portion of the work is succeeded by a series of most interesting dissertations on trading companies in England, on protection to native industry, on the rights and privileges of foreigners, the currency, means of communication, and other subjects intimately connected with commerce. The second volume contains copious statistics of exports and imports, with a treatise on the tariff and the Custom-house system in general; and a great number of documents and records, English and foreign. It is remarkable how few obsolete words occur in the former, notwithstanding the quaintness of the style.

The assumed introduction of real personages and revelation of political secrets have helped the novels of "Gregor Samarow" to a popularity to which their merits as works of fiction are far from entitling them. The writer now comes forward (2) in his own person as the historian of the fall of the Kingdom of Hanover. He occupied, as would appear, a confidential position about the person of the King, and exercised a back-stairs influence not altogether without efficacy in furthering the rise or fall of Cabinets in the miniature kingdom. He was also a Press Commissioner, charged with suggestions for the regulation of the press at home, and with negotiations with influential papers abroad. Some natural desire to embellish his motives and magnify his office must be looked for; but, on the whole, Herr Meding appears to write in a spirit of impartiality, and his most unfavourable portraits do not seem to be malicious or caricatured. The misfortune of his book is the want of engrossing interest, or any immediate bearing upon the great events of European history. Hanoverian statesmen were but straws upon the tide, with the liberty, indeed, of determining whether they themselves would swim or sink, but without the slightest influence upon the mighty flood itself. From Herr Meding's account, it would appear that numerous petty misunderstandings had arisen from time to time between the Prussian and Hanoverian Courts, sufficiently irritating to the latter to obscure the obvious common-sense consideration that Austria was too far off to be formidable as an enemy or useful as an ally, while Prussia was near enough for both. The characters of the leading personages about the King of Hanover are depicted with spirit and apparent candour; but the most interesting portrait is that of the King himself. In his deep religious feelings, in his domestic virtues, in his homely good sense, occasionally counteracted by obstinacy and the propensity to view affairs through a false medium; in his quaint punctiliousness, even in his blindness and his love of music, he strongly reminds us of his grandfather, George III.; but no trace, at least in Herr Meding's papers, appears of George III.'s imputed cunning and insincerity. One anecdote bespeaks a liberality of feeling uncommon in a German prince. A Premier having recommended two incompetent noblemen for seats in the Cabinet, and having met the King's objections by stating that he proposed to give each an able secretary to keep him straight, the King desired that the secretaries should be made Ministers in name as well as in fact, which was accordingly done, to the horror of the Hanoverian aristocracy. Most of the personages sketched by Herr Meding have been politically extinguished by the annexation, but there are noticeable exceptions in Herr Bennigsen and Herr Windthorst.

The fifth volume of Karl Hillebrand's "Epochs, Nations, and Men" (3) is devoted to personages or phases of the Revolutionary period or the era which ushered it in. Many of them have appeared in the *Kundschau*. Among the most interesting are those on Catherine II. and Metternich. Catherine is very leniently judged, mainly with reference to her recently published correspondence with Grimm, in which her character certainly appears to the best advantage. The writer is thus enabled to ignore the ruthlessness of her foreign policy and the scandals of her private life, and to dwell mainly on the cheerfulness, amiability, genial good sense, and considerate kindness to inferiors, which certainly render her a *vera avis* among autocrats. Metternich is more severely, but

not less equitably judged. Hillebrand allows him an extraordinary diplomatic talent, but deprecates the want of insight and foresight which prevented him, with unexampled opportunities, from doing anything to adapt the institutions of Austria to the needs of the times. The article on Napoleon and Mme. de Rémusat is also impartial, although the applicability of the proverb about the hero and his *valet de chambre* may not have been sufficiently borne in mind. The review of English thought in the eighteenth century is mainly based upon Mr. Leslie Stephen's work on the subject. There is a pleasing portrait of Montesquieu, and an entertaining one of Count Albergati, an Italian dramatist of the latter part of the eighteenth century, deservedly forgotten as an author, but worthy of remembrance as a type of the man of letters of the period.

The late Prince Consort's letters to the present Emperor of Germany, at the time Prince Regent of Prussia (4), have been excerpted from Sir Theodore Martin's biography, retranslated, as it would appear, into German, and printed in a very elegant form. The Prince nowhere appears to more advantage than in this correspondence, which, as the editor remarks, also evinces the Prince Regent's rapid progress in the comprehension of the duties of a constitutional sovereign.

Those cuneiform inscriptions are of especial interest which, by their mention of Cyrus (5), afford means of testing the veracity of Herodotus, and reconciling discrepancies in Scriptural and profane chronology. Dr. Floigl endeavours by their aid to settle Median and Lydian chronology, and to determine the date and duration of the Scythian irruption into Asia. His conclusions may possibly be sound, but his method of working them out is obscure and tortuous.

The ninth part of Dr. Fürst's valuable "Bibliotheca Rabbinica" (6) contains the Midrash on the Book of Esther. It is almost needless to remark that these contribute nothing to the understanding of the book. From the point of view of a modern commentator, Rabbinical exegesis is perfectly childish. Expositors dispute whether Haman's cushions were of gold without and silver within, or *vice versa*; and agree that Mordecai's reason for refusing to bow down to him was that he wore an idol upon his breast, to which also obeisance would have been made. The real value of these commentaries consists in the lively picture conveyed by them of the Jewish national feeling at the time of their composition, its patriotic intolerance and sullen resentment against the Gentile persecutor, feelings which the subject-matter of Esther is especially calculated to call forth. They also embody some interesting anecdotes and fables.

Dr. Horstmann's collection of old English metrical legends (7) is a work of extraordinary merit and industry. It contains fifty-eight narrative poems on sacred or ecclesiastical subjects, all of considerable length, besides an appendix of shorter pieces, the whole transcribed by the editor from MSS. in English libraries, with the various readings subjoined where there is more than one MS. The extreme value of such a collection for the history alike of the English language and of English poetry requires no pointing out, and its importance is increased by the masterly and almost equally laborious introduction. In this the writer takes a general view of the nature of the ecclesiastical legend, explaining its relation to hagiography on the one hand, and to the homily on the other. The original purpose of the legend was strictly one of edification; it was an excerpt from, or adaptation of, the voluminous *Acta Sanctorum*, and gradually almost usurped the place of the less interesting homily. The adaptation of tales at once so popular and so pious to the purposes of the minstrel was an obvious step, but it must be allowed that the mediæval bards edited by Dr. Horstmann appear to have kept edification fairly in view, and to be by no means obnoxious to the charge of subordinating their religious mission to the display of their profane accomplishments. At the same time they are for the most part no contemptible writers; their diction is commonly clear and forcible; their narrative, if artless, compact and effective; and their simplicity is frequently very touching. It is remarkable that the early metrical legends manifest a great superiority over the last, the work of a writer of the Reformation period, of which a unique copy, printed when Shakespeare was an infant, is extant in the Pepysian Library. Dr. Horstmann remarks that the earliest English literature was pre-eminently ecclesiastical in type, and that the legend represented its highest development on the imaginative side. He distinguishes between the Southern English literature, in which the legend proper predominated, and the Northern, which rather inclined to the homily. His preface further contains a sketch of the principal collections of legends, with an account of the peculiarities of the MSS. containing them.

Dr. Oesterley's (8) Historical and Geographical Dictionary of Mediæval Germany is an important work, whose scope is best ex-

plained in the compiler's own language:—"An alphabetical arrangement of the names of places in Germany mentioned by German historians of the middle ages, with the various forms under which they occur, the periods at which they are mentioned, the more important events connected with them, and the authorities." The work will be completed in twelve parts, the first of which is now published.

F. Babsch's essay upon the place of the ancient Germans in universal history (9) is mainly a collection of the principal passages in ancient historians relating to them, and a general review of their relation to other races and their domestic manners and institutions. It is well executed, but not distinguished by any remarkable novelty.

Johannes Turnmair, surnamed Aventinus (10), whose minor works the Bavarian Academy is publishing, is described by his editor as the founder of scientific history in Germany and the "Bavarian Herodotus." He was born in 1477, and wrote in the early part of the sixteenth century. He was evidently a very learned and diligent antiquary; but the writings hitherto published are scarcely of sufficient compass to exhibit his historical merits, and the gravity with which he records that Tuisco reigned over the Germans for 236 years seems to indicate that, if he had really started on the track of scientific investigation, he had not proceeded very far.

The philosophy of Nicolaus Cusanus (11) (1401-64) is interesting as an attempt to give a philosophical form to the pantheistic ideas which, in the guise of religious mysticism, had long been current in Germany. Cusanus himself is a striking figure as a cardinal with a genius for metaphysical speculation, and as the intellectual precursor of a long line of German philosophers with similar tendencies. Carrière compares his relation to Giordano Bruno with that of Pythagoras to Plato. Dr. Falckenberg's examination of his system is most thorough. Its general drift is sufficiently clear, but the details are often difficult to elucidate.

Dr. Bahnsen's application of dialectics to the problems of philosophy (12) bears evidence, at all events, of the writer's having applied his mind vigorously to the subject; but, until at least the last few pages, which treat of the problems suggested by various branches of chemical inquiry, it deals wholly with abstractions, in a technical style unintelligible to all except highly trained metaphysicians.

Dr. Baas's abridged History of Medicine (13) is not a work of great pretensions, but will be found adequate by the majority even of professional readers. It gives a concise and clear chronological account of the principal medical schools and medical writers; and it is but inevitable that a considerable part of the information should obviously be imparted at second hand.

The most recent parts of the Encyclopædia of the Natural Sciences (14), edited by Professor Jäger and his colleagues, contains the continuation of the treatises on botany and mathematics, and of the dictionary of zoology and anthropology. The latter is laudably compact and condensed, but the mixture of the tribes of mankind with all manner of beasts, birds, and creeping things produces an almost grotesque effect.

Mr. Carpenter's little grammar of the Icelandic language, as now spoken and written (15), not only contains full grammatical rules, but a chrestomathy and vocabulary, and is preceded by a brief but interesting sketch of the vicissitudes of the language.

The most important article in the *Rundschau* (16) is the first part of a review, apparently by the same anonymous writer who has so frequently exhibited his acquaintance with diplomatic secrets in this periodical, of the political career of the Marquis Wielopolski, the well-intentioned but unsuccessful statesman who endeavoured to perform the part of a Polish Desak by mediating between his country and Russia. The author evidently considers that Wielopolski was right, and that the Russian Government and his own countrymen displayed an equal want of intelligence in failing to enter into his ideas. Poland and Russia, he thinks, are equally necessary to each other. "The Age of Credit," a lecture by a professor at Prague, pleads for an extension of the facilities afforded by credit to the working classes, and is chiefly remarkable as another testimony to the depressed condition of these classes in Germany. "From Athens to Delphi" and "Flemish Studies" are agreeable light reading; the latter is especially concerned with the legends and folklore of the Flemings.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE UNITED STATES.

The Annual Subscription to the SATURDAY REVIEW, including postage to any part of the United States, is £1 10s. 4d., or \$7 58 gold, and may be forwarded direct to the Publisher, Mr. DAVID JONES, at the Office, 38 Southampton Street, Strand, or to Mr. B. F. STEVENS, American Agency, 4 Trafalgar Square, London. International Money Orders can be sent from any office in the United States, and Subscriptions, payable in advance, may commence at any time.

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 1,329, APRIL 16, 1881:

The Land Bill.

The Submission of the Tekkes. The State of Parties.

The Bankruptcy Bill. France and Tunis. Army Discipline. American Politics. The Police of Paris. Stolen Goods.

Dr. Parker and the Congregational Union.

New Kaleidars and Old Songs. A Dream of the Academy.

Mr. Horsey on Suicide. Independent Art. Spirits in Prison. Railway Roughs. The Trade Prospects. The Comédie Française.

Metternich's Memoirs.

Wooling a Sweetbrin. Odeurs on Libel and Slander.

Three Military Books. Our Country Towns. The Library Association Report. A Modern Sphinx. German Literature.

CONTENTS OF No. 1,328, APRIL 9, 1881:

The Land Bill—Lord Beaconsfield's Illness—Russian Reform—The Budget—France and Tunis—Church Patronage—Turkey and Greece—Letters of Obidience—The New Mint.

The Extraordinary Papal Jubilee—The Advantages of Democracy—Questions Left Out—The University Boat Race—The Earthquake at Chios—Railway Outrages—The Drain of Gold to New York—The Spring Exhibitions—Recent Music.

Turkish Armenia and Eastern Asia Minor—The Practical Fisherman—Bramar—Duncker's History of Antiquity. Vol. IV.—Prosper Mérimée—Buddhist Birth Stories—William Law—Flower of the Broom—Minor Notices.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

DORÉ'S GREAT WORKS, "CHRIST LEAVING the PRÆTORIUM," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE PHARAOH," each 33 by 24 feet, with "Dream of Pilate's Wife," "Christian Martyrs," &c. at the DORÉ GALLERY, 30 New Bond Street. Daily, Ten to Six. Is.

THE ANNUAL SPRING EXHIBITION of High-class PICTURES by BRITISH and FOREIGN ARTISTS, including Professor LEOPOLD CARL MULLER's picture, "An Encampment outside Cairo," is NOW OPEN, at ARTHUR TROTTER & SON'S GALLERY, 5 Haymarket. Admission, Is.

FRENCH GALLERY, 120 Pall Mall.—The TWENTY-EIGHTH ANNUAL EXHIBITION of PICTURES by Artists of the Continental Schools (including Portraits of the Right Hon. W. E. Gladstone, Prince Bismarck, Count Moltke, Dr. Dellinger, and other works by Franz Lenbach), is NOW OPEN. Admission, Is.

ROYAL LITERARY FUND.—The NINETY-SECOND ANNIVERSARY DINNER of the Corporation will take place in Willis's Rooms, on Wednesday, May 4, at 6.30 for 7 precisely.

His Excellency the Hon. JAMES HUSKELL, LOWELL, United States Minister, in the Chair.

Stewards.

John Bard, Esq.

Rev. W. F. Bateman, M.A.

Dr. Lionel Beale, M.D., F.R.S.

J. P. Benjamin, Esq., Q.C.

George Bentley, Esq.

William Blackwood, Esq.

Rev. Dr. Blake.

Henry A. Bright, Esq., M.A.

J. Bennett Brown, Esq.

D. C. Boulger, Esq.

Walter H. Cassels, Esq.

John T. Crossley, Esq., Q.C.

Robert Dyer, Esq.

Joseph Ellis, Esq.

John Evans, Esq., F.R.S., D.C.L.

Louis Fagan, Esq.

Robert Freeman, Esq.

Thomas Dixon Galpin, Esq.

George Godwin, Esq., F.R.S.

John Henry Grain, Esq.

W. J. Hodge.

Thomas Hughes, Esq., Q.C.

Henry Irving, Esq.

Louis J. Jennings, Esq.

Blanchard Jerrold, Esq.

Frederick Locker, Esq.

George H. Longman, Esq.

Tickets, 5s. each, may be obtained from the Stewards and from the Secretary.

7 Adelphi Terrace, W.C.

John T. Lord, Esq.

Justin McCarthy, Esq., M.P.

Wilfred G. Marshall, Esq.

Mr. Theodore Martin, K.C.B.

Hon. Ronald Leal-Matville.

Julius H. Morgan, Esq.

Samuel Morley, Esq., M.P.

R. G. C. Mowbray, Esq.

Charles Edward Mudge, Esq.

John Murray, Esq., Jun.

Sir Thomas Nelson.

Frederic Ouvry, Esq., V.P.S.A.

W. Fraser Rae, Esq.

Edgar Rodwell, Esq., Q.C.

Geo. Augustus Sala, Esq.

Herbert A. Saunders, Esq., Q.C.

George W. Smalley, Esq.

Leslie Stephen, Esq., M.A.

Russell Sturgis, Esq.

Mr. Richard Temple, Bart., G.C.S.I.

Alfred Tansley, Esq.

Henry Yates Thompson, Esq.

Geo. Otto Trevelyan, Esq., M.P.

Nicholas Tribner, Esq.

Rev. Henry Wace, M.A.

Hon. Lewis Wingfield.

Edmund Yates, Esq.

OCTAVIAN BLEWITT, Secretary.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, For the Relief of Distressed Artists, their Widows and Orphans. The ANNIVERSARY DINNER will take place in Willis's Rooms, on Saturday, May 14, at Six o'clock. The Right Hon. the EARL of ROSEBURY in the Chair. Donations will be received and thankfully acknowledged by: JOHN EVERETT MILLAR, R.A., Honorary Secretary. PHILIP CHARLES MARDWICK, Treasurer. F. LAMBE PRICE, Secretary, 24 Old Bond Street, W. Dinner Tickets, including Wines, One Guinea.

BRITISH MUSEUM.—The BRITISH MUSEUM (Natural History), Cromwell Road, South Kensington, will be OPEN to the Public, FREE, on Easter Monday, April 18, and Daily from that date. Hours of admission as at the British Museum.

EDWARD A. BOND, Principal Librarian.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL.—The SUMMER SESSION commences on Monday, May 1. The Hospital contains 100 beds. Clinical Lectures are delivered by the Physicians and Surgeons every week. In addition to the usual Courses of Summer Lectures, instruction is also given on Psychological Medicine, Comparative Anatomy, Aural and Dental Surgery, Diseases of the Skin, and Diseases of the Throat. Further information may be obtained from the TREAURER or DEAN of the School, at the Hospital.

DENTAL HOSPITAL of LONDON

MEDICAL SCHOOL.

The SUMMER SESSION will commence on Monday, May 1. The Prize Distribution will take place in July, of which due notice will be given.

Lectures.

Anatomy and Physiology of the Teeth.—Mr. C. S. TOMES.

On Wednesdays and Saturdays, at 9 o'clock A.M.

Dental Surgery and Pathology.—Mr. ALFRED COLEMAN.

On Tuesdays and Fridays, at 9 o'clock A.M.

The WINTER SESSION will commence in October.

Total Fee for Lectures and Practice, £1 10s.

T. FRANCIS KEN UNDERWOOD, Dean.

Dental Hospital of London, Leicester Square.

UNIVERSITY COLLEGE, NOTTINGHAM.

The Town Council of Nottingham have resolved to appoint FOUR PROFESSORS, as follows:

ONE PROFESSOR, who shall undertake one or more of the following subjects—Classics, Literature, History, Political Philosophy, Moral Science; and

THREE PROFESSORS, who shall undertake one or more of the following subjects—Mathematics (including Theoretical and Applied Mechanics), Physics, Chemistry, Physiology, Biology, Geology.

The work of the College will be divided into Four Departments, whose arrangement will depend, to some extent, on the subjects undertaken by the Professors elected, but it is intended that the three scientific departments shall severally comprehend:

1. Mathematics and Mechanics,
2. Chemistry,
3. Natural Science,

and that the subject of Physics shall be placed as a subject of principal importance in one or other of those departments.

Applicants are invited to specify the subjects which they would be prepared to undertake. Applications for the above appointments to be addressed to the Town Clerk, Municipal Offices, Nottingham, on or before the 7th day of May next. Particulars of salaries, duties, and conditions will be sent upon application to the Town Clerk.

Candidates are especially requested to abstain from canvassing.

SAM. GEO. JOHNSON, Town Clerk.

Municipal Offices, Nottingham, March 22, 1881.

THE Council of Firth College, Sheffield, intend to appoint a PRINCIPAL, who shall also be Professor either in the Literary or in the Mechanical Department of the College.

These Departments will comprehend respectively the following subjects:

1. Classics, History, Literature, Political Economy, Moral Science.
2. Mathematics, Mechanics, Engineering, Geology, Physics.

Applicants are requested to state in which of these Departments they would be prepared to act as Professor, and which of the Subjects in that Department they would be prepared to undertake.

The Salary of the said Principal will be £200 per annum, with Half the Fees of his own Classes.

The Council will only make the appointment in event of suitable candidates presenting themselves.

Candidates are requested to give full particulars concerning age, experience, and any Academic distinctions they may have gained, together with any other information likely to affect the decision of the Council. The names of three gentlemen to whom references may be made should be given, but no testimonials need be sent unless they are asked for.

Applications to be sent on or before the 25th day of April next, to

ENSOR DRURY, Registrar.

Firth College, Sheffield, March 24, 1881.

WARDENSHIP, TRINITY COLLEGE, GLENALMOND, PERTHSHIRE.

The BISHOPS of the EPISCOPAL CHURCH in SCOTLAND desire to receive applications, with Testimonials, from CLERGYMEN in Firth's orders for the above office, vacant by the death of the Rev. W. PERCY ROBINSON, D.D.

Full information as to Duties, Emolument, &c., may be had from the SECRETARY, No. 10, Blackfriars Street, Perth, to whom also all applications are to be sent not later than April 21. Firth, April 2, 1881.

ROYAL AGRICULTURAL COLLEGE, OIREONESTER.

For the Science and Practice of Agriculture.

For intending Land Owners and Occupiers, Land Agents, Surveyors, Colonists, &c.

The R. A. C. Farm, surrounding the College, is a mixed farm of about 500 Acres.

Chairman of the Corporation of the College, The Right Hon. the Earl of DUCIE.

For Prospectus of College and Farm, List of Scholarships, Prizes, Diplomas, &c., apply to the PRINCIPAL.

GIRTON COLLEGE, CAMBRIDGE.

The next ENTRANCE EXAMINATION will be held at the London University, Burlington Gardens, W., and in Manchester, and will begin on Monday, June 12. Forms of Entry should be filled up and sent, on or before April 30, to the Secretary, Mrs. CHAD ROBERTSON, 31 Kensington Park Gardens, London, W., from whom information may be obtained.

The CLOTHWORKERS' EXHIBITION, of the value of 80 Guineas a year for Three years, will be awarded in connection with this Examination.

SCHOOL for DAUGHTERS of GENTLEMEN, 34 Lad-broke Gardens, Kensington Park, W.—Preparation for the University Examinations. Plan of teaching similar to that of the High Schools. First professors and certified governesses. Particular attention to diet and hygiene. Terms moderate.—For Prospectus apply to PRINCIPAL, or to LADY SUPERINTENDENT, Scholastic Agency, 17 Hanover Street, Hanover Square, W. Next Term begins May 3.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL, and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition at Midsummer 1881, value from £25 to £200 a year, which may be increased from a special fund to £200 a year in case of Scholars who require it.—Further particulars from the HEAD-MASTER, or SECRETARY, the College, Clifton, Bristol.

ROSSALL SCHOOL.—ENTRANCE SCHOLARSHIPS.

Twelve to be competed for, June 28. Value from 70 Guineas (covering School Fees) to £200. Ages under 14 and 15. Candidates may be examined at Rossall or Oxford, as preferred, in Classics or Mathematics.—Apply to Rev. the HEAD-MASTER, Rossall School, Fleetwood.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS.

Eight £40; Four £20. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Cheltenham.

MALVERN COLLEGE.

The NEXT TERM will begin on Tuesday, May 16.

DOVER COLLEGE.

President.—Earl GRANVILLE, K.G.

A Chapel and another new Boarding House have recently been completed. Each Boarder will now have a separate Bedroom.

The 2nd place for Cooper's Hill, entries for Woolwich, Sandhurst, &c., have been obtained during the last year.

Tuition from 15 to 18 Guineas. Board, 40s 6s.

For particulars apply to the Rev. W. BELL, M.A., the Head-Master, or W. KROOKER, Esq., the Honorary Secretary.

SOMERSETSHIRE COLLEGE, BATH.—Senior and Junior Departments. The Senior Department is divided into Classical and Modern sides. The SUMMER TERM commences Saturday, April 30.—Applications for admission to be made to the HEAD-MASTER.

S. ANDREWS' COLLEGE, CHARDSTOCK, Dorset.

NEXT TERM begins May 18.—Apply to the SECRETARY.

KELLY COLLEGE, TAVISTOCK.

Chairman of Trustees.—The Right Hon. the Earl of DEVON, Head-Master. R. W. TAYLOR, M.A., late Fellow of St. John's College, Cambridge. A First-Class School, preparing for the Universities, Services, and Professions, open without restriction. Full provision for Modern Languages, Science, and English subjects. Greek optional. Healthy position, large airy buildings and spacious playground. School Chapel with resident Chaplain. Summer Term begins May 6. For Prospectus and further information apply to the HEAD-MASTER.

LORD BEACONSFIELD.

A DAY or two ago there were two men in England known to the whole nation, and now there is only one. It is vain for detractors to explain away an undisputed pre-eminence. The proper office of criticism is to examine and explain the causes of Lord BEACONSFIELD's extraordinary position during his later years. The last two general elections, with their opposite results, were in popular estimation regarded as single combats between Lord BEACONSFIELD and Mr. GLADSTONE. On both sides other eminent politicians were engaged; but it was on the two lifelong rivals that general attention was fixed. That the antagonists were unequally matched in knowledge of public business and finance, in sympathy with democratic aspirations, and even in oratorical power, was an additional proof of the hold which the less favoured competitor had acquired on the national imagination. It has been for many years the fortune of Mr. GLADSTONE to swim with the stream, though skill and strength and courage to tread an opposing current would, in case of need, not have been wanting. Mr. DISRAELI, of whom it was not the least achievement that he made himself as well known by his later title as by his family name, seemed to owe nothing to luck. Though he was born in the upper middle class, his Jewish descent was an impediment to his rise; and, indeed, it might have rendered his career impossible but for his father's lucky quarrel with the authorities of the Synagogue. In his after years Mr. DISRAELI was not the selected nominee of the aristocratic party, though he led it for thirty years; and he never commanded the support of the multitude. He had also the disadvantage, if not the defect, of provoking strong personal animosities. Among the unwilling witnesses of his superiority are three or four spiteful libellers, who devoted themselves during his lifetime to the ignoble task of writing hostile biographies of the leader whom they feared and hated. His own nature was neither malignant nor revengeful, and he not unfrequently won over former antagonists when occasions of hostility had become obsolete. One cause of his success was his apparent, and perhaps real, insensibility to attack. Those impassive features offered no inducement to cultivate the dislike which is felt by those who have hurt an adversary. In more than one sense he seemed, like the ACHILLES of later fiction, to be invulnerable. His frequent inaccuracies and occasional contradictions of himself, proceeding from imperfect knowledge or from indifference, were never taken seriously. It was understood that he was occupied with the government of men or with the organization of a party, and that he trusted to others the details of legislation.

*Exequent alii spirantia mollis æra,
Credo equidem, vivos ducunt de marmore vultus,
Orabunt causas melius, cœlique neatius
Describent radiis, et surgentia sidera dicent:
Tu regere imperio populos, Romane, memento:
Hæ tibi erunt artes.*

Mr. DISRAELI never understood the details of political machinery; but he supplied the motive power. The early part of his Parliamentary career was devoted to the establishment of his own position, as the necessary step to his further efforts. The leader of the party to which he attached himself endeavoured in vain to repress the ambition of his unwelcome ally, until, as Lord BEACONSFIELD records in his latest novel, "a gentleman who had never been in office" became

Chancellor of the Exchequer and Leader of the House of Commons. During the remainder of his life, Lord DERBY was guided and controlled by the astute and daring lieutenant who was destined to be his political heir. It was to Mr. DISRAELI that the Conservative party was indebted for its relief from the dead weight of Protectionist pledges. The opponents who denounced a cynical breach of consistency well knew that he had no economic convictions to repudiate. In common with a statesman extremely unlike himself, he regarded as of secondary importance the special issues which were involved in successive political contests. The first object of both was that "the QUEEN'S Government should be carried on"; and, in the later case, that the Conservative party should not be permanently excluded from power.

On many important occasions Mr. DISRAELI displayed wisdom and patriotism. It was under his direction that the Opposition maintained throughout the Crimean War a critical attitude which neither impeded the action of the Government nor offered encouragement to the enemy. It would not have been difficult to stimulate popular indignation against Ministers of whom some prosecuted a war which they disapproved, while others were intriguing against their colleagues in promotion of their own personal interests. Mr. DISRAELI brought his own followers through the crisis without impeachment of the character of the party, and with the credit of having in no instance compromised the national interests for purposes of ambition. The war had been ended for one or two years when Mr. DISRAELI organized the coalitions which forced Lord PALMERSTON on the first occasion to dissolve and on the second to resign. Of all the confederates, including Lord JOHN RUSSELL, Mr. COBDEN, and Mr. GLADSTONE, it may be said that the Conservative chiefs were the least inexcusable. It was perhaps not unfortunate for Mr. DISRAELI that he was three times the real head of Administrations which had no majority in the House of Commons. He had a sufficient reason for abstaining from legislation which was not the direction in which his genius lay. In or out of office he impressed friends and enemies alike with belief in his powers. At a time when faction was less violent and less supreme than at present, Mr. BRIGHT truly assured a meeting of his constituents that Mr. DISRAELI stood by the head and shoulders higher than his political allies. In his letters Lord PALMERSTON often recognizes the ability and the fairness of the leader of the Opposition. One of the greatest services which Lord BEACONSFIELD has rendered to his country was the steady pressure which he exercised both on his followers and his opponents in favour of neutrality during the American Civil War. Nearly all the Conservative party sympathized with the cause of the South; and yet, from the beginning of the war to the end, Mr. DISRAELI prevented the introduction of any motion which tended to interference. It was well known that the three principal Ministers were adverse to the Northern cause, though Sir G. LEWIS was supported by a majority of the Cabinet in resistance to a dangerous policy. At a later period Mr. DISRAELI's unrivalled influence alone reconciled the Opposition to the two Irish Bills which could not prudently be resisted when they had once been carried by large majorities in the House of Commons. With the adroit co-operation of Lord CAIRNS he induced the House of Lords to pass the Bill for the abolition of the Irish Church Establishment, in violation of the strongest prejudices, and in spite

of legitimate doubts of the beneficial tendencies of the measure. It is desirable that a statesman should be a competent judge of economic and social measures; but it is more important that he should possess the faculty of ruling men. Dispassionate historians will admit that, while Lord BEACONSFIELD has always been the real as well as the titular leader of his party, he has on many occasions saved them from serious errors, though he has, in his turn, undoubtedly committed mistakes.

It would not be convenient at the present moment to stir the hot ashes of recent controversy. Political passions have not subsided to the calm which befits a funeral celebration. Yet it may be said, without fear of contradiction, that in his conduct of foreign affairs Lord BEACONSFIELD was for once thoroughly in earnest. His participation in domestic affairs had often included an element of ironical contempt. In dealing with questions of peace and war he was zealously devoted to the cause of national honour and greatness. An unfriendly satirist once said that his familiar demon had deserted him as soon as he became serious and disinterestedly patriotic. It was unlikely that he should retain life and vigour long enough to retrieve the reverses which ended in his retirement from office. The regret which is now caused by his loss is suggested, not by his political triumphs or defeats, but by his genius and his force of character. There is no more wholesome and natural feeling than admiration of great ability. Lord BEACONSFIELD's political connexions excluded him from the enthusiastic applause of the great mass of Englishmen; and yet he was always regarded with good will and indulgence. Political zealots receive their good things in the form of hearty sympathy from the vulgar, with which they are identified in opinion and in feeling. A large and humorous intelligence receives credit for capacity to recognize its own shortcomings. It was always probable that Lord BEACONSFIELD would be the first to smile at any incidental blunder into which he might be betrayed. His writings would alone have made the reputation of an ordinary man. As literary compositions, they were better than his speeches, and they were still more fully replete with imagination and wit. If the political novels are in purpose too didactic, the doctrines which they inculcate are easily forgotten in the play of character and fancy. The moral of *Tancred* and the moral of *Gulliver's Travels* may be equally neglected by the judicious reader. Lord BEACONSFIELD will not be remembered by any special doctrine, though he promulgated many political propositions. His main achievement is that for more than a generation he led a great party and shared largely in the government of the nation.

CANDAHAR.

THE city and district of Candahar have already made good their claim to rank among the places known as graves of reputations. The reputation of Lord HARTINGTON for seeing all sides of a question, of Sir CHARLES DILKE for care in ascertaining the trustworthiness of statements made to influence the votes of the House of Commons, of the officials of the India Office generally for looking after important documents which the Government has promised to produce, all lie buried somewhere about the Douranee capital. But the largest contingent to the inhabitants of the Candahar reputation-cemetery has undoubtedly been furnished by the military profession. From the time of Sir DONALD STEWART's departure to the time of Sir FREDERICK ROBERTS's arrival the history of the military operations at Candahar was one long tissue of blunders and misfortunes relieved only by the gallantry of the 66th and the artillery at Maiwand. That unfortunate battle, and the hardly less unfortunate sortie during the siege, probably represent a point of professional mismanagement lower even than that of the operations round Laing's Nek. Although the Government of India could not be entirely acquitted of the disaster of Maiwand, it was certainly due directly to the ill luck or the misconduct of persons on the spot. Ever since the battle, according to an unfortunate habit of English military arrangements, a kind of squabble has been going on for the apportionment of this particular blame. It will be remembered that the Indian Commander-in-Chief complained bitterly, and justly, of the unsatisfactory official accounts of the battle. It was appar-

that something must be done, and various inquiries were held, arranged, or promised. Nothing, however, came of them but two courts-martial, which tried two regimental officers, Major CURRIE and Colonel MALCOLMSON, for misbehaviour in face of the enemy. Had these officers been found guilty, the result would have been sufficiently unsatisfactory. That they have been honourably acquitted makes the matter almost more unsatisfactory still. For, although the principle—unviolated in all our disasters of the last year or two—that the conduct and courage of subordinate officers can be depended upon without fear or limit has been once more established, it is to be feared that the inferences as to the conduct, if not the courage of superior officers, compensate for this satisfaction.

The etiquette which in such cases makes the commanding officer the chief witness for the prosecution, if not the actual prosecutor, is a just one, no doubt, but it has its inconveniences. For it is almost impossible for an acquitted to be attained without damage to the character of the person who holds this invidious position. The trial of Major CURRIE, and still more that of Colonel MALCOLMSON, has certainly had that result. General BURROWS and his Cavalry Brigadier, General NUTTALL, practically undertook in these trials to prove that the misconduct of their officers made it impossible for them to save the day. Not only did they fail to show this, but their cross-examination brought out all sorts of things of a very unpleasant character which can hardly be left unsettled, and which yet are most unsavoury to inquire into. We need not attach much importance to some of the personal imputations made. That one account represents General BURROWS as having come out of action in the placid enjoyment of a cheroot, while another represents him as having been insensible across another officer's horse, will not surprise the student of military history. Mollwitz, Waterloo, Balaklava, scores and hundreds of other instances occur to the memory, and make the most laborious inquirer despair of making accounts tally. General NUTTALL's personal bravery is, we believe, beyond question, and his conduct under Sir FREDERICK ROBERTS redeemed more or less fully any deficiency of the qualities of a General which he may have shown at Maiwand. But his own unlucky admission, made long ago, that the cavalry were "out of hand," and that they would not "charge home," seems to make an attempt to criminate regimental officers idle on the face of it. For it must be remembered that the force under General NUTTALL's command, though it was dignified by the title of a brigade, was not composed of many different regiments, for the individual leading of which the Brigadier was bound to rely on colonels and majors. It was, indeed, made up of more than one corps; but it was not numerically stronger than a single cavalry regiment in most armies, and could certainly have been "in hand" to General NUTTALL himself, if to anybody. The incidental evidence against General BURROWS was much more damaging than that against his second-in-command. The statements made were not themselves the subject of cross-examination, and should, therefore, be accepted with reserve. But, if even part of them is true, the GENERAL showed both at the mutiny on the Helmund and at Maiwand itself a want of head which, except by some extraordinary favour of fortune, made disaster tolerably certain. The events themselves gave but too strong suspicion of this, and it is in the last degree unfortunate that the proceedings resorted to by the GENERAL to clear his own reputation at the expense of others should have resulted only in the strengthening of that suspicion.

While this unpleasant affair has been going on a good deal of interest has been felt in the possible compromise as to the abandonment of the Candahar district. According to the Calcutta Correspondent of the *Times*—a strong partisan, it is true, but also an exceedingly well-informed person—the greatest pressure is being put on the home Government to moderate the ardour of their scuttling. For the present, we are told, not merely are Pishin and the Thall-Chotiali route to be occupied, but an advanced post is to be maintained at Chaman, the half-way house between Quetta and Candahar, so as to command the Khojak passes. The news seems almost too good to be true, but its truth is not wholly impossible. Even Lord HARTINGTON's stolid resolution must feel how exceedingly awkward it is to have obtained the Candahar division by something more than a *suggestio falsi* (the statement of Sir CHARLES DILKE, preparing for the Universities, German, and English subjects, for Modern Languages, Science, and English subjects, Summer Term begins May 6. For Prospectus and further information apply to the HEAD-MASTER.

WILLIAM STOKES, and Mr. GIBBS). The general tendency of these powerful arguments of the members of the Indian Council was in favour rather of Pishin than of Candahar, and it may be acknowledged that the great mass of qualified military opinion tends the same way. It is understood, also, that perhaps the greatest authority on the actual question, Sir ROBERT SANDEMAN, who is now in England, has made personal representations to the India Office on the importance of retaining all that is necessary to make Quetta thoroughly tenable. It need hardly be said that no reasonable person will be disposed to taunt the Government with inconsistency if, at the eleventh hour, they condescend to listen to reason. In politics, even more than elsewhere, half a loaf is better than no bread, and a late and ungracious concession in matters of real national importance ought never to be treated scornfully because it is ungracious and because it is late. It is not at all unnatural that certain members of the Radical party, who have been accustomed to look at foreign policy merely as a convenient arena for party strife, should fail to understand that other people care very little for dialectic victory or for triumph in a division of the House of Commons, provided the interests of the Empire are safeguarded. These other people, though they may be somewhat suspicious of the chance of resipiscence on the part of the Government, would be unfeigningly glad of it. The certainty, or all but certainty, of a Russian annexation on the north of Persia, extending almost to the frontiers of Afghanistan, the reported troubles in Herat, and the very lukewarm welcome which has been accorded to the AMER's representatives in Candahar itself, make a complete withdrawal from the border of Afghanistan not so much imprudence as madness. It is unfortunately a madness of which a Government with Mr. GLADSTONE at its head is fully capable. But some consolation may be found in the fact that the passion for scuttling has since the abandonment of Candahar was decided upon found another vent for itself. When Mr. GLADSTONE and his Ministry resolved to abandon Afghanistan, they had not realized the possibility of abandoning the Transvaal. It is but reasonable that in the enjoyment of this greater luxury they should consent to forego a part at least of the lesser, especially after their victory in the House of Commons. It will always be possible to quote that triumph—without, of course, any pedantic references to the methods by which it was obtained—even if Pishin and the approaches to Candahar are not finally relinquished.

THE LAND BILL.

A MEETING of Ulster representatives of Tenant-Right Associations has, as might be expected, passed resolutions in approval of Mr. GLADSTONE's Land Bill. The supporters of the Government in England feel or profess satisfaction at the testimony which is thus given to the soundness of the measure. As the meeting avowedly considered only the interest of the proposed recipients of legislative bounty, its decision only proves that the tenants will gain largely at the expense of the landowners. A forcible transfer of property from one class to another is necessarily welcome to the recipients. It would be more to the purpose to show that the victims of expropriation are in any degree reconciled to their loss. The only sufficient excuse which can be given for such a proposal is that it is the alternative of greater evils. As a precedent it is purely mischievous, by shaking the confidence which has hitherto been felt in all rights of ownership. The mischief which results from even the unintentional recognition of a vicious doctrine has been abundantly illustrated by the consequences of the Act of 1870. Mr. GLADSTONE then repeatedly asserted both that the tenant would acquire no right of ownership, and that the whole measure was exclusively justified by exceptional circumstances. He now admits with a light heart that the occupier became under the Act a part-owner; and English and Scotch agitators, following in his footsteps, threaten the early extension of the doctrine of spoliation to all the land in the United Kingdom. Occupiers whose possession of the land arises wholly from deliberate and perhaps recent contract argue that they are entitled to the permanent enjoyment which was claimed in Ireland as a right of the people. "A man who has never been in office" became

Continental Communism; and meetings of artisans will, like the Ulster Tenant-Right Associations, condescend to applaud legislation for the sacrifice of capital to the supposed interests of labour. In 1870 the landlords paid a fine of many millions sterling for the alleged security of the remainder of their property. They are now to be mulcted to a larger amount without any pretence of corresponding benefit to themselves. From the first clause of the Bill to the last there is no mention of anything in the nature of compensation. There can be little doubt that the pecuniary rights which the landlords retain will be exposed to additional risk. Mr. C. RUSSELL, at the Belfast meeting was careful to remind the tenant-farmers that they owed the liberal provisions of the Bill to the violence of the Land League. Mr. PARNELL long since anticipated the statement by assuring his followers that the Government measure would be liberal in proportion to their turbulent activity during the winter. Hereafter landlords without duties, and with the solitary right of receiving their diminished incomes, will be exposed without defence to the attacks of demagogues. It will be easy to excite prejudice against absentee annuitants who contribute nothing to the cultivation of the soil. Indeed Mr. W. H. GLADSTONE, in a speech at Nantwich, taunted holders under the Landed Estates Court with their undoubted purpose of regarding their purchases as investments. The abolition of landlordism, as it is called by Mr. RUSSELL's Land League friends, can only be effected by degrees. The present Bill, when it comes into operation, will have established the principle that private rights may be confiscated for supposed public benefit without any pretence of compensation. It is highly probable that periods of distress will recur at intervals; and the rent will again be regarded as the fund most readily applicable to the purposes of relief.

One of the many evil consequences of anomalous legislation is that a sacrifice to popular clamour tends to become irrevocable. Mr. GLADSTONE's bid for tranquillity in Ireland will be henceforth regarded as the minimum of concession. Not only the agitators of the Land League, but the more respectable advocates of the claims of the tenants, have begun to suggest improvements in the Bill, of course with exclusive regard to the interests of the occupiers. One of these suggestions is that the judicial administration, which is of the essence of the Bill, shall not be entrusted to the County Court judges, who are accused of imperfect acquaintance with the relations affecting the land. The real objection to the tribunals is that they might probably be impartial, and that they would be guided by the rules of law. As there will be many thousands of litigated cases, it is clearly impossible that the Central Commission should act as a Court of First Instance; nor, indeed, would its intervention be desirable, if only one of the three Commissioners is to be a lawyer. If the County Courts are set aside, the power of arbitration must be vested in surveyors and in land-agents of an inferior class, the higher ranks of the profession being generally occupied by the representatives of the landlords. It will probably not be at present suggested that tenant-farmers should be employed to adjudicate between their neighbours and the owners of the soil.

The Bill in its present form supplies ample material for the acuteness of legal interpreters; and some of the clauses are so obscure as to countenance the rumour that Mr. GLADSTONE was himself chief draughtsman. No two commentators seem to agree as to the meaning of the fundamental provision for the assessment of a fair rent. The Court is directed "to have regard to the tenant's interest, estimated with reference either to the Ulster custom, or to the scale of compensation for disturbance." The former alternative might by itself be approximately intelligible. The Court would award such a rent as would leave unaltered the value of the tenant-right which existed before the passing of the Act. There might be some difficulty in the application of the rule, but the principle of valuation seems not unjust. The reference to compensation for disturbance is more perplexing. The amount of compensation ought in theory to vary in proportion to the rent; and it may be roughly estimated at a fourth, or, in some instances, at a third, of the value of the fee simple. If the Court is to deduct a third or fourth of the annual value before fixing the rent, the epithet "fair" is exactly the last word that can be said; yet it is difficult to construe the clause in any sense which is consistent with common sense or justice. Mr. GLADSTONE may have intended, while he establishes tenant-right for the

first time in three-fourths of Ireland, to define its value as equivalent to the amount of compensation for disturbance.

LORD MONTEAGLE, who has since the beginning of the controversy advocated the doctrines which are now embodied in the Bill, publishes an ingenious explanation of the doubtful clause. In his opinion, "the question for the Court would be, not 'what portion of the fee-simple' 'belongs to the tenant as his interest,' but 'can the tenant at such and such a rent sell his interest for as much as the disturbance scale would give him?' And 'the answer, if the rent was fair, would certainly be, 'Yes, and more.'" LORD MONTEAGLE adds that on his Limerick estate there is no tenant-right, except what he has voluntarily created by giving thirty-one year leases, with right of sale. Several of his leases were sold in 1879 and 1880 for sums exceeding the amount of compensation for disturbance as proposed by the Bill. "The disturbance scale," he concludes, "seems to me to be referred to as a rough measure of what I have called this dormant tenant-right, in the absence of Ulster custom or the like." The most admissible argument which can be urged in favour of any provision of the Bill is that it renders compulsory the hitherto voluntary practice of a prudent and liberal landlord. LORD MONTEAGLE'S equation between disturbance and actual, though unrecognized, tenant-right seems to be in some degree casual or arbitrary; but it is possible that he may have solved MR. GLADSTONE'S puzzle correctly, though he will do well to obtain, if possible, a more intelligible version of the clause. Obscure language used by a legislator who calmly admits that he gave the tenants a share of the land without intending it, is at the same time characteristic and dangerous. Honest and intelligent apologists for the Bill render a service to the public interest by facilitating an acquiescence which may perhaps be indispensable. It may be an unwelcome duty to pay at once the exorbitant price of MR. GLADSTONE'S Sibylline books. The Irish tenants cannot be expected to abate any part of the demand which is conceded by a Minister with an overwhelming majority at his back. Submission to irresistible force would be rendered more endurable by proof that the wrong suffered by the landlords is comparatively moderate. Only political purists contend that an intrinsically unjust measure ought to be rejected, even when those who suffer by its provisions consider the compromise unavoidable. The Opposition has hitherto displayed commendable moderation in suspending its judgment on the Bill, and its leaders will perhaps be well advised in not dividing on the second reading. Some of the clauses in the Bill are not intrinsically unjust, and the least objectionable portion of the whole relates to the advance of public money for the purchase of land. The apprehension that the annual payments by the purchasers would not be secure is probably exaggerated. English and Scotch popular opinion, which is adverse to the landlords as an aristocratic minority, would perhaps favour the rigorous exaction of debts due to the Treasury, as long as taxation is not wholly and finally dissociated from representation and from political power.

THE TUNIS EXPEDITION.

THE preparations for the French invasion of Tunis are now so far complete that, at the date of the most recent advices, the foremost columns were in sight of the camp fires of the Kroumirs. As a preliminary to further operations the French have decided to occupy the little island of Tabarka, situated at less than half a mile from the coast of Tunis, and eight miles from the nearest point of Algeria. A French vessel of war was sent to examine this part of the coast, and to select a spot for landing troops, if a landing should be thought advisable. As the vessel passed Tabarka it was fired on, although no damage was done. Tabarka is held, not by the Kroumirs, but by soldiers of the Bey; and, if the soldiers of the Bey have fired on the French, and the French are going to occupy an island held by the Bey's soldiers, it is difficult to see in what sense the Bey and France are not at war. But the Bey has adopted the politic course of denying altogether that a shot was fired from Tabarka, and, if his garrison retires before the French arrive, peace may still be held officially to continue. The Bey's small force, sent from Tunis under his brother, is marching in the direction of the Kroumir territory, and the Bey announces

himself as very much pleased with the cordial reception which the inhabitants of the districts through which his force is passing give to his soldiers. This cordiality is evidently due to the belief of the inhabitants that the soldiers of the Bey are going to help the Kroumirs, and fight the French. But the Bey gives official assurances that nothing of the kind is intended, and that his soldiers are not going either to help the Kroumirs or to attack them. They are to maintain an attitude of dignified neutrality, and to watch the French and the Kroumirs fighting out their difference. The French expeditionary force is put down at 20,000 men, and is under the command of General FERGEMOL, the most advanced column being commanded by General VINCENDON. How many Kroumirs there are to fight the French is probably unknown to the French commanders, and is certainly unknown to outsiders. They seem to grow in numbers, as the French want to have an enemy respectable enough to justify the magnitude of an expedition which nominally is only going to chastise a clan of mountain robbers; and the amount of Kroumir fighting men has now been run up to 15,000. Even, however, if this is an exaggeration devised for special purposes, the prudence of the French in operating with a large force if they are to operate at all is obvious. The French Government, although it may be quite sincere in saying that it has no wish to attack the Bey or occupy his capital, has many excellent reasons for wishing, if possible, to avoid anything like a check. As a rule, France, like other great Powers dealing with barbarians on their own soil, like Russia and like England, is accustomed to receive temporary checks, and not much to mind them. The great Power successfully uses after a certain delay more of its strength, and the check is retrieved. The history of the French occupation of Algeria has been a history of small disasters repaired at the cost of much money and many lives by great successes. France has hitherto thought little of temporary checks at the hands of African Arabs. It now has a new and sudden apprehension of the possible consequences of a check. It has reasons, partly military and partly political, for desiring that the work it has to do should be done quickly and effectually, and that this feeling should prevail throws much light on the character and bearings of the expedition, when viewed as an expedition merely meant to put down the Kroumirs. If it was intended to do great things ultimately, to advance on Tunis and bring the Bey to submission, the force employed would certainly not be large, nor the desire of the French for rapid success at all singular. But the Frenchmen who assert most positively that nothing more than the punishment of a robber-tribe is contemplated are as eager to finish with the Kroumirs as if a great thing was meditated, and they naturally have some special reasons for an eagerness which seems at first sight out of harmony with the very limited purpose which is said to be alone in view.

The military reasons for desiring a speedy and complete success refer partly to Algeria and partly to Tunis. There is always a danger that if the Algerian Arabs saw a chance of rising they would rise, and although they would be put down in the long run, it might cost France a serious effort to put them down. The French Government is perpetually alive to the insecurity of its tenure of Algeria. There are so many Arabs and so few Frenchmen. There is so much military expenditure to hold a country by which few individual Frenchmen profit. How acutely this is felt is shown by a proposal which the present Government has under its consideration. It contemplates the expenditure of no less than two millions sterling to coax new French settlers to go to Algeria. Individual Frenchmen may be proud of their country having what they think a magnificent possession, but personally they prefer not going there. As they will not go to Algeria as a matter of pleasure or business, they are to be paid to go there. This State is to buy colonists who are to be engaged in the useful, but arduous, task of overawing their wild neighbours. Hitherto schemes of this sort have not proved very successful; for, although Frenchmen have been found to take money to go to Algeria, they cannot be got to stay there when they have gone. In the next place, although the Bey may be too frightened to oppose the French openly, his subjects may be in a different humour. They do not like foreigners coming into their country, and they hate with a special and burning hatred those foreigners when they are Christians. A rising of the Tunisian population is more than possible if the Krou-

mirs are not easily beaten. The BEY has not only formally protested to foreign Powers against the French invasion, but has alleged that he cannot answer for the safety of foreign residents in his dominions, and especially in his capital, if the patriotic and religious indignation of his subjects is once awakened. To this the French Government has given the simple answer that, if any foreigners are injured, it will hold the BEY himself and his Prime Minister personally responsible. This has had, at least for the moment, the desired effect. The BEY now thinks that he can protect foreign residents, and the foreign residents seem to think they may go on in comfort and security if the BEY is to be deposed, unless he manages to make them safe. But, although the BEY may be strong enough to maintain order in his capital, he is certainly not strong enough, and cannot be expected to restrain those of his more distant subjects who may wish to join the ranks of the combatants against a foreign invasion. The Tunisian Arabs would, of course, be subdued in the long run by France, but France would have a new, a vexatious, and even an odious business to get through. To punish the Kroumirs, and more or less to frighten the BEY, is within the present French programme. To conquer the Tunisian Arabs is not. The obvious way of preventing this new difficulty arising is to give it no time to arise. If the Kroumirs are decisively beaten before the adjacent population forms any serious purpose of resistance, it will not resist. But a lingering war—if a contest between France and the Kroumirs can be called a war—would open the way to projects of general resistance which might gradually assume a serious shape.

The political reasons for desiring immediate success are still more urgent. This is the first occasion on which a French army has seen real warfare since the army was remodelled after the German war. For ten years France has been spending largely and working continuously to get an army unlike the army which was crushed at Gravelotte and Sedan—an army much larger, better organized, better equipped, and better led. France and Europe are now to see what this new army is worth, and what are the practical fruits of so much trouble and money. The present French army is, too, in an especial sense the army of the Republicans, and both Republicans and their enemies are keenly watching what this new army can do. A check to the army would be a check to the Republic. And the military authorities have frankly accepted the challenge to show on fair terms what the average of the French army is like. They have not sent a picked body of men, or men only who have been long with the colours. They have sent troops from all parts of France, and have among them sent men or boys who have only been months with their regiments. Local observers pronounce that the expeditionary force, as seen on the spot, is a force of great promise. The men are strong, healthy, intelligent, and longing to fight; the officers are on the most friendly terms with the men, and are anxiously attentive to their wants. Some young recruits have shown a want of marching power, and have dropped behind under the trial of an African sun. But, in one way, it may be said that the presence of such men in the force only makes it a more faithful representative of the army at large. There must be young immature recruits in every army that is based on the supposition that every fighting man in the country is to fight. And just as, in order that the general character of the army may be reflected in the expeditionary force, it is fair that there should be a certain proportion of young recruits, so is it fair, for the same purpose, that the expeditionary force should be large, for the largeness of the army is its present chief characteristic. As the force is typical of the army, both in its composition and its size, any appearance of inefficiency in the field would be more than usually mortifying to the Government which has created, and is responsible for, the army. Then, again, in the field of home politics, the Government has strong motives for wishing to get its Tunis business over as early as possible. The whole scheme of the invasion is fiercely attacked, as everything the Government does is attacked, by its habitual opponents. The Bonapartists say that it is a clumsy imitation of the expeditions of the Empire which the Republicans have so fiercely denounced. The Extreme Left say that it is not only a wicked waste of the money of the taxpayers, but is at bottom a manoeuvre of stock-jobbers. What they mean

when they say this is that last summer a group of French financiers bought Tunisian bonds when they were very low, and have run them up since on the credit of a French intervention, and the facile calumny of French criticism finds in these financiers the wirepullers of the Government. The Ministry can afford to despise idle tales of this sort, but it cannot avoid seeing that the best way to scatter criticism and rumour to the winds would be to get through its work rapidly, and to be able to say that criticism and rumour referred to a thing that was past. If it is possible, it would be in the highest degree convenient to the Ministry that a telling stroke should have been delivered before the Chamber meets again in three weeks' time; and it would be not only inconvenient, but even dangerous, to it if the session closed and the preparations for the new general election had to be made while a state of things half peace, half war, very costly, and not very creditable, was dragging on in Tunis.

SOUTH AFRICA.

THERE is no use in an indefinite prolongation of criticism on the conduct and termination of the petty war with the Boers. It is not likely that the respective partisans of national self-assertion and national self-abnegation should in the course of further controversy approach to an agreement. Politicians, like all others engaged in practical occupations, must accept accomplished facts whether they like them or not. The feelings which have been aroused by the conduct of the Government will find expression soon after the meeting of Parliament; and Mr. GLADSTONE's announcement that he will not take an apologetic tone portends some bitterness of discussion; but a vote of censure on a Government with a majority of 150 is a hopeless experiment. The Opposition will have to console themselves for defeat by the knowledge that a large number of Ministerial supporters secretly share their own feeling of anger and humiliation. It is possible that the Government may by that time be enabled to furnish the country with authentic information as to the present condition and future prospects of the Transvaal or of its loyal inhabitants. The English Government cannot honourably repudiate its engagements to settlers and traders who invested their capital in the province after Sir GARNER WOLSELEY's declaration that the territory was permanently annexed to the Empire.

When the peace was hastily patched up, the Ministry apparently forgot that there were other parties concerned in the settlement of difficulties besides the Government and the insurgents. Nearly all the local trade is in the hands of Englishmen, who consequently form the principal population of the towns and villages. There are also proprietors and tenant farmers, some of them of Dutch nationality, who have an undoubted claim either to protection or to compensation. It is said that in some instances the loyal residents have been expelled from their farms either during the short war or after the conclusion of peace. There ought to be no question of compensation in money, because there is no pretext for ejecting peaceable purchasers or lessees. The disturbance of storekeepers and jobbers would be still more wanton, especially as the Dutch farmers are not inclined to settle in the towns or to engage in commercial pursuits. It is possible that some accounts of the violence and injustice of the victorious Boers may be exaggerated, or that their misconduct may be partial and exceptional. Nothing which the English Government can do will tend so directly to an equitable arrangement as an exhibition of irresistible force within reach of the Transvaal. It is true that the timidity which has been already displayed may probably tend to reassure the violent party. If Sir EVELYN WOOD's advice had been followed, the Government by a delay of two or three weeks might have dictated a reasonable settlement, instead of depending on uncertain negotiation. It is comparatively satisfactory to remember that the greater part of the reinforcements which were sent from England are still in South Africa. In case of need Sir EVELYN WOOD could dispose of a force of 10,000 men, whose services will not be required if the Boers are impressed with a belief that the English Government is in earnest. That with such a force an English general should have pledged himself not to occupy a position within the QUEEN'S dominions is not

the less humiliating because it is to be defended by apologies which are not to be apologetic.

The irritation with which the news of the peace was received by the English population of the Cape Colony indicates, among other things, the absence of serious alarm at the threats of the insurgents and their allies. The declaration of some of the Boer leaders that they were about to establish the independence of all the South African provinces seems to have produced no effect on the loyal colonists. They are much more disturbed by the recognition even in a remote territory of the supremacy of the rival race. For the present there is happily no appearance of a serious feud between the English and the Dutch inhabitants of the colony. A possible change of Ministry at the Cape bears no resemblance to an impending revolution. The threatened attack on Mr. SPRIGG, who has now enjoyed an unusually long tenure of office, may perhaps have some connexion with the untoward events in the Transvaal; but it is more naturally explained by the tedious progress of the Basuto war. The Colonial Government is wholly responsible for the rupture, which would not have been precipitated if Mr. SPRIGG and his colleagues had anticipated the obstinate resistance of the natives to disarmament. The Dutch colonists have never heartily supported the policy of the Government, and the burden of the actual contest has fallen on the English volunteers. The next election will probably turn on the question of the Basuto war, while it will at the same time be a trial of strength between the Eastern and Western provinces. The Imperial Government and its representative can well afford to be neutral. The war with the Basutos has been to a certain extent undertaken and prosecuted for the purpose of asserting colonial independence. The Cape Ministry from the first announced the not discreditable resolution to bring the war to a close by their own unassisted efforts. The aid of Imperial troops was of course not gratuitously tendered; but, if it had been offered, it would probably have been rejected. From time to time Lord KIMBERLEY formally reserved to himself the right of intervening on due occasion for the protection of the natives, but his claim was never acknowledged by the Colonial Government, and it is evidently destined to be inoperative. When the Basutos are finally subdued, the victors will, without risk of interference, dispose of the spoils. If it was intended that the Imperial Government should permanently protect the natives, the colonists ought not to have been invested with the privileges of responsible government. It has never been found possible to combine the exercise of any kind of Imperial control with the modern form of colonial independence.

The abandonment of the right and duty of protecting the natives from the possible oppression of their white neighbours may perhaps not be eventually injurious to their interests. The Colonial Government has been justly proud of its success in dealing with the tribes on the northern and eastern frontier. Friendly natives living in the colony are not even excluded from equal political rights, though it is necessary to take care that they shall not acquire even local predominance. The franchise has been fixed at such a level as to admit a few of the most prosperous and intelligent natives; while the remainder, though they are provisionally excluded, are not exposed to any formal disqualification. The disarmament of the Basutos was only impolitic, and therefore unjustifiable, because their feelings and personal pride had not been duly appreciated. As Mr. SPRIGG said, they had no use for arms except to rebel, inasmuch as they had no foreign enemies to fear, and there was no large game in the country to shoot. The formidable resistance which the colonial troops have encountered has, in a certain sense, justified the fear of rebellion; but, if the Basutos had been for the time let alone, some of them might have been enlisted in the colonial service, and the remainder would gradually have become exclusively devoted to pacific occupations. The demand for a surrender of their arms was considered both as a threat and as a humiliation. Many of the Basutos believed that their allegiance was only due to the QUEEN, and that the Colonial Government was guilty of usurpation. Small pains had been taken to explain the transfer of sovereign rights from the mother country to the colony. It is not improbable that more serious complications may result from the surrender of dominion in the Transvaal. The boast of Mr. JOUBERT, that no slaves were manumitted during the period of English occupation, is compatible with the un-

doubted existence of compulsory servitude in the province. If the capture of native children continues to be customary, the Boers will from time to time be involved in border wars with neighbouring tribes, of which some are akin to the bulk of the population of Natal. It is not improbable that the Zulus, the Swazis, and other Eastern tribes will accustom themselves to regard the English as their natural protectors and allies; but it is premature to speculate on the social and political conditions of the future. The defence of the English and loyal Dutch inhabitants of the Transvaal is a more urgent duty than the protection of the natives. The transient annexation, now that it has ceased, leaves the coloured population in the same state in which it found them. European residents have in some instances settled in the province on the faith of official assurances; and they have of late incurred the resentment of their present rulers by their acceptance of English sovereignty. The assertion of their rights will scarcely involve blood-guiltiness, unless, indeed, it should become inconvenient or dangerous, like the Transvaal war, when the English troops had been three times defeated.

THE BRIGHTON REVIEW.

SOME useful notes on the Easter Monday Review at Brighton were contributed by a military Correspondent to the *Times* of Wednesday. The general result, both of this and other criticisms, is decidedly favourable to the Volunteers. They have immensely improved since the days when these Brighton Reviews were chiefly valuable as showing that they had still everything to learn except readiness to be taught. Great complaints, for example, used to be made of the unmilitary demeanour of the men who spent the previous Sunday at Brighton. They commonly wore their uniforms, because they had nothing else to wear, but they did not in the least behave themselves like soldiers. This time they are described as saluting promptly and accurately every officer whom they meet, and this single circumstance says a good deal for the change that has come over them. The difficulty used to be to get the Volunteers to regard themselves as soldiers, except when they were actually on parade. They did not understand that a soldier has other duties than marching and firing, and that, as a Volunteer's opportunities of practising these other duties are few, it becomes him all the more to make the most of such as present themselves. A man who has learnt to salute an officer as a matter of course has made considerable progress in this direction.

Military efficiency is so largely a question of money that it is not surprising to find the Military Correspondent put an increase in the Capitation Grant either in money or in kind among the first of his recommendations. Volunteers, as he very justly says, cannot be considered fit for service unless they are provided with a great-coat, a water-bottle, and a haversack; but on Monday he noticed that many of the men arrived at Brighton with one or more of these items in their outfit wanting. There are two very obvious reasons why these deficiencies should at once be put right. However improbable an invasion may be, it ought not to be regarded as improbable where the Volunteers are concerned. As they exist in order to be useful in case of invasion, nothing that would really be needed to make them useful ought to be left uncared for. It would be an annoying addition to the confusion which would certainly attend a calling out of the Volunteers if a large number of great-coats, haversacks, and water-bottles had to be provided at a moment's notice. The other reason is that these articles are a sensible addition to the weight which a soldier on the march has to carry, and it is not desirable that a Volunteer should begin his first real campaign under a heavier load than that to which he has been accustomed on a field day. An increase in the Capitation Grant seems to be demanded, even if the equipment of the Volunteer is to remain as complete as it is. The other sources from which the funds of a Volunteer corps used to be fed are gradually drying up. Payment of an entrance fee is scarcely ever demanded. Local contributions have been generally discontinued. Officers are not able, or do not care, to pay as large subscriptions as formerly. No one has any right to complain of these shortcomings. So long as the utility of the Volunteers was an open question, it was natural that the Government should be unwilling to spend money on what might turn out to be

an unsuccessful experiment. It was for those who believed in the movement to show their faith by their works. Now the utility of the Volunteers has been established, and the nation knows not only that for every shilling laid out in making the Volunteers more efficient it gets a solid return in the shape of additional security, but that this expenditure brings in a larger proportionate return than almost any other which the military authorities can suggest. It cannot be supposed, therefore, that a proposal to increase the army estimates in order to provide a larger Capitation Grant for the Volunteers would meet with any appreciable opposition. "A Military Correspondent" makes a sensible remark with regard to the commanders of Volunteer regiments. *Prima facie*, he admits, lieutenant-colonels of Volunteers should be ex-officers of the regular army. As a matter of fact, however, these ex-officers are usually men who have left the army for some years, and, what is worse, have left it because they cared but little for it. Consequently, they represent at best the military proficiency of a past time, and they seldom care to acquaint themselves with the many changes that have recently taken place in the drill of the regular army.

The principal disadvantage of Brighton as the site of a review—the immense crowd that the spectacle attracts—was very evident on Monday. The Volunteers could not always manœuvre freely, by reason of the pressure of their attendants, and the difficulty of observing the movements of the enemy, necessarily great from the clouds of dust raised by a strong east wind, was increased by the dense smoke of the burning furze, which had been set alight out of sheer mischief by the Brighton roughs. The number of spectators makes it additionally difficult to secure the necessary ground. The mischief done by those who come to see the Volunteers is far greater than that done by the Volunteers themselves. On Monday, for example, there are said to have been eight or ten times as many lookers-on as there were Volunteers, and they were practically under no control whatever. The town of Brighton undertakes to pay for all damage done; but there is a good deal of damage which is very annoying to a farmer, and yet cannot very well be expressed in unimpeachable figures. As it was, most of the regiments which came from London on the day of the review brought their food with them, and it is extremely desirable that the habit of trusting for supplies to taverns and refreshment-rooms should receive all possible discouragement. The regiments which march to the ground would not mind having to go under canvas for a night or two; indeed, the opportunity of doing so would make the review additionally profitable. Practice, no doubt, has made the Brighton Railway Company exceedingly perfect in making arrangements for the transport of the Volunteers; but it would be well that other Companies should have a chance of showing that they can do equally well.

The appearance and drill of the men seem to have been on the whole very satisfactory. The troops "were thoroughly in hand, and were easily manœuvred." They were quiet, silent, and fairly deliberate in their fire. In the march past many of the corps went by in admirable order, and but few in a manner to call for positive blame. On the return to Brighton several battalions marched as briskly as though they had only been out for an hour. On the other hand, there was some carelessness in skirmishing, and in two places the Military Correspondent saw outposts stationed in places where "a whole division might have been collected out of sight 200 yards in front." Possibly it was the consciousness that they were placed where they could be of no use that induced two of the men to smoke "while lying down watching the enemy." "A Military Correspondent" notes that, if the corps he saw at Brighton are a fair sample of the whole force, at least 5 per cent. must be deducted from the effective strength of the Volunteers on the score of the men being too young for their work. This fact ought of course to be borne in mind whenever numbers are of importance to a calculation; but there would be good reason for contentment if no worse a thing could be said of the regular army.

THE FRENCH OPPOSITION.

THE Republican party in France is more fortunate in its enemies than in its friends. The approaching general election will find the moderate element within the

party more powerless than ever. Its one chance of existence seems to be that M. GAMBETTA, when he comes to the head of affairs, may have both the willingness and the ability to cut himself adrift from the Extreme Left. As yet there is no distinct evidence that this is his intention; but there are several considerations which point to it as one which he is likely to entertain. The hostility of the Extreme Left is now so pronounced, and their preference for M. CLÉMENTEAU so unmistakable, that M. GAMBETTA can apparently have nothing to gain by any longer attempting to remain their servant. His desire to have the *Scrutin de liste* substituted for the *Scrutin d'arrondissement* may perhaps be explained by the fact that, according to the most probable of the conflicting opinions which M. BARDOUX's Bill has called forth, the *Scrutin de liste* will tend to discourage extreme views in Parliamentary candidates. M. GAMBETTA's speeches, again, have of late been marked by a rhetorical ambiguity which may be meant to conceal an approaching change of front; and such a change must, almost of necessity, be in the direction of moderation. In any offers that he might make to the Extreme Left he would certainly be outbidden by men who were not hampered by any actual or prospective acquaintance with the conduct of public affairs. Still, when due allowance has been made for this contingency, a possible revolution in one man's policy is but a poor foundation for a party to be built on. Poor as it is, however, the moderate Republicans seem unable to command a better. The truth is that the natural development of the Left is checked by the overpowering personality of M. GAMBETTA. It is of no use for any less conspicuous politician to offer himself as a leader to the moderate section of the Republicans so long as it is certain that M. GAMBETTA must in the end take the Government into his own keeping, and uncertain how he will handle it when he has done so. The only Minister who has shown any disposition to hold his own against M. GAMBETTA speedily found it impossible to do so in office, and has apparently not thought it worth while to renew the experiment since his resignation. Times, or, at all events, men, have changed since M. THIERS declared that France was Left Centre. If this can still be said with any truth, the Republican party must represent her with singular inaccuracy. A moderate Republican in France is as badly off as a moderate drinker at a meeting of total abstainers. He is equally hated by extremes of all kinds.

If the enemies of the Republic could but lay aside their internal quarrels, they might perhaps profit by the collapse of moderate views in the majority. A Conservative Opposition can ask for nothing better than a consistent preference for extreme views in the party in power. It gives them constant opportunities of gaining over all who regard these views with uneasiness or dislike, and saves them the trouble of framing a programme. When a Government is suspected of meditating some attack upon religion or property, an Opposition has only to give notice that it will do its best to defend them. Unfortunately for the French Right, the Government of the Republic has not as yet shown any inclination to make property less secure. That satisfaction, at any rate, it has steadily refused to give its foes. They have consequently had to make the most of the religious question, and in its present phase the religious question does not readily lend itself to the purposes of an Opposition. Still, if they could but agree among themselves how to treat it, something might be made even of such unpromising material as the dispersion of the religious orders. The unknown has always an element of terror in it, and the religious policy of the present Government might conceivably be made alarming by reason of the obscurity in which it is involved. They may mean to do nothing more than they have done already; but, as they can only stop short at the sacrifice of consistency, it is open to the Opposition to maintain that they must be judged by their theory rather than by their practice, and that, from this point of view, further attacks upon the Church may confidently be looked for. But, from one cause or another, the Opposition are unable to turn this opportunity to much account. They are divided into at least four sections, each one of which distrusts or denounces all the rest. Not only can Bonapartists and Royalists no longer combine against the Radicals, but Bonapartists and Royalists are themselves divided upon matters in which some amount of agreement is indispensable to any common action. The Bonapartists are at issue as to the place which the dynastic idea

is to hold in their calculations. The Royalists are divided upon the extent to which the interests of the Monarchy may be subordinated to those of religion. The followers of Prince NAPOLEON, who may fairly regard themselves as the legitimate Bonapartists, are ready to forego for the present all reference to the Empire. They have ceased to be Imperialists, and claim to be considered good Republicans. The only thing they stipulate for is that an alteration should be made in the mode of electing the President. The old-fashioned Bonapartists labour under the serious disadvantage of being at issue with the natural heir to the Empire, and at issue with him mainly upon religious grounds. Prince NAPOLEON and M. DE CASSAIGNAC have very different ideas as to the tone which a Government should adopt in dealing with the Church. They can agree in condemning the action of the Government in particular cases; but, inasmuch as the one assails the morality and the other the prudence of what has been done, their agreement is not worth much.

The divisions in the Royalist camp are of a different kind. The Bonapartists could live in decent harmony but for Prince NAPOLEON's reputation as a Freethinker. The Royalists are of one mind as regards religion, but they differ as to the relation which ought to exist between religion and politics. Since the final triumph of the Republic, the Legitimists have treated the cause of the Church as indissolubly associated with the cause of the monarchy. It is impossible to fear God unless you also honour the King. The defeats which have hitherto befallen the Conservatives have been due, as they not obscurely hint, to the unholy alliance with the Bonapartists into which the Royalists allowed themselves to be drawn. The break up of the MacMahonist coalition has put an end to this danger, and the friends of religion have now to take care that under no pretence shall any similar alliance be concluded. The moderate Royalists, on the contrary, build their hopes on the reconstruction of the old Conservative coalition on a sounder basis. A restoration, they say, is past praying for. So long as Frenchmen remain in their present minds—and no signs of any proximate change are visible—the Republic is the only possible Government for France, and the recognition of this fact is an indispensable condition of taking any useful part in public affairs. As Catholics they are bound to subordinate their political preferences to their religious convictions. They would rather see religion respected, and the Church free under a Monarchy than under a Republic; but this is not the form in which the question now presents itself. They cannot bring about a restoration; but if good Catholics would agree to lay aside politics, and give all their energy to the defence of religion against its Radical assailants, there would be a fair chance of gaining the day. It is hardly necessary to discuss the probabilities of such an ending to the quarrel between the Republic and the Church, because this preliminary condition is altogether wanting. Good Catholics are not agreed, and are not likely to be agreed, upon the propriety of laying politics aside. M. DE FALLoux and the Archbishop of Paris, and even the Pope himself, may be of opinion that the Church is above parties, and that she ought, if a Republican Government consents to respect her rights, to be as loyal to an elected President as to an anointed King. This is not a platform on which a Legitimist can possibly consent to stand. His business at this moment is rather to proclaim to his countrymen that, no matter how exalted may be the position of those who preach it, an alliance between men of all parties who wish to see religion respected is an impracticable dream. The altar is higher than the throne; but it must, not the less, be built upon the throne. In other countries the two ideas may be dissoluble; but in France Providence, manifesting itself in history, has decreed that they shall be for ever united. So long as doctrines of this kind continue to be preached by one section of the friends of religion, the other sections can hardly hope to escape the unpopularity which attends them. The Legitimists cannot serve the Church in their own persons, but they can at least ensure that Catholics of more moderate views shall not be able to serve her any better.

ELEMENTARY TEACHERS.

IT is so natural, and even desirable, that a man should magnify his office that we are not disposed to quarrel with the National Union of Elementary Teachers for magnifying theirs. Its members have this week been holding their annual Conference; and even a glance at the report of the proceedings will do much to enlarge the reader's view of the grandeur of an elementary teacher's work. There is a great deal, no doubt, to be said against the existing Educational Code; but we were not prepared for the sweeping accusations which were directed against it at the Conference. Indeed, it seems likely that the faults which we detect in it would be regarded by the Union as the salt which alone preserves it from utter decay. In a paper on its defects, which was read on Tuesday, no reference was made to the exaggerated importance which the Code attaches to extra subjects, or to the want of some better provision for ensuring that elementary subjects shall be really learned in elementary schools. Indeed, the commonplace arts of reading and writing do not seem to have been referred to during the proceedings. The first demand which the author of the paper suggests that the Union should make is one for the abolition of what has long been supposed to be the main security that dull children will be taught these arts at all. Even an elementary teacher, magnificent as is the place he holds in the universe, is still human, and, being human, he will always be tempted to take more interest in clever children than in dull ones. He is helped in some degree to resist this temptation by the provision which makes the Parliamentary grant depend on the examination of the individual scholar. Without this there would be no guarantee that the education of dull children would be properly looked after. They might form the majority of every elementary school, but the teacher might safely neglect them, because in the examination the Inspector would naturally be brought in contact with the children who could and would answer his questions, rather than with the stolid mass of silence in the back rows. An examination of a class or of a school is necessarily an examination of the sharpest children in that class or school. However determined an Inspector might be to go behind the show children, he could not help addressing his questions to the children who showed a disposition to answer them; and, by judicious arrangements, these children might be distributed over the room so as to insure that the Inspector should never draw an absolute blank in any part of it. The examination of the individual scholar is a sufficiently tedious process for all concerned, but it does do something to ensure that the still more tedious process of teaching the individual scholar has not been omitted.

Another claim put forward by elementary teachers is that they should have less clerical work in the shape of returns to the Education Department. It is a very natural demand on their part, for, of all known employments, filling up forms is perhaps the dulllest; but, like many other dull things, even filling up forms has its uses. Every year a larger amount of public money is spent upon elementary education, and these forms are one of the principal means which the Government has for ascertaining that the money laid out has brought in some return. If they can be sure that a certain proportion of the children on the school register have attended so many times in the year, and that, of those who have attended so many times in the year, a certain proportion have passed the Inspector's examination, they know that the outlay has gone to the instruction of the children generally, and not to that of a select minority. What is the good of making school attendance compulsory if the Government are to have no way of finding out whether the law is obeyed or disregarded? The returns made by the teachers do supply such a way, and, troublesome as it may be to make them out, we sincerely hope that they will not be allowed to forego the duty. A third grievance is the exclusion of elementary teachers from the office of School Inspector. This is described as "a fatuity at which foreigners stand aghast," on the score that it keeps the work of inspection out of the hands of those who are most capable of doing it. We are not inclined to defend indiscriminately the competence of HER MAJESTY'S Inspectors of Schools. They have become by degrees a very large body, and there are naturally very many degrees of merit among them. Nor do we deny that there are shortcomings in elementary teaching and in

elementary teachers which would be more readily detected by men who have actual experience of a teacher's work than by men who have always looked at it from the outside. But against these reasons for the selection of elementary teachers as Inspectors there is to be set the important fact that an Inspector drawn from the ranks of elementary teachers would, as a rule, protect the public only against the idle or inefficient members of his former calling. What is quite as much wanted, however, is protection against the too ardent and ambitious teachers—the teacher who is continually forgetting, and helping school managers to forget, that elementary and secondary education are distinct processes, and that the subjects which have their proper place in a secondary school ought for that very reason to be excluded from an elementary school. The present race of Inspectors do give us some protection against teachers of this type; and though it is possible that some concession might usefully be made to the natural desire of elementary teachers to be inspected by their peers, we should be sorry to see it done until the distinction just referred to has been authoritatively recognized.

Mr. Justice BOWEN has this week drawn attention, in a speech at a middle-class school meeting, to the urgent need that exists for making national education more complete and comprehensive. One of the very first results of any efficient scheme directed to this object would be to remove from elementary schools a large percentage of their present teachers, and from the elementary curriculum a large percentage of the subjects now comprised in it. The higher education is amply provided for in this country; primary education is, as regards the kind of instruction given, more than sufficiently provided for. But middle-class education does not exist except in a fragmentary and chaotic state, which hardly deserves the name. There are good middle-class schools, no doubt, to be found; but it is entirely a matter of chance where they are found. An old grammar school lingers on in one town; an endowed school has been unearthed by the Endowed School Commissioners in another; a teacher of unusual zeal and ability has created a good private school in a third. But sporadic instances of this kind do not make a system of education; and we see little chance of anything better being set up until the simple truth that elementary schools are designed for the teaching of the elements is more generally taken in.

THE EDINBURGH REVIEW ON "THE OXFORD SCHOOL."

IT might seem rather curious that a review of the first volume of the *Life of Bishop Wilberforce* should appear some time after the second, which is divided from it by an interval of more than a twelvemonth, has been before the world. But in fact the writer of the article in the new number of the *Edinburgh Review* on "the Oxford School" does not concern himself much with the work he professes to be criticizing, and still less is there any need for us to return here to the examination of a volume which was thoroughly dealt with in our columns on its first appearance, and in a spirit very different from the present reviewer's. The biography, or, as he prefers to call it, "the High Church hagiology" of the Bishop is simply made a peg on which to hang a quasi-historical—we mean an unhistorical—sketch of what the reviewer is pleased to designate throughout the Oxford School of 1834. The arrangement of dates is indeed altogether somewhat enigmatical, though its startling peculiarities may be partly credited to the printer. When we are informed, for instance, that in 1851 a fierce attack appeared in the *Quarterly Review* from Bishop Wilberforce's pen on the volume of *Essays and Reviews*, which was not published till ten years later, or that "the movement which began at Oxford in the year 1844 came to a sudden termination in the year 1845," it is charitable to acquit the writer of any graver fault than an extraordinary negligence in the correction of the press. But no such excuse can be pleaded for his reiterated assertion that what has been popularly known for the last half-century as "the movement of 1833" began in or about 1834. And what makes this blunder the stranger is that he actually refers—for a purpose of his own to be noted presently—to Mr. Keble's famous Assize Sermon on "National Apostasy," preached at Oxford on June 14, 1833, which Cardinal Newman tells us in the *Apologia* he has always kept as the birthday of the movement. These however are points of minor importance. The leading aim of the article is to show by an historical retrospect that Dr. Newman was quite mistaken in saying the Liberals drove him from Oxford, and that in fact "the Liberals"—by whom are here meant the Broad Churchmen, and notably "this Journal"—always consistently supported the Tractarians, as they are of course on their own professed principles bound to do, against the narrow and fanatical intolerance of their Evangelical or red-tapist

opponents. The general drift and even the details of the argument are in very close accord with a similar contention urged more briefly by Dean Stanley some months ago in *Macmillan's Magazine*. Both papers are marked by the same sophistical ingenuity of reasoning and picturesque audacity of paradox; only the *Edinburgh* writer, who is a good deal more elaborate in his method of presenting the case, has also committed the fatal indiscretion of a more vulnerable precision in his statements of fact.

We may premise that the writer betrays from his very first paragraph a temper of mind which essentially disqualifies him for fairly appreciating the merits, we do not say of the Tractarian but of any "religious movement," as such. A religious movement must from its nature be based on some kind of enthusiasm about religion, and that is just the element in the matter with which he has less than no sympathy. It is only natural perhaps that an *Edinburgh* reviewer of the conventional type should deprecate any "depreciation of the religious [or irreligious] character of the eighteenth century," and should even think it "an advance and not a retrogression" from the preceding age, though it is a little odd that he should suppose the recent publications of Mr. Hunt and Mr. Lecky have given us "almost for the first time" any means of forming a judgment about it. It may be equally natural for him to think that a work which has made so deep an impression on all religious minds from that day to our own as Law's *Serious Call* was "amazingly over-estimated by [its author's] contemporaries." But even an *Edinburgh* reviewer might have been credited with sufficient moral and religious discrimination to save him from classing together men so utterly dissimilar in every respect as "Hoadly, Berkeley, and Butler," as common types of episcopal virtue and Christian graces in their day. But the explanation is not far to seek. Bishop Hoadly, though he occupied, during nearly half a century, one rich See after another, can hardly be said to have left his mark on any of them, but he did indirectly leave his mark on the Church of England in a way which has secured him the warmest gratitude of the reviewer, for his publication of a Socinian volume and its censure by Convocation led to the suppression of that body, whose "revival from its state of long repose" in our own day, chiefly through Bishop Wilberforce's efforts, is here spoken of as a sign of national degradation. It is characteristic of the same habit of mind that the reviewer should include in his sweeping indictment not only a restored Convocation, diocesan Synods, Church Congresses, and clerical conferences—in which he can see nothing but a "rage for public meetings and large assemblies"—but even "missions and revivals," which in some shape or other form part of the religious machinery of almost every Christian community, Catholic or Protestant. However, it seems these unhappy missions "are conducted on strictly ecclesiastical principles," and we cannot therefore wonder at the inevitable result, that "a parish which before had seemed to be as the garden of Eden is turned into a howling wilderness." This general estimate of the religious side of things may help to explain the notion, which would else be simply unintelligible to any tolerably competent judge, that "the apostolical succession, the revival of obsolete rubrics, together with one or two Patristic tendencies, were the staple of" Tractarian teaching. But it is hard to understand how even the most unappreciative outsider can imagine that the movement had "an entirely political origin" and character, and can refer in proof of it to the famous "Catholicus" Letters of Mr. Newman in the *Times*, which deal exclusively with the supreme importance of the religious element in education.

There are other curious idiosyncrasies of the writer's on which one might be tempted to linger. But, after all, it is his own affair if he likes to think that Dr. Newman's principal works "leave no trace on the mind," that there is not "in the whole range of historical or theological thought a single subject on which he has left his permanent mark," and that his Oxford Sermons—which have pretty well revolutionized the whole preaching of the Church of England—are but "the reverberation in a more subtle, though not a more commanding form," while "lacking the vigour and originality of" Dr. Arnold's School Sermons at Rugby—excellent in their way no doubt, but in a different and much humbler way, and scarcely equal to the Harrow Sermons of his distinguished pupil, Dr. Vaughan. On such points however the reviewer must be welcome to his opinion. It is a graver matter when he elaborately insinuates, under a thin disguise of officious apology, a charge of insincerity against Dr. Newman, and supports it by direct misstatement. Petavius "has" not "told us," in the passage cited in the *Grammar of Assent*, "that the doctrine of eternal punishment has never been defined in the Catholic Church," but merely that a particular theory about the condition of the lost (*dammatorum hominum*), held by many Catholic Fathers and divines, has never been condemned. Neither is it the least true that, in expounding the doctrine of the Trinity, Dr. Newman "rests his foundation on the verse which is known by every scholar not to be genuine," if by "resting his foundation on the verse" is meant—what alone could give any relevancy to the reviewer's comment—citing its authority. He merely takes the words, without marking them as a quotation from Scripture at all, as containing one of "the separate propositions of which the dogma consists," and so of course they do. But it is in recounting, or rather rewriting, the history of the Oxford Movement that the reviewer's paradoxical passion for inaccuracy—to put it mildly—becomes most prominent. We will not stay to inquire whether he is right in summarily

rejecting the general belief that Dr. Hampden's Bampton Lectures were largely indebted to the aid of Blanco White, but "a comparison of Blanco White's writings with the few other works of Dr. Hampden" has to many competent judges seemed to prove, not that the theory is "totally groundless," but that it is pretty certainly correct. Whether these long forgotten Bampton which scarcely any one has seen or thought of since the accidental notoriety once more bestowed on them by the author's appointment to a bishopric in 1847, are "acknowledged by most intelligent students to afford the best solution of many of the perplexities of Christian theology" is a question on which the reviewer must be left to form his own judgment. It turns of course on whether the not inconsiderable number of "students" who happen entirely to disagree with him are all of them unintelligent. He must be aware that Dr. Hampden did not "avenge himself by (merely) compelling candidates for theological degrees to debate on topics to them studiously offensive," but by compelling them to defend theses which they believed to be false as a condition of taking degrees indispensable for retaining their fellowships.

But the reviewer's grand point is that, when the onslaught was made on Tract XC., and "a cry of anguish went up from Dr. Newman's adherents," thereupon "the Liberal party of the Church of England, which from the days of Lord Falkland had never been extinct," &c. &c., at once came to their rescue. And this is a question not of opinion but of fact. Dr. Newman insists in the *Apologia*, and when his statement was challenged repeated in fuller detail, that "the Liberals drove him from Oxford." The reviewer declares, like Dean Stanley in *Macmillan*, that he is entirely mistaken, and that they did their best to keep him there. What are the facts? The *fons et origo* of the whole attack was a formal protest against the Tract handed in to the Oxford authorities by four tutors, of whom one was Mr. Tait of Balliol—the present Archbishop—who is metamorphosed by the reviewer into its "generous" defender, and another was Mr. Wilson of St. John's, afterwards well known as one of the most "ecological" of the *Septem contra Christum*, as a witty Don nicknamed the writers in *Essays and Reviews*. Both these were leading men among the young Liberals or Broad Churchmen of the day at Oxford, not "two or three elderly Liberals." Their two associates, the late Mr. Churton of Brasenose and the present Warden of Wadham, were pronounced Evangelicals. Of this famous protest of the Four Tutors, which, we repeat, originated the attack on "the illustrious author of the whole Tract movement"—who was not by the by thought very illustrious by his Liberal critics then—the reviewer characteristically makes no mention at all. Dr. Newman has put on record that on that occasion not a single Liberal took his side, that "excepting the Liberal no other party, as a party, acted against" him, and that in consequence of the proceedings then taken he finally left the University. But the reviewer passes *currente calamo* from 1841 to 1845, when Mr. Ward's *Ideal* had provoked a renewal of the conflict, and declares that even those Liberals who had hesitated before rallied then to the defence of the persecuted Tractarians, and "especially this Journal," i.e. the *Edinburgh Review*. It is true that in 1845, when Dr. Newman had long retired from the contest, and when it was feared that too stringent a policy might drive a large number of his followers to Rome, some of those who had taken a prominent part against him in 1841 adopted a course more consistent with their professed principles of toleration, and opposed the imposition of a new religious test, not however so much from any generosity to the Tractarians—who certainly did not owe them "the smallest gratitude"—as from a well-grounded apprehension that it might be turned with fatal effect against themselves. They came forward, as Dr. Newman himself says, "to shield from the zeal of the Hebdomadal Board," not one, but professedly all parties throughout the country who had to subscribe to the Articles, and especially of course their own. But their efforts, such as they were, would have proved unavailing, but for the courageous interposition of the two proctors—Mr. Church, now Dean of St. Paul's, and the late Mr. Guillemard of Trinity—who put their veto on the obnoxious decree; and both these proctors, though the reviewer omits to say so, were pronounced high Churchmen. He says indeed that they were thanked for their conduct by almost every conspicuous Liberal of the Church of England. If so, "this Journal," as we shall see presently, cannot then have been conspicuous for its Liberalism. But he is not content with citing the acts of the living; he also evokes from his grave Dr. Arnold, who died three years before, but "would certainly," had he been still alive, "have voted in the ranks of Dr. Newman's supporters." We have a sincere respect for the memory of Dr. Arnold, but we also know the bitterness of his avowed, and unquestionably conscientious, opposition to Mr. Newman, and we more than doubt the accuracy of this posthumous and hypothetical estimate of his conduct. What we do know, and what the reviewer himself admits, is that he was the writer of a fierce attack on the Tractarian party and its leaders, published in the *Edinburgh* some few years before, when the party was "at its culminating point of success," under the pleasant title of "the Oxford Malignants," in which they are charged with deliberate "falsehood," and the leaders, though "sufficiently insignificant as individuals," are said to be men "whose censure is to be coveted by every good Christian minister," while the entire party are labelled as "conspirators," "malignant fanatics," whose conduct is an amalgam of "the mingled fraud, and baseness, and cruelty of fanatical persecution," and who find their "only perfect prototypes" in "the malignant fanatics who, to the number of more than forty, formed a conspiracy to assassinate Paul."

It is more to the purpose however to refer—as the reviewer, we presume, has forgotten to do—to the articles which appeared in the *Edinburgh* at the very time of the controversy about Tract XC., when "this Journal especially" came forward as the generous champion of the oppressed. Did it? We have three articles before us. The first appeared in April 1841, and warmly commends "the excellent Resolution" of the Heads of Houses condemning Tract XC.—in response to the protest of the Four Tutors, which drove Dr. Newman from Oxford—but insists that this is not enough, and that "the University should, by some clear and indisputable act, declare that no man who adopts Mr. Newman's interpretation of the Articles can become, or continue, a member of its body," which is just what they attempted to do four years later, when they were only foiled by the "courage and magnanimity" of the two high Church proctors, which the present reviewer so highly extols. We pass on to October 1844, when the second storm was brewing, which overwhelmed Mr. Ward and his *Ideal*, and when the reviewer tells us that even those Liberals who had faltered in their Liberalism in 1841 generously put aside their objection to Tract XC. and came forward to shield its author and his friends from their persecutors. The *Edinburgh* for that month opens with an elaborate article of over sixty pages on "Recent Developments of Puseyism" in which the "scorn and sophisms" of men like "Mr. Ward, Mr. Newman, Dr. Pusey, and others" who have the hardihood to remain in the Church of England are sharply arraigned, and "the authorities of the Church" are pointedly invoked to find some means for getting rid of them. "Something," it is added, "ought to be done, and must be done, or effectual ruin will visit the Church." "The very flagrancy of such conduct as that vindicated in Tract XC., and consistently exemplified by Mr. Ward, has tended to disclose the full enormities of the system, and to show the perils to public faith, morality, and decency which it involves." It scarcely appears therefore that "this Journal" was resipiscant in 1844. But lastly we turn to an article on "Oxford and Mr. Ward" which appeared in the following April, when "the closing scene of the conflict" was over, and "the measure which would have been most fatal to the existence of the Oxford party was for the time warded off by the intervention of the two proctors." The reviewer says they received the thanks of all the Liberals for their conduct. What "this Journal" said at the time is that "of the three propositions submitted to Convocation, the first and second [censuring and unfrocking Mr. Ward] against each of which there were grave objections [i.e. they were probably illegal] have been carried. The third, [vetoed by the proctors] to which we should have supposed that every man of common veracity would have assented, has failed." And the article goes on to suggest that that Resolution should be again introduced as soon as fresh Proctors came into office. Much might be added as to the reviewer's paradoxical eccentricities, but space fails us, and we have perhaps said enough to enable our readers to judge what measure of credit may be attached to his historical reminiscences. He affects to hold a brief for the Oxford Liberals of forty years ago and the *Edinburgh Review* of the period, and no doubt, as the Irishman said, he "has his own consent" to the bargain; it is not equally clear that he has theirs.

THE CANT OF CONSCIENCE.

ONCE upon a time, the French Academy of Arts, owing to favouritism and caballing, defrauded a promising student of the Prix de Rome, his only chance of continuing the study of his art. At the same time the sculptor Falconet, who was executing commissions for Catherine of Russia, wrote to his friend Diderot asking him to engage this same student as an assistant for him, Falconet, at whatever terms he pleased. The good-natured philosopher ran off to show this to one of the honestest members of the Academy who had deplored, though he had not dared to prevent, the injustice. Thereupon the pious man lifted up his hands, and exclaimed gratefully, "La Providence! La Providence!" Diderot was not a pious man, but on this occasion he showed himself perhaps the better Christian of the two. "Est-ce que vous croyez," said he angrily, "que la Providence est faite pour réparer vos sottises?" It is to be feared that a very large number of persons do entertain precisely this idea of the nature and function of Providence. The habit is, however, perhaps venial; it is certainly scarcely disgusting in comparison with another habit which seems to have taken hold of a certain portion of the Liberal party of Great Britain in these days. Ever since Mr. Gladstone came into power, we have heard a great deal about the conscience of the nation; and the obstreperousness of this conscience since the conclusion of the Transvaal compromise has been almost deafening. There is Mr. Gladstone himself, who writes to Mr. Tomkinson that he is certainly not going to assume an apologetic tone about the Transvaal, and that "it was a question of sheer bloodguiltiness." No doubt it was a question of sheer bloodguiltiness, and the guilt rests pretty clearly on Mr. Gladstone himself. By the confession of his admirers, he overlooked in the hurry of the moment—that is to say, for something like a twelvemonth—the wrongs of the Transvaal. Till the insurrection broke out, he overlooked it again in the Queen's Speech; again in the early dealings with President Brand. This seems to call for a good deal of apology for bloodguiltiness. But it is a case of

conscience. Mr. Gladstone's conscience, according to a habit which it has, only pricks him when it is convenient. As long as the extreme Radical party seemed likely to content themselves with mere grumbling, it was quiet; when they threatened open revolt and organized agitation, the bloodguiltiness forced itself upon his mind. Mr. Gladstone's conscience is apparently a kind of repeater. It tells the moral time of day with the greatest accuracy—but only when it is directly appealed to by its owner or some one else.

It is not, however, with Mr. Gladstone that we purpose to deal at present. The remarkable organ or sense which he calls his conscience is an old friend to political psychologists. They have been accustomed for years to trace the mazy doubles and windings, the *cham-croisé*, the backings and fillings, in which it indulges with his temper and the political exigencies of the moment for partners. It is, however, only since St. Stephen's and some other places have been filled with a generation whose simple creed is "There are no Liberals but ourselves, and Mr. Gladstone is our Prophet," that consciences à la Gladstone have become common among us. Now they are very common indeed. There is not a carpetbagger who found the letters M.P. tacked on to his name twelve months ago but can talk about the conscience of the nation and the God-fearing instincts of the English people. Since Liberal has become a term of no meaning, and Radical has scarcely lost its connotation of contempt, we beg to suggest that these persons should call themselves "the party of conscience." They have a kind of chaplain or lord high almoner of the guild already in the person of the Bishop of Manchester. We have a certain respect for Dr. Fraser, who has done a good deal of hard work—much of it very good work, too, in his time—and who has made the Church of England a good deal more popular in the North than it was. But though Dr. Fraser's intentions are always excellent, his judgment is very frequently at fault, and his taste is more often than not a minus quantity. Preaching the Spital Sermon the other day, the Bishop of Manchester seems to have set himself to show the benighted citizens of the capital how much better they order these matters in Manchester. In London, where, as is well known, nothing is known of politics, and the whole population freely cooks its spleen in clubs and drawing-rooms, people think that political matters are best kept out of the pulpit. Dr. Fraser thinks they are best brought in. He must needs inform his audience that in the Transvaal we have reversed a policy which was not founded on justice and honesty, that the conscience of the nation was aroused, and that we have been saved from bloodguiltiness. Logic is never Dr. Fraser's forte, and he probably does not perceive that the acknowledgment of injustice involves the acknowledgment of bloodguiltiness. Enough of that, however. The impudent assumption—we beg the Bishop's pardon, but we can use no other phrase—that conscience is the appanage of one political party, is what is specially offensive in the mouth of a minister of religion. "There is hope," thinks the Bishop, "for a nation which recognizes the supreme obligation of God's law"; there is certainly not much hope for one which does not. But we doubt whether there is much hope for a nation or party which does not recognize God's law until it happens to be convenient to do so. The conscience of the nation and the Ministry, according to those excellent authorities, Mr. Gladstone and Dr. Fraser, appears to be singularly like the unjust judge in the parable. You must weary it night and day, you must administer good sound blows and kicks to it before it is, in the majestic language of its mouthpieces, "aroused." It is remarkably human this conscience, and not at all divine, as another Bishop, Bishop Butler, used to think and teach. You act upon it exactly as you act on a rather unfavourable specimen of mankind. You appeal to his interests when you can, to his fears when you can't appeal to his interests. The conscience of the Radical party—we really do not know why we should insult the nation, foolish as it may have shown itself to be, by admitting the right of Dr. Fraser to speak for it—is a conscience which is subject to most curious fits of alternate liveliness and torpor. When it is a question of regaining office, of healing divisions in the party, of bribing new adherents to join, this conscience is preternaturally active. When these questions are not to the fore, it sleeps the sleep of a just conscience and refuses to be awakened. This is the sort of conscience which is entirely blind to the iniquities of an Irish Church till those iniquities supply an easy stair to office; which thinks it dishonest confiscation to acknowledge tenants' co-partnership in 1870, and just statesmanship to establish it in 1881; which sees nothing but the necessity of re-establishing the Queen's authority in January, and nothing but a question of sheer bloodguiltiness in April. It is a kind of streaky conscience, tender and tough by turns, and the tender and the tough layers occur with the most marvellous precision at exactly the moment most convenient to the conscientious possessor. No doubt, whether to a man or a party, it is an invaluable possession and equipment for political warfare. It is like Sidney Godolphin in his early days—never in the way or out of the way. It never interferes with its owner in doing anything he likes to do, and is always at hand forbidding him absolutely to do whatever he does not like to do. It distinguishes him notably from the Pagan and Quixotic devotees of honour, the base and sordid followers of interest, while at the same time it allows him to consult his interests as much as he likes, and gives him something to plume himself upon as following a higher law than even honour itself. In short, conscience is your only wear for the enlightened politician.

Yet there must be some old-fashioned people left who regard this cant of conscience, this lugging-in of "God's law" and "God's will" as a kind of political makeweight to turn the scale in the speaker's favour, rather with disgust than with admiration. The story quoted at the beginning of this article must occur pretty often to such persons, and they must feel not a little inclined to alter Diderot's words into "Est-ce que vous croyez que la conscience est faite pour masquer vos bassesses?" The supreme point of moral obliquity has been said to be reached when injustice is decreed by a law; but there is perhaps a higher height, or rather a lower depth, whereself-seeking and cowardly irresolution are cloaked and covered by the names of conscience and morality. A great outcry has been made about the famous words "To man I can be answerable, and as for God I will take Him into my own hand," though there is a very obvious interpretation of them which is orthodox, and indeed reverent enough. Mr. Gladstone and Dr. Fraser, however, may be acquitted of any such boldness as that of Claverhouse. They say, "To man I cannot be answerable, but I will make God an excuse for my proceedings." Conscience and religion are admitted to partnership exactly on the principle recorded in *David Copperfield*. It is highly painful to Mr. Tomkinson, and other people too, that England should act as she acted in the Transvaal; it is impossible to make good the withdrawal from Candahar against the arguments of the brutal expert; the robbery of the Irish landlords is in ugly contrast with the Eighth Commandment. Never mind. "They have a partner—Mr. Jorkins." It is their conscience that obliges them to do those things, and conscience—like Mr. Jorkins—is utterly immovable. The absolute deference paid to this mysterious partner is perhaps surprising in a party, not a few of whose members hold peculiar views on religion if not on morality. The force with which the conviction that the Transvaal peace is in accordance with God's law must act on Mr. Bradlaugh, for instance, must require a curiously-constructed dynamometer to estimate. The advanced philosophers, to whom conscience is a meaningless word, show a singular sensitiveness to its injunctions in approving the scuttling out of Candahar. But here one of the most convenient points of the conscience which we are discussing comes in. It has among its other versatile characteristics some of the marks of charity. It never questions the convictions of allies, it never discourages friends. The Atheist and the pious person who reads the lessons on Sunday in his parish church, the Evangelical and the philosopher who considers conscience a variety of indigestion, can put their heads and votes together for the glory of the Lord and the good of the Liberal party. The quality of this sort of conscience is very far from strained. It will take oaths which are meaningless to it; speak "polemically" things which it does not mean historically; declaim against a mechanical majority when the majority is against it, and appeal to a mechanical majority as settling all questions when the majority is for it. It is all things, not to all men, but to its fortunate possessor. But it is conscience for all that; and having, luckily or unluckily, power as well as authority, it does, as in the millennium of the other bishop (not Dr. Fraser), govern the world at this present moment. We have all heard of a Grandison-Cromwell—what shall we say of Cromwell-Tartuffe? At least this, and no more, that, if Sterne could come to life again, he would add to his famous sentence, that there is one thing more disgusting, if not more tormenting, than the cant or criticism, and that is the cant of conscience.

THE NATURAL HISTORY MUSEUM.

MR. WATERHOUSE'S beautiful Romanesque building, which has been rising for so many years at the corner of Cromwell Road and Exhibition Road, was at last on Easter Monday thrown open to the public, who thronged into it in their thousands. It was perhaps to divert the mind of the populace from the fact that there is as yet very little to be seen in the new branch of the British Museum, that fussy officials at the entrance gave the visitors something to think about by taking away their sticks and umbrellas. There has been much correspondence upon this subject going on in the columns of the daily papers, and the case of one lame gentleman, whose crutch was demanded of him, does certainly recall the good old times at the British Museum when persons in livery were so unsympathetic to country cousins, and when aproned custodians thought nothing of smiting the nervous foreigner with a wet broom. Geological specimens and stuffed beasts are not particularly in danger from umbrellas. They do not offer the same attractions either to the idler or the iconoclast as are presented by works of fine art. It is perhaps still fresh in the minds of some of our readers that a lady who objected to the nude, a mute inglorious Savonarola, from some obscure dissenting sect, got into trouble about ten years ago for whacking the statues at the Crystal Palace with her umbrella; it is, perhaps, less widely known that a "young person" was once detected trying to pick out with the handle of her parasol the jewels in the great Carlo Crevelli in the National Gallery. The Portland Vase and the elderly maniac have become commonplaces in the history of the umbrella, used as an instrument of destruction. But, to the best of our belief, no such thrilling incidents have ever attended the natural history collections. The mad old gentleman who used to try to feed the stuffed bears with buns presented them always in his hand, and, moreover, did no damage whatever beyond making crumbs on the

floor. Only once, we believe, have the natural history collections found their way into the courts of justice, and that was when the Belgian stole the eye of the hippopotamus, and he, by his own confession, gouged it out with his thumb, and not with the ferule of either stick or umbrella.

The burning question of umbrellas being settled, the visitor has time to look round him. There is at present not very much to see; that, at least, is the first impression given by the lofty vault of the Typical Gallery, the empty pens on each side, the Bird Gallery, where even a London sparrow would attract attention, and the vast halls and corridors whither the zoology is one of these days to draw the great throng of sight-seers. The echoing floor of the long western wing may at least be trodden by the public, though nothing is arranged there; but the series of six galleries running north from this wing, and eventually to be dedicated to birds, shells, echinodermata, reptiles, insects, and fishes, are at present inaccessible and full of workmen. Upstairs it is just as bad on the western side; and in point of fact there are only two galleries, or suites of rooms, and these both on the eastern side, which are yet filled with specimens. The botanical collection is ready for the use of students, but still in too confused a state to be laid before the general public. All, therefore, that is to be seen is the mineralogy, arranged upstairs, and the paleontology, which occupies some exceedingly handsome and spacious galleries on the right hand as we enter the Museum.

Those who remember how closely and awkwardly the most interesting parts of the fossil zoological collection were pressed together at Bloomsbury, will note with surprise that they never realized until now how rich this part of the great treasure is. Since Dr. Peter Camper, in 1784, presented a jaw of the gigantic *Mosasauros* from the Holland chalk, nearly a century has passed, and that donation has proved to be the nucleus of a vast and still widening collection. There are few objects so exciting to the imagination as these colossal fragments of antediluvian life. At the very entrance of the gallery, and in such a position as they never enjoyed before, we find on our right hand the remains of the *Toxodon*, that alarming rodent which, in shape like a mouse, but in size like a horse, gnawed and squeaked on a grand scale in the aboriginal forests of Buenos Ayres. The loves and wars of the *Toxodon* would have been worthy of the song of Homer; nor would the muse have disdained the slow progress through a groaning labyrinth of trees of the *Megatherium*, whose vast forearms and blunt huge claws are lifted in a minatory fashion from the pedestal in the centre of the small gallery at the extreme east of the building. The *Megatherium* was the prototype of which the curious little sloth of modern times is the degenerate descendant; it crashed lazily through the forests, gripping young trees in its paws, and stripping off the bark with a muscular, cylindrical tongue, to which the trunk of the existing elephant is a mere plesantry. Perhaps the most beautiful object in the south-east gallery is the skeleton of a male specimen of the gigantic Irish deer, *Cervus hibernicus*, which was found under the bogs in the county of Armagh, and which is so arranged that the noble arch of black antlers breaks the centre of the room, as the visitor enters, with a curve of surpassing delicacy and originality, forming a span of over nine feet. The Guide sold at the doors has several little eccentricities, due, we suppose, to the hurry with which it has been prepared. Not least puzzling among these is the sentence which refers to this splendid specimen:—

The *Cervus hibernicus*, so named from the abundance and perfect preservation of its remains, met with in the shell-marls.

This is equal to Bishop Latimer's instance of *non-sequitur*, "Tenterden steeples the cause of Goodwin Sands."

The corridor at the east end is almost entirely given up to the life-size plaster cast of the great marine lizard, *Pliosaurus Cramptoni*, which was found in the alum shale of Whitby in Yorkshire. This huge reptile measures twenty-two feet from the end of its snout to the tip of its tail, and fourteen feet across its expanded paddles. It will be recollected that one of the most acute of living zoologists has identified the legend of the sea-serpent with the vagaries of some last lingering specimens of this extraordinary creature. A little further on, in Case 9, we come upon the remains of the great fossil salamander from the miocene of Eningen, which, when first discovered in 1726, was supposed to be the skeleton of the last antediluvian man, *homo diluvii testis*. These colossal forms, representing the reptiles, are, for the time being, all that the northern galleries have to show. The gallery intended to receive on one side fossil fishes, and on the other side fossil squids, ammonites, and such-like quaint Cephalopoda, is not yet ready for occupation. Gallery B, the western side of which is being filled with fossil Mollusca, and the eastern with Brachiopoda, Bryozoa, Crustacea, and Echinodermata, will, it is hoped, be ready very soon to entertain the public; while the other northern gallery, in which are sooner or later to be collected the corals and sponges, is not yet provided with wall-cases. When all these objects have been placed, a home will be arranged for the fossil plants.

It may perhaps be admitted that, except to specialists, a collection of mineralogical specimens is not particularly exhilarating. The great hall of dichroite which seems crystal white when looked at from one point of view, rich blue from another, and straw-colour from another, is perhaps the most entertaining object that the upstairs galleries have at present to show to the indifferent masses. The general collection of mineralogy is contained in forty-one table-cases, so arranged that each pair of opposite cases

properly forms a single series. At right angles to these cases is arranged at the end an assortment of "pseudomorphs," that is to say, of minerals which have been subjected to decomposing influences, and have lost their normal character. In the pavilion beyond there are to be found the very valuable and numerous collections of crystals and of meteorites for which the British Museum has long been famous, the Cranbourne meteorite occupying the place of honour at the end of the whole gallery. Among the crystals, those purchased with the Kokcharow collection in 1865 are particularly prominent, and are said to surpass all others in number and value. For those whose education in mineralogy has been neglected, Mr. Lazarus Fletcher has appended to the Guide above mentioned a very complete and interesting chapter on this particular science.

The building itself seems to be in every way commodious and spacious, as well as a striking piece of architecture. It is perhaps not generally realized that it is "the largest, if not the only, modern building" in which terra-cotta has been exclusively used for external façades and interior wall-surfaces. Mr. Waterhouse has displayed great ingenuity in his interior decorations. The walls and supports are covered with designs, in relief, of animals, reptiles, and fishes, drawn with a truth and picturesque freedom which remind us of Japanese metal-work. The designs on the western side of the building are taken from living organisms, while those on the eastern are altogether restorations of fossil forms, often excessively grotesque in outline. The whole history of the building is a curious instance of the way in which great adventures are often carried out piecemeal in English life. Professor Owen had long been calling out for, "in the first place, room for seventy whales," before his plan was seriously taken up by the Government. Finally, in 1864, it was not an architect at all, but a very clever engineer, Captain Fowke, to whom the Commissioners entrusted the construction of the building. His design was a striking one; it represented a red-brick building of the French Renaissance, much ornamented with white and red terra-cotta; it included two detached wings, destined to form a Museum of Patents. But Captain Fowke died in September 1865, before he had completed the details of his design, and early in the next year the Commissioners, determining this time to secure professional knowledge, laid his fragments in the hands of the eminent architect, Mr. Waterhouse, and begged him to adapt and complete them. For two years Mr. Waterhouse did his best to make Captain Fowke's clever drawings fit in with a practical purpose, but in the month of February, 1868, he confessed that the task was an impossible one, and was empowered by the Commissioners to form a new plan to his own satisfaction. His first step was to abandon the French Renaissance, and to adopt that refined Romanesque of the eleventh century, the strangeness of which to unfamiliar eyes is probably the reason why this beautiful building has not been universally approved of. In architecture, more than in any other art, popular taste is swayed by the personal or the accidental. Mr. Waterhouse's rough sketch was accepted by the Trustees in April 1868, but the plans were not finally digested until 1871. In 1873 the actual labour of building was begun, and, at last, in 1881, we have the pleasure of congratulating the venerable director, Professor Owen, in whose brain the scheme first germinated more than twenty years ago, on entering at last into the fruit of his labours.

ARYAN ODDITIES.

WE lately improved the occasion with some remarks on those habits of early man which induce him to pursue the practice of "primitive Boycotting." We showed that the ruder races Boycott each other all round, and that it is quite an unusual thing to find a man, among certain peoples, who may speak to his mother-in-law, his father-in-law, his wife, or, in some extreme cases, his mother. Odd and amusing as is the etiquette of primitive man, it scarcely excels in humorous absurdity those Aryan manners which are recorded for our example in the *Institutes of Vishnu*. This work, translated by Mr. Jolly, and lately published by the Clarendon Press, is a collection of ancient aphorisms on the sacred laws of India. We do not know that among the *Jatakas*, or queer stories about beasts which Buddha used to tell his grinning disciples, any one is recorded to have made a stuffed bird laugh. That kind of miracle is certainly much in the vein of the Buddhist imagination. But it is certain that the ancient aphorisms on the sacred laws of India are comic enough in themselves, and we cannot be too thankful that the great Aryan mind took another turn in the ancestors of our own race.

The aphorisms begin at the beginning, with a singular account of Creation. The people of the Guinea coast believe that creation was the work of a big spider. The Bushmen will have it that things in general were made by the Mantis, a large grasshopper, and this plausible view is accepted among the Hottentots. The Australians are inclined to divide the praise between the eagle and the crow, who lived, before men appeared on earth, in a paradise of birds, as may also be read in a favourite passage of Aristophanes. The Iroquois stand to it, in spite of the Jesuit missionaries, that the world was constructed, or rather fished out of the water, by a large hare, and "our god appears to us," said they, to an old English explorer, "in the form of a mighty big rabbit." A Californian tribe accounts for the origin of things by saying that "the Great Spirit awoke and found himself sitting

in a chair." Feeling rather lonely, he set about making wolves, who afterwards rubbed their tails off and grew into men. The great Aryan mind, not to be outdone in gratuitous absurdity, ascribes creation to a boar. "Having woken from his slumber, Vishnu purposed to create living things," to which end he assumed the appropriate form of a boar. "His feet were the Vedas," and he raised up the earth with the edge of his tusks. He created ogres, fairies, witches, and bogies, and then he made men, and went off "into a place hidden from the world." But how were men to behave? This question at once occurred to the goddess of the earth, an extremely pretty woman, whose charms are described in intimate detail and at great length. The goddess of the earth marched off to consult the chief god, who replied in those aphorisms which give us so strange a picture of life and duty in India.

First, of course, men were divided into the four castes. The Brahmanas were to have all the cream of everything. The ludicrously mean precautions taken by the Brahmanas to secure wealth, power, honour, and immunity from punishment, make half the fun of the Institutes of Vishnu. On the other hand, the Sudras were so despised that "painting and the other fine arts" were left exclusively to their menial hands. In India Sir Frederick Leighton would be a Sudra. Literature, on the other hand, is treated with high and just respect. The chief duty of a king is to "show reverence to the gods, and the Brahmanas." "Let him bestow landed property upon Brahmanas." This rather reminds one of a hint in a monkish chronicle of the reign of Richard II. After attributing to that unfortunate prince almost all known crimes, the pious author adds, "Yet he had his redeeming qualities. He once gave an estate to the brethren of" St. Albans, or wherever it might be. It is suggested that the king may just as well confide all judicial duties to a Brahmana. Then, when we come to crimes, the Institutes of Buddha decree that "all great criminals shall be put to death"; but "in the case of a Brahmana no corporal punishment must be inflicted." He is only to be branded with a mark, even if he kills another Brahmana. But if a Sudra chafes a Brahmana, a red-hot iron pin, ten inches long, is to be thrust into the mouth of the miserable offender. There is a crushing fine for any one who neglects to invite a Brahmana to dinner, or, still more, offers him no food after having invited him. Brahmanas may borrow money at two per cent. The ordeal by poison must not be administered to Brahmanas, nor, what is more sensible, to bilious persons. Also a Brahmana may have four wives. We do not gather that they are all to dine out with him at the same time. As to marriage, neither a Brahmana, nor any one else, may marry a woman whose hair is red, which satisfactorily accounts, to the evolutionist, for the rarity of auburn locks among the natives of India.

The duties of an undergraduate in India afford some agreeable reading. He must "put on two chapels" every day; "he must twice a day perform the religious acts of sprinkling the ground round the altar, and of putting fuel on the fire." As to what is called "tubbing," it is written that "he must plunge into the waters like a stick." The sense of this puzzles the commentators. He must avoid honey, stale food, singing women, the killing of living beings, and rude speeches. He must not study the Veda, and then go and get up the binomial theorem, or chemistry, or anything else, under penalty of becoming a Sudra. After conduct which, in England, the proctors could not overlook, he must go begging to seven houses, clothed only with the skin of an ass. As to reading, some of the regulations are very sensible. The student must take an entire holiday on four days of every month. Many men would do better work if they abstained altogether from study on Sundays. But now come the rules, which are not so sensible. There are Saints' days every day, so to speak, and the student is luckier than Mr. Trevelyan's undergraduate:—

In Neville's court four years I spent,
Where we didn't use to read in the term of Lent.

The Brahmana student must not read when a strong wind is blowing. Nor in a village in which a corpse is lying. Nor during a battle. Nor while dogs are barking. Nor when a musical instrument is being played. This sounds like a modern aphorism to excuse indolence under the infliction of a barrel-organ. Again, a man must not read when Sudras are in the neighbourhood. Nor while immersed in water; and this would have been hard on the famous Wolf who used to study all night with his feet in cold water to keep him awake. The student must not read in a boat; but there seems no reason why he should not study in a punt, on cushions, under the trees. If a five-toed animal comes between him and his tutor, he must put away his books. Therefore (perhaps) the Master of University turned dogs out of college, lest they should come between the men and their tutors, and lead to idleness, screwing up, and similar indiscretions. The aphorisms well observe that to study on forbidden days does a man no good either in this world or the next. To read the Rig-Veda is to feed the ancestral ghosts with clarified butter. How much better these ghosts (whom he neglects a little in his mythological speculations) must owe to Professor Max Müller! But the ghosts prefer one to read the Atharva-Veda. They like it as much as meat. One pleasing indulgence is permitted to the student. "He may at pleasure prostrate himself before a young wife of his Guru (coach, or private tutor), stretching out both hands, and saying, 'Ho, salute thee!'" This is a most interesting custom, which is unlikely, however, to be much appreciated by Gurus with young wives at Oxford and Cambridge.

We now come to the crimes committed by wicked men. Among these are selling lac, adultery, cooking one's own shop for dinner, marrying before one's elder brother, Atheism, cutting trees, to teach the Veda for a reward, causing bodily pain to a Brahmana (which must be a most attractive offence in a country so Brahmana-ridden). One punishment for these offences is to eat barley gruel for a month. In the next world there are twenty-two hells, all very worthy of a place in Dante's collection. When the torments are over, criminals of the fourth degree become fish. First-class misdo-mennants enter the bodies of birds, and so forth. When re-born again into human form, the criminals each suffer appropriately. Let people who complain of dyspepsia, like Mr. Carlyle, learn from Aryan wisdom that they have been "stealers of food" in a previous existence. Horse-stealers are punished with lameness. A man, who sank so low as to sell tin is re-born as a dyer. Most amusing of all, a thief is born a bard. Some bards are certainly born thieves of other men's ideas, but the converse sounds odd. But we may escape these misfortunes by living on milk for three weeks, by eating nothing but lotus, and by avoiding conversation with ladies. There are penances for having dined with carpenters, goldsmiths, enemies (a thing we all do frequently), blacksmiths, liars, doctors, trainers, lunatics. The majority of birds and beasts are not to be eaten.

Perhaps these examples, chosen almost at random, will prove that etiquette of extraordinary stringency and minuteness is not peculiar to primitive man. The Australian, who may not speak to his mother-in-law, and must give his wife's sister the ears of the beasts he kills, is not subjected to a more ridiculous tyranny than the devout believer in the Institutes of Vishnu. Sir George Grey thought Heaven had ordained Australian laws to prevent the natives from becoming civilized. Man seems to have thought out the Institutes of Vishnu for a similar purpose.

IBERISM.

THE ordinary Englishman may be incredulous when he is told that recent events in the Transvaal have indirectly produced one huge and almost unalloyed joke. It is true, however, and the locality of the joke is no other than Lisbon. For some weeks past readers of their newspapers have been more or less dimly aware of a tempest in a teacup about the Lourenço-Marques Treaty. Negotiations have been going on for converting Portugal's southernmost African possession (which she owes to the kindness of Marshal MacMahon in one of our invariably unlucky arbitrations) from a pestiferous swamp, of no value to herself or anybody else, into an entrepôt, which might have considerable chance of being commercially important. Other incidental advantages were to accrue to Portugal, and her sovereign rights were not even to be bought out, much less taken away without compensation. This arrangement, however, which might appear to be beneficial to all parties, has been taken by one of the little factions which the blessed gift of constitutional government has raised up in all the smaller European countries as an occasion of warfare. The arrival of the British fleet in the Tagus, a tolerably frequent event, tending considerably to the enrichment and enlivenment of the Portuguese capital, was construed as an attempt to overawe the freedom of Lusitanian debate. Progressistas and Regeneradores fought in the Council Chamber with their tongues, and with more deadly weapons in the streets. Blood was shed; a Ministerial crisis arose which was fully discussed in these columns at the time. Finally somebody triumphed, and the song of that triumph has been duly raised. The liveliest newspaper of Portugal appears to be a certain Republican print called the *Seculo*, which is strongly devoted to "Iberian" principles, and the Lisbon Correspondent of the *Times* has given Englishmen who do not read Portuguese—a larger number, it may be suspected, than those who do, though Portuguese has been not ill defined as a very ugly kind of Latin—an opportunity of forming acquaintance at once with "Iberism" and with one of the finest specimens of modern journalism. The liveliest Irish papers, even the *Irish World* itself, cannot hold a candle to the *Seculo*, though there is a considerable affinity between Irishmen and Portuguese in race, in style, and in affliction for the pig.

Iberism, as the intelligent man will probably discover by means of his unaided wits, signifies the desire for a coalition of Spain and Portugal, in which Iberia is to be for the Iberians, and for nobody else at all, at all. Whether this idea has supplanted Señor Castelar's more famous and grandiose dream of a Latin League, in which France, Spain, Portugal, Italy, and Greece are to face and dominate the brutal Teuton and the savage Slav, or whether it is supplementary and preparatory to it, is a mystery of Iberian politics which we cannot pretend to solve. To an Englishman who has always been told (and not untruly told) that Spaniard and Portuguese hate one another with a hatred compared with which the mutual aversion of Scotch and English at its hottest was a mild dislike, this may seem surprising enough. The Iberist, however, would probably retort that England and Scotland got on very well together, and that there is no reason why Spain and Portugal should not. In order to promote this blessed result, it has struck the ingenious Portuguese mind that there is nothing for reconciling enemies like a community of hatred, and they seem to have pitched on the necessary object of detestation. This object is England. It is true that, until recently, any dislike which Spaniards may have had to us

was confined to a mild and chiefly Platonic hankering after Gibraltar; and that Portuguese, as a rule, were not supposed to hate us at all. We are generally supposed to have held towards Portugal the position which France used to hold towards Scotland, except that France never did any particular good to her ally except to make her people call legs of mutton *gigots* to this day, while England really has done many good turns to Portugal. Without going so far back as the Abbey of Batalha, the historical ties between England and Portugal are considerable. Everybody has a dim idea of the Methuen Treaty, which gave the Portuguese wine trade such an impetus as no trade ever had before or since, and, according to grumblers, gave half England the gout for generations. We took the Portuguese very much under our wing in the Peninsular War, spent oceans of money on them, preserved them from all but very transient experiences of the awful incubus of French occupation, which weighed on their Spanish neighbours, and taught them to fight in a very creditable way under Pack and Borsford. We helped them semi-officially to get rid of that unpleasant person, Don Miguel, and we have bought *quintas* in their hills and valleys, and accepted baronies and viscounties from their monarchs in the most condescending way in the world. Perhaps there has been a little too much condescension in the matter; and possibly the Portuguese, while they were too lazy to exploit the Alto Douro for their own exclusive profit, have been annoyed at the Viscount Smiths and Baron Browns who buy up and store in their lodges the magenta-coloured fluid which claret would be, if it could. At any rate, the screaming of the *Seculo* seems to reveal a Tattycoram-like attitude of rage at favours received. We have kept the *Seculo* too long waiting, however, for which it deserves, and is hereby requested to receive, the excuses of an infamous English journal.

It seems that the fiendish Progressistas, who, not to bother the reader with the political intricacies of Portugal, are the people of whom the *Seculo* does not approve, have been hinting that, if England is offended, and withdraws her regis, "the lion of Spain will instantly claw us, and reduce us to a mere Iberian province." Now there is nothing that the *Seculo* would like so much as this in reality, only it does not exactly say so. It says instead, in effect, "What business is this of anybody except ourselves?" "Mayn't we be clawed as we like?" "What liberty have we, if we have not the right of option or even of discussion on a matter which affects the integrity of our Empire?" Besides, "What shall we lose if we are now in the claws of the British leopard?" This is a point of pathology on which we can offer no opinion, though perhaps a great shikari might be able to say whether the lion or the leopard is in his clawing the clawer most agreeable to the clawed. But we can assure the *Seculo* that the British leopard was quite ignorant of the noble quarry which, it seems, he has in hand, or rather in claw. The *Seculo* continues in the line interrogative manner which is the soul of oratory and journalism. "What do we gain by being Englishmen instead of Spaniards? As Spaniards we should, at least, be citizens; as Englishmen we should never be more than serfs." This last statement is obscure, but probably refers to the degraded monarchical institutions of this realm. Besides, it seems that Great Britain only takes care of Portugal till she has stripped her of her last transmarine possession. We confess that we did not know that England had ever stripped Portugal of any transmarine possessions, except during the brief period when Portugal was under that very Spanish dominion to which the *Seculo* is anxious to return. But perhaps the *Seculo* has a private history all to itself. In fact, it certainly has, for "since 1640," it seems, we have been making capital out of the ingenuous, patriotic sentiment of Portugal, in order to continue the gratuitous and cowardly seizure of all her colonial dominions. This bad English leopard, this "insatiable British sea-serpent"—for the *Seculo* is liberal in metaphorical zoology—has done the most dreadful things to Portugal. "By her bestial and sordid diplomacy" she has severed Lusitania from Spain and France. We have supplanted the Portuguese in the basest manner, we never did anything in "the marvellous work of maritime discovery," "an adventurous and warlike disposition is a feature in the English character which has ever been conspicuous by its absence." And therefore it is that "the Republican party of Portugal accepts as an honour England's sordid political hatred."

This is indeed a melancholy state of things. It seems that not only have we been robbing Portugal for centuries, but we now hate her sordidly. It may be so, but we can only say, like the lover *malgré lui* in the comedy, "I protest to you, Madam, I was wholly ignorant of my own affection." Englishmen have been sordidly hating Portugal without knowing it, and now without knowing it they have been plotting to take from her her last transmarine possession, which, by the way, seems to show that geography, like history, is not the *Seculo's* strong point. "The Jewish sordidness" of our "usurious and crafty disposition," the "total absence of any noble or heroic element in our character," make it appear impossible to expect anything better from us. It is really odd that, considering the oceans of generous Portuguese wine which have passed into English bodies in the last two centuries, they should have exercised so little purifying and refining influence on the English soul. It was probably too bad to begin with, the *Seculo* would, no doubt, retort with the lightning quickness of repartee which distinguishes the Latin journalist. However this may be, it is clear that the shortest way to be a good Iberist is to be a good hater of England. Iberism will probably soon discover that

England first bred the Phylloxera, and has no doubt already discovered that Sir Wilfrid and all his followers are at heart animated only by a jealousy of the Latin race. Of course it is not easy to say how much of the amusing and amazing nonsense which we have been quoting really expresses any actually existing sentiment, and how much is to be set down to the *blague* which to the journalism of the Latin races is the very breath of life. Iberism is not in itself an impossible thing; for the two nations of the Peninsula—composite as the larger of the two is—have at any rate a considerable community of faith—by the way, Iberism is Freethinking—and language, and certainly are not much wider apart than Sicilians from Piedmontese, or Silesians from Holsteiners. The modern cant of nationality proceeds upon no intelligible or scientific grounds, either in its uniting or in its disintegrating agency. Iberism, too, has several things in its favour. The average Portuguese, unless he is very much belied, is rather ignorant, and possessed of a good deal of national jealousy. By combining these two strings, and playing on both, it might be quite possible to substitute for the traditional hatred of Spain a hatred of England. Many people will remember the amusing outburst which appeared some time ago in the Portuguese papers about remarks derogatory to Portugal in some obscure English school-book. This Lourenço-Marques to-do seems to be a sort of sequel to that international episode. It is at least satisfactory to find that England is in no danger of the woe denounced against those of whom all men speak well. Since the French left off abusing us, except now and then as a sort of survival, there might have seemed to be some danger of our getting blue-mouldy for want of a verbal beating. Germany, Spain, and now Portugal, however, seem to be determined to save us from this peril. The odd thing is, that to all these nations we have for a long time done nothing, or next to nothing, but good. Russians, whom we constantly oppose, are civil-spoken enough on the whole; so are Austrians, to whom of late years we have certainly not behaved too handsomely. National antipathies, however, are always more or less inscrutable; and if it pleases the Portuguese to swear eternal hatred to us, we must even put up with it, and only hope that they will not, in an ecstasy of determination to spite us, set fire to the anchorage of the Tagus, or cut down the vineyards of Boa Vista and Calcavillos.

SEALS.

THERE was a jubilant paragraph the other day in one of the morning papers respecting the success of the "sealers" belonging to the port of Dundee. The *Resolute* had taken 3,600 seals; the *Ancora*, 16,000 young and 1,000 old; the *Thetis*, 4,000 young and 2,800 old; and the *Narwhal* was reported "full." We are not told the number of seals that this vessel could contain, but perhaps we may be allowed to put it at 3,600, like the *Resolute*. These two vessels therefore killed about 7,000 seals between them. No distinction is made in the case of the *Resolute* between "old" and "young"; but, as old seals are more valuable, the absence of particulars probably indicates that they were all "old." If this be the case, the Dundee fleet has brought home this season 20,000 young seals and 10,800 old seals. This number, however, must not be supposed to represent the total killed by the crews of the English vessels, for in these general massacres many more are killed than the ships can bring away, and many that escape die of their wounds afterwards—not to speak of the thousands of young who perish for want of their natural sustenance. A victory such as this is really far more disastrous than a defeat, as we propose to point out. We must premise that two distinct animals are habitually spoken of as "seals," and two different substances as "sealskin." The group of marine, flesh-eating mammals which are spoken of collectively by naturalists as the *Pinnipedia* (because their hands and feet are modified into swimming organs by the interposition of webs between the digits), contains three families:—1. The Walrus. 2. The True Seals (*Phocidae*). 3. The Eared Seals (*Otariidae*). The True Seals are clothed with short, coarse hair, and are, therefore, sometimes spoken of as "Hair Seals"; while the Eared Seals are called "Fur Seals," because some species possess beneath the coarser hair that short, thick, silky fur which is so much prized for cloaks and other garments. Most people have long been familiar with the general form and appearance of a True Seal; and of late years two fine Eared Seals have been exhibited in the Gardens of the Zoological Society of London. There is also a fine pair from the north-western coast of America to be seen in the Brighton Aquarium. It is to this family that the popular names "Sea-Lions" and "Sea-Bears" have been given, for their power of locomotion on land, their general appearance, and their loud cries—which, however, resemble a bark rather than a roar. The animals which have lately been slaughtered in such numbers are certain species of True Seals. Though not of the same commercial importance as their fur-bearing relations, they are still most valuable for their skins and their oil. Seal oil is largely used in the preparation of the vegetable fibre called "jute," and is worth 50s. a tun. Their extirpation, therefore—not to mention the regret with which naturalists regard the destruction of a species—would not merely involve the loss of the capital embarked in the fitting out of the vessels engaged in the business; but would seriously endanger, if not ruin, more than one branch of commercial industry. This catastrophe, however, cannot be far distant, unless vigorous

measures to regulate the slaughter be adopted without delay. The habits of the seals, which are exceedingly curious, have not as yet been properly considered. Those captured off Newfoundland and Jan Mayen, which are the grounds resorted to at this season, belong to migratory species. They leave the Polar Seas at the beginning of winter, assembling, like swallows, at some long-frequented and well-known meeting-place, which they do not leave until the gathering is completed. Then, taking advantage of the Polar current, they start southward. Small detachments, consisting of from half-a-dozen to a score, form the vanguard; and behind them comes the vast, uncountable herd. For many miles nothing is to be seen but seals; the sea seems to be literally paved with their heads. At Belleisle Island the herd divides—part drifts into the Gulf of St. Lawrence, part goes on to Newfoundland. There they remain until the beginning of January, when they commence their return northward. This is not the easy matter that the previous migration had been, the current being now against them. On reaching the ice, which at this season covers the sea through which they had passed a short time previously, the herd halts. The females are then ready to bring forth their young, and if unmolested would remain on the ice until the cubs were old enough to accompany them on their homeward journey. The cubs are usually born from the 15th to the 24th of March, each female producing only one, and they are suckled for about twenty days. They develop with extraordinary rapidity, and when three weeks old are able to take care of themselves. Until this age they are comparatively worthless. It is manifest, therefore, that to kill them at an earlier period is not only cruel but foolish. Yet this was until very lately, and we fear is still the practice. Moreover, as the female seal shows a strong affection for her cub, and will not leave it to save her own life, advantage was taken of this to kill a larger number of old seals, the young being left to starve. The following account was written in 1875 by Captain David Gray of Peterhead, an experienced sealer. It is therefore strictly accurate, and, painful as it is, deserves careful attention.

Last year the fleet set to work to kill the seals on the 26th of March, 1874, and in forty-eight hours the fishing was completely over, the old ones being shot, wounded, or scared away, while thousands upon thousands of young ones were left crying piteously for their mothers. These mostly perished of famine in the snow, as they were not old enough to make worth while the trouble of killing them. If you could imagine yourself surrounded by four or five hundred thousand babies, all crying at the pitch of their voices, you would have some idea of the piteous noise they make.

To the barbarity and folly of wasting the young seals in the manner above described may be added the "imprudent expenditure of capital," as a Norwegian sealer cleverly said, in killing so many old seals. After the season of 1874 there was a general feeling that some date must be fixed by international agreement before which no seals should be killed; and an Act of Parliament, called "The Seal Fishery Act," was passed in 1875, by which it was enacted that a "close time" should be fixed by an Order in Council "when the foreign States whose ships or subjects are engaged in the seal fishery have made with respect to their own ships and subjects the like provisions to those contained in this Act." In 1876 the 3rd of April was fixed as the day when seals may first be captured, apparently without the consent of any foreign Power; and the Government of Norway passed a similar law, prescribing the same date in the following autumn. We have not been able to ascertain what action, if any, was taken by Germany or America. It will be observed that the number of young seals captured this year is twice as great as the number of old ones; whence we may conclude that, at any rate, they were not left to die on the ice as heretofore; but the early date at which the news of the success of the sealers was received at Dundee shows that they must have been taken before they were old enough to leave their mothers. It was admitted by one of the sealing captains examined in 1874 that his most successful season, both in skins and oil, had been that of 1866, when the fishery did not begin till the 6th of April. If sealers could be induced to look beyond the success of the moment, they would learn from such a fact as this the necessity of moderating their eagerness. The thirst for gold, like other excesses, carries its own punishment with it. The records of the seal trade are full of warnings. When the Southern Ocean was first opened to British enterprise by the discoveries of Captain Cook, it teemed with animal life. Fur Seals and Hair Seals abounded on the coasts of Australia and New Zealand, and on the outlying islands. They were at once set upon and killed, the slaughter being conducted without regard to sex or season. The result was the total extermination of several species. "One might as soon expect to meet a sea-lion on London Bridge as on any one of the islands in Bass's Strait," was the reply of a New Zealand naturalist to an inquiry about the seal-life that early voyagers had observed. The same result has happened at the Falkland Islands, at Cape Horn, and on the Pacific seaboard of South America. A vessel called the *Betsy* took one million skins from the island of Masafuera at the beginning of the century, an exploit which left no survivors for future adventurers; and the island of Juan Fernandez, where, in Anson's time, there were seals in abundance, has now only a few stragglers to show. The same thing happened at the South Shetlands. In 1821 and 1822 British sealers took away 320,000 skins for the two years; killing males and females indiscriminately, and leaving the young to die. The fate of the sperm-whale might furnish a useful lesson in the same direction. It was once abundant in the Southern Ocean, but is now all but extinct,

from the very same causes that we have pointed out above in the case of the seals. The American whalers observed its maternal affection, and found it easier to kill a mother and her cub together than a mother alone. A few years of this policy, added to the use of steamers armed with projectiles of cunning contrivance, and the fishery had to be given up as no longer profitable.

The possibility of regulating a traffic of this kind has been most conclusively demonstrated in the case of the Northern Fur Seal (*Otaria urima*), an Eared Seal inhabiting the Pribilof Islands, in Behring's Sea, whence "sealskin" for the London market is now principally, if not entirely, obtained. These islands belonged to Russia from their discovery in 1786 down to 1869, when they were ceded to the United States. In the early years of the Russian occupation the seals were slaughtered recklessly and indiscriminately, and in 1842 an unusually severe winter thinned them still further. After this a smaller number was killed in each year, and in consequence the seal population steadily increased, until, in 1869, Mr. Elliott, who was sent to the islands by the Government of the United States, estimated the numbers at between five and six millions, or twice the population of London. Shortly afterwards, the islands were leased, under certain conditions, to the Alaska Commercial Company. Of these provisions, that which is most important for our present purpose limits the slaughter to 100,000 in each year; and, further, it has been agreed, after careful observations extending over several years, that these shall be all males of four or five years old. We have no space to give the reasons for this determination, which is based on the curious polygamous habits of this species of seal; we merely draw attention to it in order to show the importance of studying the habits of creatures on which a large commercial venture has been risked, instead of trusting blindly to chance. The English had a similar opportunity with the Fur Seals of the Southern Hemisphere; but, as we have shown above, it was lost through carelessness and ignorance. We are much afraid that our system of hunting the Hair Seal will lead to a similar result, unless we can secure the active co-operation of the other nations interested, and so bring about a radical change. This will not be easy. The Americans are fortunate in being the sole owners of the Pribilof Islands, and in having animals of exceptional habits to deal with. The difficulties, however, that stand in the way of a necessary reform should not deter us from at least trying to bring it about.

THE MYSTERY OF E. J. W.

THE singular misfortunes which seem to have befallen this unlucky person can hardly fail to interest those who study the very curious collection of advertisements from the "Agony Column" which Miss Alice Clay has recently published (*The Agony Column of "The Times."* London: Chatto and Windus). No small industry must have been required for the work, which covers a very long period, the first advertisement given being dated January 13th, 1800; and the last, November 23, 1870. Miss Clay must therefore have taken the trouble to examine some twenty-two thousand copies of what was within the memory of persons still living the leading newspaper. The task must have been a wearisome one, but the result is an amusing and very interesting little book. The Agony Column has presented to the world a long series of enigmas, many, no doubt, not worth the guessing; but others not undeserving the attention of people who are fond of riddles, and these Miss Clay has carefully picked out so as to offer her readers the choicest utterances of those mysterious persons who, having been for some unaccountable reason debarred from using the post, have been obliged to advertise their frantic appeals in the neighbourhood of the births, deaths, and marriages. In one respect it must be said that Miss Clay's work is disappointing. Much curiosity has always been felt respecting these strange advertisements, of which, by the way, a large number now appear in the *Standard*, and this curiosity she is not able to satisfy, as her labours have not apparently enabled her to form any opinion, or even to indulge in any plausible guesses, respecting the advertisers. She does not attempt to say whether they are lunatics, or in some instances thieves and receivers of stolen goods, as they are commonly supposed to be, or whether they are really unfortunate people who are driven to this peculiar way of communicating with each other; but, though she cannot satisfy curiosity on the main point, she is able to throw some light on a singular and obscure subject, as her collection, without dispelling the mystery which surrounds the advertisers, makes clear some remarkable facts regarding them. It shows, for instance, how persistent certain of them have been and over how long a period their communications extend. This would seem to prove that some of them, at least, are not lunatics or fools, and are attacking or defending interests of real importance. Of the most remarkable instance of devotion to the second column which Miss Clay gives we now propose to speak, leaving for a future time notices of the minor agonizers. Attention has lately been drawn to the curious advertisement of Mrs. G. to Mrs. Jones, which, it is said, has appeared for several years past; but Mrs. G. is far surpassed by the person above-mentioned, Mr. E. J. Wilson, of Ennis, Ireland, who, at varying intervals, advertised in the Agony Column of the *Times* from February 1851 to July 1870, and not impossibly may be advertising in the *Times* still.

As has so often happened with men who have achieved distinction, his maiden effort in the line wherein he was destined to

excel was a modest one, as he merely stated in his first advertisement that, as the clothes were ready, he was ready to wear them, and alluded to a bar of iron, intimating thereby, probably, that he was prepared for some undertaking and would not flinch. This was addressed to "D.," and was followed by advertisements addressed to "Equator," "Indigo Blue," "Simulacre," and "Alexis," which were in the florid style so much beloved by the agony advertisers, and have no meaning for the uninitiated. It is remarkable that in March 1852 his advertisements called forth some of the very few answers they ever received, and that he was entreated to give an explanation, in capitals, and asked whether he had a conscience. On the latter point apparently "E. W." was unable to give a satisfactory reply, as in a French advertisement he apparently admitted that he was a serpent nourished in the bosom of somebody, who was "de la race sacrée"; but added that his blood was not ditch water. Mr. Wilson was silent for awhile after this, but in June he was at work, and issued an advertisement in which he gave for the first time his full initials, "E. J. W." This was followed by a series of inflated notices addressed to "The Counterfeit," to "Equator" again, to "Croix Rouge," "Fly-by-night," and "The Key." The only thing to be deduced from these stilted productions is that "E. J. W." had been asked to do something which he thought unpatriotic, but that nothing would "sway his allegiance," and that he was quite incorruptible. In January 1853 "Mary (alias Emily) Pierce Crawford, daughter of Daniel Merryweather Ford," addressed him in the *Times*, intimating that she should like to apply to 4 Spring Place, Hammersmith, and in the next month he was told by "Two Indescribables" that, together with G — and Arthur, he was "inexcusable" for absenting himself, and was apparently invited to come to the same place. The "Indescribables" added that all communication was interrupted in England and abroad, and that their reputations were calumniated to render them homeless and friendless.

Up to this time there had been nothing remarkable about the advertisements of "E. J. W." He had been engaged in secret negotiations, possibly political, but very likely commercial only; had been asked to do something which he called unpatriotic, and had refused. In March 1853, however, two curious notices were issued by him, referring, apparently, to some political struggle; and in 1854 a very remarkable advertisement appeared, which seems to show that, in the course of the intrigue or negotiation in which Mr. E. J. Wilson had taken part, he had made very desperate enemies, who, in revenging themselves on him, were not deterred by the slightest timidity or by scruples of any sort. In the *Times* of May 1st, 1854, he advertises thus:—"MY DAUGHTER! O, my daughter!" and in May 17th he says:—"Lutte à mort. Je veux voir ma fille." Unless the strange notices which he sent for so long to the *Times* were altogether due to the delusions of an unsound mind, it is clear that his daughter had really been carried off; for, as will shortly be seen, many subsequent advertisements refer to her loss, and prove that he made the most strenuous efforts to get her back. In 1854 and 1855 advertisements by "Egypte" and "Egypt" appeared, which, though not at first recognizable as the productions of "E. J. W.," were undoubtedly his. He refers—giving his initials in one case—to stolen gains, participation in which he absolutely refuses, and on June 27th, 1855, he asks where his child is. It seems certain that she was not restored to him; but for some reason not to be gathered from Miss Clay's collection, he was for some time after this either willing to correspond by the penny post, like ordinary mortals, or was debarred from his beloved second column. He did not appear in it again until July 1856, and after issuing three brief German advertisements in this month, he was silent until January 1857, when he published an advertisement signed "Decimals.—Cygne," both of which appear in many of his later appeals. In March he again mentions his daughter, informing the public, in the first place, that she has two of her toes joined together; and, secondly, that he has not seen her for seven years; and shortly afterwards he speaks again of the money he would not take. A series of mysterious advertisements, in one of which he describes himself as "hors la loi," follow at varying intervals the notice containing this reference, and in December 1857 his daughter is heard of again, as he says indignantly to one "X. Cheops," "No, no. Hands off my child," and adds that he will not risk his "little gipsy girl in the pestilential marshes of Hungary, though there secure against every power." About this time misfortune appears to have fallen him, as he seems to have been sadly in want of money. In July 1858 he issued the following remarkable advertisement:—

X. GAMINS X.—I CANNOT LECTURE at Coventry as contemplated. Although reported in the "Endowed Schools Commission" as receiving £80 per annum, I get but £50, and you know with that without board, &c.—E. J. W., Cygne.

After this he apparently came to the conclusion that secrecy was no longer necessary, as in a notice to his friend Cheops he requested that gentleman to address E. J. Wilson, Ennis, Ireland, and this advertisement is followed by several giving his name. In one of these he says that he has lost his money and his child, and asks the delicate question whether a lawyer can advise a criminal act without rendering himself liable. In February 1859 he pathetically speaks of himself as "the author of the decimal system at Her Majesty's Customs, which pours pure gold every day into the coffers of the nation, earning a miserable subsistence in the worst part of Paddy's land": and in March he became, it would seem, very anxious about his daughter, as he issued a

notice warning all persons assisting in secreting her that they were liable to imprisonment. This was succeeded by an advertisement complaining of a schoolmistress whom he had previously spoken of as having aided in the abduction of his daughter, and on April 16, 1859, the following formal notice appeared in the Agony Column:—

TWO HUNDRED POUNDS REWARD.—Any person (except a detective or his agent) restoring to me my daughter, ALICE JANE WILSON, 10 years old, shall receive £200 reward.—E. J. WILSON, Ennis, Ireland.

This offer did not bring her back, as in July we find him issuing a despairing appeal to "Alice," saying that he has not heard from her for eighteen months, and has undergone great persecution. A French advertisement published the next day seems to have answered this, and it may be hoped that poor Mr. E. J. Wilson succeeded at last in recovering his child, as there is no more mention of her in his subsequent communications in that Agony Column wherein he loved to impart his woes to his intimate friends, his deadly enemies, and the world in general.

For some time after 1859 he was silent. In 1862 there was an advertisement about eggs which was perhaps his, and there were others headed "Spurs and Skirts," which were indignantly answered by "the father of E. W.," who may or may not have been Mr. Wilson. In 1867 he indubitably reappears, as there is a communication to "E. G. G. (en voyage)," which subsequent notices show to have been his. It must be said that his later productions are not as interesting as his earlier ones, and suggest no stranger story of dark conspiracy or desperate revenge. In one of these earlier advertisements he had alluded mysteriously to money which he claimed on "eggs," and most of his latter appeals are to "E. G. G." though he occasionally addresses "B. E. N." Answers to his advertisements there were apparently none; but by this he was undismayed, for, though not voluble as formerly, he not infrequently addressed the *Times* from 1867 to 1870, when he was, so to speak, "left advertising," his last recorded effort being an appeal to "E. G. G." to pass through the Tyrol, over the Stelvio, and then by Solferino, Magenta, and the Mont Cenis to Grenoble. As has been said, Miss Clay's book does not extend beyond 1870, and without examination of very many files of the *Times*, it is, therefore, impossible whether the veteran advertiser continued his labours, or whether, after nineteen years of work, his place in the Agony Column knew him no longer.

What were the curious intrigues in which he was involved? Why was his daughter taken away from him twice, and, above all, why was it necessary for him during all this long period to correspond by advertisement? Of course it may be said that there is really no mystery whatever about the matter, and that Mr. E. J. Wilson was simply a person liable to harmless fits of derangement, during which he amused himself by penning advertisements, just as Mr. Toots pleased himself by writing imaginary letters from great personages. This may be the true explanation of the mystery; but we somewhat doubt whether the delusions of lunatics are so definite, so numerous, and so lasting as those which must have afflicted E. J. Wilson if he was really deranged. If he was sane, and if his innumerable advertisements were not due to a disordered imagination, his story must be an interesting one, and, should he still be alive, he might well take the world entirely into his confidence, and recount the adventures and misfortunes of which Miss Clay's book gives the dim outline. Having greatly stimulated public curiosity, he ought in fairness to give the answers to the riddles he has put, now that the enemies of twenty-five years ago are presumably not in a position to abduct children or instruct solicitors. What were the deeply mysterious intrigues in which he was engaged in 1852 and the following years? What made his enemies so furious against him, and how were they able twice to carry off his daughter? What was the unpatriotic task he was urged to undertake? Who were "Alexis" and "Fly-by-night," and "Counterfeit," and "Cheops," and "Indigo Blue," and the many others to whom he addressed himself for so long? Was Miss Alice Jane Wilson restored to him? and, if she was, who restored her? What were the stolen gains he refused to participate in, and how did he introduce decimals into the Customs? Who was "E. G. G.," so often urged to go to Grenoble; and why, above all, was he, Mr. E. J. Wilson, of Ennis, Ireland, obliged during nineteen years to advertise in the *Times*, and how was he debarred from using the post like other men? If he is, as we much hope, still alive, and will answer these questions fully, he will produce a work of surpassing interest, and will doubtless prove that the truths of the Agony Column are stranger than the fiction of Gaboriau.

MURETUS.

IN the somewhat grotesque series of quotations intended to demonstrate that Dr. Reid's philosophy had its adherents before Dr. Reid was born, Sir William Hamilton pronounces a glowing panegyric upon "the pattern critic, the incomparable Muretus." Few people now, probably, turn to that scholar's remains. His criticisms and illustrations of the ancient writers have long since been gathered up by indefatigable editors; the use of Latin for original compositions has so nearly died out that we no longer require a model to show how modern topics may be treated in the

language of Cicero: and the dialogues of Erasmus and the speeches of Muretus have alike disappeared from schools. In the history of literature and learning, however, every one who has ever held a prominent place retains some interest, even though it be the faint interest we feel for a fading name; and the remembrance of the hours most of us have spent in endeavouring to write Latin prose may possibly inspire some respect for the modern who succeeded best in that pursuit.

Marc Antoine François Muret, better known as Muretus, was born of respectable parents, near Limoges, in 1526. In his boyhood his talents attracted the admiration of the elder Scaliger, for whom Muretus in his turn professed a filial regard. At the age of eighteen Muretus lectured on Cicero and Terence at the College of Auch. He subsequently taught the classics at Poitiers and at Bordeaux, where he numbered Montaigne among his pupils, and wrote Latin tragedies which undoubtedly led the way to the vernacular tragedies of the Pléiade, and in which Montaigne himself acted. Before 1552 he went to Paris, where he occupied the chair of philosophy and civil law in the College of Cardinal le Moine. Though Turnebus and Buchanan were his colleagues, the young professor gained such admiration by the elegance of his style that his class-room was crowded, and, it is said, Henry II. and Catherine de' Medici were among his hearers. But the college was not long to be illustrated by the first living writer of Latin verse and the first living writer of Latin prose. The restless Buchanan returned to his wandering life, and Muretus's Paris career was brought to a sudden and unhappy termination. A disgraceful charge was brought against him, and he was thrown into prison. He had already begun to starve himself to death, when the interference of powerful friends procured his release. Muretus next appears at Toulouse, where he began to lecture to the law students. At Paris he had declaimed with success on jurisprudence; but at Toulouse the study was seriously prosecuted, and the justly celebrated school of law was not prepared to allow the finest phrases to compensate for ignorance of the subject. The course ended in a fiasco; and about the same time the unlucky lecturer was assailed by a charge similar to that incurred at Paris. How far the accusation was well founded it is not easy to determine. Turnebus, who had connexions in Toulouse, continued on friendly terms. On the other hand, Joseph Scaliger apparently has no doubt of Muretus's guilt. It has been argued that Scaliger was willing enough to believe any story to the discredit of Muretus, who had played a trick on him which the great critic never forgave. Out of a fragment of Philemon Muretus manufactured some Latin verses. These he palmed off on Scaliger as the work of Attius and of Trabea, and Scaliger gravely inserted them in his commentary on Varro as interesting relics of those poets. The biographers further plead that only conscious innocence could have prompted Muretus to dedicate his translation from Alexander's commentary to the very person whose name had been coupled with his a few months before at Toulouse. There are, we think, two other considerations which may fairly be urged in the defence. Part of the accusation consisted in a charge of heresy. Now, on a review of the writings of Muretus, this imputation appears so undeserved, and so manifestly invented to create a prejudice, that we are justified in viewing the whole accusation with considerable suspicion. Moreover, it is notorious that from the days when Dominic established the inquisition in Languedoc to the days when Voltaire denounced the judicial murder of Calas, Toulouse was infamous for its savage bigotry. Fanaticism has always recognized its surest opponents in the artistic character and in the culture of letters; and Muretus was above all things a literary artist. Innocent or guilty, however, Muretus was in imminent danger of being burnt. Happily he effected his escape, and the disappointed zealots of Toulouse could only enjoy the gratification of burning his effigy. The reproach of atheism still clung to his name, and long afterwards gave rise to the absurd suggestion that Muretus was the author of the mysterious book *De Tribus Impostoribus*. Muretus now resolved to go to Italy. On his way he fell ill at an obscure inn, and a consultation was held over him by the rural surgeons, who determined on attempting a hazardous operation. "Fiat periculum in anima villi," said one of them, little supposing that the wretched patient was the first Latinist of the age. Muretus was so scared that, in spite of his illness, he pursued his journey to Italy. He first visited Venice, where he made the acquaintance of Paulus Manutius, between whom and himself a cordial friendship continued to subsist. Here he dedicated several of his productions, including the commentaries on Catullus and on the Catiline orations, to various nobles of Venice. Finding them insensible to his flattery, he ceased "ploughing the seashore," and made his way to Padua. While there, he was warned by Lambinus, who played the part of the good-natured friend with much satisfaction, that a certain person with a short neck, red hair, and wide nostrils was reviving reports to his prejudice. Who this unprepossessing person was does not appear; but Muretus wrote back in deep distress that he longed to retire to some lonely country "where he should never hear the name of the Pelopidæ." Such a refuge, he adds, presented itself in Greece, whither he had been invited with a promise of a handsome salary. Greece in 1558 hardly offered many attractions to a man of letters; and unfortunately Muretus gives no explanation of this incident. The next letter to Lambinus is of a very different kind. Muretus had now gone to Ferrara on the invitation of Cardinal d'Este, and, forgetting all his wishes to retire from the world, cheerfully pledges Lambinus in a glass of excellent white wine, and only

regrets that his friend was not with him to drink it. Shortly afterwards Muretus accompanied Cardinal d'Este to Rome, and when his patron was despatched to Paris as papal legate, formed one of his retinue, and renewed the old intimacy with Turnebus. Except this interval, he passed the rest of his life in Italy, composing orations for State occasions of ceremony, and lecturing on the classics. Twice at least topics worthy of an orator were afforded by the massacre of St. Bartholomew and by the battle of Lepanto; but in these addresses the speaker betrays a poverty of thought unredeemed by his usual felicity of diction. The praises of persecution, however, did not lack admirers, and within a few months a translation appeared at Lyons of the speech "touching the happy and admirable success of Charles IX."

The letters of Muretus are so colourless that it is difficult to form from them any notion of the personality of the writer. The occasional mention of the sausages, thrushes, and becafores which his friends sent him may lead us to believe he was not averse to good cheer. A certain mischievous vein shows itself, not only in the imposition which he played on Scaliger, but in his custom of using rare words from Cicero which had escaped the diligence of Nizolius, and diverting himself by the shrugs and glances of the purists who might be present. But the letters generally are occupied by learned discussions, by frigid compliments, or by the petty squabbles common among scholars. At one time Muretus poaches upon the Horatian preserves of Lambinus; at another, Muretus himself is the sufferer from the incursions of Lipsius. Perhaps what the letters omit is more significant than what they contain. Living in Venice, and afterwards in Rome during the sixteenth century, Muretus is silent on the works of art in which those cities were rich. His interests were exclusively literary, and neither painting, nor sculpture, nor music appealed to him. His general course of life may, however, be collected from his works. The summer months, from July to October, were devoted to the Long Vacation, during which Muretus usually accompanied Cardinal d'Este to his retirement at Tivoli, "to live the life of the Phœnicians." In the rest of the year he delivered two courses of lectures, opened in November and in March by addresses, of which several specimens survive. The audience appears to have been somewhat miscellaneous, and the laudable endeavours of the more studious were sadly disturbed by the pushing and whistling of the unruly spirits. On one occasion a facetious youth brought an alarm with him, and amused himself in the middle of the lecture by making it strike. "It would be odd," said Muretus, "if among so many noisy animals there was no bell wether." The hour he occupied twice a week was in the afternoon or evening, and it is possible that the morning lecturers found more peaceful classes. At any rate Muretus, as soon as he had delivered the fixed number of public lectures, was glad to continue the course in his own room, where the teaching assumed a less formal aspect. Of the quality of his instruction we may gain some notion from the opening addresses, and from the more copious of his commentaries. On anything connected with Aristotle, no better judge can be found than Sir William Hamilton; and from his eulogy of Muretus it appears that he put a high value on his Aristotelian labours. A modern student who dips into the commentary on the *Ethics* to seek help on those passages outwardly so easy, and really so difficult, of which the *Ethics* contain not a few, will find little aid from Muretus. For "getting up" the book for an examination, his commentary is useless. Yet the general interest, the light touch, the gossiping illustrations—sometimes resembling an essay of Montaigne, though of course the personal charm of Montaigne is wanting—may well have served to inspire a taste for study. In Mr. Ellis's judgment, the commentary on Catullus is unworthy of the reputation of Muretus. Its great defect appears to us to be its want of fulness. So far as it goes, it evinces fine literary feeling, and its sound judgment avoids the far-fetched ingenuities from which even Mr. Ellis's excellent work is not altogether free. In fact, Muretus was singularly free from pedantry. He ridicules Ciceronianism so far as it was a servile imitation, with much the same arguments as Erasmus had used, and with not a little of his wit; while, so far as it was a striving after consummate literary form, he gave it his approbation and his example.

In 1578 proposals reached Muretus from two different quarters to quit Rome. The "natio Germanorum," studying law at Padua, wrote to him expressing their desire that he should lecture on jurisprudence. The authorities at Padua do not appear to have concurred in the project; and Muretus civilly excused himself, adding that his mode of teaching the civil law did not find favour with the Italians, who preferred the method of Bartolus. As Bartolus was the author of the maxim "*De verbis non curat jurisconsultus*," this remark was not altogether complimentary to the Italian jurists. But it is not uncommon for men to mistake their abilities, and Muretus was always sore that he was not recognized as an authority in jurisprudence. The other invitation was more important. Stephen Bathory, King of Poland, wished to found a college at Oracow, and was anxious to attract to it learned men from Italy. He particularly desired the presence of Sigonius, Fulvius Ursinus, and Muretus, and held out to the last the splendid stipend of 1,500 gold crowns, with the certainty of ecclesiastical preferment. Muretus, who frankly avowed the doctrine that a man's country is where he is best off, was disposed to close with the offer; but his friends dissuaded him, and the Pope made an arrangement by which his salary was raised from 500 to

1,000 crowns. Before this year Muretus had taken holy orders. He had always been sensitive to religious impressions, and could not perform Mass without shedding tears. The approach of age and a severe illness rendered him devout; and towards the close of his life he confined his classical reading to Seneca and the graver writers, only returning to Terence, "his early favourite," to assist the studies of a nephew of promise, who unhappily died young. The biographers record that Muretus never gave more than five hours to repose, and he relates himself that he used to return to his books immediately after dinner till he felt the ill effects of the practice. Nevertheless, he appears to have generally enjoyed good health. In his latter days he became extremely fat, and suffered from gout in the feet, in allusion to which he observed that it was time to leave the house when the foundation was tottering. At last, in 1585, thirteen years after he had pronounced the funeral oration of his patron, Cardinal d'Este, he died in a manner which greatly edified those around him. The beauty of his language and, it must be owned, the verbosity into which his facility too often betrayed him, have affected his reputation, and he is sometimes regarded as a mere stylist. But his attainments, both in Greek and Latin, were of a high rank in an age of learning, and it was not without reason that Scaliger remarked, "Pauci in mundo Mureti; vere regius erat."

ENGINE-DRIVING.

WHENEVER a fatal railway accident happens both the press and society are overwhelmed by a flood of talk mostly of the most ignorant and therefore dogmatic kind. Every talker and every habitual writer of letters to the *Times* makes his noise and spoils his paper. The one "tells you, sir," that, until some scheme of his is made compulsory, accidents will occur daily. The other trusts that the editor may find space for what appears to him (though to no one else) to be a valuable suggestion. Words run riot over the devoted heads of readers and listeners, and the only people able to check their flow and add a few ideas to their rapid mass are too busy to talk or write letters to the editor; for very few people outside of "the railway world" have the slightest accurate knowledge of the subject of railway management, and perhaps to this general popular ignorance may be attributed some of the shortcomings of railway managers who have not public opinion to urge them on to better ways, and who have but few suggestions worthy of a moment's consideration laid before them except by their own class. Mr. Michael Reynolds has done something to enlighten the public mind about one department of railway work in his book called *Engine-Driving Life* (Crosby, Lockwood, and Co.), and incidentally much light is thrown on railway management generally. His other books, *Locomotive Engine-Driving* and *Stationary Engine-Driving*, show that he is a man thoroughly acquainted with his subject, so that we may safely accept his guidance in considering why we are generally safe, but sometimes are killed or maimed, in travelling by train. The first lesson which his writings and general experience combined teach is that all servants and officers employed on railways must have the very rare quality of being always on the look-out for great and serious danger in circumstances which they have passed their lives in encountering without meeting with any accident, and that this faculty is of especial importance amongst engine-drivers. It is a matter of everyday experience to find men smoking in fiery mines and on board of powder-vessels; nay, even without the temptation of tobacco, we find miners in dangerous places removing the gauze from their lamps to get a better light. And we can recall with a renewed feeling of "goose-flesh" Major Majendie's report of a visit to the mining districts, when it was by no means an uncommon occurrence for him to inspect a stone-paved cellar full of powder-casks, the floor of which was gritty with loose powder, in the company of the proprietor or his servant wearing hobnailed boots and carrying a naked light.

Indeed, this blindness to danger produced by living amongst it with impunity seems almost universal. We believe that the best authorities recommend that night watchmen in big buildings should be frequently changed, because when a man has made a certain round every night for years, or even months, and has never found a fire or a thief, he becomes quite blind to either of these should he chance to meet them later on. See how this blindness would tell in the case of a driver of an express train. He has perhaps to make a journey of one hundred miles, and stop perhaps three times, but has to pass thirty, forty, or more signals. If the traffic is well regulated he may travel this road for months together without ever finding one of these signals at "danger"; but were he to get into a condition of danger-blindness and not look out for these signals the result would probably be that there would be a terrible accident. He must go on assuming that every signal is at danger, though never in his experience has it been found to be so. He must also exercise patient and untiring vigilance in inspecting and testing his engine; trust no one but see that all is right for himself. It is really a matter for marvel that men are to be found to do this work, and it becomes even more so when we read what Mr. Reynolds has to tell of the early years of training which every driver has to go through. After an appalling story of hard work, irregular hours, and no little danger, he goes on to say:—"If we were to sum up the

conditions on which a man can command the regulator of an engine, it would read thus—miles to run, 200,000; coals to break up and put into the fire-box in their proper place, 3,000 tons; day work, three years; night work, four years; Sunday work, twenty-five days per year; innumerable hair-breadth escapes, eyes constantly on the roll, the mouth shut and the ears open, an iron constitution, a whistle on the lips, a warm heart, and an intelligent head, with the motto "Wait." As with the engine-driver, so with all the rest of a railway staff—they must always assume that things are wrong until they are proved to be right. Not long ago an accident happened from a signalman not having a proper railway mind. A train was in the station waiting to go out; this signalman tried to lower the starting signal, but found it locked; he looked at his locking-frame and saw that the lever moving the points of a siding was pulled over, thus locking the starting-signal; he tried to put it back, but could not; he now made the fatal error of thinking for himself, instead of acting as part of the machinery; seeing a truck on the siding he jumped to the conclusion that the wheels were foul of the points, and that that was the reason why the point-lever would not move, and without further verification signalled the train on by hand. Now, the real reason why this point-lever would not move was that the signal on a branch line was down, thereby locking the lever of the siding-points and that of the starting-signal. As soon as the main-line train, which had been so recklessly sent on, got well on to the line, a train came along the branch line, and, the signal being down, did not stop, and ran into the other train, doing great damage. In many instances it is possible to test the working of men and machinery in unusual circumstances. At sea fire drill and "man overboard" drill are carried out, and in the military service false alarms of fire or attack are given to exercise the men in vigilance and promptness of action; but on a line of railway this is impossible. Punctuality in the running of the trains is of the first importance; so that when something goes wrong the staff must deal with it as it were by instinct, and how well they do it is obvious from the comparatively few accidents that happen. How danger is often ward off by courage and intelligence the general public seldom learn. Mr. Reynolds tells one stirring story on this point. At a certain station on a single line of rails an express from the North had to stop to let the express from the South pass. A few miles from this station was a steep incline, down which the North express had to travel. A fish train had recently passed over the line, leaving the rails so slippery with oil which had run from the partly putrid fish that the North express could not be controlled by the breaks, and all hope of stopping at the station was lost. The driver therefore sounded his whistle in short jerks to show "danger." The station-master heard him, and, with true railway instinct, saw what must be wrong, jumped upon a horse which was luckily near, and galloped along the line to meet the South express, and succeeded in stopping it in time. From the two opposite examples of the signalman and the station-master, it will be seen that there is another mental difficulty in railway work. As a rule, the most dangerous thing for any person to do who is connected with the running of the traffic is to think for himself; but there are occasions on which such a man must think for himself and quickly, and carry out his plans at once. Of course instances do occur of carelessness and stupidity amongst railway servants—even amongst drivers. Mr. Reynolds gives one very curious example. There were some gates at a level crossing, and a new regulation was made that they were to be kept shut across the line at night, and only opened to let the trains pass. The drivers being directed by a notice posted up in the engine-shed to stop before coming to the gates, and open them themselves, he goes on to tell us that "It was a single line, and only three trains passed through them between eight P.M. and six A.M. The notice was there for all to read, but about a dozen gates were demolished before all the drivers whom it concerned really knew of it."

Before leaving the subject of carelessness we may quote one more story from engine-driving life. It will be remembered that some time ago an accident occurred through a driver, after stopping to put something right in his engine, starting the train in the wrong direction, and that this error was not found out until some time had elapsed. Much astonishment was expressed at the time, not so much at the mistake having been made, as the engine was fitted with a peculiar form of reversing gear to which the driver was not accustomed, but that it should be possible for a train to travel in the wrong direction for some time without attracting the attention of driver, fireman, or guard. But the following story shows that such a thing has happened before:—"The driver of a goods-train brought his engine and train to the foot of a home signal which was against him. He and his fireman had some difficulty in stopping it; so the engine was reversed, and they sat down, and it is thought that they both went to sleep. The driver happened to open his eyes and saw the signal off, and put on steam. The guard in the rear finding that the train was going the wrong way and gaining speed, and fearing some one would run into his van, jumped out and showed a red light, of which no notice was taken until the engine came up to him, when he saw that both men were standing facing the weather-board, and quite unconscious that they were going the wrong way."

Any one who wishes to get a real insight into railway life cannot do better than read *Engine-Driving Life* for himself, and if he once takes it up he will find that the author's enthusiasm and real

love of the engine-driving profession will carry him on till he has read every page. Perhaps the constantly recurring stories of danger and disaster may make him rather nervous on his next railway journey, but the antidote is to be found in the statistics of railway accidents, which, on the whole, go to show that we are perhaps safer when travelling by train in England than at any other moment of our lives.

M. DE LAVELEYE ON THE APPROACHING SCRAMBLE FOR GOLD.

AMONG the various publications which the International Monetary Conference has called forth, perhaps the most remarkable is a letter addressed by M. de Laveleye, the eminent Belgian economist, to the members of the Cobden Club, and more particularly to those of them who are also members of Her Majesty's Government. If this country, M. de Laveleye tells the members of the Cobden Club, persists in its attachment to the single gold standard, it will compel other nations to follow its example, and will thus provoke a struggle, or, as he prefers to express it, a scramble, for gold, which will inevitably enhance the value of that metal; or, in other words, will lead to a fall in prices. But a slow and continuous fall in prices, induced not by the abundance of commodities, but by the scarcity of money, means general distress. The farmer, getting less for his cattle and his corn, will not be able to pay the old rent to his landlord, or the old wages to his workpeople. The manufacturer, also getting less for his wares, will not be able to pay the old rate of wages, or make the old profits. And so with all other classes. Consequently, with prices, wages, salaries, rents, and profits must all come down. This will produce universal discontent, will lead to ill-feeling between classes, will intensify the bitterness of labour disputes, and generally will discourage production, while it will also check the accumulation of wealth, because there will be smaller profits and wages out of which to save. In their distress and discontent the producing classes will attribute their sufferings to foreign competition, and a cry will arise everywhere for protective duties. Thus the final result will be a war of tariffs. From these multitudinous evils, M. de Laveleye assures us, the only safety is to be found in universal bimetalism, which will provide the world with an abundance of metallic money, and will prevent, therefore, the fall in prices of which we have been speaking. The picture is an alarming one, but we venture to think that it need not disturb the equanimity of any amongst us. M. de Laveleye by implication admits what goes far to weaken his conclusion—namely, that the single gold standard gives advantages to those who adopt it over bimetalism. If it does not, why should other nations follow the lead of England, and bring upon themselves all these terrible calamities? If it does, on what ground should we give up admitted advantages to please our envious neighbours? It is to be borne in mind that our existing monetary system dates from the end of the great war against Napoleon, and that for half a century afterwards silver retained its full price. There was no struggle for gold, and none of the evils followed which M. de Laveleye holds up as warnings before us. The depreciation of silver dates only from the demonetization of that metal by Germany after the Franco-German war; and, consequently, if any nation is responsible for the approaching struggle for gold, it is Germany and not England. Why do not M. de Laveleye and those whom he represents address their remonstrances to Germany instead of to England? Or why should he expect us to redress a state of things brought about not by ourselves but by the Germans? If his argument means anything, it means that our monetary system is superior to that of other nations; that they are envious of us, and resolved that we shall not continue to enjoy our present advantages; and that, therefore, we had better give up those advantages for fear of suffering from the acts of those who thus envy us. That is hardly the kind of reasoning which will induce Englishmen to change their monetary policy. And, in truth, on such grounds it would be folly as well as pusillanimity to change. If there is to be a struggle for gold, the rich countries have clearly an immense advantage over the poor. Gold, like other commodities, can always be had by those who have the means of paying for it, and the rich countries have better means of paying for it than others. If, therefore, there is to be a struggle for gold simply because others are envious of our good fortune, we have reasonable ground for thinking we are able to hold our own, and it would be sheer imbecility to be frightened out of our advantages by threats such as M. de Laveleye adduces.

M. de Laveleye attributes to English economists the prevailing opinion that the single gold standard is the only sound one. We think, however, it would be difficult for him to prove the point. No doubt, English example has had immense weight. But we are inclined to think that the preference for gold is due partly to the abundance of gold caused by the great gold discoveries in California and Australia, and partly to the advance of the world in wealth during the present century. In rich countries there is a convenience in having a money composed of a very dear metal—that is to say, in having a money which has considerable purchasing power in a small compass. And as Western Europe and the United States have advanced immensely in wealth during the last three-quarters of a century, it is natural that the preference for gold has generally spread. And as gold itself became more abundant during the past thirty years, that preference was

able to show itself. To these circumstances we would attribute the existing preference for gold much more than to any doctrinaire opinions, though we do not dispute that a certain school of English economists did give currency to the notion. But the best school of English economists have never taught that gold is the only proper standard of value. Different metals suit different countries, and suit even the same country in different stages of development. The best opinion in England at present undoubtedly is that for rich countries gold is the most convenient standard of value, and for poor countries silver, because in rich countries transactions are usually large, and consequently it is convenient to have a standard which has much value in a small compass; whereas in poor countries transactions are small, and coins of small amount consequently are the most convenient. Foreign economists have misconceived this theory, and have understood it as implying an inferiority on the part of the nations which continue the silver standard or the double standard. It seems strange that such a misconception could prevail; yet in this very letter of M. de Laveleye we have a striking instance of the misunderstandings to which English writers are subject when dealing with these questions. It seems that Signor Luzzatti, the negotiator of Italian treaties of commerce, did us the honour on the 7th of February last to refer in the Italian Parliament to an article of ours, which he supposed to convey a threat to the following effect—that “England, France, and Germany will form a coalition to defend their gold, should Italy wish to take it away.” We are quite unable to say to what passage Signor Luzzatti refers in this quotation, but we think we may assert with confidence that we never used the words here quoted. We have said, and on occasion we are prepared to say again, that it is unwise of Italy to resume specie payments in gold; that, if she does so, she will be unable to retain her gold, and instead of promoting, she will really hinder, her own economic development; that, in short, a silver standard is much more suitable to her present circumstances. We learn with surprise that Signor Luzzatti understood the article referred to as a threat. Even if it were our custom to threaten, we should certainly never have thought of a coalition between England, France, and Germany against Italy. The idea is in itself absurd, all the more so as we have often stated our conviction that Germany made a mistake in adopting the single gold standard, and would do wisely in returning to the single silver standard. But a coalition between any countries in this matter is impossible. The leading banks of each country must act for themselves to protect their own metallic reserves.

To return, however, to M. de Laveleye's gloomy anticipation of the consequences of the rejection of bimetalism, we should like to know from that eminent economist how he would give effect to a universal adoption of bimetalism, supposing it to be possible. At the present time silver is legal tender just as much as gold in France; yet silver accumulates in the Bank of France. As soon as it is paid out, it is paid in again by the public, who will not keep it in circulation. So, again, in the United States, silver is coined at the rate of 100,000 a month, yet silver will not circulate, because the public pay it into the Treasury as fast as the Treasury pays it out to its servants and contractors. And in New York the banks have actually entered into a compact with one another not to accept silver. Lastly, here at home the Bank of England is allowed to hold one-fourth of its metallic reserve in silver; but it never has used the privilege, and never is likely to do so. Supposing even that England and Germany at the Conference were to agree to adopt bimetalism, how would the bimetallic advocates ensure that the agreement would have any effect? Here in England it is almost certain that the banks would agree among themselves to receive and pay only gold, and almost all persons who have large sums either to take or give would also enter into similar agreements. Would bimetalists propose, then, that the Governments represented at the Conference should interfere with the freedom of contract so far as to forbid special contracts for payment in gold? and, if not, how would they get over this difficulty? We venture to think that the only effect of joining a bimetallic union by England would be that all persons in trade would have to contract for payment in gold, and if they did this, no more silver would circulate in England after the arrangement than before it. But a more academic agreement that silver was to be full legal tender would not increase the consumption of silver, and it is only by an increase in the consumption of silver that its value can be raised. The bimetallic plan, then, is impossible, whatever way we look at it. And we venture to think M. de Laveleye's forebodings of evil are equally groundless. The United States, France, and her allies of the Latin Union will not bring upon themselves calamities such as M. de Laveleye describes simply because England and Germany will not join them in adopting bimetalism. Their Legislatures and Governments will be guided by the interests of the countries to which they belong, not by mere pique or foolish desire for retaliation. And, certainly, the consequences of a continuous fall of prices would be at least as serious in France and the United States as they would be in England. We saw at the time of the Pittsburgh riots how formidable and how numerous are the dangerous classes in the United States, and to what lengths they are prepared to go when spurred on by distress. In France, again, where parties are so envenomed, and the institutions of the country so new, general distress would lead to results which no Government will lightly face. It may be, of course, that both France and the United States will be compelled to demonetize silver; but

they will not do so because of the action of England. They will take the step because they are compelled by their own circumstances, and any aid that England might be willing to give them would certainly not avail to prevent the change. The truth is that people are too impatient about this depreciation of silver. If they would only wait a little longer, things would right themselves without any disturbance. The price of silver possibly may never again be as high as it was before the Franco-German war; but, once the present disturbances are over, and a condition of equilibrium is established, the price must become steady at some point. And, when once the price does become steady, no matter at what point, the evils which now affect trade will cease. As for the agricultural distress and the long depression in trade, to which M. de Laveleye incidentally refers, their causes are far different from any passing fluctuations in the value of silver, and no tampering with our own monetary system will have much effect upon them. The causes of the long depression in trade we have so often discussed that we need not refer to them now. And, as for the agricultural distress, it is sufficiently accounted for by the long succession of bad seasons with which we have been visited. A few good harvests would do more to set our farmers upon their legs again than any amount of tampering with the currency.

THE THEATRES.

WAS it worth while to go to a great deal of trouble to have the 1603 quarto of *Hamlet* acted by an inferior amateur company in order to see whether Herr Devrient was right or not in supposing it to make a better acting play than the accepted version as now arranged for the stage? "I, there's the point," as the quarto has it, which Mr. Furnivall and his friends proposed to their "fellow Shakspeare-students" at the St. George's Hall last Saturday. It is self-evident that a performance on the stage can neither help nor hinder the settlement of the literary question as to the source of this first edition; and, with all respect to the memory of Herr Devrient, we may doubt whether his opinion was of such importance as to require all this labour to settle its value. The contrivers of the spectacle had further the intention of showing us exactly how the piece looked when first played, without scenery and in the dress of the time. But in this, as in some other details, they did not act with the courage of their opinions. To be consistent, the actors should have worn the dress of to-day, not that of the Elizabethan period, which does not essentially differ from what actors commonly wear in ordinary performances. *Hamlet* should have superintended the play in evening dress and killed Laertes in a fencing jacket. If the play could not be given by daylight, it should at least have been lighted with candles, and not with gas. Still less should the gas have been raised or lowered, or turned on suddenly, to represent the dawn, when Horatio says that "the Sunne, in russet mantle clad, walks ore the dew of yon his mountaine top." The parts of Ofelia and the Queen ought to have been taken by boys, not by women. It was perhaps as a compensation for this that the part of the player Queen, in the quarto Duchess, was taken by a stout youth, as tall within "the altitude of a chopine" as *Hamlet* himself.

Some such drawbacks were perhaps inevitable in a performance of this kind, but it was at least to be expected that a body of persons professing to be honouring Shakspeare's memory, and promoting the study of his works, should have made some effort to fit themselves for their task. The actors of Saturday, however, appear to have confined themselves to learning the mere words of their parts very indifferently well, and rehearsing just enough not to run up against one another. Mr. Furnivall, in his address before the curtain rose, begged the indulgence of the audience for whatever was amiss, for the absence of much that they might reasonably have expected from a regularly-trained company. And the indulgence asked was liberally given. The audience not only tolerated a version of *Hamlet* which botchers and pirates had done their best to reduce to a *caput mortuum*, but, with the exception of an occasional titter, they listened with a gravity of dubious merit while that degraded text was declaimed in a manner beneath criticism. Only once was there a general laugh. That was at *Hamlet's* querulous delivery of the words "O my propheticke soule, my uncle! my uncle!" which ended in an absolute whine. This was followed by a breakdown on the part of the Ghost, who had gone on at first with a perfectly confident sing-song; on recovering, he gabbled through the rest of his part as if conscience-stricken. The remainder of the performance was in keeping with this. The principal actor perfectly solved the problem of giving a *Hamlet* without the Prince of Denmark. There was something almost ingenious in the way in which he contrived to avoid even blundering into an attempt to do what he ought to have done. The other performers probably only appeared less bad because they had less to do. The ladies, Miss Zoe Brand and Miss Helen Maud, did show some power of acting; but even the latter, though much the best of the troupe, contrived to spoil her *Ofelia* by a series of offensively piercing screams. All showed, moreover, the airy confidence of ineptitude.

It is impossible to avoid wondering what can be expected of such a performance as this, except the gratification of much fussy vanity. If the degraded text of the First Quarto must be acted before we can tell whether the *Hamlet* given there be or not a better acting play than any possible arrangement of the accepted version, it must be given by competent actors. Amateur theatricals

are doubtless a good school of manners and culture, as well as a nice amusement for the actors, and are to be tolerated with politeness in private. It is, however, quite another thing for six-and-twenty persons to come forward heralded by much flourishing of trumpets by Mr. Furnivall's "New School of Victorian Shakspeareans," and pretend to settle an artistic question. They must expect to be judged by a standard proportionate to their pretensions, and we have already said what we think is in that case the judgment due on the performance at the St. George's Hall. Nobody supposes that admiration for Spohr would excuse four people who scarcely knew at which end to take hold of a fiddle-bow for inflicting on us a pirated edition or rejected draft of one of his quartets. And this is the exact parallel to the feat performed by Mr. Furnivall and his friends. It is high time that people who set up an idol and dub it Shakspeare should be made to understand that the antics they may be pleased to indulge in before it are not to be taken seriously.

At Sadler's Wells Miss Isabel Bateman has produced a new play by Mr. H. A. Jones. This piece, which is called *His Wife*, is a domestic drama of the traditional kind. There is a villain, Colonel Forester by name, who has seduced a maiden in humble life with the help of a Scotch marriage and under an assumed name. After casting her off and attempting to suppress all evidence of his marriage, Colonel Forester becomes engaged to a Miss Nelly Christy, although he knows that his wife, who goes by the name of Margaret Field, is still alive. Shortly before this second marriage is to come off Margaret Field, who is supporting herself as a needlewoman, turns up at Fairdale Hall, the home of Nelly Christy, and, meeting her husband by accident, claims him. She is, however, robbed of her certificate by the Colonel's faithful, though villainous, servant, and committed to gaol under a false charge. The remaining four acts are taken up with the Colonel's efforts to get her out of the way by various means—murder among them—her sufferings, and her final rescue by her friend and guardian angel, the Rev. Michael Christy. There are a certain number of loose threads in Mr. Jones's piece which want winding up more neatly. His villain is much too honourable a man for his part, and his fifth act ends just a little tanelly; but the drama, on the whole, goes well, and the first four acts end with effective tableaux.

Miss Bateman made a decided success in the part of Margaret Field. Her appeal for help when about to be taken off to prison at the end of the first act, and her acting in the fourth when she is in a madhouse and well nigh mad in fact with grief and suffering, were very effective. Perhaps her best point was the speechless trance of grief with which she learns of her child's death at the end of the third act. She had the satisfaction of being well supported by her company. Miss Kate Pattison played the part of Nelly Christy very gracefully and gave what little pathos her rôle allowed very sympathetically. Mr. Brooke as Colonel Forester made a most cool and satisfactory villain. Two subordinate scoundrels of the male sex, and one female—Mrs. Puckram, the nurse in the madhouse—were adequately filled by Mrs. Carter and Messrs. Edgar and Redwood. We have seldom seen a better get up than that of Mr. Oanninge as Dr. Sprottle, and indeed the whole piece was excellently put on the stage. We believe we can congratulate Miss Bateman on having made a genuine success with *His Wife*.

On Wednesday afternoon a piece by Messrs. Savile Clarke and Du Terreaux was performed at the Gaiety by a company including several members not belonging to the ordinary staff of the theatre. The play, which is a drama of a distinctly sensational character, has the merit of perfect unity of interest and development. It is founded on the adventures of a gentleman who enlists as a soldier, and is then driven to desertion by his sergeant's tyranny. He becomes confidential clerk to a banker, but is reduced to despair by the persecutions of a lawyer, a Mr. Frere, and finally saved by the lawyer's daughter, and the discovery that his father—whom he imagined he had offended beyond forgiveness—has left him his heir. The story, it will be seen, affords abundant opportunity for effective situations, which are well utilized by the authors of the play and by Mr. Charles Kelly, who played the hero, Edward Carrell. Mr. Kelly looked his part in the first act, in which he has to represent a hunted-down deserter very well, but he was best in the third and last. In this he has to play a man who is driven to suicide by sheer despair, and is saved from death only to fall into apparently hopeless difficulty. In this scene Mr. Kelly's acting was both manly and pathetic.

Mr. Robert Brough played the character of a clerk, who has to be too continuously drunk, with considerable comic power. The chief female parts were taken by Miss Florence Terry and Miss Alma Murray. Miss Terry's acting was lively, and reminded us of her performance in the fifth act of *Shylock* at the Lyceum, when she suddenly developed an original capacity. Miss Alma Murray showed some power of expressing passion. A word of praise is due to Mr. S. Charteris's acting in the character of a banker, and J. O. Cowper's rendering of the lawyer, Mr. Frere.

At the Lyceum *The Corsican Brothers* has made way for a revival, which it is not too much to call brilliant, of *The Belle's Stratagem*. The wit, the humour, and the courtliness of Mr. Irving's Doricourt were already known to many playgoers. The fun and grace of Miss Ellen Terry's Letitia Hardy approach as nearly as possible to perfection. The assumption of the hoyden seemed to us to be admirable alike in conception and execution. The other parts are capably filled. Mr. Howe appears for the

first time at this theatre as old Hardy, a part which, oddly enough, seems until quite lately to have been taken by a low comedian. Mr. Terrias will do well to give up wearing his sword in the minuet. The piece is mounted with excellent taste and discretion. So much unnecessary fuss has been made over the so-called mutilation of a clever play, the brightest parts of which are retained in the present version, that we may expect soon to see a performance from Mrs. Cowley's "first quarto" undertaken by Mr. Furnivall and his followers.

At the Folly Mr. Toole has revived a singularly amusing piece of nonsense called *The Wizard of the Wilderness*, in the course of which he performs some real and some affected conjuror's tricks with unflagging spirit and skill.

REVIEWS.

THORNTON'S FOREIGN SECRETARIES.*

MR. THORNTON, in a work which is probably his first, has not attained high literary excellence. It may, indeed, be doubted whether any recent writer has exhibited so habitual an indifference to the rules of grammar. That verbs require nominatives and nominatives verbs appears not to have occurred to the author, who also habitually fails to overcome the difficulties of the cases of pronouns, as *who* and *whom* or *he* and *him*. It is nevertheless odd that Mr. Thornton, in spite of the confusion of his language, not only writes like a gentleman, but always makes himself intelligible. His style may be compared to that of George III. in his letters to Lord North. No one can construe the King's sentences, but it is equally true that no one can misunderstand them. The process of thought is indicated if not expressed by the words, as when Lord Castlereagh is said to have accused an adversary of pulling out a white pocket-handkerchief like a crocodile. With similar indifference to minute accuracy Mr. Thornton relates how "after being herself forced on from the island of Protia, and seeing no other way out of the difficulties, Sir John Duckworth took advantage of the first fair wind to retrace his steps through the Sea of Marmora." The feminine pronoun represents the flagship, and the masculine the Admiral. The only fault of the narrator is that he thinks in the same sentence of both without observing the consequent change of gender. An elaborate eulogy on Lord Liverpool is perhaps less easily analysed:—

His Premiership is perforce brought before the readers of the later pages in this book, and has no place here; but the head of a school in statesmanship, which Prime Minister after Prime Minister has chosen to model itself upon, it proves that the possession of extraordinary information, unflinching patience, natural kindness, facility of expression both of tongue and pen, and, above all, a high rectitude of purpose, may land the possessor on the highest pinnacle of fame to which a British subject can attain.

The Premiership or the head of a school is apparently the proof of some proposition, while Lord Liverpool has been landed on the highest pinnacle of fame. The Minister himself would have been satisfied with a humbler position, but it is true that in popular estimation he has been underrated. He was successively overshadowed by Castlereagh and Canning; but he must have had a remarkable power of conciliation and management, and on more than one occasion he offered a spirited resistance to the King's encroachment. It may be worth while to correct an error in the second volume of the *Life of Wilberforce* which has led to some confusion. Lord Aberdeen, in 1856, is said to have told the Bishop of Oxford, then on a visit at Haddo, that Lord Liverpool was "greatly overrated." He proceeds to say, "True, his qualities were rather moral than intellectual, yet in difficult times he kept for years a Government together, and brought the country gloriously through a terrible war; but he was strictly fair, just, careful, painstaking, and honest." It is evident that Lord Aberdeen said that Lord Liverpool was underrated, and that he proceeded to correct a mistaken judgment. Either the reporter of the conversation or the printer accidentally reversed his meaning. In a later part of the same volume, Lord Aberdeen repeats the same judgment without using any ambiguous phrase.

Notwithstanding his enthusiastic praise of the Minister whom Lord Beaconsfield unjustly stigmatized as "the arch Mediocrity," Mr. Thornton is the very reverse of an exclusive partisan. The twelve or thirteen Foreign Ministers who are the subjects of his work excite in succession his gratitude and admiration. In several instances he applies to them indiscriminately the old-fashioned title of "our hero," with an impartiality worthy of a Public Orator presenting a batch of eminent persons to the University for an honorary degree. Grenville and Fox, Canning and Castlereagh, Aberdeen and Palmerston, successively provoke in him a mild outburst of the *furor biographicus*, which is generally directed to one object at a time. Even the Mulgraves, the Harrowbys, and the Hawkesburys, whose tenure of the Foreign Office has been almost forgotten, are recalled to memory by the sympathizing historian; and, notwithstanding the smile which his zealous sympathy may provoke, Mr. Thornton is on the whole in the right. All the statesmen whom he com-

memorates were anxious to discharge their duties as they understood them; and even Fox when he was in office preferred the welfare of the country to the interests of a faction. A few months earlier he had grudged the admission that the advantages of the battle of Trafalgar compensated for the relief which the victory afforded to Pitt. Even for George IV., though he was not a Foreign Minister, Mr. Thornton has a good word. "Whatever may have been the faults and shortcomings of George IV., he never, as a king, neglected public duty." It is perfectly true that "the poisoned pen of faction," and, it may be added, of cant, "has not been idle before and since the death of this unfortunate prince." It is a relief to find one benevolent apologist for George IV., or, indeed, two, for it seems that the King's "old friend Alderman Martin took up the cudgels in that interesting *History of Brighthelmston* which bears his name." Mr. Thornton adds that "the volume should anyhow be read by all lovers of history, and of Brighton in particular." The classification of Brighton as a subdivision of the art or science of history is nearly as original as the vindication of George IV.'s character. On a very different person, more wholly unconnected with the Foreign Office, Mr. Thornton goes out of his way to bestow a somewhat surprising eulogy. "On the whole, the greatest Whig of the century, Thomas Babington Macaulay, rivalled Pitt and Fox themselves in forensic exposition, &c." The cheerful and indiscriminate admiration of every eminent person is pleasanter than the common propensity to carp and criticize, and perhaps it is equally instructive.

By the accident of remaining in office till 1801, Lord Grenville acquires a claim to be included in Mr. Thornton's catalogue. He judiciously quotes Lord Malmesbury's statement that no other Foreign Minister of his time was equally independent of his chief and his colleagues; yet the policy of his administration was attributed both at home and abroad almost exclusively to the Prime Minister. French historians of all shades of opinion, from Louis Blanc to Lanfrey, believe that the steady opposition of England to the French Republic was inspired and maintained by Pitt. Grenville owed his introduction into public life, and his appointment as Foreign Secretary and leader of the House of Lords, to the friendship and confidence of his famous kinsman; but after the French war broke out he was far more earnest in his prosecution of the struggle than Pitt himself. At the time of the abortive Ghent Conference Pitt wrote to Lord Malmesbury that if it came to a choice between peace and war "either I or Grenville will go out, and it will not be I." In explaining his later financial arrangements, Pitt more than once confessed to the House of Commons that the long duration of the war had been to him a surprise and disappointment. If he could have foreseen the long continuance of the necessary efforts, he would have raised a larger proportion of the necessary funds by taxation, with a corresponding diminution in the public debt. After his resignation Pitt approved the Peace of Amiens, notwithstanding its unsatisfactory conditions, while Lord Grenville censured the tameness of Addington's Government, and the extent of the concessions which it made. At the same time Fox declared that he found it difficult not to rejoice in every triumph achieved by France and in every mortification incurred by England. It is difficult to reconcile with his former policy Lord Grenville's feeble resistance to France during his term of office as Prime Minister, and his long-continued opposition to the Peninsular War. As long as Fox lived, it was perhaps unavoidable that he should exclusively control foreign policy; but Lord Grenville owed no allegiance to Lord Howick. The tame abandonment of Continental independence by the Ministry nicknamed "All the Talents" was suitably rewarded by the Treaty of Tilsit, and by the French conquest of Spain. It was by no merit of theirs that both transactions were in their ulterior consequences injurious or ruinous to Napoleon. A liberal subsidy to Alexander before the battles of Eylau and Friedland would have been both politic and economical. There is no question connected with the history of the great war on which more general misapprehension prevails than the pecuniary relations of England to the Allies in successive coalitions. The war cost, in round numbers, a thousand millions, while the subsidies amounted to fifty millions, or one-twentieth part of the whole. All the great Continental battles, any of which might with better generalship have overthrown Napoleon, were rendered possible by English subsidies. The greatest achievement of Pitt's career was the organization in his last term of office of the great coalition of Austria and Russia, which was treacherously and foolishly repudiated by Prussia. When Pitt succeeded Addington, Napoleon was encamped at Boulogne, and the Continent was at peace. Before two years had passed the fear of invasion of England had finally disappeared, and Napoleon was compelled to risk his Empire in the struggle which was decided at Austerlitz. The Tory Governments which, after a short interval, succeeded, had the courage not only to follow the traditions of their master, but to prosecute, though with insufficient vigour, the war in the Peninsula which sapped the revenues of France. The criticisms of the Treaty of Vienna by Lord Grey and his reduced body of adherents were in some respects plausible, and even just: but Lord Liverpool, Lord Castlereagh, and the Duke of Wellington had no means of dictating to their powerful allies the conditions of the European settlement. The English Ministers were undoubtedly inspired by a well-founded dread of revolution and of revived French ambition; but the Duke of Wellington successfully resisted a further curtailment of French territory on the ground that, with

* *Foreign Secretaries of the Nineteenth Century to 1834.* By Percy M. Thornton. 2 vols. London: Allen & Co. 1881.

out seriously impairing the power of France, it would create a standing grievance and a plausible pretext for war. The Peace of Vienna, with all its defects, was fully justified by its results, inasmuch as for nearly fifty years it secured the peace of Europe. For sixty-six years it has not been followed by war between England and France, a period which is double the longest intervals of peace which had occurred for many centuries. It is not surprising that Metternich, who was more responsible than Castlereagh for the conduct of the negotiations, should to the end of his life have regarded his own main achievement with unqualified complacency.

The change of tone and temper rather than of policy which was introduced into the conduct of affairs by Canning after the death of Lord Londonderry is gradually losing by lapse of time the historical interest which it may once have possessed. By an excusable miscalculation of political proportions Canning employed a grandiloquence, which was afterwards corrected by experience, in boasting of his interference with Peninsular squabbles and of his recognition of the Spanish Republics in South America. The new world which he said that he had called into existence to balance the old weighs nothing in the political scale. The Spanish colonies were decaying before the separation; and the process was not interrupted by the secession. The result is probably due to the practical elimination of Spanish blood, and to the increase of the indigenous race. The survival of the unfittest in moral and political aptitude unfortunately sometimes coincides with the converse results of physical adaptation to soil and climate. In Mr. Canning's time historical precedents were seldom checked by ethnological considerations. The results of the North American revolt had produced a hasty confidence in the progress of emancipated colonies. It is, after all, possible that the separation of the South American colonies from the mother-country may have been innocuous, or in some instances beneficial. The Spanish Viceroyalties administered a system as corrupt and oppressive as that of the Presidents who have succeeded them; and the removal of the former restrictions on trade was a perceptible advantage.

It would perhaps have been convenient to close the list of Foreign Secretaries at the death of Canning or with the formation of the Duke of Wellington's Administration. Lord Aberdeen and Lord Palmerston represented two conflicting systems of policy in a later generation, or, rather, they pursued the same objects by opposite methods. The animosity which was, as the *Life of Wilberforce* shows, felt by the former colleagues of Sir Robert Peel against Lord Palmerston was not exclusively caused by his foreign policy; but they seem to have attributed to Palmerston the war to which, in spite of their feelings and their deepest convictions, they had been themselves parties. Their weakness and their insincerity are curiously illustrated in Sir James Graham's conversation with Bishop Wilberforce. The truth is that Palmerston's apparently pugnacious policy coincided during his long tenure of office with the maintenance of peace. For the Crimean war no single statesman was so responsible as Lord Aberdeen. Forty years before he had incurred the ridicule of his diplomatic colleagues by contending that it was dishonourable to offer Napoleon at Châtillon terms of peace less advantageous than those which he had rejected while the allied armies were still beyond the Rhine. It is unfortunately true that diplomacy, which is the function of Foreign Secretaries, is almost identical with the more or less direct exhibition of force. It is desirable not to cause unnecessary irritation; but the friendship of other States habitually depends on implied threats and promises. The position of England at the end of the great war was the fulcrum on which successive Ministers rested their influence over European politics. Lord Palmerston believed in the national strength when it had, in comparison with the resources of other Powers, already begun to decline. Lord Beaconsfield will probably have been the last English statesman who will have sought to keep alive the old tradition. It will perhaps have been finally swept away by the abandonment of the new Indian frontier, and by the capitulation in the Transvaal. The vast armaments of the Continent have destroyed the ancient balance of power. The forty years which intervened between the fall of Napoleon and the Crimean war will perhaps be regarded hereafter as a golden age.

VIRGINIBUS PUERISQUE.*

A RECENT writer on Latin literature has observed that the Romans in the age of Plautus had not arrived at the intellectual condition in which general moralizing on life is found agreeable. We are inclined to think that nations as well as individuals interest themselves in this form of literature only at a given period. Boys and unformed races do not care for it; mature men and women have more or less outgrown the taste. It is when a man awakens to the perplexities of the world, between eighteen and twenty-five, that he speculates on life as a whole. He is puzzled with big problems—he suffers, perhaps, from *Weltschmerz*. Afterwards, when he has real private cares and duties of his own, he ceases to vex himself about life, and devotes himself to living. It appears to us that English literature has reached this practical stage. We have scarcely any essayists who write about things at large—love, life, death, marriage, idleness, childhood, and so forth.

* *Virginibus Puerisque*; and other Papers. By Robert Louis Stevenson. London: C. Kegan Paul & Co. 1881.

A. K. H. B. has been left by the death of Mr. Friessell almost alone in the field. We do not "even" Mr. Louis Stevenson, as his countrymen say, to A. K. H. B., or to the late Mr. Friessell. He at least is not a Montaigne *épiciër*. He does not repeat the commonplaces, or appeal to the sympathies of middle-aged tradesmen and people in business. But his topics are those of all the old essayists—the wide, almost limitless topics which are neglected by a generation that has little care for general reflection, but is anxious to make special points in particular branches of history, literature, and science. Mr. Stevenson's interest in human life is absolutely untouched by any care as to how that life came to be organized and evolved. He takes it as he finds it.

A brief dedicatory letter explains very clearly the nature of Mr. Stevenson's aim. He had meant, he says, to be the *advocatus juventutis*, "to state temperately the beliefs of youth as opposed to the contentions of age," and to produce a volume that might be called "Life at Twenty-five." But Mr. Stevenson says he found it impossible to remain fixed at twenty-five, and he declares that "the shadows of the prison-house" lie on part of his essays. We scarcely agree with him in this estimate. The essays are those of an exceedingly clever man, who knows uncommonly little about the "prison-house" and its shadows. Mr. Stevenson complains that he cannot be a Socialist any longer. Except for that important loss to the revolutionary party, we fail to see any sign that his essays are either those of an old or a world-weary man. He need not try to fancy that, like the father of Aucassin in the story, *il a sons tens trepassé*. Only a man still young at heart will so resolutely disdain Sidney Smith's advice to "take short views." Only a young man will be as sad as night, or as Mr. Stevenson now and then. Older people take shorter views. They don't look on marriage, for example, as a stage so very near death and dissolution. A certain laird, who was "unco wastefu' in wives," as the parish sexton said, was married five times. Even at his fifth venture, we are sure that he did not say, with Mr. Stevenson, "Times are changed with him who marries; there are no more by-paths where you may innocently linger; but the road lies long and straight and dusty to the grave." Mr. Stevenson declares, as the last result of his philosophic contemplations, that "it is good to have been young in youth, and, as years go on, to grow older." This might be disputed. It is good not to dress like a younger man, nor to cultivate his fine swagger. It is good to feel that "we may all be mistaken, even the youngest of us." But surely a great deal of youth may be preserved, especially by people who find their young tastes cleave to them still. Many elders are young at Lord's, or on the moors, or the links; and Mr. Bright is much more than a boy again beside a salmon river.

It is a duty to remonstrate with Mr. Stevenson on his melancholy assumption of middle age. As far as his published works show, he is still, to use an American idiom, "just as young as he can live." His very style is young, and not without a certain quipomeness. It is his own style, but here and there in the tissue one discerns a thread of Thackeray, of Carlyle even, of Emerson, of the great English essayists of the eighteenth century, or of old and quaint English. It is a very personal style, and, if we are to hint a fault and hesitate dislike, now and then somewhat too exclamatory, and too apt to address the reader with a familiarity which all readers do not equally admire. For this reason, and still more because, as we have said, the world is too old to care for general talk about life, Mr. Stevenson's essays are not every one's book. People are certain to like it very much indeed, or to be indifferent to it and even repelled by it. In Mr. Stevenson's charming books of sentimental and humorous travel, the *Inland Voyage* and the *Travels with a Donkey*, the landscape was always with us. If we tired of the talk of our companion (which, for our part, we never did), the hills and swift rivers, and forests of chestnut-trees were there to admire. In these essays of course we have Mr. Stevenson without his environment of landscape. How much or how little any reader will appreciate his discourse is a matter of individual taste and habit of mind. For our own part, we have always heard him gladly, and generally differed from him exceedingly. "These notes, if they amuse the reader at all," says the author, "will probably amuse him more when he differs than when he agrees with them; at least they will do no harm, for nobody will take my advice." Yes, in spite of Mr. Stevenson's deliberate counsel, ladies will still marry men who do not smoke and brides will be won even by total abstainers.

But let us examine Mr. Stevenson's theory of life, as he entertained it in his salad days. *Ecrases l'infâme*, he cried; and *l'infâme*, in Mr. Stevenson's eyes, was "the infamous Budgett"—that is, Mr. Samuel Budgett, the Successful Merchant. Mr. Stevenson is irreconcilable to a world of commerce and "business habits," a life in which men go to offices. Every man in Edinburgh (where we learn that Mr. Stevenson has resided, if not "lived") does go to an office of one sort or another. Of these persons Mr. Stevenson speaks with a bitterness almost akin to the spirit of persecution. He draws what he obviously thinks a terrible picture of a busy person compelled to be idle:—

It is no good speaking to such folk: they cannot be idle, their nature is not generous enough; and they pass those hours in a sort of coma, which are not dedicated to furious mowing in the gold-mill. When they do not require to go to the office, when they are not hungry and have no mind to drink, the whole breathing world is a blank to them. If they have to wait an hour or so for a train, they fall into a stupid trance with their eyes open. To see them; you would suppose there was nothing to look at and no one to speak with; you would imagine they

were paralyzed or alienated; and yet very possibly they are hard workers in their own way, and have good eyesight for a flaw in a deed or a turn of the market. They have been to school and college, but all the time they had their eye on the medal; they have gone about in the world and mixed with clever people, but all the time they were thinking of their own affairs. As if a man's soul were not too small to begin with, they have dwarfed and narrowed theirs by a life of all work and no play; until here they are at forty, with a listless attention, a mind vacant of all material of amusement, and not one thought to rub against another, while they wait for the train. Before he was breeched, he might have clambered on the boxes; when he was twenty, he would have stared at the girls; but now the pipe is smoked out, the snuff-box empty, and my gentleman sits bolt upright upon a bench, with lamentable eyes. This does not appeal to me as being Success in Life.

This is a painful sketch of failure, but are industrious people really so forlorn? We have never met with any such, except in Mr. Henry James's little tale, the *Pension Beaurepas*, where there is a New Yorker as miserable, out of his counting-house, as the deplorable creature of Mr. Stevenson's imagination. A regular man of business would hurry off and "do" the town, or he would instruct himself with the conversation of the traffic manager, or he would read the city articles in all the papers, or he would write letters in the waiting-room. We differ as much from Mr. Stevenson about the value of life. Indeed, he is not consistent,—not that that charge will distress him much,—with himself. This is the conclusion of his whole philosophy—"to travel hopefully is a better thing than to arrive, and the true success is to labour." That is to say, life is worth living for living's sake, for the sake of consciousness of effort and of experience. Yet Mr. Stevenson, in a charming essay called "*Æs Triplex*," denies that we can love life, defined as a "permanent possibility of sensation." The language is that of the schools since Mr. Mill's date; but the meaning is Mr. Stevenson's own meaning. We are attached to life, because it is always calling on us for exertion, and presenting to us spectacles of interest; in fact, because it offers a permanent possibility of sensation, action, and emotion. All philosophers, including Aristotle and Mr. Stevenson, are pretty well agreed about that matter. The difference is only in language. It is the *ἐνέργεια* we all care for; but then Mr. Stevenson comes in with his difference. He wants, or seems to want, this consciousness of the various world, and of our active and passive share in it, to be enjoyed, not in the "perfect life," but in the life Bohemian. We are obliged to use that detestable word. His youthful conception of existence is that of a healthy and reflective nomad who walks in the ways of his heart and the sight of his eyes. Thus he writes:—

To reckon dangers too cautiously, to hearken too intently to the threat that runs through all the winning music of the world, to hold back the hand from the rose because of the thorn, and from life because of death: this it is to be afraid of Pan. Highly respectable citizens who flee life's pleasures and responsibilities and keep, with upright hat, upon the midway of custom, avoiding the right hand and the left, the ecstasies and the agonies, how surprised they would be if they could hear their attitude mythologically expressed, and knew themselves as tooth-chattering ones, who flee from Nature because they fear the hand of Nature's God! Shrilly sound Pan's pipes; and behold the banker instantly concealed in the bank parlour! For to distrust one's impulses is to be recreant to Pan.

The old toast wished "success to our inclinations, provided they are virtuous." Mr. Stevenson has no such cautious distrust of his impulses. He, at least, is not "Pan's dastard." Mr. Max Müller has discovered that Pan was really "a purifying or sweeping wind," which does not absolutely account for the god's goat-feet, nor for his singular, and even scandalous, reliance on the excellence of his own impulses. But Mr. Stevenson does not appear to take Mr. Müller's view of Pan. Perhaps years, which take away the philosophic mind, will also lead him to doubt the wisdom of being a creature of impulse. Meanwhile, this confidence in impulse, this nomadic habit, this familiarity with solitude and with nature, make a great part of the singularity and of the charm of his work. If he were not so much a disciple of Thoreau, he would be much more like a disciple of Henry Murger, for which it would be a great error to mistake him.

We have said so much of Mr. Stevenson's philosophy of life that we have no room for his theory of love and marriage. He is almost inclined to doubt whether Scott was ever in love. One or two short passages of autobiography in Lockhart, scraps written early and late in life, seem to us to make the affirmative answer a matter of certainty. Scott's heart was less "prettily mended again" than he himself declared, and the crack rings audibly enough in his poetry and prose.

Perhaps the best of Mr. Stevenson's essays are the excellent and most spirited paper on "English Admirals" and the singular vision of approaching death, styled "Ordered South." From this we quote an example of Mr. Stevenson's touch, when he deals with landscape, the landscape of Southern France:—

Or it may be something even slighter: as when the opulence of the sunshine, which somehow gets lost and fails to produce its effect on the large scale, is suddenly revealed to him by the chance isolation—as he changes the position of his sunshade—of a yard or two of roadway with its stones and weeds. And then, there is no end to the infinite variety of the olive-yards themselves. Even the colour is indeterminate and continually shifting: now you would say it was green, now grey, now blue; now a tree stands above tree, like "cloud on cloud," massed into filmy indistinctness; and now, at the wind's will, the whole sea of foliage is shaken and broken up with little momentary silverings and shadows. But every one sees the world in his own way. To some the glad moment may have arrived on other provocations; and their recollection may be most vivid of the stately gait of women carrying burthens on their heads; of tropical effects, with caves and naked rock and sunlight; of the relief of cypresses; of the troubled, busy-looking groups of sea-pines, that seem always as if they were being wielded and swept together by

a whirlwind; of the air coming, laden with virginal perfumes, over the myrtles and the scented underwood; of the empurpled hills standing up, solemn and sharp, out of the green-gold air of the east at evening.

The very great interest of a paper on "Raeburn's Portraits" may, perhaps, be most felt by Scotchmen, but should be apparent and attractive to all readers. The Essay on Childhood is full of sympathy and observation. Indeed, there is no paper in this little collection but is sure of its readers, none that can fail to give a novel and exciting pleasure when the right man or woman opens the book in the right mood and the right hour. But we admit that this harmony of moment and mood are necessary, and that Mr. Stevenson's book is not one for every student and every condition of feeling.

FROM EXILE.*

THE jaded voluptuary in novel-reading may possibly cavil at the construction of Mr. Payn's latest work of fiction on the ground that, to his experienced eye the secret which runs through the book is revealed, or at least suggested, for reasons in which his confidence is never subsequently shaken, as early as the forty-first page of the first of three volumes. But perhaps neither Mr. Payn nor any other prolific novel-writer can be expected to write for old hands at novel-reading only, and he would be a very capricious old hand who was not amply compensated for any feeling of satiety suggested by his early penetration into the plot by the merits which one has learnt always to expect in Mr. Payn's work. The leading idea of *From Exile* is founded on the many cases of personation, in the latest of which a kind of languid interest was the other day revived, and of one of the most daring and successful of which Vidocq was the hero. This celebrated thief, and subsequently thief-taker, has recorded in his memoirs how one of his most audacious and brilliant escapes from prison was due, so far as the duration of its success went, to his having picked up enough of a fellow-prisoner's private history to enable him, with the aid of the histrionic power he possessed, to pass himself off as the returned son of an old couple upon whom he had never set eyes before, but who welcomed him "with effusion." The task undertaken by, we must not say the hero, but the principal figure of Mr. Payn's *From Exile*, is less difficult than Vidocq's, and its undertaker's talents are by no means equal to those of the inventor of the *police de sûreté*; but, while Mr. Payn's story is a good deal longer than Vidocq's, it is only fair to say that, even if the secret is guessed at the point above referred to, the interest of the book can never be said to flag. There are many difficulties in the way of the imposture being detected by those personages of the story to whose interest it chiefly is that it should be discovered; and, in the management of the overrunning of these, as well as in several more or less subordinate episodes, Mr. Payn's technical skill in exciting and suspending his readers' interest finds plenty of play. Nor can any one complain that there is any want of incident in the volumes; indeed, the catastrophe which opens the way to everybody, except the villain, being happy ever afterwards is as sensational as can be desired by the greediest devourer of novels of the school indicated by the epithet just used.

The novel opens with a freshly enough chosen place and incident:—"On a rock, rising sheer from the purple depths of the mid-Pacific, stands a man beneath a flagstaff from which lazily droops the British Union Jack." Silence and solitude are around him, and, as he stands with his eyes fixed on the horizon, he is

as motionless as a statue, and as dumb. A sculptor would have been glad of such a model, though perchance he would have attired him differently. He is in an English sailor's dress, so far as he can be said to be dressed at all—that is, he has blue trousers, fastened by a belt around his waist; but the cloth is in rags, and the leather is worn thin, and has lost all trace of its original colour. He has a snow-white shirt, not made of linen, however, but of some soft and pulpy substance—the bark of the paper mulberry tree, macerated in a running stream, and beaten out, like gold leaf, by a wooden mallet. His headgear is a large leaf of many colours, which not only shields his face from the tropical sun, but trails behind his back like a dustman's cap; and yet his face, naturally swarthy, has become tanned almost to copper-colour by the sun-rays of a clime where it is seldom cooler (save in storm times) than England's June, though rarely warmer than its July.

Further than this, the out-of-door life and enforced temperance of ten years spent on what seems a desert island, have tended to foster the natural, if somewhat fierce, handsomeness of this young fellow, who "has no expectations, and yet it is plain he has placed himself on that coign of vantage beneath the British flag, with some idea of seeing or being seen by some one. . . . But for the brightness of his eyes, and a certain passionate look in them, which puzzles you, you would say his expression was indifferent." His expression suddenly changes, however, as a speck of white on the horizon catches his eye, and, with a face instinct with hope and fear, he catches up a telescope and makes out that what he has seen is a ship bearing the British flag. Then he hesitates for a time between conflicting emotions, and then flinging the telescope down, he rushes down hill to a wooden cabin, where, bursting open a sea-chest, he drags two little packets from the bottom of it. Having done this, he climbs down the sheer face of a cliff with startling rapidity, and leaping into a small boat, paddles out into the open sea already foaming with the coming storm. After some two hours' struggle, he comes so near the

From Exile. By James Payn, Author of "By Proxy." London: Chatto & Windus. 1881.

ship that those on board see him, and as "he deftly glides up a snow mountain into a dark green valley, under her quarter, a rope is thrown to him by which he swings himself on board; at the same time spurning with his feet the little bark of safety that is no longer necessary to him, and which proceeds bottom upwards, like a largish turtle, on its road to ruin." In answer to the questions of the second lieutenant, the new comer announces that his name is Frank Wylder, that he comes "from yonder rock, called Craglands Isle, on which you will go to pieces on the reef within half an hour, if you keep on your present course." Presently the first lieutenant, in conversation with the second, says, on hearing of the new arrival's name, "Wylder, Wylder! and shipwrecked! That is really very curious. I knew a Wylder in Cumberland who disappeared from his family about ten years ago, and was supposed to have been lost at sea; that is, I know his father."

"Was he a black man?" inquired Lennox, innocently.

"What nonsense you talk. He was a Cumberland squire, of considerable property, though, to be sure, he was swarthy."

"I should think his wife must have been swarthy, too, if this is their offspring. He is not like a nigger, however, for his hair hangs down his back like a girl's, except that there is little doubt of its being his own."

"I am certainly curious to see him," mused Grant.

"I recall the story now quite distinctly. He quarrelled with his father, Ernest Wylder, of Craglands."

"Craglands," interrupted the other, "why that is the name of his island. He called it Craglands Isle."

"Then that cannot be a mere coincidence," ejaculated the first lieutenant, "but Frank Wylder it must be."

"Now you mention it, he did tell me his name was Frank."

"Well, 'pon my life, it's most extraordinary," observed Grant, reflectively, "to think that we should have been drawn out of our course, apparently all for nothing, and, sighting that solitary rock, have been the means of rescuing this unhappy man from what would probably have been a lifelong exile. If there be such a thing as a special Providence, this surely looks like it."

"It won't look like it, however, to the younger brother, who is calculating on the success in the meantime," remarked Lennox.

At about this point Wylder himself appears, and in the course of the conversation which follows makes what will strike the practical novel-reader as a somewhat curious slip. Having given some account of his shipwreck on Craglands Isle—so called, as Grant had guessed, after his old home—he finishes by saying that he has lived alone on it for ten years. To this Grant replies that he could have sworn that after Wylder came on board he saw through his glass the flag lowered that was flying above the rock; "indeed, it seemed to me as though there was signalling with it." Wylder replies, smiling, that there can hardly have been any attempt at signalling, although the flag may have been lowered. "When I said I was alone, I should have explained that what I meant was, that I had no European companion. I found some natives on the island, who, upon the whole, have treated me kindly. They have no love for strangers, however, and were certainly far from wishing to attract your attention."

In the next and third chapter we are introduced to a skating party taking place on Cragland Mere, and make the acquaintance of two very attractive girls—Grace Wylder, cousin of the missing Frank, and Helen Turton, her friend. Somewhat *à propos de bottles*, we learn some significant facts in the course of their conversation—that a certain Richard Rideout used to be the constant sporting companion of the missing Frank; that the said Rideout was concerned in a murderous poaching affray, for which he would have had to stand his trial but for the supposed fact of his being drowned in the Mere; and that this supposition was never verified by the finding of his body. In subsequent chapters we learn that the present Squire of Craglands, Frank's uncle, has "had losses"; and we are also told of the circumstances of Frank's disappearance, and how, amongst other things, the beautiful and noble Margaret Neil, to whom he had been betrothed, found out, too late, that the tales of his vulgar vices were untrue; and that it was not he, but Rideout, who, not without reason, bore a certain resemblance to him, that had been seen in suspicious situations. Then comes the news of Frank's discovery on the desert island, and shortly afterwards appears Frank himself. The first people who meet him are Grace Wylder and Helen Turton, who are, like the reader, struck by various oddities of speech and manners in the young man, but are ready to set them down to his long residence on his desert island. Here, of course, with the reception of Frank by the Squire, with the words, "Let him come in, Jennie. Get him something to eat and drink, and —," added he to himself as he led the way indoors, "I wish to Heaven it would poison him," begins that interest which, as we have before said, is kept up without flagging to the end of the book. We do not intend to indicate the nature of the surprises which are in store even for the reader who has, or thinks he has, foreseen what will be the end of the complication; and we may end as we began our notice of an exciting book by calling attention to the undiminished liveliness of Mr. Payn's style.

WHAT IS A CAT?

THIS is the question which Mr. Mivart propounds at the outset of his treatise, and the answer occupies 557 closely-printed pages. As Bishop Berkeley began to write on the virtues of *Tar-Water*, and ended with a proof of the existence of the Trinity,

The Cat: an Introduction to the Study of Backboned Animals, especially Mammals. By St. George Mivart. London: Murray.

so Mr. Mivart rises from minute investigations of the organic structure of the cat's body to disquisitions on its psychology, and then, after passing in review all cats, known and unknown—a vast procession headed by our own familiar "Thomas," and terminated by strange creatures from geological strata, whose forms can only be guessed at from fragments, a tooth here, and a claw there—he dons the garb of a polemical divine, and vindicates for Divine agency a distinct share in the origin of every species. We remember in the days of our youth certain tortuous problems in arithmetic, wherein a countryman, on being asked how many eggs he had in his basket, replied in an evasive fashion that this needed the application of several rules to unravel it. How we used to wish that his answer had been more straightforward! Some such feeling came over us, we own, as we read Mr. Mivart's ponderous volume; and the more we think it over, the more convinced we are that it would have been much more effective had it been shorter. The half is often much better than the whole, if authors would only think so. Mr. Mivart's main intention is excellent, as set forth in his preface. He has proposed to himself to select some living organism, the description of which should serve as "an introduction to the natural history of the whole group of back-boned animals" (the italics are his, not ours), the subject being treated with the same minuteness of detail that has hitherto been bestowed upon the human species alone. For this purpose he had to choose between one of the lowest and simplest or one of the highest and most complex of living creatures. There is much to be said in favour of each of these courses. As the greater includes the less, it is easier to proceed in a descending scale; and as the nomenclature of the different parts of all "back-boned animals," to adopt Mr. Mivart's phraseology, has been fixed by that of man so immutably that there seems to be no hope of changing it, there is a certain convenience in mastering it once for all, before the student proceeds to study birds, reptiles, or fishes. On the other hand, the said nomenclature is, unfortunately, not a philosophical one. It was first adopted when the anatomy of any other creature was not thought worthy of investigation. It is based on resemblances, real or fancied; on relations that are found in man only; or on the discoveries of particular observers. In consequence, when applied to other organisms, it is often unmeaning or misleading; and some of the ablest of German anatomists have found it necessary to begin their researches with a lower and more generalized form, and to propose an entirely new nomenclature for the different parts. We rather regret that Mr. Mivart did not select the first of the two courses mentioned above, and work out the anatomy and life-history of some lower form with the same ability and industry (though let us hope not with the same prolixity) that he has brought to bear upon "the harmless necessary cat." Such a treatise, if well done, might become the starting-point of a new system of biology, which would in time, as other monographs were written, include all the higher forms, with the exception of Man. As the human body is studied for practical purposes, and not for the extension of science, no inconvenience would be caused by leaving the description of it as it is at present, with a set of designations devised without reference to the existence of any other mammal. Mr. Mivart, however, has determined otherwise; and, having come to this decision, it is obvious that no animal would suit his purpose so well as the cat, being so well known, so readily accessible, and "the most highly-developed type of carnivorous mammalian life." It is not the first time that it has been used for this purpose. Nearly forty years ago M. Straus-Durckheim published an elaborate and exhaustive monograph on its osteology and myology, with excellent plates, as "type des mammifères en général, et des carnivores en particulier"; and in his introduction he traverses much of the ground covered by Mr. Mivart. Strange to say, we can find no reference to this book, either in his text or in his notes, though it is quite inconceivable that he should not have read it.

Mr. Mivart begins with a short introduction, in which, firstly, he discusses very briefly the origin of our domestic cat. We wish that this part of the book could have been longer. It is a very interesting subject, and would well bear going into with minuteness of detail. His conclusion—the reasons for which he does not give—is that our cat came to us from the East, and "is probably a descendant of the old domestic cat of Egypt." Dismissing in a sentence the theory of Professor Rolleston that the domestic cat of the Greeks was the white-breasted marten, he proceeds to enumerate the existing breeds of cats, amongst which it appears that there is one in South America that does not "miaul," or, as Mr. Mivart politely puts it, "give forth cries like those by which our own cats are wont to give expression to their emotional sensibility." We devoutly echo his wish that this delightful novelty could be introduced into this country. In the next place, we come to the order to be observed in the bulk of the treatise. Here Mr. Mivart pauses, to lay down the position that, in order to be able to give a correct answer to the question "What is a cat?" we must "know both the main facts as to the animal considered in itself absolutely, and the various leading relations in which it stands to all other creatures"; or, as he explains a little further on, its anatomical structure, which includes, according to him, not merely the form, relations, and functions of the organs, but the activity of the animal as a whole, which he terms "the physiology of the individual or Psychology" (the italics are his), its *Hæcology*, and its *Phylogeny*; and further still, we are invited to compare the cat with all other living creatures. This is a formidable programme, and the strange words in which

it is set forth trail their novel length along and rattle their air syllables in a fashion that may well appal the stoutest advocate of transcendental anatomy. On closer investigation it appears that the cat's "Hexicology" means the study of the cat's "relations to time, space, physical forces, other organisms, and to surrounding conditions generally"; and the cat's "Phylogeny," the tracing out its probable pedigree. Seriously, however, we think that a very great deal of this is superfluous. These questions are of the highest importance and interest; but such a return to first principles is surely out of place in the present treatise; as, indeed, is much of the preliminary part of the anatomical investigations, where the chemical constituents of bone, and the histology of such common substances as cartilage, connective tissue, and the like, are described and figured. In Moore's *Lalla Rookh* the learned Fadladeen proposed to begin his criticism on "The Veiled Prophet" by taking a review of all the stories that had ever been written. We all laugh at such a proposal; but really the attempt here made amounts to much the same thing. Moreover, if every time that an anatomical monograph is written it is to include all those subjects which nowadays can be found treated of exhaustively in plenty of accessible books, we hardly like to think of the number or the weight of the volumes that will encumber our shelves. Original research is a very desirable thing; but surely the iteration of truths that have been stated over and over again falls into the category of vain repetition. The eight chapters (iii.-x.), however, which contain the description of the cat's skeleton, muscles, alimentary system, circulation, respiration, organs of secretion, nervous system and organs of sense, and development, are very good; and if anybody will take the trouble to get a cat's skeleton, and then a cat's body, and work through the descriptions carefully for himself, we can assure him that he will find that he has acquired much sound knowledge on the normal structure of mammalian osteology and visceral anatomy.

The chapters whose contents we have thus briefly mentioned terminate at p. 364, and then the portion of the work begins to which the rest is merely introductory, and for the sake of which we suspect that it was written. The author's previous works have taught us his peculiar views on the theory of evolution, and in this monograph he finds a fresh opportunity of stating and enforcing them. The chapters we have now to notice are headed "The Psychology of the Cat"; "Different Kinds of Cats"; "The Cat's Place in Nature"; "The Cat's Hexicology"; and "The Pedigree and Origin of the Cat." We give their titles in the order in which they occur, but it will be most convenient to notice them in a rather different sequence. Under "Different Kinds of Cats" we have a list of the species of living cats—fifty in number—which the author is disposed to accept, accompanied by a short description of each, and illustrated by numerous figures of the animals and their skulls. This enumeration is succeeded by a brief account of extinct cats and catlike animals, which, we are sorry to say, disappoints us greatly. We have already stated our opinion that information of this sort should be sought for in some of the ordinary text-books; but, putting that objection aside for a moment, we venture to find fault with the execution of this section. It is so much compressed that beginners will be simply bewildered; while advanced students, though grateful for the numerous references contained in the notes, will feel the want of fuller descriptions and more numerous illustrations. This chapter is succeeded by that headed "The Cat's Place in Nature." In this the author contrasts the cat with, firstly, "creatures that are devoid of life," by which unusual expression the "mass of non-living, inorganic things" is meant; and next passes on to invertebrates, the review of which he concludes as follows: "Inasmuch, then, as the cat is a back-boned animal, it may be said to differ from the whole of the invertebrata in the following points;" and so on through fishes, reptiles, birds, and the lower orders of mammals, each section being dismissed with the formula of which one example has been cited above. By this means the cat is carried upwards stage by stage, as though the author were ascending a long staircase, and shouting in triumph as each landing was gained, till, at the top of the last flight, he proclaims it to be "a member of the typical genus of the typical family of carnivorous placental mammals—mammals being the suck-giving, tied-brained class of back-boned animals"! No doubt Mr. Mivart has written this portentous sentence from a wish to avoid the obscurity of long words derived from a dead language; but we submit that "tied-brained" is quite as difficult of comprehension as the usual "zygcephalous." We have no space to do more than allude to the chapter on "Hexicology," which is mainly devoted to geographical distribution, and is very interesting; or to that portion of the last chapter wherein a genealogical tree of the cat from its most remote ancestors is constructed. We have a few words, however, to say on the cat's psychology, and on the concluding sections of the last chapter, in which the theory of evolution is treated. The term "psychology," as we explained above, is held by our author to embrace not merely the cat-mind, but "all the vital activities, of whatsoever kind," of which the cat or any other animal is capable. Mr. Mivart begins by citing several interesting illustrations of the intelligence, the affection, and the instinct of cats. To these we can add a curious instance of charity on the part of a cat which came under our own observation. A much-petted domestic cat had a saucer of cream regularly set for her in the verandah of a country house. One day, when there was more than she wanted for herself, she went out into the garden and brought in a half-starved

kitten, a stranger to the house, to share her meal; and while it lapped the cream she sat by and protected it from the dogs, who viewed its presence with much jealousy. We once saw a dog do nearly the same thing. Mr. Mivart denies that animals have language to express their thoughts. Perhaps not, as we understand the word; but they certainly have some means of communicating their ideas to each other. We think that Mr. Mivart errs in comparing cats with man at his best. Degraded forms of the human species could be found, we imagine, whose habits were not more elevated and far less cleanly than those of cats; while their power of communicating their ideas, such as they are, to each other would be quite as unintelligible to ourselves. Mr. Mivart next sets forth his own meaning of the word "psyche," or "soul," by which we are to understand "the living principle of individuation," or, as he says in another place, "a power, or polar force, which is immanent in each living body, or, rather, which is that body living." In this there is nothing very different from the conception of life which other authors have arrived at. Mr. Mivart, however, has a special object in laying down the doctrine so carefully. In one of the anatomical chapters he had traced out the stages of the cat's development, and had pointed out the remarkable appearances presented by the embryo at different periods. He next argues that this "internal force" effects each of these successive changes; and, further, that it is but reasonable to suppose that the same force, when set in motion by "a Great First Cause," brings about that greater change which differs from the former in degree only—namely, the evolution of one species out of another, which "mode of origin may, as opposed to the hypothesis of natural selection, be fitly termed psychogenesis." Natural selection is stigmatized by Mr. Mivart as "a crude and inadequate conception." We confess ourselves, however, wholly unable to see how his "internal force," controlled by divine agency, is a worthier conception of supernatural interference than the existence and operation of natural laws which, on his own theory of the universe, must be part of the same scheme of creation.

GULSHAN-I RAZ.*

THIS *Mystic Rose Garden* is a work on the doctrines of the Persian Sufis, written in verse by Sad ud din Mahmud of Shabistari, near Tabriz. It was composed in A.H. 717 (A.D. 1317) in answer to fifteen questions on the doctrines of the Sufis, or Mahomedan Mystics, propounded by Amir Syad Hosaini, a celebrated Sufi doctor of Herat. These questions were sent to Khurāsān in a poetic epistle, and Sad ud din Mahmud was chosen by his brother Sufis to answer them. Little is known of the writer, but the fact of his having been called upon to respond by the professors of Sufi doctrines is a convincing proof of his authority and learning. The questions having been put in verse, it was desired that the answers should also be in rhyme. The author says—

I began
An answer to that epistle in concise terms.
All know that this person in his whole life
Has never attempted to write poetry;
And though his talents be competent thereto,
He has rarely had to compose verse.

His confidence in his powers was not unfounded, and his work is accordingly written in rhyme. Mr. Whinfield has translated it into blank verse, a medium well adapted to the subject-matter.

Sufeyism is widely spread throughout the East, and although it has its foundation in the Kuran and the Hadis, or traditions of Mahomed, it has attracted to it men of various religions, who have felt the want of something more than a formal religion of rites and ceremonies, and have sighed for a nearer approach to the Divinity. Kabir, the celebrated Hindu reformer, was a Sufi, and his writings are full of Sufi ideas and teachings. All European writers who have considered the subject are agreed as to its near relation to the European mysticism, and especially to the speculations of the Neoplatonists. Mr. Whinfield says in his very interesting introduction:—

Many of the Catholic definitions of "Mystical theology" would do for descriptions of Sufeyism. The ruling ideas in both systems are very similar, if not absolutely identical. Thus, for instance, we find the Sufis talking of "love to God," of "union with God," of "death to self and life eternal in God," of "the indwelling in man of the Spirit," of "the nullity of works and ceremonies," of "grace and spiritual illumination," and of "the Logos." Both systems may be characterized as religions of the heart as opposed to formalism and ritualism. Both exalt the "inner light" at the expense of the outward ordinance and voice of the Church. Both exhibit the same craving for visionary raptures and supernatural exaltations, and have been productive of similar excesses and extravagances. Both systems have a tendency to Pantheism, and both use similar sensuous figures to express their visions and raptures.

The essence of Sufeyism, says Sir John Malcolm, is poetry. The chief poets of Persia, the great Maulana Jamāl ud din, Shaikh Sadi, Hafiz, Jami, Omar Khayyam, were all Sufis; and indeed all Persian poetry of any note is imbued more or less with Sufeyism. The imaginative temperament of the poet lifted him above the trammels of creeds and the forms of religion, and as Sufis they

* *Gulshan-i Rāz: the Mystic Rose Garden of Sad ud din Mahmud Shabistari.* The Persian Text, with an English Translation and Notes, chiefly from the Commentary of Mahomed bin Yahya Lahiji. By E. H. Whinfield, M.A., Barrister-at-Law, late of H.M. Bengal Civil Service. London: Trübner & Co.

became what they call themselves, "men of heart," "men looking behind the veil," "interior men"; and in their raptures they sought "the Truth," the Infinite in the world of imagination. Having no special terms in which to embody their poetic creations, they adopted the language of the world, and made the tavern and the wine cup, the ruby lip, the graceful curl, and such like, the images under which they expressed their mystic ideas and beliefs. The exhilaration of wine, the pleasures of love and of convivial intercourse, are made to figure the raptures of the soul and the joys of a spiritual existence. These terms are full of mystic meaning to the initiated, and are the means of uplifting his soul to high imaginings and raptures, in which he looks behind the veil, and arrives at some conception of what he deems "the Truth." Many of their productions are clothed in imagery so material that, to the ordinary reader they are mere rhapsodies of the lover and the reveller, and are read and admired as vivid and truthful pictures of the pleasures and troubles of this mortal life. This outward expression of the ideas of Hafiz, who constantly sings, or appears to sing, the joys of love and wine, led Sir W. Jones to call him the Anacreon of Persia. But under all the worldly imagery of the Sufi there lies a deep and hidden meaning, intelligible to men of kindred feelings, but unperceivable by the man of the world. The author of the *Gulshan* gives a long answer to the thirteenth question which inquires

What means the mystic by those expressions of his?
What does he indicate by "eye" and "lip"?
What seeks he by "cheek," "curl," "down," and "mole"?
He, to wit, who is in "stations" and "states"?

and he answers:—

Whatever is seen in this visible world
Is as a reflection from the sun of that world.
The world is as a curl, down, mole, and brow,
For everything in its own place is beautiful.
The epiphany is now in beauty, now in majesty;
Cheek and curl are the similitudes of those verities.
The attributes of the Truth are mercy and vengeance,
Cheek and curls of fair ones are types of these two.
When these words are heard by the sensual ear
At first they denote objects of sense.
The spiritual world is infinite,
How can finite words attain to it?
How can the mysteries beheld in ecstatic vision
Be interpreted by spoken words?
When mystics treat of these mysteries
They interpret them by types.

He goes on to explain that "wine, torch, and beauty" are epiphanies of "Verity." "To be a haunter of taverns is to be freed from self," for "self-regard is paganism, even if it be in righteousness." Other of the author's explanations are very long and diffuse, and he seems to have been overpowered by the variety and extent of his own ideas. Thus he says "The story of the curl of the Beloved is very long. Ask not of me the story of that knotted curl," but he describes some of its similitudes and effects. All the explanations of this interpreter of Sufeyism require careful study and comparison before anything intelligible can be arrived at; but for this very reason, perhaps, they are more appreciated by the mystic, who is proud of possessing a knowledge, or the shadow of a knowledge, unknown to the world at large. Jalâl ud din, as translated by an eloquent writer on Persian literature, is far more direct and intelligible. He says, "They (the Sufis) profess eager desire, but with no carnal affection, and circulate the cup, but no material goblet; since all things are spiritual in their sect, all is mystery within mystery." In words like these the great Sufi poets have embodied their high conceptions. The Sufi looks through the veil of words in which the inner meaning of the poet is shrouded, and the uninitiated, who comprehends no more or little more than the material sense of the words, is delighted with the beauty of the language and the elegance of the verse. Hence it is that the odes of the great poets, and of Hafiz in particular, are sung and recited throughout the East by men of all degrees; by many for the mystic meanings they embody, but by more, perhaps, for their sensuous imagery and burning language which is intelligible to all.

Mr. Whinfield in his introduction has analysed the contents of the various sections of the poem, and for this work his readers will be grateful. It will greatly help those who desire to read and understand the poem itself, and some readers no doubt will be sufficiently satisfied with its explanations to abstain from any attempt to push further and master the mysteries and difficulties of the Sufi poet. We quote as an illustration the analysis of Section VIII., which is one of the shortest:—

The creature state being non-existent, man cannot of himself move, draw near to, or unite with [the Truth]. Union is only a phrase for annihilating the phenomenal element in man—sweeping on the dust of contingent being. The genesis of the creature world is an eternal process. It is a drop of water raised from sea of Being in mist, poured down in rain, converted into plants, animals, man, and finally recalled into the bosom of the sea. Phenomena are constantly annihilated in the universal Noumenon, and this annihilation is union.

The poem contains many illustrations of the writer's argument. Among them is the following story, the subject of which is a favourite one with Oriental poets, and is more than usually explicit:—

I have heard that in the month Nysan
The pearl oysters rise to the surface of the sea of Umân.
From the lowest depths of the sea they come up,
And rest on the surface with opened mouths.
The mist is lifted up from the sea,
And descends in rain at the command of the Truth.

There fall some drops into each shell's mouth,
And each mouth is shut as by a hundred bonds.
Then each shell descends into the depths with full heart,
And each drop of rain becomes a pearl.
The diver goes down to the depths of the sea,
And thence brings up the glittering pearls.
The shore is your body, the sea is Being,
The mist Grace, the rain knowledge of the Names,
The diver of this mighty sea is human reason,
Who holds a hundred pearls wrapped in his cloth.
The heart is to knowledge as a vessel,
The shells of knowledge of the heart are voice and letters,
The soul is darting as a lightning flash,
It bears these letters to the hearing ear.
Then break open the shell, take out the royal pearl,
Cast away the husk, carry off the sweet kernel.

Sufeyism, as we have said, is based on some mystical verses of the Kuran; but its development was furthered by the knowledge which the Mahomedans acquired of Western philosophy and mysticism. The chief Sufis have been Persians, and there are constant allusions to and quotations from the Holy Book and the Traditions. So the whole has a Mussulman colouring. But it has been declared by competent Mahomedan authority that "the Sufi has no religion on account of his non-observance of the rites, forms, or ceremonies of any religion." Notwithstanding this, the pure Sufi is held in high esteem by all intelligent Mahomedans. So far indeed is their reverence carried, that all their distinguished and learned men are deemed to have been more or less advanced Sufis. Nor is this surprising. Minds that were able to put a spiritual interpretation upon the hard and dry utterances of the Kuran, to lift them above the material facts of mundane existence to the unknown world and the life to come, were Sufis, perhaps even without acknowledging it. In fine, every elevated and enthusiastic teacher of the higher and more ennobling truths, though Mahomedan in his creed, was Sufi in his inmost soul, and let his imagination wander into the mysteries of life and future existence. The great license of thought which was the life of Sufeyism might be considered entirely adverse to sectarianism; but it is not so. It is the tendency of all religions, whether formal or spiritual, to split up into divisions; and there are three sects of Sufis, which cannot be described in a few words. Suffice it to say that the members of the first sect are gentle, gracious, and forgiving; those of the second ardent and enthusiastic. Those classified in the third division are endowed more or less with the virtues of both. Lastly, there is a dark side to Sufeyism. Some of its professors, in casting off the outward forms and ceremonies of the law, have held themselves also released from its moral rules and precepts, and have no scruple about indulging in sensual enjoyments or of writing of them in the most outspoken language. They interpret the mystic terms of their profession in the double sense; and, if they indulge in the grossest forms of sensualism and bodily indulgence, their minds soar at intervals in search of the Infinite, and are purified and exalted by their spiritual ecstasies.

The text of the verse is well printed in Talik type, in imitation of the MS., and the translation, so far as the exoteric meaning is concerned, is close and accurate. Mr. Whinfield may be trusted for having accurately rendered the esoteric terms and phrases. He has been assisted by a Commentary, which he commends, and has been most laborious and conscientious in his own work. We cannot predict anything like popularity for his book, but it is a contribution to philosophy for which a restricted few will be thankful.

HAUGHTON'S PHYSICAL GEOGRAPHY.*

IN a course of six lectures delivered in Dublin a few years ago for the benefit of the Governess Institution of Ireland, and now printed with additional notes and appendices, Professor Haughton has condensed into a popular form the results of the most recent research on several of the most important problems of physical geography. Professing to give rather a series of sketches than a formal exposition of this complex and engaging department of knowledge, his mastery of the subject has enabled him to compress into so narrow a compass the material which would in ordinary hands suffice to fill a treatise of no slight dimensions, whilst his mode of exposition has an amount of clearness which must agreeably lighten the task of the learner. If the facts and figures with which his pages are crowded to fullness present themselves with an abruptness as regards arrangement, as well as with a dryness of style, not always compatible with easy or pleasurable reading, they have that definiteness of aim and precision of statement which forms one of the highest points of merit in all lessons, making them easy for the memory to retain, and supplying both appetite and food for the speculative faculty. Mathematical formulæ are brought in where called for to illustrate the larger operations of nature, or to connect particular natural phenomena with the fundamental and all-regulating principles of the code of physical law, but not to an extent to tax unduly the powers or the attainments of the class of persons for whom these lessons are intended, themselves engaged in the duties of educating others. For the purposes of instruction these lectures will be found admirably fitted, seeming as they do with subjects capable of boundless expansion, and supplying

* *Six Lectures on Physical Geography.* By the Rev. Samuel Haughton, F.R.S., M.D. Dubl., D.C.L. Oxon, Fellow of Trinity College, and Professor of Geology in the University of Dublin. Dublin: Hodges, Foster, & Figgis. London: Longmans & Co. 1880.

under each head of inquiry such elementary facts as the teacher whose wants are contemplated would most gladly have ready to hand.

In a rapid sketch of the past history and future prospects of the globe on which we live, Professor Houghton sums up the stops which have been made good in terrestrial physics within the memory of men hardly beyond middle age. Forty years ago such a lecture, he remarks, would have been looked upon as the wild dream of a romance writer. Yet there may now be built up upon the solid basis of fact and demonstration, in a way to carry the confidence and conviction of the learner, an edifice of knowledge for the surety of which there are guarantees at every stage, and to the extension of which no limits can be set. Casting aside as futile the old-world speculations of metaphysicians concerning the possibility or the conceivability of the world being created out of nothing, modern science has set itself to work out the history of our globe as made up of materials existing as far back as the mind is capable of reaching, the actual origin or beginning of matter lying wholly beyond our powers of apprehension. It is to the great cosmical hypothesis of Laplace that we owe the first scientific conception and development of the idea of the evolution of the planetary system from a primary nebulous mass, later research having greatly extended our knowledge of the composition both of the sun and the subordinate members of the scheme, the main outlines of which advance the lecturer draws out and confirms by proofs. He is so far careful of one suspicion traditionally attaching to the daring scheme of the French physicist—"qui n'avait pas besoin de cette hypothèse"—as to premise at the outset that "the evolution of planets with their living freight from combinations of pre-existing materials by no means involves the denial of a creating and presiding mind; such an evolution as we find in nature—orderly, symmetrical, and regular—constituting, on the contrary, the highest proof we have from natural religion of the existence and power of God, the author of nature."

Since the days of Laplace our great gains have been in the way of the chemical composition of meteoric bodies and of the sun and stars. Among the constituents of the numerous extraterrestrial bodies that have been accumulated no new element has been discovered; but of the sixty-five elementary substances recognized by chemists, twenty-seven are understood to have been found in meteoric stones. Still closer is the identity established by spectrum analysis between the constituents of the sun and stars, comets and nebulae, and our earth. When first thrown off from the sun, as these indications go to prove, the earth with its satellite formed a binary system, rotating on its axis in precisely the same time as it now takes to revolve round the sun, there being then but one day and night in the year. As the earth's mass contracted by cooling, this motion gradually accelerated until the year became what it is now. Under the retarding action of the tides due to the moon's attraction, it is to be expected that in course of time the original condition will recur, as has come to pass in respect to the moon's motion round the earth, she having when first condensed into a separate body spun much more rapidly round our globe. A further identity in fate is thought to await our planet in the withdrawal into the interior by means of cracks or faults of all the water which now envelops it, not less than a third of the oceanic mass being held by some to have been already absorbed; the difference of ocean levels, which has often puzzled geologists, being thus accounted for. Shocked as the astronomer of a few years ago would have been at the accuracy of his great clock in the heavens being called in question, there is increasing urgency in the proofs presented by advanced reasoners like our author of the fact that the sidereal day is lengthening; foreboding the time when, the water and air having been absorbed, our planet will be reduced to the condition in which we now see the moon—a lifeless, dry, burnt-out cinder. That this process of deterioration has gone on so much more rapidly in the case of the moon is shown in the next lecture to be due in part to the lesser size of our satellite. A careful estimate is further given of the agencies which originally determined the structure and distribution of the earth's mass, and have since modified and altered the relations of land and sea. The lecture on continents and oceans, volcanoes and mountains, traces the tremendous operations of wrinkling and folding of the surface crust as the globe contracted under cooling, resulting in vast and lofty mountain chains and deep-sea valleys. The continents may be regarded as flat-topped table-lands, raised slightly above the sea-level, often with precipitous cliffs all round, or a fringe of volcanoes, corresponding, in all probability, to ancient lines of faults, of different geological ages. Were the earth stripped of its oceans, there would be seen the true amount of wrinkling produced by these geological causes. If we call the zero plane the original surface of the globe before it became wrinkled at all, we can easily see that it must lie far below the present sea-level—7,000 feet, as Professor Houghton's formula brings it out. The mountain chains are the axes of elevation along which the continents were raised, differing widely from each other in geological age. The most modern is the great east and west chain which produced the continent of Europasia, from the Pyrenees to the Himalayas, chiefly of nummulitic limestone. Our writer's charts show clearly the main axes upon which these elevations have taken place, with the comparative depths of the ocean basins or depressions. The great volcanic chains, both active and extinct, are also mapped out. Of these the Australian island chain forms perhaps the most conspicuous, starting from Tierra del Fuego, through the Andes, Central America, the Rocky Mountains, Aleutian Islands, Kamtschatka,

Japan, the Philippines, Sunda, New Guinea, and the eastern Australian islands, terminating in New Zealand; twenty-four thousand miles in length, or equal to the circumference of the whole globe. The total number of active volcanoes on the border of the Pacific basin is 175, considerably more than half the number shown by the entire earth (225). Of isolated volcanoes in this range and in the whole globe, the grandest are the group of the Sandwich Islands; Mauna Loa rising to a height of 18,750 feet, and its lava streams flowing to an extent of thirty miles from the crater. Kilauea, only 3,870 feet high, shows a molten bubbling lava sea 14,000 feet long by 5,000 feet in breadth. Were the Pacific Ocean dried up the aspect would be that of a gigantic lunar crater, occupying three-quarters of the whole surface of the globe, its generally level bed broken here and there by isolated central volcanic peaks, like those of Owyhee and Otaheite, rising abruptly to a height of 30,000 feet above the crater floor, and girt on all sides by a margin of lofty unbroken conical precipices, nowhere less than 12,000 feet, and on the eastern rim exceeding 20,000 feet, in height. What, compared with this, is the widest crater of the moon, Maro Crisium, less than 300 miles in diameter, with but six central volcanic cones of no great comparative height?

We are surprised to find our author discern in facts and observations such as these a refutation of the uniformity in nature upheld by Lyell and his followers. That nature has been uniform at all times, past, present, and to come, is, he declares, a shallow creed refuted by many known facts in astronomy and geology; and "if there be one science which teaches its falsehood more clearly than another, it is the science of geology, from which we learn that the present is unlike the past, and will probably be still more unlike the future." That the aspect of our globe, as also that of the sun, moon, and stars, has been at successive periods of time wondrously diverse, not even the most rigid uniformitarian would deny. But that these changes, stupendous as they have been, have been brought about by the uniform operations of the same laws we now see acting in nature, we should have thought our author the last man to call in question. Different as are at present the physical conditions of the earth and moon, what he describes as their life-history has been by his own showing continuous, the self-same laws operating through all; though, for reasons strictly referable to the same code of physical causes, the course of one body has run towards its end more rapidly than that of the other. To what but the uniform persistence of the same course of nature does he owe the confidence with which he lays down the like doom of extinction for our globe, with its manifold living forms? The main causes of terrestrial change have been, as he distinctly lays down, heat and moisture; and vast as have been, and still must be, the results of secular cooling, and of the partial absorption of the earth's watery envelope, these operations have obeyed, and must ever obey, the uniform laws of heat and fluid motion. How and when are we to conceive a new code breaking in upon the uniformity of nature? The doctrine of catastrophes and intrusive creations had, we thought, long ago given place to the reign of unbroken law and continuous evolution. Our author, in all but this singular passage, testifies to faith in the harmony of nature; as when, by reference to the known law of cooling, he proceeds to calculate the proportional length of the periods into which geological time divides itself, even without our knowing the coefficient that should by right fix the rate of cooling for the sun-heated earth suspended in cold space. To Azoi time, during which the earth's temperature sank from 212° (the boiling point of water) to 122° (the point of congelation of albumen and formation of living tissues), he assigns 33 per cent. of the whole term. Palaeozoic time, down to 68°, the age of the simpler forms of plant life and lower vertebrates, occupies 41 per cent. Neozoic time, from 68° to the existing mean of 48°, includes the development of living forms from the Triassic age to the present day, or 26 per cent. A very close approach to the same figures results from a tabular survey of the thicknesses of the stratified rocks, in preparing which our author has been assisted by Professor Edward Hull. Of course the climates through this stupendous roll of ages, in the sense of local or periodical averages of temperature, have been anything but uniform. This, however, is a simple matter of degree in point of sun heat and moisture, the wide differences that we see being due to the same causes uniform in action through prolonged ranges of time.

The problem of atmospheric and ocean circulation, as main elements in the determination of climate, is treated with a mastery of its fundamental conditions which we cannot remember to have seen in any English treatise on the subject. Within the scope of this short lecture we get in a highly compressed form the essence of the scientific matter which fills a large space in works like that of Elisée Reclus. Starting from the primary cause of all atmospheric motion in solar heat, and consequent watery evaporation, he shows how the key to the general problem of meteorology is to be sought in the study of barometrical pressures all over the globe, combined with the measures of rainfall. Circulation, both in air and water, begins with the partial vacuum caused by solar heat round the equator, to fill up which cold and heavy currents of air and water are stirred from either pole. In illustrating the movement of a mass of either fluid from pole to equator, our author has not escaped the common fallacy of employing the figure of a cannon ball fired in this direction, and, owing to the rotation of the mark, falling behind the point aimed at. The actual force exerted in nature is not one of propulsion, but, on the contrary, is a drawing force. A particle or mass of air thus set in motion, instead of being deflected to the rear or west of a meridian line

drawn from the starting point (the pole) to an imaginary point on the equator, will be swept by the whirling motion of the earth towards the opposite or eastern side of such a hypothetical meridian; the resultant of the two motions being seen in the gyratory law of storms, as well as in that generally preponderant set from west to east which observation has widely established. Over Europe at least, where the amplest means of registration are enjoyed, it seems made out that, for not much less than 200 days out of the 365, the wind sets more or less from west to east. The primary currents thus set in motion are affected by the unequal distribution of land and water, a wide difference being manifest in the two hemispheres; the result being, on the whole, the five great systems of winds indicated by our author's scheme—the north-east trades, 6° N. to 35° N.; the south-east trades, 6° N. to 28° S.; the south-west anti-trades, 35° N. to 65° N.; the north-west anti-trades, 28° S. to 70° S.; and the north-east Arctic winds, 65° N. to 80° N. We do not find that he notices a further cause of difference between the northern and southern hemispheres, due to the ellipticity of the earth's orbit: the northern half of the globe, under the present position of the equinoxes, having its winter in perihelion, neither winter nor summer being in consequence liable to the same extremes as those of the Southern Hemisphere. The charts and tables of local temperatures, rainfall, ocean currents, and similar details of meteorology show immense care in their compilation, and their value is much enhanced for the more advanced class of readers by mathematical notes, such as that upon the total amount of solar heat at any spot upon the earth, and its loss by radiation into space. We regret having no space for detailed notice of the lectures upon the lake and river systems of the Old and New Worlds, or that upon the geographical distribution of animals and plants—all full of valuable information, treated in the true spirit of science, and embodied in language of unvarying clearness and force.

BURIED ALIVE.*

IN the year 1849 a young Russian literary man was condemned to be hanged. His crime consisted in his having taken part in what was styled "The Petrashevsky affair"—that is to say, he had been a member of one of the secret societies to which the Government so strongly objected. His sentence was commuted, but he was sent to Siberia, condemned to a long period of hard labour in a prison, to be followed by service in the ranks of the army. On foot and in chains he made the dreary journey to his far-off prison-house, and therein endured the miseries of penal servitude during four years. This same man has recently been carried to his grave in the Alexander Nevsky cemetery at St. Petersburg, escorted by deputations from the Universities and other learned institutions, and followed by crowds of mourners who represented all that is most cultured in Russia. And the Emperor who now rules that land has conferred a pension of 2,000 roubles on the widow and children of the man whom his predecessor kept during four years in chains in Siberia.

When Fedor Dostoevsky, the convict in question, was allowed to return home in 1860, he renewed his long interrupted literary pursuits. He had always warmly sympathized with all who were needy and oppressed, and his years of prison life had only strengthened the influences which drew him towards them. As a successful novelist, he attained a position which enabled him to plead with effect the cause of the "Poor People" and the "Humiliated and Outraged," after whom he named two of his works, and to give expression to the generous indignation which stirs the hearts of each youthful generation in Russia, and which has of late years developed into so dangerous a fire of revolutionary wrath. Having been forced to associate for years with criminals, he studied with special interest the paths along which men advance towards crime, the motives which urge them to become law-breakers, the reasonings by which those among them who are given to speculation still the voice of conscience. The most remarkable passages in the best of his novels, *Crime and Punishment*, are those in which he traces the first manifestations of the moral obliquity of vision which induces a Russian specimen of the Eugene Aram family to regard as a quite excusable, if not praiseworthy, action, the murder of a disreputable old woman. But by ordinary readers that elaborate psychological romance will be found less interesting than the simpler sketches of prison life, founded upon his own experiences, which he published a few years after his return from Siberia, under the title of *Notes from the Dead-House*, and of which an English translation is now before us. They naturally created a great sensation in Russia at the time when they first appeared, and they are still highly esteemed there as faithful records of what convict life used to be before the reforms were introduced which have considerably modified its conditions; for, although it is impossible to say how much of the work is fact and how much fiction, still the general idea which it conveys is likely to be tolerably correct.

No one who visits a Russian prison can fail to be struck by the docility of the prisoners, their readiness to yield to what appears to be a very insufficient amount of force. A traveller who recently visited Siberia has put upon record his not unnatural surprise at finding that twenty soldiers sufficed to control a body of eight

hundred prisoners, of whom nearly a third, he was told, were probably murderers. To this docility on the part of the convicts, as well as to a considerable amount of negligence on the part of their warders, the pages of *Buried Alive* bear frequent testimony. One so-called mutiny, indeed, is described, but it is represented as little more than a remonstrance against bad food. Now and then an officer of a brutal nature figures on the scene and behaves cruelly. But the greater part of the guardians are credited with a good-natured carelessness which enabled their charges, or at least those among them who had money, to obtain many more enjoyments than are usually to be obtained in a gaol. Tea and tobacco were easily to be purchased in the prison described in *Buried Alive*, and brandy, although a forbidden luxury, was introduced in considerable quantities. Sometimes a feast went on for days within the walls, including "much eating, drinking, and music." We are even told that "some of the revellers who are rich will occasionally elude the vigilance of the officers, and bribe their escort to accompany them to some haunt of vice in the suburbs of the town instead of going to work. Here a feast is prepared, ladies are invited, and the convict eats, drinks, and shirks to his heart's content." After a winter's day spent in doing little or nothing, the prisoners would pass several hours of the night either in working on their own account or in gambling. No sooner had the guardians left the dormitory than it was suddenly lighted up, each of its thirty inmates producing his own candle. Some of them earned considerable sums of money by their nightly handiwork, but it was difficult for them to retain their earnings, which were generally exchanged for strong liquors or lost at cards. For gambling, though strictly prohibited, was an ordinary occurrence, and sometimes "card parties would last all night, and only come to an end when the doors were unlocked in the early morning." At Christmas-time no small amount of license was accorded by the authorities. The most characteristic scenes in the book are those in which the author brings before the eyes of his readers the stage fitted up within the prison walls, and the dramatic performances in which criminals acted with skill and zest, and were rapturously applauded by a criminal audience.

Various types of convict life are represented by the prisoners whom the author describes at length. One is the innocent-looking young soldier who had never misbehaved himself except upon an occasion when, out of sheer wretchedness, he drove his bayonet into his commanding officer. Another is a young Circassian "with a wonderfully attractive, clever face, which was the image of his beautiful soul," and whose sole offence was that he had obeyed his brothers when they ordered him to go forth on an expedition which ended in the murder of an Armenian merchant. A third, the most interesting of the group, is an old Raskolnik, or Dissenter, who is described as being the most "thoroughly benevolent" old man whom the author had ever met. He had assisted in the burning of an orthodox church in his native village; but this was his solitary crime, and in Siberia he lived a faultless life, and was much respected by the other convicts, who made him their banker. He was "as pleasant, cheerful, and open-hearted a man as ever lived on the face of this earth." But he had his own secret sorrows. One night his fellow-prisoner woke up and heard a sound of subdued weeping. "The old Dissenter was sitting on the stove reading his prayers out of a manuscript book and weeping bitterly"; and between his sobs could be distinguished words of bitter sorrow, such as "Lord, do not forsake me! Lord, give me more strength! Oh, my darling children, my dearest children, shall I ever see you again?" These three criminals all belong to the class of convicts on whom may be conferred without impropriety the title which the Russian peasants apply indiscriminately to all persons in the grip of the law, that of "The Unfortunate." On the tragic lives of such men, whom a hasty impulse or a mistaken view of duty has hurried into crime, the author of *Buried Alive* always loved to dwell. Sorrow was ever sacred to him, but never so much as when it was intensified by a fault, or at least a folly. Of more vulgar criminals a few portraits are given; such as the robber Orloff, "who had murdered old men and young children from no other motive than that of satisfying his own thirst for blood," and who "scorned pain and suffering, and respected the authority of no human being." But they are not so interesting, though their stories are illustrated by detailed descriptions of the effect of the lash.

Of more legitimate interest are the descriptions of a captive's feelings during his imprisonment, which the Russian novelist attributes to the imaginary author of the book, but which are probably faithful records of his own sensations. As mere results of imagination they would have no special value. But, if they may be regarded as conscientiously chronicled reminiscences, they are well worthy of being studied. It is not often that we have an opportunity of knowing what are the thoughts which pass through the mind of a man of culture who is obliged to herd for years with the outcasts of humanity. The aristocratic wife-murderer, who is credited in the introduction with the authorship of the book, is represented as finding his new life "after all not so very different" from that which he had hitherto led. Existence as a convict seemed to him less hard, after he had entered the prison, than it had appeared to him on the journey. His work was not heavy, his food was not bad, his companions were not unendurable. What might be called the professional criminals were at first reserved with him, despising him as an amateur, and imagining that he would stand upon his dignity. But after a

* *Buried Alive*; or, *Ten Years of Penal Servitude in Siberia*. By Fedor Dostoevsky. Translated from the Russian by Marie von Thilo. London: Longmans & Co. 1881.

time they became more affable, having discovered that he was what they called a "good" man. At first he used to wander about the prison absorbed in grief, and unable to think of anything except his misery. But gradually this acute pain wore off. Only the impossibility of being alone even for one moment remained an evil to which he could not become accustomed. Feeling that the depression which constantly weighed upon him, and the jarring to which his nerves were incessantly exposed, would be certain to ruin his health unless he made a vigorous struggle against their influence, he resolved to take as much physical exercise as possible, and therefore always worked as hard as he could, whether he was employed on pounding calcined alabaster, or turning a flywheel, or shovelling away snow. By this means he preserved his equanimity, though at times his misery is represented as seeming greater than he could bear. On a bright winter's day, for instance, when the sun shone on the white snow, he would feel an almost irrepressible longing to flee away into the boundless steppe which stretched away southwards from the bank of the river by the side of which he worked. And the same impulse would make itself felt again when the winter was past and the spring came back, the time "when not only in Siberia, but all over Russia also, those who are known as God's people escape from their gloomy dungeons and hide themselves in the woods and forests." At length the happy moment came when his chains were struck off and he was allowed to go forth "into the wide, free world." As a matter of fact, the real author of the book did not become utterly free when he emerged from his prison, for he was obliged to serve in the ranks of the army as a private soldier from 1853 till 1856. Then he was promoted to be an officer, and eventually he was amnestied. His health, it is said, suffered greatly during his confinement, and he never completely recovered from the effects of the hardships he endured. Since the time of his imprisonment great changes have taken place in the Russian convict establishments. Readers who wish to form a correct idea of what penal servitude in Siberia now is cannot do better than refer to the letters on the subject which Mr. Lansdell contributed to the *Times* in the spring of last year, and the paper which he read at the Swansea meeting of the British Association, and which was afterwards published in the October number of the *Contemporary Review*.

Gaelic Proverbs.*

THE collection of Gaelic Proverbs on which the present one is based, the editor tells us, was first published at Edinburgh in 1785. It was a small book and in several respects faulty, but it was then and for some time afterwards the only collection of Celtic proverbs gathered into a book and translated for the benefit of the world. It appears to have had the still greater merit of being a genuine product of the past, the editor's share in the compilation of which consisted in simply giving as correctly as he could the words of sayings familiar to all among whom he lived, in rendering them into English, and in occasionally illustrating them by an explanation or an anecdote. Macintosh intended to publish a new edition, but his death, which took place in 1808, intervened. A second edition, however, did appear in the year 1819, in which additions, probably found in his papers, were incorporated. The editor this time was Alexander Campbell, better known as the editor of a collection of Scottish songs and music called *Albyn's Anthology*; he prefaced the proverbs with an account of the original compiler, which has been termed a biographical curiosity. But worse was to come; for he had announced in the title-page that he would "English" the proverbs "anew," a threat which he appears to have carried to effect in a novel fashion. For not only did he lack the requisite knowledge of Gaelic to deal satisfactorily with his subject, but he undertook to improve Macintosh's simpler and more correct language into turgid commonplace. For instance, where Macintosh had been content to translate "Smiles are not companions of pain," Campbell got it into his head that the elegant thing to say was "The laugh is not excited by the sharp lancinating pain of a stitch." The first edition contained only 1,305 proverbs and familiar phrases, the second 1,538, while Mr. Nicolson has brought the number up to 3,900, many of which, he tells us, came in at the last moment. Besides thus doubling the number of recorded proverbs, which implies work extending over many years, he has appended some useful notes to the collection, and a short biography of the original compiler. On the whole, the work has been most conscientiously done; nor have we found many occasions of charging him with inexact translations, as when "An ni a chùim an eideann o na gobhair" is rendered "What kept the goats from the ivy," instead of "What kept the ivy from the goats." Of course the question as to what sayings wanted to be explained and as to the kind of explanation required would always be one on which readers would differ, so we cannot regard it as a serious fault that we meet with explanations now and then, which we could have spared, and that at other times we miss the editor's assistance. Some of the notes contain anecdotes in illustration of certain sayings which have become common in the Highlands, and they are frequently both amusing and instructive, but never in bad taste. We shall now

select a few instances, beginning with the following, which illustrates an important event in Scotch history:—

Bò a' bhàbhaill-thulchain (the cow of the end-stall).—The *buabhall-thulchain*, or end-stall, was the innermost in the row, and was used for the accommodation of a cow that had lost her calf, in place of which a stuffed imitation calf was brought in whenever she was to be milked. Hence came the application of the word *tulchain* to the imaginary calf, and of the term *tulchain-bishop* to persons appointed to that office in Scotland after the Reformation, simply as receivers-general of the temporalities for the benefit of the baron or his creatures. "The Bishop had the title, but my Lord got the milk or commoditie."

The volume contains many allusions to the turbulent life formerly led by the Highland Gaels, such as the one relating to a disastrous cheese, referring to which we have the following note:—

Three parties of the Macdonalds of Glencoe went in different directions on a Faugh-Nollagh, or "gentle begging" expedition, for the Christmas of 1543. They met by appointment at the Black Mount, and proceeded to divide the proceeds, when it was found, after everything else had been divided, that the remnant of a cheese was still to be disposed of. From words on the subject the claimants came to blows—not with fists, alas! but with dirks; and, if the story be true, only one man out of eighteen was left to tell the tale! A small loch at the spot where this happened is still known as *Lochan-na-fala*, the bloody tarn.

One of the sayings recorded refers to a time when there were wolves in Scotland, the story being "that two men went to a wolf's den, when wolves still flourished in Scotland, for the purpose of carrying off the whelps. The den was in a cairn with a narrow entrance, through which one of the men crept in while the other stood on guard outside. Presently the yelping of the young ones called their mother to the rescue, and she bolted past the man outside, who was dexterous enough, however, to seize her by the tail while she was disappearing. So they stood, the she-wolf blocking the entrance and darkening the den, while the man outside held on like grim death. The man within finding the light suddenly obscured, called out to his companion, 'What is that darkening the hole?' The reply was, 'If the tail breaks, your head will know who darkened the hole,' which has since become a familiar saying.

We are not in a mood to write on proverbs and familiar phrases generally, or to institute minute comparisons between those of the Scotch Gaels and those of other nations; and, if we had been inclined to venture on the latter course, the editor has given us no assistance in the shape of a good and useful index. This is the only serious charge we have to make against him. He has, however, brought together some groups, in English, in his Introduction, under such headings as those of Religion, Morals, Self-respect, Truth, Courage, Temperance, Industry, Courtesy, Benevolence, Caution, Pools, Boors, Women, Children, and others. But we shall only mention in particular those referring to women, which may be characterized as conceived in much the same spirit as those of other European nations; but, on the whole, they are much less unfavourable to them than those of the peoples of Southern Europe. The following have been brought together by the editor:—

Meal is finer than grain, women are finer than men. There was never good or ill but women had to do with it. Modesty is the beauty of women. I like not pullets becoming cocks. Take no woman for a wife in whom you cannot find a flaw. Choose your wife as you wish your children to be. Take a bird from a clean nest. Choose the good mother's daughter, were the Devil her father. If you take a wife from Hell, she'll bring you home there. When you see a well-bred woman, catch her, catch her; if you don't do it, another will catch her. Their own will to all men, all their will to women. What a woman knows not she'll conceal. Harsh is the praise that cannot be listened to; dark are the dames that cannot be dallied with. Where a cow is, a woman will be; where a woman is, temptation will be (attributed to St. Columba). A man's wife is his blessing or bane. If you wish to be praised, die; if you wish to be decried, marry. You are too merry, you ought to marry. Who speaks ill of his wife dishonours himself. True or false, it will injure a woman. Warm is the mother's breath.

But this by no means exhausts the references in the volume to women, some of the most amusing ones being omitted in it, such as that about "MacCormack's wives, very strong in the neck," or the one worded "Pity him who would burn his harp for you," in allusion to a Hebridean harper, who, having nothing else to make a fire with to warm his wife, broke his harp in pieces and burned it. The story, which forms, as it appears, the subject of one of Hector McNeill's poems, goes on to say that he failed to warm her heart, as she proved by running away with another man before the morning.

Some of the most interesting things in the book are for several reasons the allusions to Cuchullin, as in the saying "As strong as Cuchullin," *a propos* of which we learn that Cuchullin's name is still associated in the island of Skye with the old vitrified fort of Dùn Sgathlach at Ord, where his son Connlaach was supposed to have been born and brought up by his mother, whom Cuchullin is made to describe in *Fingal* as

The sunbeam of Dunscaulch of waves,
White-bosomed fair of gentle eye,
Whom I left in the Isle of hosts.

Mr. Nicolson very properly raises his voice, however, against the habit of guide-book writers, who would improve the Coolin Hills in the same island into Cuchullin's Hills, to which they have no local or historical claim, as the name is pronounced by the natives *Coolyun*, which they could never confound with that of Cuchullin. It is curious also to notice that the sweet-scented herb called *Queen of the Meadow* is in Gaelic called Cuchullin's Belt, as in

* A Collection of Gaelic Proverbs and Familiar Phrases, based on Macintosh's Collection. Edited by Alexander Nicolson, M.A., LL.D., Advocate. Edinburgh: Macneilhan & Stewart. 1881.

Alexander Macdonald's "Song of Summer"; the passage has been rendered:—

Sweet is the scent of thy deck,
Thou belt of Cuchullin of calma.

We should like to do justice to the allusions to the Fenian legends in the Gaelic sayings of the Highlands, but, as we have not had time to make an index, we can only mention the following which we happen to have stumbled across, worded "Conan's life among the demons: If bad for me, for them no better." Conan was one of the principal characters in the legends about Finn, or, as the Highlanders love to call him, Fingal. He was, the editor tells us, the only disagreeable one of the Fenians; in fact, he is described as rash, quarrelsome, and meddlesome. Among other things he did, he is said to have visited Hell in search of some of his departed friends, and to have there given as good as he got to the fiends. Sir Walter Scott picked up the story, and made use of it, as the editor remarks, in *Waverley*, where Mrs. Flockhart asks:—"And will ye face thae tearing chields, the dragoons, Ensign Maccombich?" "Claw for claw," quoth he, "as Conan said to Satan, Mrs. Flockhart, and the Deevil tak' the shortest nail."

The allusions to witches and ghosts are numerous in the book, but we will only mention the one rendered "The way of the ghost, going round the bridge," to which is appended the following note:—

The superstition here referred to is illustrated in *Tam o' Shanter*, where the infernal pur-ueers have no power to go beyond the keystone of the bridge. Another saying is, "I came round about, the ghost's trick," in reference to which the following story is told. A certain man was haunted by a ghost, which met him wherever he went, so that he became known in the country-side as Big Donald of the Ghost. Weary of his life, he went away to America, hoping there to be rid of his tormentor—but in vain. The very night of his arrival, the first person he met in the streets was his old friend. He cried out in amazement—"How did you come here?" "I came round about," said the imperturbable ghost. Donald in disgust returned home.

We can thoroughly recommend the book as full of amusement and instruction. But when it reaches another edition, let us hope that the editor will not be so cruel to his readers as not to provide them with the assistance of a good index.

PASTORAL DAYS.*

THIS pleasant American book has brought to our remembrance, though without any sense of imitation, two old-fashioned favourites. In the first place, its descriptions of rural humanity, its rustic sweetness and humour, have a certain analogy with the delicately pencilled studies of life in Miss Mitford's *Our Village*; but the relation it bears to the second book is much closer. It is more than forty years since Mr. P. H. Gosse published the first of those delightful sketches of animal life at home which have led so many of us with a wholesome purpose into the woods and lanes. It was in the *Canadian Naturalist* that he broke this new ground, and though we do not think this has ever been one of his best known books, we cannot but believe that there are still many readers who will be reminded of it as they glance down Mr. Gibson's pages. The fauna and flora of both books are the same, or nearly the same; the patient, cheerful attitude in the presence of nature is the same; and in his specially entomological fervour the younger distinctly recalls to us the elder naturalist. The indignation of the villagers at the man who can spend his time in paying attention to insect-life is told in a story that directly reminds one of Mr. P. H. Gosse's anecdotes. In Canada, as in New England, there seems a wider and more generous landscape than we can boast. A recent American writer, otherwise highly complimentary to our institutions, complains of the poverty and confined range of our scenery. Only once, for a moment, among the billowy woods of Sussex, did he contrive to lose the sense of restriction and constraint that our landscapes gave him, and he found himself always sighing for the boundless forest and vast rivers of the States. Even in the naturalist's account of the civilized parts of New England, where all is pastoral and comparatively old, we have the same impression of vastness. The powers of nature are unexhausted, the ground itself retains its primeval richness, and the explorer who dives into a solitude is not always, as in England, coming out upon the seamy side of nothing. To those who are haunted by the narrowness of the old world and the swarming civilization of its crowded acres, there is something very soothing and almost moving in the record of a life spent in the beautiful woodlands of America. Mr. Howells has prophesied that a time will come when the gadding temper of the Yankee will turn backwards and form a wave of passionate nostalgia for American solitude. We fancy that the whole world will some day look to the back counties of the States as the only place where a man may be quiet and possess his soul.

People must be strangely constituted who do not enjoy such pages as Mr. Gibson has presented to us here. It is not merely that he writes well, though he possesses a style that is full of felicity, but the subject itself is irresistibly fascinating. We plunge with him into the silence of a New England village in a clearing of the woods. The spring is awakening in a flush of tender green, in a fever of warm days and shivering nights, and we hasten with our companion through all the bustle and stir of the few busy hours of light so swiftly that the darkness is on us before we are

aware. Then falls on the ear a pathetic, an intolerable silence; a deep mist covers the ground, a few lights twinkle in scattered farms and cottages, and all seems brooding, melting, in the deep and throbbing hush of the darkness. At last a little plaintive piping trill breaks the stillness:—

Again and again I hear the little lonely voice vibrating through the low-lying mist. It is only a little frog in some far-off marsh; but what a sweet sense of sadness is awakened by that lonely melody! How its weird minor key, with its magic touch, unlocks the treasures of the heart. Only the peeping of a frog; but where, in all the varied voices of the night, where even among the great chorus of nature's sweetest music, is there another song so lulling in its dreamy melody, so full of that emotive charm which quickens the human heart? How often in the vague spring twilight have I yielded to the strange, fascinating melancholy, awakened by the frog's low murmur at the water's edge! How many times have I lingered near some swampy roadside bog, and let these little wizards weave their mystic spell about my willing senses, while the very air seemed to quiver in the fulness of their song. I remember the tangle of tall and withered rushes, through whose mysterious depths the eye in vain would strive to penetrate at the sound of some faint splash or ripple, or perhaps at the quaint, high-keyed note of some little isolated hermit, piping in his sombre solitude. I recall the first glimpse of the rising moon, as its great golden face peered out at me from over the distant hill, enclosing half the summit against its broad and luminous surface. Slowly and steadily it seemed to steal into view, until, risen in all its fulness, I caught its image in the trembling ripples at the edge of the soggy pool, where the palpitating water responded to the frog's low, tremulous monotone. Higher and higher it sailed across the inky sky, its glow now changed to a silvery pallor, across whose white halo, in a floating film, the ghostly clouds glide in their silent flight.

The wailing of the great owl upon the maple-tree breaks through this mood of reverie, and takes our author back in memory to the scenes of his youth, where the owl was looked upon as a creature of most sinister omen, and his own partiality to it, as a proof that there was something uncanny or even "fey" about him. All this is described with great sympathy and delicacy; but perhaps Mr. Gibson is most felicitous in his little touches of floral painting. He has a few words about the earthy, spicy fragrance of the arbutus that might have been said in verse by the late Mr. Bryant; his description of the effect of biting the bulbs of the Indian turnip, or "Jack-in-the-Pulpit," is inimitable in its quiet way; while the phrase about the fading dandelions—"the golden stars upon the lawn are nearly all burnt out; we see their downy ashes in the grass"—is perhaps the best thing ever said about a humble flower, whose vulgarity, in the literal sense, blinds us to the beauty of its evolution and decay.

In his studies of life and country manners Mr. Gibson is a very agreeable and amusing, if not quite so novel, a companion. Not seldom he reminds us, not merely of Miss Mitford, but sometimes of Thoreau and of Hawthorne. The story of Aunt Huldry, the village crone who sustained herself upon simples to the age of a hundred and three, is one of those little vignettes, half-humorous, half-pathetic, and altogether picturesque, in which the Americans excel. Aunt Huldry was an old witch in a scarlet hood, whose long white hair, flowing behind her, was wont to frighten the village children who came upon her in the woods; but she was absolutely harmless, a crazy old valetudinarian, who was always searching for the elixir of life in strange herbs and decoctions. At last she thought she had found it in sweet-fern, and she spent her last years in grubbing up every specimen she could find, smoking it, chewing it, drinking it, and sleeping with a little bag of it tied round her neck.

But, although Mr. Gibson writes so well, he modestly disclaims all pretension as a writer, and lets us know that he is an artist by profession. His book is illustrated by more than seventy designs from his pencil, engraved in that beautiful American manner to which we have so often called attention that we need not particularly dwell upon it here. The scenes designed are closely analogous to those described in the text. We have an apple-orchard in full blossom, with a group of idlers lounging underneath the boughs; scenes in the fields so full of mystery and stillness that we are reminded of Millet, or of our own Mason; clusters of flowers drawn with all the knowledge of a botanist and the sympathy of a poet. It is hard to define the peculiar pleasure that such illustrations give to the eye. It is something that includes and yet transcends the mere enjoyment of whatever artistic excellence the designs may possess. We are directly reminded by them of such similar scenes as have been either the rule or the still more fascinating exception of every childish life, and at their suggestion the past comes back; in the familiar Wordsworthian phrase, "A river flows on through the vale of Cheapside." It is a curious matter of speculation how far this sentiment of homely nature is or is not a growth of nineteenth-century civilization. A certain sentiment of the grandiose forms of scenery was undoubtedly introduced into life at the close of last century, and scarcely existed before even in trained poetic minds. But the homelier beauty, the picturesque of the minute objects that surround our feet, this seems to have been more or less an element of human feeling from the first, and as vivid in Theocritus or Virgil or Herrick as in any nature-loving bard who has flourished since the French Revolution.

We know so little over here of the best American art that it may chauce that Mr. Gibson is very well known in New York. We confess, however, that we never heard of him before; but his drawings are so full of delicate fancy and feeling, and his writing so skilful and graceful, that, in calling attention to his book as one of the prettiest that the present winter season has brought forth, we cannot but express the hope that we soon may hear of him again, in either function, or in both.

* *Pastoral Days; or, Memories of a New England Year.* By W. Hamilton Gibson. Illustrated. London: Chatto & Windus.

ACOSTA'S HISTORY OF THE INDIES.*

IN the whole series of volumes put forth by the Hakluyt Society few probably deserve to be read with greater attention or will better repay the reader than Acosta's book on what he calls the natural and moral history of the Indies. It has its special scientific value in the fact that it laid the foundations of physical geography, while the portion which is devoted to a narrative of events may almost be regarded as a contemporary history. His trustworthiness has been admitted by more recent writers; and, if we adopt Mr. Markham's somewhat curious numerical test, he takes the fourth place among the original authorities on Mexican and Peruvian affairs during the century of the conquest. It seems that in Mr. Prescott's *Conquest of Peru* "Garcilasso de la Vega is quoted eighty-nine, Cieza de Leon forty-five, Polo de Ondegardo forty-one, and Acosta nineteen times." The scrutiny of some other books might furnish a different result; but if Acosta seems, with Prescott, to have a subordinate place, this is perhaps only because Prescott's plan did not throw him back on the most valuable portion of Acosta's work. Acosta shows undoubtedly no small historical powers; but his heart was clearly given to the most careful study of the formation, the products, the people, of a country in regard to everything which tends to make them what they are; and, so long as he is engaged on these subjects, his writing has a peculiar charm.

Whether that charm would have been enhanced by a new translation instead of republishing one now nearly two hundred and eighty years old, we can scarcely venture to say. The fastidious eyes of more modern readers are apt to quarrel with the spelling of the Elizabethan age, and a more solid objection may be urged against the lumbering style of some of the Elizabethan writers. But this charge cannot fairly be brought against the translator who attached simply the initials E. G. to his rendering of Acosta's work in an English dress. It has been ascertained, Mr. Markham tells us, that this was Edward Grimston, who wrote a history of France, and translated or compiled a general history of the Netherlands from that of Jean François le Petit and the manuscripts of Sir Roger Williams. He was the grandfather of Sir Harbottle Grimston, whose name became known in the civil wars, and he is said to have reached the mature age of ninety-eight. It is more to the purpose that he could write English, and good English too, with not too much of Latin in it. Of his translation of Acosta Mr. Markham speaks as creditable and trustworthy, although it makes some omissions and has some blunders, especially in proper names and native words, which have been corrected in the present edition.

It would not be easy to express in a single phrase the qualities which impart to Acosta's volumes their power of attracting and keeping the attention of the reader. They are rich in information of all kinds, and whatever be the subject with which he is dealing, we see that the author was a man not only of wide but of deep learning, which he has thoroughly at his command; but it is not this alone which challenges our respect, for on many matters of which he treats much is known now which was utterly unknown in his day. Nor are his pages startling from any expressions of a destructive or negative philosophy. Acosta was a member of the Society of Jesus, and no imputation has been thrown on his orthodoxy; and although his utterances here and there are fully beyond some which have brought others into trouble, he was altogether unconscious of any inconsistency between his theological or religious and his scientific convictions. Nor can it be said that in the field of physical science he was to any wonderful extent beyond his age. His birth synchronises with the death of Copernicus; but he makes no reference to that astronomer, nor is there any reason for thinking that he was alive to the fundamental principles of his system. Experience had convinced him that the earth was a globe; and he had learnt that the whole heavens around it were in motion, but it is very doubtful whether he had any idea of the relations of the sun with his planets to other bodies in the universe. But a man's worth is to be measured not so much by his actual knowledge as by his method of dealing with matters which are only partially known or are wholly new to him, or, in other words, by the means which he uses for the discovery of the truth of facts. It is here that Acosta shows the true scientific temper; and it is this which must win for him the respect and sympathy of readers who yet may think that, although he used his opportunities to good purpose, he might have used them for better.

Such a censure would probably be undeserved, for we have to remember the vast range of facts and the multiplicity of the questions with which he had to deal; and, if under such conditions he could judge calmly and dispassionately, he was doing perhaps a harder work than that which fell to the lot of Copernicus or Galileo. We may find the evidence of this in almost every page of the book. His explanation of the darkness of portions of the nightly heavens may or may not be adequate; but he seized at once the real point when he asserted "that according to the figure which these spots have in heaven, they move with the same proportion with their stars without any separation. . . . It followeth then by all that we have said, that the heaven containeth in it all the parts of the earth, circling continually about it, without any more doubt." The soundness of his judgment is

specially tested when he has to encounter theories which seem to have sprung up almost with the discovery of the new world. No sooner had Spanish enterprise forced itself unto Mexico and Peru than the wise or the devout were ready with their reasons for saying that Peru was the Ophir of the historical books of the Old Testament, and that the nations found in America were the descendants of the lost tribes of Israel. The folly of these notions is shown in each case by a simple reference to facts. Peru yields gold, but it does not yield it in the quantities ascribed to the Biblical Ophir, nor has it the precious stones and the exquisite woods of the latter. As to the resemblance in sound between the names Ophir and Peru, that seems to him "of small consideration." If that argument "were of force, we might as well say that Yecatan is Jectan mentioned in the holy scripture." Of the other problem which is concerned with the peopling of America he confesses candidly that he can give no satisfactory solution; but he is sure that, they must have come either by sea or by land; and the enormous difficulties involved in the idea of their having crossed the vast Atlantic or Pacific Oceans incline him to the conclusion that they must have come by land. But, as he is careful to record his conviction that there yet remains much land to be discovered in these oceans, so he urges that there is no reason or experience contradicting his "conject or opinion that the whole earth is united or joined in some part, or at least the one approacheth neere unto the other." This is a remarkable anticipation of the more recent knowledge gained of the conformation of Northern Asia and America. But, however the so-called Indians of America may have found their way thither, they are clearly not Jews, in spite of any points of seeming likeness on which stress may be laid; for, on the other side, he says:—

We know well that the Hebrews used letters, whereof there is no shew among the Indians; they were great lovers of silver, these make no care of it; the Jewes, if they were not circumcised, held not themselves for Jewes, and contrariwise the Indians are not at all, neither did they ever use any ceremonie neere it as many in the East have done. But what reason of conjecture is there in this, seeing the Jewes are so careful to preserve their language and antiquities, so as in all parts of the world they differ and are known from others, and yet at the Indies alone they have forgotten their lineage, their law, their ceremonies, their Messias, and finally their whole Judaisme.

Such follies, however, are seldom killed; and dreamers, driven off from America, find the lost tribes in Afghans and in Englishmen. But with Acosta fact is the great teacher. He approached the equator with the prepossessions of a man who has put faith in the theories of Aristotle and Virgil; but, on crossing it, the cold was such as to make him glad to get into the sunshine for warmth; and what else could he do then "but laugh at Aristotle's Meteors and his Philosophie?" He had his political as well as his theological prejudices; but he was quite ready to admit that the government of Spain was not perfect, and that there were good points in the government of Montezuma. "Every history well written is," he says, "profitable to the reader, for, as the wise man saith, 'That which hath bin, is; and that which shall be, is that which hath bene.' Humane things have much resemblance in themselves, and some growe wise by that which happeneth to others. There is no nation, how barbarous soever, that have not something in them good and worthy of commendation, nor commonweale so well ordered that hath not something blameworthy, and to be controlled." He speaks with less certainty, as we might expect, when he has to deal with narratives of portents and prodigies, and with regard to these his sentences curiously balance or nullify each other. They are worthless and they are valuable; they are not to be trusted and they are to be treated as divinely sent warnings.

Although the holy Scripture forbids us to give credite to signes and vaine prognostications, and that S. Jerome doth admonish us not to feare tokens from heaven, as the Gentiles do, yet the same Scripture teacheth us that monstrous and prodigious signes are not altogether to be contemned, and that often they are forerunners of some generall changes and chastisements which God will take, as Eusebius notes well of Cæsarea.

He is not less exercised about those passages in the Bible which describe the earth as flat. He refuses altogether to admit the authority of Chrysostom or any other Father when they deal with questions of astronomy; and he does not rate highly the wisdom of the former when "he doth laugh at those which hold the heavens to be round," although "it seemes the holy Scripture doth inferre as much, turning the Heavens a Tabernacle or Frame built by the hand of God." But his learning makes it easy for him to set one Father against another, and the opinion of Chrysostom is set aside by the dictum of Jerome, "that those which hold the heaven to be round are not repugnant to the holy Scripture, but conformable to the same." We shall, however, go wrong if we look on his conclusions as involving the theory of a heliocentric system. His words have their value chiefly as showing his position in reference to the ascertainment of fact and the interpretation of Scripture. The fact, if proved, is not to be denied, and it may sweep away a multitude of time-honoured ideas. The south wind is warm in our northern hemisphere; and, according to Aristotle, "we must confesse of necessity that the Southern wind is that which blowes and comes from the burning zone, the which being so neere the sunne wautes water and pastures." But Acosta had seen abundance of water and excellent pastures in this burning zone, and so he adds:—

This is Aristotle's opinion, and, in truth, man's conjecture can hardly passe any further. So as I do often consider with a Christian contemplation how weak the philosophie of the wise of this world hath bene in the searche of divine things, seeing in humane things (wherein they seeme so well read) they often err.

* *The Natural and Moral History of the Indies*. By Father Joseph de Acosta. Edited, with Notes and an Introduction, by Clements R. Markham, C.B., F.R.S. 2 vols. London: Printed for the Hakluyt Society. 1880.

He sees, in short, that the testimony of genuine experience must be paramount, and that it is absurd to take a metaphor, no matter where it may be found, as authoritatively settling any question. Otherwise the anthropomorphites may safely take their stand on the saying, "Heaven is my throne and earth is my footstool"; and thus he reaches the conclusion, "that in the holy Scriptures we ought not to follow the letter which kills but the spirit which quickeneth." Some of his own notions, as on the subject of earthquakes or sea-sickness, are perhaps worth no more than Aristotle's theories about the south wind; but they are the notions of a man who has his eyes open to note all that may be brought before him, and his sojourn of seventeen years in Central America has been made to yield a rich harvest. As a historian he is judicious; as a naturalist he is both accurate and unwearyed. Among the few products of the country which he has not noticed is the tree with which Mr. Markham's name will be closely associated in India; but of the general features of the country his descriptions are excellent. It is clear that the time which he spent in tropical America was one of no little enjoyment, and he almost waxes eloquent in speaking of the climate of Aristotle's fire-devastated zone:—

Considering with myself the pleasing temperature of many countries at the Indies, where they know not what winter is which by his cold doth freeze them; nor summer which doth trouble them with heat, but that with a matto they preserve themselves from the injuries of all weather, and where they scarce have any need to change their garments throughout the year, I say that often considering of this, I find that if men at this day would vanquish their passions and free themselves from the snarcs of covetousness, leaving many fruitless and pernicious disciplines, without doubt they might live at the Indies very pleasant and happily.

As we may suppose, he esteems the climate more than the people; and his remarks on the religion especially of the Mexicans are thoroughly to the point. He sees that it rested wholly on the primitive idea of Chthonian gods, gods whose keenest appetites are those of hunger and thirst, and of whom nothing more terrible could be said to their worshippers than that they were dying for want of human flesh and human blood. One of the most vigorous supporters of this worship was the second Montezuma, whose character, as given by Acosta, is probably the more true as lacking the gloss thrown over it by the more glowing narrative of Prescott.

FARMING IN A SMALL WAY.*

WE have rarely opened a book more replete with valuable and practical information than this handy little volume of Mr. Long's. Indeed it must have needed no slight self-control to condense into such very moderate compass the results of so much study and experience. To say nothing of the chief topics of what may more strictly be called farming, such chapters as those on the dairy and poultry-yard, on gardening and bee-keeping, might easily have been expanded almost indefinitely. But Mr. Long, greatly to his credit, has steadfastly resisted all temptations of the kind; and we may well hope that he will reap a satisfactory harvest in the shape of popularity, if not of profits. He has written principally for the benefit of gentlemen farmers, who may have undertaken to cultivate thirty to forty acres, which is about the smallest extent of land they can hope to turn to the best account as an investment. Assuming that they are fairly intelligent, and that they are prepared to supplement the use of their capital by assiduous attention to a business that should be a pleasure, Mr. Long gives them every encouragement. Speaking with all deference to his superior knowledge, we should be inclined to think that the general contrasts he has drawn between the cost of living in town and in the country are decidedly coloured in rose so far as the latter is concerned. At the same time he rejects with searching common-sense criticism some of the extravagant estimates as to particular branches of profit, which theorists, on the strength of logic and figures, have worked out entirely to their own satisfaction. As for his own statements and suggestions, they are invariably those of a thoroughly well-informed expert; nor does he attempt to impose them on us by a mere *ipse dixit*. On the contrary, and especially when differing from the majority of recognized authorities, he always states his reasons succinctly; and when he deduces his arguments from close money calculations he shows that he has all the figures at his fingers' ends. We may add that, being himself a practical farmer, he must have tested most of the plans he recommends.

We have said that his general picture of what ought to be the position of the industrious gentleman farmer in a small way is somewhat rose-coloured. Thus, he asserts, what is doubtless very true, that "there is no end to the home production of food for home consumption"; but he goes on to add that, "excepting for clothing, grocery, coal, and minor matters, it should not be necessary to have a tradesman's bill at all"—a proposition that seems very much more problematical. He refers to an old work, written in the beginning of this century, with the object of showing that a gentleman in the country could live as well with economy and keep as good a position on 200*l.* a year as if he were settled in London on an income of 1,000*l.* We should have fancied at least that, with the increased cost of living, and the tremendous fall in the prices of agricultural produce from what they stood at

through the long wars with Napoleon, the estimate would have been valueless for present purposes. But that is not the opinion of Mr. Long. He believes not only that the author was in the right when he wrote, but that the thing is perfectly feasible still. In a chapter entitled "The Household" he goes carefully into details. He assumes, of course, that his country gentleman has a few hundred pounds of capital to start with, and that he has laid them out to the best advantage under competent advice. His actual cash incomes from sales will form but a small part of his profit. His home is supplied chiefly from his own little domain and farm buildings. He need never buy milk, butter, or vegetables; and he fattens his own pork. Besides that, the butcher, baker, and grocer may be paid in great measure from the home produce, by way of barter. His rent is set down, with the taxes, at 100*l.*, which ought to infer a sufficiently comfortable dwelling-house. And, with rent and taxes included, taking into account his special arrangements with the indispensable tradesmen mentioned above, his total outgoings are to be slightly under 400*l.*, while the receipts, comprising the home consumption, will be somewhat in excess of it. And this briefly is the way in which he is to manage, in order to arrive at a result so desirable. He has rented thirty acres. He lays twelve acres out of the thirty down in grass; two are reserved for yard, garden, and orchard; seven for growing various kinds of corn; and the rest for potatoes, roots, and field vegetables. He keeps a couple of useful horses, that may plough or go in a carriage; with eight cows, besides pigs. The cows are to be almost entirely stall-fed, as they always are by the frugal peasant-proprietors on the Continent. Thus nine acres of his grassland may be left to be mown for the home-feeding. The yield of wheat should supply bread enough for the year; the barley he raises will feed his pigs and poultry, while the oats will suffice for the horses. The main sources of his actual profits are in the potatoes, dairy, pigs, calves, and poultry. Mr. Long takes the yield of potatoes at a minimum of five tons to the acre. If of well-selected sorts, they ought to sell at from 10*l.* to 12*l.* per ton; and with thirteen tons to spare for the market, that gives no less than 135*l.* in shape of receipts. The sales of butter, after deducting the grocery account, come to 100*l.* in round numbers; the pigs, after paying the butcher's bill, ought to bring in 130*l.*; while the poultry-yard will be good for another 100*l.*, and the calves for 30*l.* more. Mr. Long has evidently felt in drawing out his tables that those results would be at least as surprising as satisfactory. For he protests beforehand that he has no idea of straying into the regions of the impossible; and has merely considered "what may be realized by dint of care, attention, and industry." While he adds *per contra* and by way of postscript to his balance-sheets, that the several items, as he has set them down, are almost all of them capable of great extension. The returns on the single article of calves might be doubled at the least; while much more might be made of the pigs and poultry. But we imagine that most people would be more than contented, even were their incomes materially within his margins.

There are certain simple, but golden, rules laid down for the guidance of the farmer. In the first place, he must look well before he leaps, and take care to select his locality judiciously. Next, in taking so small a holding on lease, he ought to be able to secure full liberty of action, or, at all events, be free from the crippling routine of hard and fast covenants and rules of cropping. Necessarily he must practise systematic economy. But, at the same time, it is shortsighted folly to grudge giving a good price for a good article. Thus there could be no more fatal saving than buying cows that are beginning to be worn out, or even past their prime; while it is self-evident that in the matter of his manures he must be liberal both as to quality and quantity. *A propos* of manure, nothing is to be wasted; and even the refuse of almost everything that comes out of the soil should be returned to it in one shape or another. The small farmer must have the faculty of judicious combination, and his whole systems of feeding and cropping should be arranged with the most minute consideration as to dovetailing their separate parts. He must be intelligent, of course, and have something of the natural bent of the late Mr. Mechi, whom Mr. Long, by the way, repeatedly quotes. He must specially study the character of the soil, not only with regard to the cropping, but to the methods of tillage, and he must never be sparing of labourers' wages. Spade husbandry, with its thorough stirring of the land, is much to be commended within his manageable limits; yet there is such a thing, on the other hand, as going to work too thoroughly. After a field has been brought into high condition at great expense, an unkindly substratum may be forced to the surface.

Much must depend on the proper choice of seeds, roots, or breeds of animals, and there Mr. Long's experienced advice will be found invaluable. Thus, in potatoes, which, as we have seen, are almost to be the farmer's mainstay, there are tubers which are predisposed to disease, while others appear to be practically safe from it. The size and quality will of course essentially affect the price, while there is a great deal in the manner of sowing. It has been very much the practice to throw aside the smallest and poorest roots for seed, and we need hardly say there can be no more false economy. So with the pigs, some breeds of which fatten more quickly than others on a far smaller allowance of food, to say nothing of their superiority of flesh and the comparative absence of bone. Of the necessity of exercising a wise discretion in the selection of poultry we need hardly speak. Some fowls lay eggs in abundance but will not sit; others do less in the way of

* *Farming in a Small Way.* By James Long, Author of "Poultry for Prizes and Profit," &c. London: Smith, Elder, & Co. 1881.

laying, but are admirable nursing mothers; while there are others, again, that fetch comparatively little at the poultryer's, owing to the colour of the flesh, or even the tint of the skin. We confess that Mr. Long has given us a new "wrinkle" in strongly recommending the Plymouth Rock. He tells us that it is an American bird with Asiatic blood in its veins. "It is perhaps equal to anything yet described as a farmer's fowl; it is, *par excellence*, a fowl for all, possessing every qualification for profit. It is large, very hardy, tame, a fine layer of large yellow eggs, very plump and tender on the table; it is precocious, and a quick grower; and, moreover, a fine sitter and mother." It would be difficult to say more in its praise; and though he mentions that as yet they are rare in England, we shall expect them to become common ere long. The chapter on cows and dairy management is admirable—it contains some interesting notes, by the by, on foreign cheeses—but the subject is so wide that we dare not even touch it. For the same reason, we hardly venture to follow Mr. Long into the garden and orchard, though there also he is well worth consulting as to the most suitable seeds and plants for different seasons and situations. He dwells on the propriety of utilizing each inch of space with seedlings that may be shifted elsewhere in the garden or even transferred to the fields; though all that can only be carried out by the ungrudging use of fertilizers. In laying out an orchard, he points out that special care must be taken in examining the subsoil to which the plants will strike their roots. The trees will pine and wither away should they get down to wet. The more hardy fruits will necessarily pay the best in such a climate as ours; and Mr. Long refers especially to the profit that may be made by apples, if the grower can dispense with the services of a middleman. "If he is able to store apples with safety, he could almost make his own price in the winter." With regard to fruit bushes and trees, two suggestions of his have struck us. One is, that gaps in hedges might be advantageously filled up with gooseberry bushes. The other relates to growing vines in the open air. In many localities where they fail the failure is set down to the climate. Mr. Long considers that success depends rather on the exposure and the variety of the vine than on temperature. There are plenty of hardy sorts to be procured, and he says, "if a suitable grape is grown, we can see no reason why every south wall and every cottage porch should not be ornamented with glorious clusters which would add so much to the pleasure of the occupants." There are a variety of minor matters besides which are pleasantly and instructively treated, from game, dogs, and bees, down to rabbits, rats, and ferrets. All we have attempted is to give some general idea of the contents of a volume which deserves to be studied by every resident in the country who takes an interest in country pursuits.

ADVERTISEMENTS.

THE GROSVENOR GALLERY. SUMMER EXHIBITION.

Will Open on Monday, May 2.

Admission, One Shilling. Season Tickets, Five Shillings.

DORÉ'S GREAT WORKS, "CHRIST LEAVING the PRETORIUM," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE PHARAOH," each 35 by 23 feet; with "Dream of Pile's Wife," "Christian Martyrs," &c. at the DORÉ GALLERY, 35 New Bond Street. Daily, Ten to Six. 1s.

THE ANNUAL SPRING EXHIBITION of High-class PICTURES by BRITISH and FOREIGN ARTISTS, including Professor LEOPOLD CARL MULLER's picture, "An Encampment outside Cairo," is NOW OPEN, at ARTHUR TROTTER & SON'S GALLERY, 5 Haymarket. Admission, 1s.

FRENCH GALLERY, 120 Pall Mall.—The TWENTY-EIGHTH ANNUAL EXHIBITION of PICTURES by Artists of the Continental Schools (including Portraits of the Right Hon. W. E. Gladstone, Prince Bismarck, Count Moltke, Dr. Dollinger, and other works by Franz Leubach), is NOW OPEN. Admission, 1s.

ON and after May 1 the PAINTING of the celebrated Russian Artist AIVAZOVSKY will be ON VIEW for a short time only at the PALL MALL GALLERY, 48 Pall Mall, S.W. The famous Paintings, "COLUMBUS'S SHIP IN A STORM," and "COLUMBUS LANDING ON THE ISLAND OF SAN SALVADOR," are alone worth seeing. His Continental reputation among Art Critics and Royalty (for whom he has executed several works of art) in Italy, Rome, France, and Russia has long been established, and should tempt admirers of fine original paintings to take an early opportunity of seeing his celebrated Pictures.—Admission, 1s. Fridays, 2s. 6d. Catalogue, with Biography of Artist, 6d.

ROYAL LITERARY FUND.—The NINETEENTH ANNIVERSARY DINNER of the Corporation will take place in Willis's Rooms, on Wednesday, May 4, at 6.30 for 7 precisely. His Excellency the Hon. JAMES RUSSELL LOWELL, United States Minister, is the Chair. Tickets, 21s. each, may be obtained from the Stewards and from the Secretary, OCTAVIAN BLEWITT, Secretary.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, For the Relief of Distressed Artists, their Widows and Orphans. The ANNIVERSARY DINNER will take place in Willis's Rooms, on Saturday, May 14, at six o'clock. The Right Hon. the EARL of ROSEBURY in the Chair. Donations will be received and thankfully acknowledged by: JOHN EVERETT MILLAIS, R.A., Honorary Secretary. PHILIP CHARLES HARDWICK, Treasurer. F. LAMBE PRICE, Secretary, 24 Old Bond Street, W. Dinner Tickets, including Wines, One Guinea.

ART-UNION of LONDON.—The ANNUAL GENERAL MEETING to receive the Council's Report, and to distribute the Amount subscribed for the Purchase of Works of Art for the year 1881, will be held in the Royal Adelphi Theatre on Tuesday, May 4, at Half-past Eleven for Twelve o'clock precisely, by the kind permission of Messrs. A. and S. Gatti. LEWIS POCOCK E. E. ANTROBUS Hon. Secs.

GUYS HOSPITAL MEDICAL SCHOOL.—The SUMMER SESSION will commence on Monday, May 2. The Hospital includes special departments for the Diseases of the Eye, Ear, Skin, &c. CLASSES are held in the Hospital for Students preparing for the Examinations of the University of London, and other Examining Boards. House Surgeons, Dressers, and Clinical Assistants are selected from the Students according to merit, and without extra payment. The Prizes and Scholarships are awarded for proficiency in the several branches of Medical study. Two Scholarships of 125 Guineas each, to be awarded next September, are open to Students who enter in the Summer session.—For Prospectus, and further information, apply to the DEAN, Guy's Hospital, S.E.

GUYS HOSPITAL MEDICAL SCHOOL.—ENTRANCE SCHOLARSHIPS. Two Open Scholarships, each of 125 Guineas, tenable for one year, will be open for competition on Monday, September 28, 1881, and following days. Open Scholarships in Science: the Subjects of Examination are Physics, Inorganic Chemistry, Botany, and Zoology. Open Scholarships in Arts: Subjects—Latin, Euclid, Algebra, Arithmetic, French and Greek, or German.—For further particulars and conditions apply to the DEAN, Guy's Hospital, S.E.

THE Council of Firth College, Sheffield, intend to appoint a PRINCIPAL, who shall also be Professor either in the Literary or in the Mechanical Department of the College. These Departments will comprehend respectively the following subjects: 1. Classics, History, Literature, Political Economy, Moral Science. 2. Mathematics, Mechanics, Engineering, Geology, Physics. Applicants are requested to state in which of these Departments they would be prepared to act as Professor, and which of the Subjects in that Department they would be prepared to undertake. The Salary of the said Principal will be £500 per annum, with Half the Fees of his own Classes. The Council will only make the appointment in event of suitable candidates presenting themselves. Candidates are requested to give full particulars concerning age, experience, and any Academic distinctions they may have gained, together with any other information likely to affect the decision of the Council. The names of three gentlemen to whom reference may be made should be given, but no testimonials need be sent unless they are asked for. Applications to be sent on or before the 25th day of April next, to ENSOB DRURY, Registrar. Firth College, Sheffield, March 21, 1881.

LANDSCAPE GARDENING.—STUDENTS for the Profession will be received by Mr. EDWARD MILNER in the Crystal Palace Company's School of Gardening and Practical Floriculture after May 1.—For Prospectus, apply to the Under-signd at the Palace. F. K. J. SHENTON, Superintendent of the School of Art, Science, and Literature.

ROYAL AGRICULTURAL COLLEGE, CIRENCESTER. For the Science and Practice of Agriculture. For Intending Land Owners and Occupiers, Land Agents, Surveyors, Colonists, &c. The R.A.C. Farm, surrounding the College, is a mixed farm of about 1500 Acres. Courses of Committee of Management.—The Right Hon. the Earl of DUCIE. For Prospectus of College and Farm, List of Scholarships, Prizes, Diplomas, &c., apply to the PRINCIPAL.

GIRTON COLLEGE, CAMBRIDGE.

The next ENTRANCE EXAMINATION will be held at the London University, Burlington Gardens, W., and in Manchester, will begin on Monday, June 13. Forms of Entry should be filled up and sent on or before April 30, to the Secretary, Mrs. CROOK, Mountbatten, 31 Kensington Park Gardens, London, W., from whom information may be obtained.

The CLOTHWORKERS' EXHIBITION, of the value of 60 Guineas a year for Three years, will be awarded in connexion with this Examination.

THE FUNERAL OF LORD BEACONSFIELD.

THE remains of Lord BEACONSFIELD were committed last Tuesday to the resting place which he had himself chosen with a ceremony more imposing in reality than the most pompous public funeral. At a public funeral the attendance is perforce numerous and brilliant, but it is for the most part an official attendance, and the scene being London, the assistants put themselves but little out of the way. On Tuesday last an obscure Buckinghamshire village, and a ceremonial hardly more gorgeous than that which would be gone through in the case of any popular country squire, attracted an assembly which may be said to have been fully representative of the whole of English society. The heir to the Throne and two of his brothers, almost the whole body of foreign diplomats, all but one or two of the deceased statesman's colleagues, and many of his lifelong opponents, the heads or the heirs of the greatest houses in England, the most distinguished representatives of literature and art; last, but not least, a great multitude of delegates representing half the population of the country, followed the coffin of the late Conservative chief to his grave. That grave, putting the traditional abodes in death of the great men of England out of the question, could hardly have been better chosen. The country, better known perhaps than most purely country districts because of its lying on a road—the direct road from Oxford to London—which many men have trodden in the days which are least forgotten, has more than the usual charm of English country districts. Its remarkable diversity of hill and valley, the hills jutting out like promontories and embracing gulfs of green valley, while they themselves are saved by endless beech woods from the bareness which too often afflicts the higher eminences of the North and West, has a singular air of retirement and repose. It is not exactly a silent country, for the processes of fashioning the beechwood into its various uses are audible enough in most places. But the noise is rather cheerful than disturbing, and the manufacture is one of those old-world kinds which are conducted in cottage homes, and make a merely picturesque litter, not a grimy desolation. In the remoter depths of the hills and the woods the retirement is complete; and Hughenden itself, without a regular village, and at some distance from anything that, except in Buckinghamshire, would be called a town, is as far from any madding crowd as the most determined lover of a quiet God's acre could desire.

It is probable that there never has been so little discord in the opinion expressed at home and abroad at the decease of an eminent man. The graceful and satisfactory intention of the Government to erect, with the permission of Parliament, a monument in Westminster Abbey to Lord BEACONSFIELD, at the public expense, lost some of its grace by the unfortunate accident which prevented Mr. GLADSTONE from personally announcing it. Luckily, however, the person who stands next to Mr. GLADSTONE in general estimation as a representative of his party was able on an occasion suitable enough according to English habits, though it may seem incongruous to foreigners, to repair the misfortune to some extent. The plain and downright, but thoroughly satisfactory, panegyric which Lord HARTINGTON passed on the late Prime Minister at the Fishmongers' dinner expresses in an irresistible fashion the claims of Lord BEACONSFIELD

to the funeral honours he has received, and to those memorial honours which still remain to be paid. The eulogy is especially noteworthy because, as Lord HARTINGTON with just pride reminded his audience, it was practically only a repetition of one uttered by the same voice in the very hottest of the political battle, when but few on the same side were found to acknowledge the virtues of their great foe with the same union of courtesy and candour. It coincides, too, with the special praise which another Liberal, Lord ROSEBURY, had bestowed when it was yet a question whether Lord BEACONSFIELD would live or die. Nor can it be doubted that this praise exactly expresses the feelings of the majority of the nation, and, what is rarer, and perhaps more remarkable, of almost all foreign critics who are able to judge. Amid the general chorus of eulogy, seldom other than temperate and appropriate at home and abroad, three persons only, whose names are known to any one beyond their own immediate circle, have ventured in various manner and degree to hint faults and hesitate dislikes. The dubious language of Canon LIDON may be held to be either an apology for or a consequence of the uncertainty of vision which once made him unable to pronounce that bean-sacks were not men. M. SCHERER, according to a habit of critics, English as well as French, in dealing with foreign subjects, may have desired to convince his own countrymen of the profundity of his knowledge by differing with Englishmen themselves as to the obsolescence of Lord BEACONSFIELD's novels and the motives of Lord BEACONSFIELD's policy. Mr. HERBERT GLADSTONE, having sufficiently demonstrated already his lack of his father's qualities, may have desired to show that he at least possesses defects from which his father is free. But the mention of these discordant voices—its manner, a discord—may be excused as tending to show the real unanimity with which at least part of the excellences of the late Chief Minister of Queen VICTORIA has been recognized. It was once said of a different enough person, "C'est une pierre de touche, il déplaît invariablement à tous les imbéciles." Lord BEACONSFIELD undoubtedly had something of this same peculiarity; and it is not strange that some of those who disliked him should have been unable to avoid giving instances of the fact.

The terms of Lord HARTINGTON's eulogy might well be inscribed on the monument which Mr. GLADSTONE, it may be hoped, will still have the opportunity of formally proposing. "We have admitted," said the politician who for years had to fight a losing game against Lord BEACONSFIELD at the head of an insignificant and dispirited minority, lavish of imputation, and embittered by constant defeat—"We have willingly admitted that his policy, "has been directed to no mean petty personal or even party ends, that it has been one which, in the end, "has been calculated to promote the greatness of the Empire, "and the prosperity of this country." No higher eulogy can be passed by an opponent on any statesman than this, and it is, unfortunately, not one which has been or will be passed on all who have occupied the position of Lord BEACONSFIELD held. It indicates moreover the apt test by which history distinguishes between two classes of statesmen. It would be invidious even to specify the discrimination which this test has made in times past, still more to speculate on the way in which it is likely to work in the future. It is sufficient that the most unquestionable testimony, the testimony of a persistent and con-

...passes Lord BEACONSFIELD through the ordeal of this same peculiarity which has attracted most attention abroad. Abroad, too, even more than in England, the opinion of those who are qualified to judge asserts not merely that the greatness, the honour, and the true prosperity of England were Lord BEACONSFIELD's constant aim, but that they were his actual achievement. A remarkable sentence, written without the least personal reference to him and published when he was on his death-bed, expresses the opinion of a competent and impartial critic on this matter. "Au lendemain de San Stefano," says a recent French writer, "les Russes sont les maîtres de l'Orient; après le traité de Berlin il ne reste plus au Czar d'autre client que l'état Bulgare diminué de moitié." It is certain that this is the all but universal opinion of the Continent, and it is possible that it may one day be the accepted opinion of English history. The Treaty of Berlin would thus be classed with the Triple Alliance alike in the magnitude of its immediate effect, and in the folly with which its advantages were thrown away afterwards. This, however, is contentious matter, and it is better for the present to keep to ground which is common to all but the eccentric, the ill-natured, and the ill-informed. Despite M. SCHERRER, Lord BEACONSFIELD's novels are not obsolete in England, and it is exceedingly improbable that "Coningsby," "Henrietta Temple," and "Contarini Fleming," to name no others, will miss such immortality as happens to the usually short-lived literature of fiction. But Lord BEACONSFIELD's chief and proper function was not writing, well as he could and did write. The eulogy which has been made the text of this article seizes the real importance and nature of his work. At all times, those who are not rocked and dandled into legislators, but cut their own political fortunes out with their own swords, have been exposed to, and have too often deserved the reproachful title of adventurers. The epithet has been flung often enough at Lord BEACONSFIELD himself, and he has now been acquitted of it solemnly and finally by the deliberate judgment of those best qualified to judge with knowledge and least likely to judge with partiality. An adventurer does not set his country before party and personal ends; an adventurer does not come out of forty years of desperate political warfare with scarcely a personal enemy, and with hands on which unscrupulous and embittered foes are unable to detect a speck. Only in one sense, the older and better sense, of the word may the word adventurer be attached truly to Lord BEACONSFIELD's career. All England admits that he followed the quest of the greatness, the honour, the prosperity of his country with the courage, the perseverance, the fortitude in defeat, the moderation in victory of a legendary seeker after adventures. Half England, at least, believes that before he was laid among the Hughenden beeches the quest, if, after the manner of such things, only for a moment, was attained.

GREECE.

THE Ministers at Athens have probably reasons of their own for delaying the announcement of a decision which they must necessarily take. They think it prudent to consult popular prejudice by affecting to regard as a misfortune the wonderful good luck of obtaining without a struggle the large extension of territory which the Porte has been induced to concede. In private life judicious persons never congratulate a friend on high promotion, on an unexpected windfall, or generally on any success which may have been achieved by himself or his family. Experience has taught them that it is more complimentary to assume that merit has been inadequately rewarded. Newly-made judges like to be pitied for the supposed diminution of their professional incomes; and bishops profess regret for the loss of their former freedom from responsibility. In all cases it is possible to imagine a preferable state of things, with which alone, as with a recognized standard, less eligible conditions of life are compared. The Greek Government has selected the decision of the Berlin Conference as the high-water mark which has not subsequently been reached by the diplomatic tide. If the Plenipotentiaries at the Congress had been less liberal at the expense of Turkey than the Ambassadors at Constantinople in their late deliberations, the Greeks would have repudiated the authority which they now describe as paramount and conclusive. At one

time they almost succeeded in persuading themselves that they would go to war for the possession of Janina, Metsovo, and Prevesa; but sagacious observers justly conjectured that warlike enthusiasm was assumed for the purpose of obtaining as much as possible without detriment to the interests of peace. When the European representatives were instructed to warn the Greek Ministers of the consequences of further obstinacy, there could be no doubt of the ultimate acceptance of their advice. The disposition of the Court to consult the dictates of prudence was first allowed to transpire, and, when no disturbance followed, Mr. COMOUDOUROS and his colleagues thought it safe to return a reasonable answer to the offer of the Great Powers. For the purpose of avoiding sudden inconsistency with the policy which had been previously announced, the Note, which contained the acceptance of the modified frontier, was expressed in studiously ungracious language. The Greek Government professed not to have recovered from its surprise at the refusal of the Powers to be bound by the decision of Berlin. It was also thought proper to publish a protest on behalf of the Greek inhabitants of the districts which are not to be surrendered; and, with better reason, an inquiry was made as to the time and manner of the evacuation of the ceded territory by the civil and military Turkish authorities. The quarrelsome tone of the communication mattered but little, as it was a substitute for the threatened declaration of war. The resignation of the Minister who was specially charged with the organization of the army served as an additional argument to show that the Cabinet had formerly been in earnest.

The Porte with good reason complains of the inadmissible pretensions of the Greek Government to make stipulations for the supposed benefit of the population of Epirus. The least that could be expected in return for a voluntary sacrifice was a receipt in full; but the European Ambassadors will probably explain that the blustering language of the Greek Ministers is addressed rather to their own countrymen than to the Turkish Government. More conciliatory professions would have little practical value. There is no doubt that, as occasion arises, the Greeks will promote intrigues both in the neighbouring provinces and in the islands of the Archipelago. It might have been courteous to suppress for the moment any publication of their future intentions; but verbal warnings are neither more nor less significant than well-known designs. The Albanian revolt, which is perhaps not yet finally subdued, may in some degree reconcile the Greeks to the avoidance of a collision which might be dangerous. The Albanian tribes have among their causes of dissatisfaction with the Government of the SULTAN a feeling of resentment at the cession of Dulcigno to Montenegro, and they regard with alarm the establishment of Greek dominion in Epirus. According to the latest accounts, a body of Albanian insurgents has occupied a part of the territory which has been ceded by the Porte to Greece; and the League disputes the validity of the transfer. The victory of DERSH PASHA may perhaps have broken the strength of the movement; but a Turkish general is not likely to exert himself for the purpose of compelling Albanians to submit to Greek authorities. The same officer, indeed, effected after long delay the cession of Dulcigno; but at that time the SULTAN and his Ministers were threatened with aggression by some of the Great Powers, and the friendly Government of Germany was exerting its influence to procure an early settlement of the Montenegrin dispute. Those who have the best means of judging of the present policy of the Turkish Government seem to apprehend no serious difficulty in the completion of the arrangement which has been effected with so much difficulty. In Thessaly there will be no real or fictitious insurgents to act the part of the Albanians, who, by a secret understanding with Constantinople, resisted for a time the surrender of Dulcigno. The province is occupied by regular Turkish troops, which will certainly obey the order to retire. It is highly probable that the ceded districts will contain many malcontents, including all the Mahometan population; but the majority will prefer, at least at the outset, Greek to Turkish rule.

The European Governments have not guaranteed to the SULTAN the quiet possession of his remaining dominions; but they have become morally responsible for the discouragement of Greek aggression, at least in the immediate future. It would be both dishonourable and impolitic to promote agitation for the transfer to Greece of the districts

in which are reserved to the SULTAN. The English Government, which has professed exceptional sympathy with Greece, is in consequence especially bound to adhere to the compromise which it has finally approved. Lord GRANVILLE's despatch to Mr. COCHRAN exhausts the merits of the controversy; and it is satisfactory to find that the mistake committed at the Berlin Conference originated with the French Government. Lord GRANVILLE wisely gives the true explanation of the change in English policy. He and his colleagues would, he says, have supported the decision of Berlin; but they found that some of the Powers were not prepared to insist on the acceptance by the Porte of the proposed frontier. The English Government had the good sense to acquiesce in the modified policy of its allies, and it now reminds the Greeks that the territory which they will acquire is extensive, fertile, and defensible. It may be hoped that irresponsible English sympathisers with Greece will henceforth desist from further efforts to disturb the peace. No serious politician will repeat the opinion which Mr. W. H. GLADSTONE lately thought fit to deliver, that the Greeks ought to take what they can get, and to wait for the earliest opportunity of obtaining more. The rash and unjustifiable advice of an obscure member of the Liberal party would matter little, but that his name may perhaps mislead foreigners into the belief that he speaks with authority. It is well that they should know that the speaker occupies no official position, and that, in unconsciously dissociating politics from morals, he has no pretension to represent the Government. The Greeks are not so delicately scrupulous that it is necessary to stimulate them to practise a perfidious policy. It would be difficult to feel satisfaction in their good fortune if the political interests of the kingdom were exclusively considered. The object of the Great Powers was praiseworthy or justifiable, not because it aggrandized a petty State, but because it has emancipated a considerable population from alien rule. The faults of Turkish administration are incurable, through incapacity rather than by reason of deliberate injustice. That the SULTAN should still be strong enough to defend his remaining dominions is expedient in the interests of peace. It is well that no sacrifice of life or treasure has been made in resistance to Greek pretensions. Competent judges entertained little doubt that a Greek invasion could have been successfully repelled; but war, if it had once begun, might not have been confined to a single quarter. If peace can be maintained for a reasonable time, it is possible that Greece and Turkey may find that they have interests in common. Both Governments are concerned to resist the encroachments of the Slavonic Principalities; and the Greeks in the northern parts of the peninsula have already suffered from the civil and ecclesiastical oppression of the Bulgarians. Unless the hopes which have been excited are unexpectedly baffled at the last moment, some satisfaction may be felt in a settlement attained by the cordial co-operation of the Great Powers. It is also worth while to note that the concert of Europe has only been found possible when it was directed to peaceful objects.

THE LAND BILL DEBATE.

THERE is a sufficiently paradoxical superstition to the effect that a bad beginning makes a good ending, and on this principle the end of the Land Bill debates in the House of Commons ought to be very good indeed. The singular maladroitness, or still more singular contempt of good management, which has again and again characterized the present Government, never appeared more remarkably than on Monday night. Ministers had made a point of the debate beginning in earnest on that day, and had turned a deaf ear to all representations of the inconvenience thus occasioned. Yet when the time came they were not ready even to put in an appearance, much less to conduct operations regularly, and the Bill was introduced anyhow by an inferior official. The Opposition, however, were ready if the Government were not, and some at least of the difficulties which have been puzzling all heads for the last fortnight were put with his usual force, and more than his usual moderation, by Mr. GIBSON. Such a speech evidently demanded a reply of the most serious character. It would have been impossible for the Opposition, all things considered, to open fire from heavier guns. Their own Irish Secretary is not in Parliament, and Mr. GIBSON's position, as ex-Law Officer, gave him an official

status, which was more than supported by his admitted legal and oratorical ability. Yet the Government made no sign even after that black swan an Ulster Liberal had given them time to make up their minds. The squabble—for it hardly deserved any other name—which followed was sufficiently discreditable to the Ministry, even if they had not hit upon the felicitous idea of deputing Sir WILLIAM HARCOURT, their ordinary peacemaker, to make play for them. The well-known effect of an eironicon from the HOME SECRETARY is to set the House in a blaze, and something of this sort actually happened. That Mr. GLADSTONE should decline to receive lessons in the art of managing business was also nothing new. This is a favourite habit with the PRIME MINISTER; and, for some reason not altogether easy to discover, it never fails to fill his devoted followers with admiration. It may, however, be doubted whether it is either conclusive as an argument or sufficient as an excuse.

The point of Sir WILLIAM HARCOURT's jeer at Mr. GIBSON might have been anticipated. "You don't dare to move the rejection of the measure" was the only retort which the HOME SECRETARY could think of, and it was a very obvious one. It might have been hoped, but perhaps scarcely expected, that the discussion would be conducted in another fashion. In the first place, it is impossible, or at least unreasonable, to move the rejection of a measure, much of the meaning of which is certainly obscure to those who do not like it, and apparently unknown to those who do. But, in the second place (though it is not to be supposed that merely factious disputants, whether in or out of office, will understand this), to move the rejection of the Irish Land Bill *sans phrase* is no light matter, and one which but few serious politicians would take in hand. Sir WILLIAM HARCOURT and his colleagues—who in the last Parliament repeatedly moved and supported resolutions and motions on foreign policy, the success of which was practically impossible, but which, if they had succeeded, would have produced consequences still more impossible to foresee—no doubt do not appreciate the attitude of hostile critics of the Land Bill. That attitude is, however, easily enough to be explained. There is, perhaps, no sane man acquainted with politics in either of the three kingdoms who believes it possible now to do without some sort of a Land Bill, unless England is prepared either to face permanent anarchy in Ireland or to put it down sternly and ruthlessly. It was possible a year ago; Sir WILLIAM HARCOURT and his colleagues have made it impossible. By coquetting for months with the Land League; by elaborate assurances that their measures of coercion, when at last they were decided upon, were merely the preface of measures of reform; by causing many landlords to give up the game in despair, and allowing others to be so nearly ruined that they are ready to accept any fragment of the loaf rather than none; by openly declaring their own belief in the occupier's right of partnership; by a score of other omissions and commissions, the Government have brought matters to such a pitch that something must be done. They have proposed a something which is more complicated than any measure of any kind that the English Parliament in all its experience has had before it, which affects not merely innumerable interests, but affects them in a way which is as yet dimly comprehensible, or not comprehensible at all. And all they have to say when explanation is asked for is, "You can take it or leave it; pass it or oppose it. If you dare not oppose it, what business have you to talk about it at all?"

Such, at least, was the attitude of the Government as it was displayed, not merely by their refusal to meet Mr. GIBSON, or in any way to enter on an explanatory course, but by the plain meaning of the HOME SECRETARY's speech. It was, of course, impossible that a pretension so monstrous should really be maintained; and Mr. FORSTER, late, unwillingly, and after many Irish and Liberal members had interferred to give him time to find something to say, did at last rise to meet Mr. GIBSON's objections, and to satisfy his inquiries. Practically speaking, the IRISH SECRETARY devoted himself to one point only—the point that the Bill, whatever advantages it confers on the tenants, confers them at the expense of the landlord without in any way compensating him. This is, of course, to put the matter in the largest possible way, but it is for the purpose sufficiently accurate. In particular, the objection has been made on all sides that the proposed tenant-right to be given must, if it have a value at all, have a value representable in money, and that exactly this amount is practically carved by the Bill out of the land-

lord's property. Mr. FORSTER denies this. He goes so far as to say that, if it were so, it would be a very unfair proceeding. But nowhere in his speech did he attempt to prove where the value of this tenant-right is to come from. If it is not to come out of the landlord's pocket, it must come out of the tenant's. That is to say, in the long run, besides paying a "fair rent" to the landlord, the tenant will pay the full balance of the utmost competition rent, in the form of interest on the sum he has paid to an outgoer, and a huge bonus having been given to the present generation of tenants, Ireland will in the future be worse rack-rented than ever. Mr. FORSTER's speech may be described not so much as an answer to Mr. GIBSON's doubts as a panegyric on the Bill. It had the fault of all such panegyrics, that it overlooked what is practically possible. In such cases the three-hooped pot is always to have ten hoops. Landlords and tenants are to be both benefited, and yet the benefit is to come out of nobody's pocket. The Land Court is to dispense absolute justice on the principles of the soundest equity, and yet there is to be no guarantee that it shall not dispense absolute injustice on the principles of decreed iniquity. In the enormous mass of discussion which has been published on the Bill, nothing has more clearly appeared than the arbitrary nature of the powers which this Court is to possess, and the probability of its acting most to the detriment of those who are the best landlords. To these things Mr. FORSTER has really nothing to say, except that he hopes the best things from this best of all possible Courts. Clearly that is not a satisfactory answer. What those who frankly admit that they dislike the Land Bill, but as frankly confess that, in view of the mismanagement of the last twelvemonth, they do not see how some measure of the kind is to be avoided, have a right to demand is, that the powers of the Land Commission shall be more strictly defined and guarded, and that the exact nature and origin of the benefits intended to be conferred on the tenant should be clearly defined. Neither on Monday nor in the somewhat jejune debate of Thursday night was this demand met. Mr. C. RUSSELL, representing the extreme partisans, and Mr. H. BRAND, representing the unwilling acceptors of the Bill, brought objections, but did little more, and the IRISH ATTORNEY-GENERAL repeated the policy of vague panegyric.

There are many minor points, doubtless, on which much discussion may and must take place, but these are the chief. If the Bill, as Mr. FORSTER's rose-coloured view of it represents, is merely meant to settle tenants in their holdings, to reduce confessedly exorbitant rents, to raise others which are unduly low, and to assure the payment of the settled amounts, there would be much room for objection to its principle as a needless and mischievous interference with laws which are quite certain to work in spite of it and to bring on the trouble over again, but there would be little room for complaint of positive injustice. At present there is a very great deal of room for this last complaint, and it is perfectly easy to see why the Government shrinks from facing the difficulty. The truth simply is that the fault of the Bill in the eyes of the Opposition is its merit in the eyes of the Irish party and the extreme Radicals. As the one side fears, so does the other hope, that the landlords will be robbed. No clearer proof of this could be given than the manifesto of the Irish Roman Catholic Bishops, representing as they do the Left Centre, not the Extreme Left, of their party. A demonstration that the landlords will not be robbed would therefore substitute only one class of opposition for another, while a demonstration that they will be robbed would alarm the moderate Liberals. It is, however, the absolute duty of the Opposition to insist on these points being made clear, and to be deterred by no unworthy insinuations as to obstruction from forcing the Government to speak out.

AMERICA.

IF the dead-lock in the United States Senate has a ludicrous side, it may also be regarded by patriotic Americans as a proof of the soundness of their institutions. The only question at issue is the appointment of the Serjeant-at-Arms and of half-a-dozen other officers of the Senate. Neither party pretends to believe that the duties will be better or worse discharged by a Republican than by a Democratic nominee; but both parties are determined that their respective opponents shall not have the pleasure of

the nomination. The Democratic Senators also reply on the hardship which, in their opinion, would be inflicted on the existing officers by removal from their places at the present moment. It had not been expected that any business would be transacted during the Spring Session, and consequently the Democratic Serjeant-at-Arms and his colleagues had thought that their tenure was safe till December. The Republicans reply that the fundamental principle of the right of the majority to govern is involved in the personal and trivial issue. They can out-vote their opponents, but without the minority they cannot make a quorum. The numbers would be equal but for the defection of MAHON, one of the nominally Democratic Senators for Virginia, who represents in his own State the sacred cause of repudiation of debt. According to the Democrats, MAHON is to be rewarded by the appointment of one of his partisans to the office of Serjeant-at-Arms. A Republican colleague probably alluded to the arrangement in the reference to the sale of Mr. MAHON's vote in the Senate. The accused Senator replied that his assailant was a liar and a coward; and he was informed in return that he had lost the power of offering an insult. The altercation formed part of a promiscuous debate on things in general, and especially on the state of parties, which has occupied several weeks of compelled idleness. Day after day long speeches are delivered, sometimes to a very small audience, but there are no Bills, no motions, and no divisions. Happy is the country which can afford to allow its most important legislative body a holiday in mid Session of indefinite duration.

In the meantime the Senate has not lately held an executive Session for the consideration of the PRESIDENT's nominations. Two hundred and forty appointments are consequently suspended, though some of them are probably safe from eventual rejection. Mr. CONKLING is known still to resent the disregard by the PRESIDENT of his influence in his own State, but he has probably not ascertained whether the Democratic Senators will take part with himself or with the PRESIDENT. The main cause of quarrel is the nomination of Mr. ROBERTSON to the place of Collector of Customs at New York. Mr. ROBERTSON, who is an active election-manager, had done good service to Mr. GARFIELD during the Presidential contest, and he had therefore naturally incurred the displeasure of General GRANT's party and of his principal supporter, Mr. CONKLING. The appointment may perhaps have been intended as a challenge to this most formidable rival to Mr. BLAINE and Mr. GARFIELD in the ranks of the Republican party. As a political manoeuvre the nomination seems to have been a mistake, as the Republicans disapprove of an unnecessary schism in their own ranks. As a protest against Mr. CONKLING's theories of Civil Service patronage, the appointment of Mr. ROBERTSON was open to criticism. Mr. GARFIELD, like his predecessor, professes a desire to reform the Civil Service, and a President is likely to be sincere in a policy which tends to establish his own independence; but Mr. ROBERTSON's claims to promotion were exclusively political; and it is not known that the present Collector of Customs was incompetent to discharge his duties. Since his dismissal a memorial in favour of retaining his services has been numerously signed by New York bankers and merchants, who may or may not have been influenced by political motives. As an impartial American writer observes, it may be right to attack CONKLING, but not with CONKLING weapons.

The American Senate so far contrasts favourably with the English Parliament that its constitution is not doomed to organic change and that it is not engaged in revolutionary legislation. A Serjeant-at-Arms is a much more harmless subject of contest than the landed property of a kingdom. Even the larger issues which are raised in American controversies are almost exclusively retrospective. Northern critics affect to be shocked at a book lately published by Mr. JEFFERSON DAVIS in defence of the expediency and lawfulness of his conduct before the outbreak of the war. If the question is to be decided by legal or constitutional standards, there is much to say in defence of secession; but it scarcely seems worth while to revive a dispute which was settled, not by logic or by legal discussion, but by superior force. Neither the North nor the South perceived at the outset that the institution of slavery was at the bottom of the conflict; and probably few intelligent politicians in the South now seriously regret emancipation. Political society in the United

Spain has since attained a condition of stable equilibrium which is enjoyed by no European State, and least of all by England. It is a melancholy task to read the articles in the *Quarterly Review* which not inaccurately recapitulate the progress of democracy and of subversive doctrines. Shame and sorrow may be justly felt that such things should be capable of being said,

Et non potuimus repellere.

The miscarriages and disasters connected with Central Asia and Southern Africa would alone justify feelings of regret and anxiety which are unknown in a country which has, happily for itself, no colonies, no dependencies, and no foreign politics. The best excuse for the persistence of the North in its resolution to suppress the Confederacy, was the determination that the Republic should have no formidable or equal neighbour. American citizens need no such impulse to the cultivation of patriotic pride. The classes which have lately become dominant in England seem to have no sympathy with national greatness or honour. It may be confidently asserted that such a transaction as the Transvaal peace would not have found a supporter in the United States.

The domestic dangers of England are even more serious than any external complication. Squabbles about Serjeants-at-Arms and Collectors of Customs are not only trifling in themselves, but they have nothing behind them. It matters little whether four years hence another now President finds a difficulty in inducing the Senate to confirm his nominations. Whatever may happen in the interval at Washington, the population and revenue of the Union will have largely increased, and the debt will have been reduced to comparatively insignificant proportions. The English Parliament will probably by that time have changed its constitution and its character; and a still more democratic House of Commons will probably have undertaken enterprises more anomalous than even the Irish Land Bill. Mr. GLADSTONE, who has himself denounced almost every existing institution, may perhaps have retired from official life; but he will be succeeded by still more violent politicians. The threatened extension of household suffrage to the counties will have destroyed the power, not only of the Conservatives, but of the Moderate Liberals; and all power will hereafter be vested in the representatives of artisans and labourers. The saying which was once attributed to Mr. BRIGHT, that such a democracy has never yet existed, may perhaps not be authentic; but it is undoubtedly true. The unqualified supremacy of a constituency living on weekly wages has no precedent in any other country, and it would be more menacing to property and order than any existing political organization. Perhaps at some distant period the evils which are reasonably apprehended may tend to cure themselves. In the United States the elections on which power and office depend are not controlled by turbulent demagogues, but managed by professional agents by methods which would in England be deemed correct. The Birmingham machinery, which is now mild for purposes of oppression and exclusion, would be more innocuous if jobbers superseded the ambitious agitators who devised the system. It is conceivable, but scarcely probable, that at some future time an English Parliament might spend the half or the whole of a Session in a contest for the appointment by one of two hostile parties of a Serjeant-at-Arms. America has already attained that enviable condition.

THE WEEK'S ORITUARY.

WITHIN the last few days three men, each famous in their day, although for very different reasons, have passed away. Their careers are worth considering, not only because they played a leading part in great European countries, but because they were each in a special manner representatives of the country, or at least of one important section of the country, to which they belonged. Marshal VON BENEDEK was an admirable specimen of the commanders of a type high-minded, loyal, capable of considerable things, and incapable of very great things, whom Austria has sometimes sent out to victory, and often to defeat. He will be known in history as having lost the great battle of Sadowa, and it will be forgotten that he had previously commanded with success in Galicia, Italy, and Hungary. He accepted his post as head of the home army, in 1866, with

great reluctance, and only on the express order of his sovereign. If the plan of the campaign which he adopted was an obvious one, it was also obviously right, and was very nearly successful. As the Prussian army was coming forward in two halves, it was natural that the Austrian Commander-in-Chief should endeavour to crush one half before the other came up. He failed to carry out his design, partly because he was not possessed of the gifts requisite to infuse celerity into a vast force, and partly because the army itself was so disciplined, equipped, and led that it was ill adapted to move quickly. The fortune of the day, which for hours seemed promising for Austria, was decided when the CROWN PRINCE appeared on the scene. The Austrians fought with the greatest bravery; but they were outmanœuvred, and they had the serious disadvantage of a weapon much inferior to the Prussian needle-gun. Austria had, as usual, got together a force very large and of very good quality. The ease with which, while BENEDEK was defending Austria against the Prussians, the Archduke ALBERT defeated the Italians at Custoza, showed how very strong Austria was against all except an enemy of the first class. But Austria, although in seven years she had repaired the losses of Magenta and Solferino, had never dreamed that it was necessary to have an army of a new kind. There was nothing of the growth of that military spirit, aiming at great achievements, studying every detail, pondering over every combination, and pushing the best men to the front which pervaded the army and the leaders of Prussia. In fact, Austria, like the rest of the world, very much underrated the capabilities of the Prussian army. It had been accustomed to lead in Germany because it had been taken for granted that the Austrian army must, in the nature of things, and in the absence of an exceptional genius like FREDERICK the GREAT, be more than a match for any army that Germany, or a part of Germany, could bring against her. If so, the man whom it seemed in accordance with the established order of things to appoint as Commander-in-Chief would do perfectly well. It was immaterial that the person thus marked out did not feel himself competent. He would, whether he liked his task or not, discharge in a manner satisfactory to Austria the duty of leading an ordinary Austrian army in the ordinary Austrian way. BENEDEK was quite up to the level of Austrian generals, and was perhaps superior to all of his generation except RADETSKY. He went to Sadowa, was beaten, and a new order of things commenced for Europe, for Austria, and for the Austrian army.

Nothing is harder for a nation, in spite of lessons and warnings, than to alter its military system, for the army is the creation of a Government and a people, and to alter the army it is necessary that the Government should undergo a change of policy and the people a change of character. If Austria had not learnt enough in time to anticipate Sadowa, France did not trouble itself to learn enough after Sadowa. The EMPEROR was probably better aware than any one else in France how little the lesson of Sadowa had been taken to heart. He was as reluctant as BENEDEK to enter on a campaign which caused him many anxious forebodings, and, like BENEDEK, he entered on his task in deference to influences and to considerations which left him, as he thought, no option. In part, he was led astray by a political miscalculation, for he thought that the South German States would either hold aloof, or openly side with him if he won a first success. In part, he was deluded by a military misconception, for he thought, and thought with apparent reason, that South German troops, even if they did fight against him, would not prove very formidable enemies. They at least had not been among the victors at Sadowa, and it might have been fairly said that Sadowa had taught, not that Germans generally, but that Prussians only, were dangerous. General VON DER TANN and his Bavarians were at Sedan, but then they were supported by the main force of the triumphant Prussians. It was only after Sedan that the General and his South German troops showed what they could do, when inspired by the example of Prussia and perfected by incorporation into the system of Prussian organization. For a short, but most critical, time the issue of the war, the issue whether France should close the war altogether crushed or not, depended on VON DER TANN and his men. The French had got their new army ready on the Loire, and the German army was mainly occupied with the investment of Paris and the siege of Metz. It was mainly the task of VON DER TANN to hold the army of the Loire in

check until the surrender of Metz set free an overpowering force of German troops. If the army of the Loire had not been held in check, the investment of Paris must have been abandoned. With great skill, with very great patience, persistence, and courage, the Bavarian leader held the army of the Loire in check until succour came up. It is true that VON DER TANN had mainly raw levies opposed to him, and that the new army was under the command of a general of moderate experience, reputation, and capacity. It is also true that Metz surrendered for political, and not military, reasons much earlier than it ought to have done, and that it was thus by a stroke of good fortune that VON DER TANN was helped as soon as he was. But, as things turned out, he so resisted as to gain great credit for himself and his troops, and he resisted long enough to save Germany from a prolongation of the war. And, as it happened, the service he rendered to Germany was political as much as military. He may be said to have been one of the chief founders of the German Empire. Of course, if he had not prevented the abandonment of the siege of Paris, there could have been no crowning of the German Emperor at Versailles. But this was not only or the chief sense in which he contributed to found the Empire. The basis of the new Empire was that the Royal family of Prussia should be placed at its head, as representing German States large and small, all of which had pretensions to independence, and had justified their pretensions by arms. Bavaria could regard Prussia on the footing of an equality, if not of force, yet of worth, and not in the humble attitude of a partner in the struggle who had done nothing towards a partner who had done everything. In founding the Empire and being merged into it, the smaller States could maintain their self-respect, and that this should have been possible was due to VON DER TANN more than to any other one person.

If the French Government had not largely profited by the lesson of Sadowa, the French people had never imagined that there was any lesson of Sadowa by which to profit. They shouted "To Berlin" as comfortably and gaily as they might now shout "To Tunis" had not times changed and they changed with the times. Nor was it only the foolish and ignorant who raised the cry. No one shouted and screamed so loudly as the recognized leaders of French popular opinion. Of all the screamers, the loudest and the fiercest was perhaps EMILE DE GIRARDIN, the cream of the cream of popular journalism. He has now died peacefully and happily, after a career singularly prosperous, influential, and interesting, if to give facile and impetuous utterance to any opinion that comes uppermost, and to find each successive utterance eagerly echoed by others, gives interest to life. No French critic would have admitted that EMILE DE GIRARDIN was the best writer or nearly the best writer that the press could boast; but every critic would have allowed that EMILE DE GIRARDIN was a complete embodiment of all that makes French journalism especially French. He was bold, independent, vivacious, very dogmatic, and very capricious; thought just enough to write well, and wrote well enough to permit him to think as badly as he pleased. He got over his professional duelling when he killed ARMAND CARRÉL; and he was a master in the art of starting a journal, selling it, and starting another. He had no kind of scruple in turning suddenly from one point of the political compass to the other, for he could sell the expression of one opinion as well as that of another, and he was supported by the consciousness that the opinion he expressed was always his real honest opinion at the moment when he wrote. He was as far as possible from being a hack-writer, for he owned the papers in which he wrote, and he could sell a paper, whatever he might write in it. He had thus two of the greatest recommendations a journalist can have. He was found to be entertaining, and he was believed to be honest. He gained an importance which he greatly enjoyed, and he persuaded Frenchmen that it was a part of their day's work to find out what EMILE DE GIRARDIN had to say. Good judges could not expect to find much that was valuable in the expressions of his impromptu and momentary creed, but it was always possible that he might be saying something that was telling, and that an indefinite number of readers might repeat as of their own. On two or three occasions of his life he exercised incontestable influence on popular opinion. He gave voice to that reaction against the sternness of

CAVAIGNAC which paved the way for the election of LOUIS NAPOLEON. He rallied to the Liberal Empire, and believed in the crowning of the edifice when his rallying and his belief were of real service to the Empire. He threw himself heart and soul into the struggle of 1877 against reactionary intriguers, and the adherents of the present governing party freely admit how greatly they were indebted to his vehement and unsparring aid. He was thus, in an intelligible way, the greatest of French journalists, and perhaps he was the last of the journalists of his type. Life is too serious in France for another EMILE DE GIRARDIN to find with ease his proper sphere. There is abundance of vehemence and bitterness in French journalism; but it is expected to flow in the channel in which it first takes its course. There is no shouting "To Tunis" now, for the shouters would be afraid that their cries might be heard at Berlin. Everything in this world comes to an end; and the common fate has apparently overtaken such journalism as that of EMILE DE GIRARDIN.

ENGLISH LAND.

PROJECTORS, not satisfied with the realization in the Irish Bill of their wildest dreams, continue the agitation against the tenure of land as it exists in Great Britain. In his Budget speech Mr. GLADSTONE, while he intimated his future design of imposing additional taxes on landowners, excused the postponement of fiscal changes by alleging that they would form a part of a more comprehensive scheme. The extent of the proposed legislation is indicated by the cold support or positive opposition offered by the Government to Lord CAIRNS's Bill for removing restrictions on the alienation of land. The transfer of discretion in selling settled lands from trustees to tenants in possession would, if the opinions of theorists are well founded, bring a large additional quantity of land into the market; but measures which are not directed against the continuance of life-estates appear to the Government, or to its advisers, insufficient. It is doubtful whether the economic and sentimental causes of the accumulation of landed property will be practically counteracted by any interference which falls short of the Continental method of compulsory subdivision; but the burdensome Succession duties which will probably be imposed by the present Government may perhaps tend to break up family estates. Down to the present time owners have rarely been inclined to sell portions of their property for the purpose of clearing off incumbrances or of improving the remainder; but if three or four per cent. on the capital value of land were charged on every succession, it might sometimes be difficult to raise the money by mortgage. It is also possible that the startling provisions of the Irish Land Bill may alarm landowners into an abandonment of their hereditary prejudices or instincts. When the doctrines of political economy are relegated to Saturn and Jupiter, the advantage of purchasing or possessing land in a better known and more lawless planet will perhaps become doubtful. Fifteen months ago an eminent orator provoked surprise and indignation by the gratuitous statement that landowners might justly be expropriated, if it were thought expedient to divide their estates among occupying freeholders. It was justly thought necessary to anticipate a contingency which the speaker himself professed to consider improbable. Circumstances change so rapidly that Irish proprietors would now gladly submit to the seizure of their land, if only they could secure compensation, which is not even mentioned in Mr. GLADSTONE's Bill. Timid English landlords may perhaps be disposed to anticipate the time when a Government, anxious to appease popular clamour, may make the tenants a present of a half or a third of the property of the owners. It is true that a theory of customary tenure has been invented to excuse or explain the project of confiscation in Ireland. For the present, English tenants are allowed to depend on contract; but the special conditions of the Irish precedent will be explained away when the time arrives for spoliation in England and Scotland. Mr. BARCLAY and the Farmers' Alliance have begun not indistinctly to point to fixity of tenure as one of the objects of their agitation.

The more modest or plausible claims which are urged on behalf of tenant-farmers have within two or three years lost much of their force. The evils of limited ownership

have been habitually exaggerated, though few projectors have gone so far as Mr. ARNOLD, who hopes by means of subdivision of land to increase the population of the United Kingdom by five millions. It cannot be denied that in some cases a life-tenant has been less able than an owner, in fee to do justice to the land. The process of borrowing money for improvements under modern Acts is cumbersome and expensive, and the interests of younger children not unfrequently clash with the object of improving land for the benefit of the heir. As a matter of fact, great settled estates are for the most part liberally administered; and in England, as in Ireland and in Flanders, small landlords are the most exacting; but there has been some foundation for the complaints which are loudly and constantly repeated. At present it is almost useless to inquire into special impediments which affect the expenditure of capital on land. With falling rents, and with the abandonment on a large scale of arable cultivation, few landowners have either the means or the inclination to sacrifice capital in addition to the loss of income. The absurd proposition that the produce of English soil might be doubled by improved cultivation has become irrelevant, as it was always practically untrue. Unless the gross produce can be increased without a more than proportional increase of cost, it is idle to discuss physical possibilities of artificial cultivation. Since the great fall in prices, which has followed on a great increase in the cost of labour, it is more than doubtful whether high farming is profitable; and the permanent improvements which the landlord is expected to make in many cases fail to return an income on the outlay. When a naturally fertile soil is saturated with moisture it is possible that it may still be worth while to drain; but drainage costs, on an average, from 8*l.* to 10*l.* an acre, and it ought to produce as many shillings of rent. At present a tenant is seldom disposed to pay interest on such expenditure; or, if he agrees to the arrangement, he is likely in a year or two to require, on some other ground, a reduction of rent. The improvement of roads or farm buildings, making no direct addition to the productiveness of the land, is still less tempting to a prudent landlord. Notwithstanding the voluminous incubations on landed property which have been published of late years, the owners of land have not been educated into the belief that they are public functionaries, with duties entirely unconnected with their interests. Those of them who have retained a smattering of economical knowledge since the science departed from the earth even doubt whether it is for the general advantage that they should improve land, except when their operations tend to the increase of their own revenues. At present it is only in rare instances that so-called improvements will pay.

The managers of the Liberal party are naturally proud of their successful efforts to detach the farmers from their ancient and natural alliance with the Conservative landlords. The diminution of the majority at the West Cheshire election may perhaps have been caused by the hopes which are founded on the violent provisions of the Irish Land Bill; yet it is possible that the tenants may find that their interest is not identified with the cause of democratic change. Before the next general election they will have been practically disfranchised, as the landlords were deprived of political power by the introduction of the Ballot. The highest class of occupiers will find that large farms are naturally connected with large estates; and they can scarcely hope to be supported by the labourers under a system of household suffrage in any scheme for the acquisition of the land. It would not be for their benefit that the great landowners would be expropriated. Few of them, if they had the choice, would become owners of their farms on fair terms of purchase. It can scarcely be advantageous to any person engaged in an industrial occupation to sink a large portion of his capital in an investment at the lowest rate of interest. As an ingenious writer has lately contended in a series of letters to the *Times*, the most profitable tenure by which a farmer can hold is to pay a rack-rent, or, in other words, the annual value of the land. The landlord receives and the occupier pays about three per cent. on the capital represented by the land. Farmers have also learned by recent experience the unexpected lesson, that in times of difficulty they may detach themselves from the land, so as to anticipate the ruin with which they might otherwise have been threatened. The numerous tenants who have within two years thrown up their farms must have continued the business when it ceased

to be profitable if they had been freeholders as well as occupiers. Some of them were bound by engagements for terms of years; but agricultural leases are for the most part one-sided contracts. The landlord must in any case perform his covenants; but there is, in the majority of cases, no use in insisting on the obligations of a leaseholder who complains that he is farming at a loss; on the whole, it is probable that the agitation of the farmers for advantages to be obtained at the expense of the landlords will subside before it has produced any considerable effect. It is possible that hereafter more revolutionary changes will be attempted by more formidable numbers. The division of England into petty freeholds would be a comprehensive and doubtful experiment. The most certain result, or rather the preliminary condition, would be a large diminution in the class of tenant-farmers, which will have been previously deprived of political power.

THE BRADLAUGH DIFFICULTY.

MR. BRADLAUGH has once more presented himself in his favourite character of the Radical HELEN, the fatal but fascinating person who brings Governments into disaster and parties into disarray. The difficulty which has been experienced for the second time in adding this particular sheep to the flock appears to have completely upset, at least for some considerable time, the never very stable equilibrium of Mr. GLADSTONE's temper. That temper was sufficiently irritable on Monday night; but the fretfulness of the PRIME MINISTER was fairly explained by the unlucky accident which had deprived him of the power of performing one of those rare acts of graceful generosity the opportunities of which English statesmen justly prize, and on the discharge of which they specially pride themselves. On Tuesday, however, Mr. GLADSTONE must surely have recovered from the vexation of having to commit the task of announcing the intended monument to Lord BEACONSFIELD to the hands of Lord RICHARD GROSVENOR. Perhaps his inability to attend the funeral brought on a new access of irritability. Perhaps his equanimity was upset again, and still more seriously, by the defeat he met with. The epigrammatic historians of the last century, who strove to imitate SALLUST and TACITUS, would probably have defined Mr. GLADSTONE as "strenuous in obtaining great victories; impatient in the sufferance of the smallest defeats." The PRIME MINISTER relapsed into his last year's mood of sulkiness inactivity—a mood which may, with much aptness and every disclaimer of disrespect, be compared to the well-known "then-I-won't-play" attitude of childhood. The majority, as Mr. GLADSTONE satirically designated his enemies, had acted for themselves, and they must take the consequences. Therefore the SPEAKER was left without the assistance of the leader of the House in carrying out its orders; an unseemly wrestle took place on the floor; and Sir STAFFORD NORTHCOTE had to come once again to the rescue. Mr. GLADSTONE's contribution to the carrying on of the QUEEN's government and the national business was confined to one of his familiar protests against being instructed in his duty by any one. The folly, to say no more, of such conduct as this can be illustrated by a very simple dilemma. If the rebuke to Mr. GLADSTONE conveyed by the division was so severe as he seems to have considered it, his proper course was resignation; if, as is obvious, this is absurd, his proper course was to bow to the will of the House, and to remember that the leader, not less than the Speaker, of the House of Commons is its servant and not its master.

The merits of the case were so clear that only Mr. GLADSTONE's expectation—an expectation justified, it must be allowed, by the general conduct of his followers—of implicit obedience on the part of his party could have led him to expect a favourable division. When the advocates of Mr. BRADLAUGH's admission are driven to represent his exclusion as an inquisitorial proceeding, to suggest that the late Mr. MILL ought to have been excluded likewise, and so forth, the desperate weakness of their position is as good as confessed. It is not on record that the House had any official cognizance of Mr. MILL's religious opinion; nor has it been proposed to inquire into the religious opinions of any one who presents himself to take the oath. The entire proceedings in the matter of Mr. BRADLAUGH are integral.

and each of them as have taken place out of the House of Commons are but parenthetical passages, inseparable from the rest. It was the House which—with very doubtful wisdom, it must be confessed—delegated formally to the law courts the duty of examining into Mr. BRADLAUGH's case. It was before those law courts, thus representing the House, that Mr. BRADLAUGH voluntarily and solemnly declared himself a person on whose conscience an oath is not binding. To say after this that the House is not officially cognizant of Mr. BRADLAUGH's atheism, or that a confessional is being set up at the door of the House of Commons, is simply childish. The very journals and speakers who adopt this untenable ground admit that, in their own judgment, Mr. BRADLAUGH, by the manner in which he has conducted himself in this matter, has forfeited their sympathy, and cannot be regarded as a martyr for conscience sake. There was, therefore, no conceivable reason why indulgence should be shown to him or why the House should feign ignorance of what was unmistakably and unavoidably before it. Such an argument, resting as it did on premisses false in fact, is even feebler than the absurd quibble that the House has power to expel, but has no power to refuse to admit. Even if the power of expulsion did not necessarily imply the power of refusing to admit, there is no reason whatever for limiting the sovereignty of the House over all subjects affecting its own members. The question of the dignity of the House has been pooh-poohed; in reality, it is the kernel of the whole matter.

It was perhaps a sense that the defeat in numbers was for once only symbolic of a complete defeat in argument which made the tone of the Government much milder on Wednesday than on Tuesday. At first, it is true, Mr. GLADSTONE showed himself to be in an even more disturbed state of mind than on the previous night. He threatened the Irish members with delay of the Land Bill as a consequence of, or a punishment for, their conduct in the division; he rated an unfortunate member of the Opposition for daring to express by a laugh the opinion that the PRIME MINISTER's demand for a pledge of capitulation was a little surprising, and he generally showed his soreness at his defeat. On this occasion, however, Mr. BRIGHT, who on the night before was in the thickest of the battle, was, as the telegraph lately described the King of ASHANTEE, "quite peaceful." Perhaps the prospect of the Fishmongers' dinner soothed Mr. BRIGHT. Perhaps he perceived the extreme danger to his chief's reputation of a mere attitude of sulky petulance. As was pointed out last year, the evident desire of the Government is to get their *protégé* in without being obliged as a Government to propose the further relaxation of the oath. It is possible that Mr. GLADSTONE, owing to a remnant of antiquated prejudice, shrinks from drawing his own pen through the name of GOD in the admission forms of the House of Commons. It may be that he doubts the effect of such a proceeding on his supporters. It is certain, on his own authority, that he thinks the elimination of the Deity would take a great deal of valuable time, which had better be spent upon existing measures of a more practical nature. He therefore, at first, refused to give Mr. LABOUCHÈRE any facilities for his enabling Bill unless the Opposition would pledge themselves to accept it without a murmur. This astounding demand was, of course, met as it deserved. There may be differences of opinion on the Opposition benches as to the propriety of altering the test, there can be none as to the impropriety of pledging a whole party to accept before seeing it a measure which the Government dare not, or do not choose to, introduce on their own responsibility. Mr. BRIGHT, however, though he too expected rather unreasonable things, was less absurd in his expectations, and a great deal less pugnacious in his manner, than Mr. GLADSTONE; while the efforts of Mr. PETER RYLANDS to take a high tone naturally did not greatly exasperate any one on the Opposition benches. The fate of any such Bill as seems to be indicated need not here be prophesied, nor need its merits or defects be discussed. But it may be pointed out that the Government (that is to say, Mr. GLADSTONE) will have, whether they like it or not, to make up their minds, and boldly to adopt the proposal to admit atheists (by way of being consistent, Republicans, too, ought to be admitted) to the Parliament of Great Britain. Their desire to run with the hare and hunt with the hounds, to enjoy the advantage of Mr. BRADLAUGH's society and countenance, without the disadvantage of identifying

themselves with his opinions, has on two separate occasions wasted a great deal of time, brought upon them humiliating defeats, and convicted their chief of an almost incredible want of the faculties either of a statesman or of a party leader. They will hardly risk a third disaster. The incident is a deplorable one in many ways, and an unpleasant sign of the times. But it is at least instructive to those who have eyes to see as to the incurable duplicity which besets a Liberal Government which strives to conciliate Radical opinion. The one thing which the present Government has steadfastly refused to do is to play *cartes sur table*. It is, no doubt, by accident that it has had the appearance of keeping back evidence and of manufacturing evidence in matters of foreign policy. It seems to refuse to explain the actual bearing of its Irish Land Bill. It ostensibly shrinks from assuming the responsibility of writing "There is no God inside these walls," on the door of the House of Commons. In all these cases it is possible that Mr. GLADSTONE and his colleagues have been the victims of circumstance and of that maleficent influence of office which Mr. BRIGHT pathetically described after dinner on Wednesday. But it is at least conceivable that a remote posterity reading the records of the present Administration, and drawing unguarded conclusions, may describe it as an "organized dishonesty." If any future historian should be so misguided, one of his principal documents will undoubtedly be the pages of *Hansard* which record the events of the BRADLAUGH debates of 1880 and 1881.

THE FRENCH IN TUNIS.

THE French have entered the territory of Tunis and the war has begun. In some subtle sense there is no war at all. There is merely an expedition to punish marauders who live on a strip of land between Algeria and Tunis, and who only acknowledge the authority of the BEY when it pleases them. They are to the BEY what the BEY is to the Porte—rebellious, independent, or dependent, according to the convenience of the hour. They made a raid into French territory, and killed, not only French Arabs, but French soldiers. The French determined to inflict chastisement of a kind that would at least prevent raids for the future; and when the brother of the BEY arrived and invited the Kroumirs to submit to the authority of the BEY, they replied that they were quite willing to submit to the BEY in other things, but that, if the French attacked them, they would defend themselves. The French had no choice but to carry out their punitive expedition, and on Tuesday the French force crossed the boundary, and a series of petty skirmishes began. The Kroumirs fought well—after their savage fashion. They knew the ground, and made the most of the advantages which the ground gave them. Creeping through the brushwood they discharged their muskets, and then slunk into the brushwood again and were no more seen. At one point they got between two companies of French infantry and were destroyed to a man; but in the main they endeavoured, not so much to stop the French advance, as to make it hazardous and laborious. They are greatly assisted by the configuration of the land, which consists of ranges of barren mountains intersected by ravines at once abrupt and sufficiently covered with vegetation to give shelter to those who are on the watch for their enemies. They are still more assisted by the climate; for the heat is intense, and heat provokes agonizing thirst, and to drink the cold water of the streams in the heat is almost certain death. One of the French commanders has already had to return invalided, and the task that falls on the officers of preventing their men drinking water is more arduous than that of meeting and beating the Kroumirs. In order to shorten their operations, the French have thought it necessary to secure the means of cutting off the Kroumirs from receiving arms and food. To do this, they have taken steps which, as the BEY plaintively protests, are somewhat inconsistent with the state of peace which he is assured still prevails between France and Tunis. They have bombarded his fort of Tabarca, they have occupied his town of Kef, and disarmed his garrison. Neither at Tabarca nor at Kef did the BEY's troops offer any resistance. At Tabarca the garrison waded from the island along a spit of sand to the main-

land, when the firing began. At Kef the garrison consented to be disarmed, with the exception of one Arab, who did not on the spur of the moment understand why he was to be disarmed by people at peace with his Bey, and had to be killed. If the Bey wanted a justification for going to war with France, he has any amount of justification he could ask. But he does not want to go to war with France, and France does not want to go to war with him. When the French Consul at Tunis proposed that, to secure order, a force should be landed at Goletta from a French man-of-war, the Bey replied that he preferred to maintain order himself, and the Consul at once acquiesced in the refusal, on the ground that it was entirely for an independent prince like the Bey to choose whether a French force should enter his capital or not. The French have committed acts of war against the Bey, but they contend that they have only committed such acts of war as were necessary to make their expedition against the Kroumirs successful. The Bey would not aid them by inviting them to occupy such positions as were necessary for the purpose, and so, with as little display of force as possible, they occupied Tabarca to cut off the supply of ammunition, and Kef to cut off the supply of food. It cannot be said that the French have as yet done anything at variance with their alleged purpose of confining themselves to the chastisement of the Kroumirs. All they have done is, for the purposes of their expedition, to treat the Bey as if he did not exist.

The BEY has eagerly invoked the assistance or intervention of the European Powers, and has pointed out with irresistible force that the French have not obeyed the ordinary rules of international law. The Powers have turned a deaf ear to the appeal. They think that the French have a legitimate excuse for punishing the Kroumirs, and they are not inclined to help a petty African prince to make objections which, if allowed, would render its process of punishment difficult and protracted. Further, the BEY has appealed to the Porte, of which it now suits his convenience to declare himself the abject vassal. The Porte, so far as diplomatic forms go, has responded to the appeal. Its representative at Paris has remonstrated with M. BARTHÉLEMY ST.-HILAIRE against the violent measures to which its vassal has been subjected; but, on the other hand, to show at once its own power and its desire to please France, which has recently been befriending Turkey in the Greek negotiations, it offered to depose the BEY, and appoint his brother to reign in his stead. The BEY will thus learn that there are inconveniences as well as conveniences in the vassalage of which he has suddenly become so enamoured. The French Minister, if the report given of his reply is accurate, made a very crushing answer to the representative of Turkey. He said that it was a trap that was being set for France, but that a trap set in the face of an old and wary bird was set in vain. To accept the offer to depose the BEY was to acknowledge that the Porte had the right to depose him. It was to recognize that Tunis stands to Constantinople as Egypt stands, and this was what France never had recognized and never would recognize. The claim of the Porte to a suzerainty over Tunis was, in the eyes of the French Minister, a novelty set up in 1871. Just as Russia during the German war got her gain out of the weakness of France by annulling the provisions of the Treaty of Paris relating to the Black Sea, and Italy got her gain by putting aside her engagements with France and occupying Rome; so, directly the war was over, the Porte thought it might venture to gain something in the same way, and proclaim that Tunis belonged to it and was under its protection. Even at that time, when France was crushed, the French Government altogether declined to admit the pretension of the Porte, and it is not likely that it will admit it now that France has recovered its strength, and is able to make its will prevail, at any rate with the smaller Powers. The claim of the Porte is thus, in the view of the person who is entitled to speak for France, not only baseless in itself, but a manifesto of French humiliation. M. ST.-HILAIRE, therefore, gave the Turkish Minister to understand, as plainly as language could express it, that he could not discuss the affairs of Tunis for a moment on the footing that Turkey had a special authority over Tunis. Turkey is a Mediterranean Power, and a Mahomedan Power, and in these qualities she can speak of Tunis as much as she likes, but not in the quality of the guardian, protector, and suzerain of Tunis. The Turkish Minister

accepted with diplomatic suavity the position created for him. As France would not discuss the matter on the footing which he was instructed to maintain, he forbore to say a word more, and was sure that Turkey had no wish to offend a Power from which she had recently received such essential service. Thus the interview terminated in the pleasantest manner. France had asserted her views, and Turkey had consented not to abandon, but to keep silence as to, her views; and this was the end of the conversation on which the BEY had fondly placed his hopes between those who are anxious to protect him by coercing him and those who are ready to depose him.

The Firman of 1871 was recognized by England, as well as by the other Great Powers, with the exception of France, and therefore an English Minister like Sir CHARLES DILKE naturally speaks of Tunis as a vassal State. It may be added that, as a mere piece of historical accuracy, the claim of Turkey to the suzerainty of Tunis seems to rest on better grounds than M. ST.-HILAIRE was ready to allow. But, when it comes to a practical question, and the Great Powers have to consider whether they shall uphold the claims of Turkey or not, against France, they wisely consider what is expedient for themselves. It is evidently much more convenient to them that, if possible, no new extension shall be given to the interminable Eastern question. It is no part of their business to uphold the claims of the Porte when their own interests are not touched, and they seem all to have perceived at once that they had no interest in treating an attack on the BEY as an attack on the Porte. They did not interfere with the protest made by the SULTAN as suzerain, but some of them, at least, gave the Porte to understand that the protest must be considered only as a matter of form. A section of the Italian press has taken a sudden fancy for the Porte, and speaks of the French invasion as a monstrous violation of rights guaranteed by Europe. But, so far as is known, this is not the language of the Italian Government, or of the Government of any Great Power. Germany openly says that she would like to see France annex Tunis, as the French might see in Tunis a compensation for the loss of Alsace and Lorraine, and be thus kept happy and quiet. Austria and Russia are probably very indifferent to what may happen in Tunis, or, if Austria might be inclined to different views, it has, in this as in other matters, to follow the imperious lead of Prince BISMARCK. There remain Italy, which has very serious interests at stake, and England, which is not directly interested in Tunisia, but has very strong motives not to let the interests of Italy be sacrificed. Italy is not strong enough to get attention for her representations at Paris, but England is; and England has taken the only practical and useful step that was open to her, and has obtained from the French Government an assurance that nothing more than the punishment or subjugation of the Kroumirs is contemplated. The French Government may have been glad, for its own sake, to give this assurance. It affords it an opening for getting out of its difficulty at an early moment. The expedition, though not disapproved, is by no means strongly approved in France; and now that the new army has been tried, and it has been ascertained that even the raw recruits, although at first confused, soon got steady and behaved admirably, the French will have something to rest on with satisfaction; and, when they have done what they say they mean to do, may be very well pleased to do no more.

SHOOTING IN THE ARMY.

IF the question were not so exceedingly serious, there would be something irresistibly comic in the discoveries which are constantly being made about the English army. No matter what it is that has to be done, the moment the need arises it turns out that the particular thing is wanting which can alone enable us to do it. If reinforcements are wanted at a moment's notice, the regiments first on the roster have only half their complement of men. If a sudden demand is made on the endurance of the troops, it is found that they have not the physical strength which, in the majority of men, is the foundation of endurance. The latest revelation was made the other day when it appeared that, by the side of the Boers, our soldiers were wholly unable to hit the objects at which they aimed, or even to aim at the objects which they wished to hit. This is the most wonderful,

perhaps, of all the wonderful things that have come to light about the army. It was known to be small; it was known as regards its recruits to be young and weak; it was known to be very imperfectly equipped with some of the first essentials of warfare—as foreign armies count essentials. But it was not known that the individual soldier, even when his training is complete—the individual soldier, that is, who is of full age and of full height, and of full measurement round the chest, and who has neither deserted nor been sent to prison—might still be worthless when pitted against hastily raised levies, when these hastily raised levies happened to be able to shoot. That was a fact which, after all our experience of the injudicious economy which gives us the costliest and the least efficient army in Europe, could still excite surprise. There are some things which it takes an actual campaign to bring to light. The troops seem to do their work all right, so long as they are at home, and it is only when they get into the field that the weak place makes itself visible. But this cannot be said of a deficiency in shooting power. Shooting with arms of precision is not a faculty that comes to a man he does not quite know how. It is a matter, not of chance or intuition, but of training and practice, and as such it depends on the nature of the one element and the amount of the other. The revelations which have appeared in the *Times* during the last ten days show that if the public had known what opportunities of training and practice in shooting are enjoyed by English soldiers the disaster at Majuba Hill might have been foretold almost with confidence. The Boers were marksmen, the Englishmen were not. Consequently the Boers brought down their men at every shot, while the English fire did scarcely any execution. Nothing takes the heart out of troops more than the discovery that they are simply so many irresponsible targets. If they could have resorted to the bayonet they might have regained their confidence; but before the bayonet could be used there was a space to be crossed on which the enemy's fire suffered no man to live. Against experts like the Boers the British volleys went for nothing. Our men might as well have been armed with the old Brown Bess as with rifles of the utmost accuracy which they did not know how to use.

That they did not know how to use them was in no sense their fault. Good military shooting requires three things—the ability to hit an object when the distance is known, the ability to make a good guess at the distance, and the ability to combine these two powers in circumstances resembling those of actual warfare. No pains seem to be taken to make an English soldier perfect in any one of these elements. In the first place the amount of practice at the target is very much less than it ought to be. Many skilled Volunteers fire, it is said, as many as 2,000 rounds in the year, and none as few as 200. The regular soldier fires 90 rounds a year—that is, a little over 500 rounds in his whole time with the colours. This is not enough to make him a good shot, even at a fixed target, with the proper decoration of bull's-eyes and rings. But, supposing that these 90 rounds were enough for this purpose, and that an English soldier did learn some appreciable time before passing into the Reserve how to fire at a target with a reasonable probability of hitting it, he would have mastered only the rudiments of military shooting. The targets at which he will have to fire on a campaign will not be fixed. He must dismiss all thought of the familiar markings from his mind, and learn to fire at any object, however inconspicuous, which promises to be or to belong to an enemy. More than this, he will have to ascertain for himself how far off the object is, and to sight his rifle accordingly, and to do all this amidst the excitement, probably the wholly new excitement, of a battle. No kind of training can give him the experience he needs in this latter respect, but he is not even given the experience which, with a little expense and trouble, might be brought within his reach. The practice at the target is pretty nearly all the practice he gets, and practice at the target leaves him just where he was as regards firing when skirmishing. Major DAUBENEY suggests that the proper targets for soldiers would be dummies placed behind rocks, or in hollows, or on the side of a hill, in positions as nearly as possible resembling those in which a flesh and blood enemy would be discovered. If the men were then to advance firing to within a certain distance of their supposed foes, the con-

dition of the dummies when the halt was sounded would be an excellent test of their proficiency. The suggestion is so simple that the wonder is that it should be necessary to offer it. That soldiers should be accustomed to the mimic warfare of a sham fight in which they do nothing but blaze away with blank cartridge, and be denied the mimic warfare in which they would be really learning to fire with ball, is one of those unfathomable mysteries in which English military administration is so strangely rich.

The third point in which practice is essential to good shooting relates to the circumstances under which the shot is delivered. When the object of shooting is to win a prize, these are necessarily quite different from what they are when the object of shooting is to win a battle. In the former case the utmost care has to be taken that the soldier should be perfectly undisturbed, with his wind in the best possible order, and every muscle under proper control. In the latter case, the first two of these conditions can never be secured, while the first is only to be had in practised soldiers. The German system of instruction takes this difference into account, and endeavours to reproduce it during musketry practice. One of the German directions provides for firing immediately after a charge, while the men are still out of breath. In our army this would be regarded as a sheer waste of good ammunition. Why should the men be made to fire just when they were least likely to hit the mark? That it is precisely when they are least likely to hit the mark that they will have to fire in battle is dismissed as an irrelevant consideration. As the *Times* very well says, "The troops attacking Laing's Nek arrived in front of the Boers with weary limbs and panting breath. Then, like the Germans, part of their practice should be after rushes, and when their breath is hurried." The General Order which has just been issued leaves all these shortcomings where it found them. It does not alter the number of rounds annually fired, it does not substitute movable dummies for fixed targets, it does not provide for any combination of musketry instruction with the ordinary movements of actual fighting. Whatever is needed to make the shooting of the English infantry soldiers what it ought to be, and what the shooting of other armies is, still remains to be done. Perhaps among the host of useless questions with which Ministers are daily beset, some officer of weight may think it worth while to ask whether Mr. CHILDERS proposes to make any further move in a matter which so nearly concerns the military efficiency of England.

M. GAMBETTA ON EDUCATION.

M. GAMBETTA is apparently of opinion that what he has already done is not enough to keep his name before the public upon the eve of a general election. It is only on rare occasions that the PRESIDENT of the CHAMBER of DEPUTIES finds it convenient to descend from the chair, and take his turn with other speakers. If he did so too often, he would be forced to deliver himself with more clearness and precision than at present suits him. What he prefers to do is to make speeches upon all manner of non-political occasions, into which he can introduce just so much reference to public affairs as is needed to support those eloquent generalities which sound so fine and mean so little. In this way he is committed to nothing, while at the same time it is impossible that the dullest elector, provided he reads his newspaper, should forget his existence. Englishmen will probably think the usage of their own country preferable to that which M. GAMBETTA has introduced into France. Occult influences have often enough been brought to bear upon Governments; but M. GAMBETTA is the first conspicuous instance of an occult Government. The business of the country is understood to be carried on in precisely the way he wishes, but his own explanations of what that way is go no further than a repetition, which even his oratory can but just save from being tedious, of the glories of universal suffrage. If what is done by the subordinates whom he allows to call themselves Ministers turns out well, M. GAMBETTA is ready to take the praise. If it turns out ill, they are paid to bear the blame. A politician, whose eloquence consists of endless variations upon the theme that the people can do no wrong, can hardly fail to find himself on the winning side.

M. GAMBETTA's latest effort of this kind is a speech at the

Congress of a "League of Instruction," which has just been sitting in Paris. It would be idle to go to this speech for any account of what the League of Instruction is, but as this is a matter which has only a local interest, there is nothing to regret in the omission. The presence even of a few statistics would have lessened the specific impression left by M. GAMBETTA's rhetoric. Such displays succeed best when they are wholly unweighted by any reference to facts or figures, and no one appreciates this useful truth more accurately than M. GAMBETTA. A prosaic person who had spoken earlier in the day had alleged as one of the reasons for supporting the League the necessity, as Mr. Lowe once said, of educating our masters. France is governed by universal suffrage, and unless those whose votes determine how she shall be governed are enabled to determine it intelligently, all manner of public evils may follow. M. GAMBETTA is evidently of opinion that it is not respectful to a master to speak of educating him. Worse still, such language may be twisted to imply that the gift of mastery should be withheld until the recipient is capable of exercising it properly. Universal suffrage, he declares, being a right, must be exercised independently of all considerations of fitness. Still, though it is not permissible to say that the electors need education, M. GAMBETTA is anxious that they should be educated. Their decision must be accepted under any circumstances, but it may be accepted with greater pleasure, though not with greater submission, if those who give it know something of the questions upon which they have to pass judgment. Politicians are not bound any more than judges to pronounce upon hypothetical cases; but it would be interesting as a matter of speculation to know what M. GAMBETTA would say of universal suffrage if it were to decree the dissolution of the Republic. Probably he would maintain that, under some special circumstances which he would be quite able to invent for the occasion, what appeared to be a decision given by universal suffrage was, in fact, nothing of the kind.

We have no wish to say anything against education considered as a preparation for the discharge of political duties; but there is undoubtedly a fallacy lurking in the double sense in which the word is employed. Of this fallacy M. GAMBETTA made liberal use in his speech. He painted in the brightest hues the august and magnificent task of the teacher who gives an education from which chimeras, sophisms, and the absolute are alike banished—an education which is made of the "lion's marrow" of positive science. As a Republican critic has pointed out, this lion's marrow only embraces in the great majority of cases the positive sciences of reading, writing, and the four first rules of arithmetic. This amount of education is useful in a small way to its possessor, but it falls a long way short of M. GAMBETTA's glowing description. It would be nearer the truth to say that the lion's marrowbone is there, but that all the marrow has gone out of it. Nothing can be more characteristic of democratic enthusiasm in its least imposing aspect than this absurd endeavour to invest one of the humblest and dullest of functions with these majestic attributes. M. GAMBETTA knows as well as anybody that the amount of instruction that can be conveyed to the great majority of Frenchmen is exceedingly small, and that such political intelligence as they may chance to display is far more likely to come from the education of life and business than from anything which the League of Instruction can teach them. So long as it was the clergy or the religious orders who were employed in imparting rudimentary knowledge, the Republican party looked upon it with proper contempt. Now that lay teachers have taken their place, Republicans think it best to avoid particulars and quietly to appropriate to the preliminaries of education all the fine things that have from time to time been said about education itself.

At this point it seems to have occurred to M. GAMBETTA that he was coming near to dangerous ground. The League of Instruction is a private association for extending the benefits of education to all who care to receive them. How is such an association to be distinguished from those other associations professedly aiming at the same object which the Republican party has lately been busy in dispersing? If one association of Frenchmen may go about teaching its neighbours, and its neighbours' children, why should other associations of Frenchmen be debarred from doing precisely the same thing? M. GAMBETTA evidently felt that it was not necessary to give himself much trouble about a quibble of this kind; for all he

said by way of establishing a distinction was that he is in favour of true liberty of teaching, but not of "a certain liberty." This formula has, at all events, the merit of simplicity. Liberty to teach what M. GAMBETTA approves is true liberty; liberty to teach what M. GAMBETTA does not approve is a "certain" liberty. By this means the necessity of proving that M. GAMBETTA has any more right than other people to impose his views upon France is avoided. The phrase demonstrates itself. No one can desire to see any liberty recognized which is not true liberty, and all liberties which do not please M. GAMBETTA fall short of this standard. They are only "certain" liberties. M. GAMBETTA is not above taking a leaf out of the reactionary book. The distinction he draws has always been in high favour with the adversaries of freedom. They are never opposed to liberty in the absolute, but always to a "certain" liberty. So long as people will be content to teach what is true, they must be secured against censure or interference. It is only when from teaching what is true they turn to teaching what is false, that the need for restriction arises. It is not in the least strange that M. GAMBETTA should wish to act on this distinction; indeed, it is far too convenient to be lightly laid aside. But it is strange that he should think it worth while to give it actual expression. It is a much less dangerous thing to be illogical in deed than to be illogical in word. Unfortunately, each time that one political party is guilty of thus bogging the question its adversaries are confirmed in their determination to bog it in their turn whenever they have the opportunity. It is one of the grievances of this very League of Instruction that when the reactionists were in power the League was thwarted and discouraged in every possible way. If the friends of the League had returned good for evil, and conceded to the reactionists the liberty which had been denied to themselves, the first step would have been taken towards a better state of things. So long as neither party will forego its turn of vengeance, France is condemned to a hopeless see-saw.

THE CHURCH QUARTERLY ON GREGORY THE GREAT.

THERE can be no doubt that Gregory the Great must rank with Leo I. and Innocent I. among the virtual, if not intentional, founders of the Papal Monarchy. Dean Milman calls him the "third great founder of the Papal authority, not only over the minds but the hearts of men." This fact is clearly apprehended and illustrated by the writer of an able and interesting article on "The Letters of Pope Gregory I." in the new number of the *Church Quarterly*; and he has done good service in pointing out how these letters not only supply in great measure a reason and justification of the process of gradual aggrandizement, but formed also one main instrument for carrying it out. The letters of Popes, both genuine and forged—notably the too famous Isidorian decretals—are the foundation of the Canon Law, and this alone would give a peculiar significance to the fact that the collection of Gregory's letters far exceeds, as well in magnitude as in diversity of subject-matter, those of any of his predecessors, not excepting Leo, the most copious and energetic in his correspondence among them. Dean Milman had already observed that these letters offer a singular picture of the incessant activity of his mind and multiplicity of his occupations, and prove that nothing was too little or too great for his personal solicitude, from the minutest details of ritual or regulations about the papal farms in Sicily, to the conversion of Britain, the extirpation of simony in Gaul, negotiations with the conquerors of Italy, and the revolutions of the Eastern Empire. And he proceeds to distinguish the three-fold character of Gregory's pontificate, as a Christian bishop, organizing the ritual and music of the Church service, and administering the patrimony of the Roman See; as Patriarch of the West; and as virtual Sovereign of Rome, and protector of the city and the Italian population against the Lombards. With this agrees very closely the reviewer's estimate of the special nature and interest of the contents of Gregory's *Registrum*.

Matters of Church government and discipline, of social morality and order, are prominent. But secular questions in great variety, such as might engage the attention of a conscientious and just landlord, a vigilant and beneficent head of a civil department, or a public-spirited and large-hearted minister, occupy even more space in it, and show how large a part the Pope was beginning to take in the political and temporal business of Italy. It is this preponderance of administrative activity which gives a character to the letters of Gregory the Great, and makes them so important in illustrating the history of his age and country. But the collection has a further interest. The special interest of Gregory's letters is that, amid the desolations of Italy and these wails of despair, in this record of lamentation and mourning and woe, they exhibit in the clearest and most instructive way the nascent Papacy of the middle ages; the early steps by which the Primacy of St. Leo, the head of the hierarchy of the early times, *Præsum inter pares* among the great Patriarchs of the undivided Church, developed into the administrative all-controlling monarchy of Gregory VII., Inno-

cent III., and Boniface VIII. And they show not only the steps by which it took shape and became established; they show it was a necessary and inevitable consequence of the conditions of the time.

It was in fact a main source and secret of its power that, amid the confusion and misery to which Italy had then been abandoned, "the one survival of purpose and governing capacity was in the Roman Church." It was great alike by the weight of the religious traditions to which it appealed, and by the happy accidents of ecclesiastical and secular history, when the disputes and quarrels in the Church needed an arbiter and men looked naturally to the most highly placed, while the retirement of the Emperors to Constantinople left no rival sovereignty in the field. The Roman See was indeed hardly less indebted, from an historical point of view, to its civil than to its spiritual inheritance. "The temper, the obstinacy, the 'high stomach' of the old senate had passed into the clergy who surrounded the Roman Patriarch at the Lateran." And the play of these combined forces, secular and religious, is the more strikingly illustrated by the conspicuous absence of any marked distinction of personal character or ability among the Popes of the early centuries. St. Leo, who reigned from 440 to 461, is the first of them who can be called a preacher or a theologian. But when all the elements of local and inherited authority came to be represented, not by a man of average or inferior calibre, but by one who in a remarkable degree reflected and embodied all its characteristic features, the effect could not fail to be largely and permanently increased. And such a man was Gregory, who stands out in his official capacity in the sharpest personal contrast to all around him, and to nearly all his own predecessors.

We have observed that Gregory embodied in his own person all the leading characteristics of his high position. He was not simply a great Churchman; it might almost be said that he was a Roman first and a Churchman afterwards. He "was above all things a Roman of the Romans," and might with better reason be called, what Mr. Carlyle designates his own father, *ultimus Romanorum*. To him the Romans were the rightful, though disinherited, lords of mankind; the old proud Roman name, not *Imperium* but "*Respublica*, name and thing, the sum of secular interests, with all their associations and duties, is as often in his mouth as it was in the mouth of Cicero," and it is hardly too much to say that he was the volunteer and unofficial Secretary of State for the imperial Government in the West. The Greeks he hated and despised, as Juvenal did before him, or as Englishmen of the last century hated and despised the French; he declined to learn their language and seemed almost to pride himself on his ignorance of it; when a Roman lady wrote him a letter in Greek, he would not answer it. For the "long-bearded German barbarians"—the Lombards as we now call them—he felt only an indignant loathing, though as Pontiff he was solicitous for their conversion to the Gospel. No member of his household, says his biographer, showed any trace of barbaric ways, either in speech or dress. His keen Italian humour, one side of which was exhibited in his famous puns about the conversion of the Anglo-Saxon slave boys, had a sterner side too. When he had written to "John, the Faster," Patriarch of Constantinople, to remonstrate about the cruel scourging of certain Isaurian monks, and the Patriarch replied that he knew nothing about the matter, Gregory asked his "most holy brother"—whom he seems to have regarded as a religious variety of the *Graculus esuriens* type—"whether he carried his abstinence so far as to feel bound to abstain from telling the truth"? He has bequeathed his name to the ecclesiastical chant which he introduced, but his method of teaching it is not so generally known. Throughout his whole active life, probably owing to his austerities, he was a chronic invalid, unable to stand or sit, and obliged therefore to transact business of all kinds lying on a couch, and long after his death this couch was shown at the Vatican, on which he reclined while giving lessons to his choir school, as well as the *flagellum*, "with which he used to threaten his boys"—but apparently without needing to use more than threats—during practice time. But his Roman temper found expression in graver matters than these. Like St. Ambrose of Milan, he had been a magistrate before he became a bishop, and he carried into his ecclesiastical administration the strict integrity and justice of the best class of Roman magistrates. The Church of Rome possessed, at that time a vast patrimony, in different parts of the empire, managed by local agents, sub-deacons, who discharged the duties, and too often emulated the greed and extortion of the provincial governors of an earlier age. One of Gregory's first acts was to issue peremptory orders to Peter, the subdeacon, manager of the Sicilian estates of the Church, to look closely into these abuses, abandon all unjust claims and profits, and insist on justice being done everywhere. He even sent him "a regular Land Law for the management of Church estates," going into the minutest detail, and studiously providing against all kinds of vexatious and oppressive dealing with the poor tenants. In another way he showed his superiority to the standards of his age, in his treatment of the Jews. He would not indeed allow them to hold Christian slaves, and desired that all legitimate means should be adopted for their conversion, by preaching and argument, but every attempt to convert them by force or annoyance, or denial of their rights, he strictly forbade. He enforced the existing law against building new synagogues, but, when a serious convert from Judaism raised a mob and forcibly turned a synagogue at Oglilari into a Christian church, Gregory at once wrote to condemn the insolence and injustice of his conduct,

and directed the Bishop to restore their synagogue to the Jews. They were not, he wrote to another Bishop, to assume any liberty beyond what the law allowed them; but neither should they suffer any prejudice in what the law did allow.

It is however chiefly through his contributions, not the less effective because in the main unconscious, to the development of Papal power, that Gregory has left his mark on history. By the end of the sixth century, when he succeeded to the chair of Peter, its claims as generally admitted throughout the West, though by no means unlimited or undisputed, were already considerable, in spite of the shock occasionally given to their authority by the blundering and vacillations of Popes like Vigilius, who suffered himself to be made the supple tool and accomplice of the intrigues of the Court of Justinian. The primacy of Rome was, the reviewer thinks, universally acknowledged, but exactly how much that primacy involved was another question on which as yet there was no such general agreement. In the fifth century the title of Pope came to be restricted to the occupant of the Roman See, and his office was supposed to make him the natural judge of appeals, and—at least since the days of St. Leo—to carry with it a right of confirming the decrees of Ecumenical Councils different from that of the other Patriarchs. But the Patriarch of Constantinople also held a very high and dignified position, and ruled over a clergy more learned and cultivated than the Latin, and it still seemed uncertain whether, under favourable circumstances, the centre of gravity might not be shifted from West to East. To prevent this was probably among the aims, and was certainly the permanent result, of Gregory's policy. This helps to explain his quarrel with John the Faster about the title of Ecumenical Bishop, of which, as the reviewer very properly points out, an unfair case has too often been made by Protestant controversialists. What Gregory did and what he did not mean to include in his somewhat intemperate denunciations is very clearly explained in the following lucid summary:—

The condemnation is, indeed, as absolute as definite reasons and violent language can make it; but the popular controversial use of it, as a condemnation by Gregory of the pretensions of the Roman See, must be considered as an instance of theological boldness or innocence. For it is assumed that Gregory, in condemning the word, absolutely condemned the thing; whereas, the truth is that he only condemned the word and title, and that because it had been assumed by his rival at Constantinople, and symbolized his pretensions. . . . But to be all that the title of Universal Bishop practically and really signified Gregory certainly made no hesitating claim. He spurned, indeed, the pompous name, as unbecoming a Christian, and as invented by that ostentation and pride of office which he very sincerely despised and hated. And his protest undoubtedly does further exclude that later development of the Papal office which annulled the independence of bishops, and placed its own delegated authority on their thrones. But that every bishop in Christendom, including him of Constantinople himself, owed to the Patriarch of Rome and the successor of St. Peter an account of his faith and conduct, and was liable to his judgment, was certainly Gregory's belief, and he systematically acted upon it.

But Gregory had other and nobler methods than this of promoting the influence of his See. If he was masterful and imperious in his dealings with recalcitrant prelates, as his letters testify, it was in the interests of a vigorous and impartial discipline and in order to enforce a high standard of life and work among the clergy of every rank. That his judgments were sometimes hasty or based on defective information he himself frankly admits, but of the single-minded aim and spirit of his administration generally, and of his lifelong and unrelenting war against every form of corruption, selfishness, sloth, and oppression in the Church, no reader of his letters can entertain a doubt. Most especially did he wage an implacable war against simony, which he always spoke of and treated as "the first and worst of heresies." So emphatic indeed was his language on this point that in later days, when it had to be reconciled with the infallibility of simoniacal pontiffs and the validity of simoniacal ordinations, it caused serious perplexity. Nor can we fairly attribute his struggle for the supremacy of his own See to any narrow or selfish motives. In the Church, as in the Empire, a double government would have seemed fatal to the preservation of unity, and his Roman instinct no less than his ecclesiastical traditions prompted Gregory to resist to the uttermost the pretensions of his Eastern rival. The notion of a Greek bishop claiming equality, or still more superiority, to the Bishop of Rome was quite as shocking to his deepest national as to his ecclesiastical sentiment; he was resisting not only a schismatical claim, but the insolence of a *parvenu* and an upstart. And the thirteen years' pontificate of "a man who impressed his character on the Church with a power unknown since St. Augustine, and even more widely felt than his in the East," made the success of that claim thenceforward impossible. The Papacy passed out of Gregory's hands far firmer and stronger than before; his letters were eagerly searched in after ages for rules and precedents by the compilers of the Canon Law, while his administration impressed on many minds a conviction at once of the reality and the necessity of the vast powers supposed to be inherent in his See. He was, in Milman's words, the real father of the Medieval Papacy.

Disinterested and just, it was the only power which none but the bad need fear, the only power which men could wish to grow and increase. In Gregory's hands it grew, not because he was ambitious, but because he was so just and good; not because he aimed at increasing it, but because from his way of using it, it could not help increasing.

The reviewer goes on to insist, like Milman before him, with obvious reason, that in the hurry-burly of the middle ages the centralized power of the Papacy was essential for the maintenance

of religion and social order. In this secondary sense, at all events, it is certainly true to say that the Church was built on the rock of Peter. It does not of course follow, as he observes, that the same system could be profitably maintained under the altered conditions of a later age. But into that discussion we need not enter here. We are tracing out an historical sketch, not defining the terms of a theological controversy.

THE WAY WE ADVERTISE NOW.

ADVERTISEMENTS are the ground-bait of commercial success. We are all pestered every day by the circulars of Companies who manufacture tea out of old brooms, sell chemical waters with sham Greek names, or are anxious to dispose of shares in the South Mull and Tobermory Gold Mine. This is sufficiently annoying; but private adventurers in literature, society, art, politics, and what not, easily outdo the impudence of their pushing commercial brethren. The trumpet is blown at street-corners with extraordinary emphasis, and persons who are anxious to "get on" have taken to organized systems of self-advertisement. Perhaps the most audacious advertisement which has been issued takes the shape of a printed post-card. On one side of the card, naturally, is the address of the recipient, the victim. On the side where the writing should be comes this pitiful printed application for a puff (we alter the names, of course):—

A FAIR PHILISTINE. The New Novel. By Mr. TOMKINS.

MR. TOMKINS'S NEW NOVEL.

At all the Libraries, in 3 Volumes,

A FAIR PHILISTINE.

The Author will esteem it a personal kindness if you will demand his book at the Club and from the Circulating Library.

The author is exceedingly grateful for favours to come. He only wishes every one to act as his unpaid tout, to oppress the circulating libraries with demands for a book they do not mean to read, and to introduce what may be nonsense, for anything they know, into their clubs. We had previously thought the women who knit stockings and send them to all parents of new babies, and the persons who dun all railway shareholders for subscriptions for every church on the line, the most importunate of petitioners. But the knitting-women are probably poor, the object of the begging clergy is at least a public object. The self-advertising novelist has no such excuse. He degrades literature, such as the profession is, by his circulars, by his invitations to join a conspiracy to puff him. Probably the advertising novelist is not the only offender of this sort, and it is said that the poems of the modern Muse have been pushed in the same enterprising manner.

The shamelessness of people who have written a book, or even a magazine article, seems to have become infectious. No sooner has Jones "ventilated" (as he calls it) his view of compulsory vaccination, or of the Irish Land Bill, in the "Modern Period," than he, his editor, his brothers, his cousins, and his aunts write to every one they know who has anything to do with the press. The editor ventures to think that a daily or weekly journal will find in Jones's essay an unequalled subject for a leading article. The brothers, cousins, and aunts express the same view in different terms. We believe that if Jones had written on Maori Kitchen Middens, and if he and his friends knew the sporting prophet of such a print as "The Patriotic Publican," they would pester the poor man with requests to advertise Jones's researches in that light-hearted journal. It is thus that many queer phenomena in journalism are accounted for. The dullest and most uncalled for of books is made the topic of a formidable leading article, while many amusing or edifying works are left quite unnoticed. The reason is that the literary advertiser has made his point. He has got hold of some one, some literary Mr. Lofly, who "has spirits working at a certain board," or rather, at a certain newspaper office. This kind of pushing impudence is becoming as shameless and as successful as it was in Macaulay's time, before he smote Montgomery. Literature shows signs of degenerating into a Mutual Advertisement Society. Notorious people of every description allow their names to be printed at the end of articles; they thus advertise and are advertised. Meanwhile, many of the unhappy men who do the manual labour of puffing are sincerely to be pitied. The advertising writer or editor makes himself such a steady, unabashed, persistent, brazen bore, that the writers whom he assails sacrifice even their sense of justice to pacify him and escape his importunities. Few people have the strength of will to resist the interested impudence which is encouraged by every concession. Other people, perhaps naturally modest, beholding the success of shamelessness, clothe themselves in impudence. Thus the life of every one engaged in criticism is made a burden by "presentation copies" of worthless books and by begging letters.

The artistic advertiser follows very much the same tactics. There was a time when artists allowed their friends to see their finished pictures before they were sent to the Academy. The ordeal was trying, and the pretence of criticism was made under difficulties. Still, among friends, these things might be endured. But now every beginner, every pushing wistful amateur, sends cards to people he does not know, and compels them to come into his studio. The critic who yields is lost. A favourable opinion is extorted from him; and then of course he is bound to express the same opinion in his published review, or to be stigmatised as a mean hypocrite. In his invitations, in his entreaties for scraps of

notice, the painting advertiser scarcely differs from the literary pusher. But the latter, at least, does not ask people to listen to his unfinished works and to explore the secrets of his waste-paper basket. The poetaster seldom has an entertainment analogous to Studio Sunday. But we presume that cards offering the privilege of hearing Mr. Raggs recite the first two acts of his unfinished tragedy of *Caractacus* will soon be as common as circulars from Indian Gold Mining Companies, and the proprietors of patents for making chocolate out of scraps of old leather.

The advertising politician, the pushing carpet-bagger, is no less annoying than his brethren, and no less eager for little bits of notice. He begs quite pathetically for what is called in the language of the press "a friendly par." Friendly pars are the breath of his political nostrils. One favourite dodge of the advertising politician is to get himself put upon the Committees of forlorn political hope. The Oppressed Boers Committee; the Skipetar Committee; the Independence of Tunis Committee, are the kind of public bodies in which he disports himself. Then he gets up deputations to the Prime Minister, the Home Secretary, the Colonial Office, and pleads, in moving language, the cause of the Boers, the Bey, the innocent outraged Albanians, and the rest of his clients. When deputations are slack, the advertising politician is always busily lecturing at South Shields, or Morpeth, or some such place on "Politics and Morality," "Religion and the Empire," and so forth. He sends his lecture ready printed, with "cheers" and "laughter" inserted at the more moving passages, to all the newspaper offices he knows, and asks to have three columns allotted to him. He fills the press with little notices of his movements, as if he were a pet professor in a scientific, or a popular beauty in a mundane, journal. These are arts by which men do not disdain to try to rise. But it must be said, for the credit of human nature, that the advertising politician rises very slowly. Even when he takes the part of a Parliamentary buffoon and plays his little pranks, or asks his comic questions in the House, he mainly achieves notoriety as a bore. We cannot doubt, when we think of some advertising members of the Lower House, that many men prefer notoriety as bores to the absolute lack of attention which is their natural portion. This they can obtain. They will do well to be content with what they have achieved. No one, by sheer dint of advertising, unaided by real cleverness, can make much way in politics.

In society the same truth holds good. Mere buffoonery, mere posing and posturing, is not enough. A man who is depressed by a snub from a duchess will fail, however assiduously he cultivates curls, imbecility, and daffodil neckties. People will not listen to every sort of egregious nonsense; the nonsense must be clever as well as egregious. Alcibiades showed much knowledge of the art of social advertisement when he cut off his little dog's tail. The action set all Athens talking; but Athens would not have talked about his imitators, if they had cut off the tails of a whole pack of hounds. Success of every sort is now sought, as it were, in the cannon's mouth, in the face of all modesty and self-respect. But we cannot succeed by advertising alone, nor will mere impudence do everything. This is a truth which the advertisers of themselves too much neglect. If Mr. Tomkins's *Fair Philistine*, which introduced us to these reflections, happens to be hopelessly dull, the money and invention expended on his post-cards will all have been wasted. If the modern Muse's poems are trash, no number of dinner-parties, nor a world of advertisements, will make people buy them. The advertising politician will advertise till he is grey, but he will be as far off the Cabinet as ever. The pushing young man who wears bangles on his ankles and his hair in a net will never really be a success unless he has some originality and humour in his impudence and buffoonery. If people could only become convinced of these facts, they would cease to bore their acquaintances with petitions for praise; they would dare to be natural, and cease to be impatient of obscurity. Good work, great power, original character, will make their way without puffing and pushing. Perhaps they will not make their way quite so fast as they would do by the aid of mean obtrusiveness. But self-respect is worth keeping, even at the cost of a retarded success; nay, some will still think, even at the cost of failure. Meanwhile, most of the advertising people will lose their self-respect, will become generally odious, and will fall into the bargain. And they will be odious and contemptible even when they succeed, even when a sorely tormented world does ask for their novels at the club and the libraries.

SNAKES IN THE FLOWERS.

OF all the pleasant winter resorts on the Western Riviera, none is more enchanting than the Principality of Monaco. To vary the famous Spanish saying, Monaco would have been a terrestrial paradise, had Providence, with innumerable other blessings, only granted it a decent Government. But the yoke of its autocratic princelets pressed on the necks of their subjects, and successful revolution circumscribed a territory originally so minute as to seem almost microscopic on any moderately-sized map of Europe. The townships of Mentone and Roccabruna have been long lost to the Grimaldis, with many a rich hectare of olive ground and shady lemon garden. But enough still remains to surround the palaces of the reigning powers with a domain of almost unrivalled picturesqueness. We talk advisedly of palaces and powers in the plural; because, as is well known to the gayer

half of the world, the townfolk and simple peasants of Monaco have been subjected to a double allegiance. By solemn legal arrangements between the high contracting parties—arrangements of which, so far as we know, the terms have been kept scrupulously secret—M. Blanc, when banished from the German Empire by the Reichsrath, was encouraged to transfer his tables to this sunny nook of the Mediterranean. M. Blanc has been gathered to his fathers, in the fullness of riches, if not of honour; but, so far as he, his heirs, and representatives were concerned, it would seem that he could hardly have been driven to a happier choice. Judging, at least, by appearances, and the crush of the sanguine customers who swarm day after day into the "Moorish" halls of his Casino, the gleaming of the grapes of Monaco must be better than the vintage of Hombourg. The fact is, that Monte Carlo—as the new suburb is called which has been springing up around the Casino—is as admirably central as it is eminently seductive. It lies among the growing health resorts that are overcrowded every winter with hosts of wealthy and idle strangers. There, within easy reach, are Cannes and Nice, on the one side, Mentone, Bordighera, and San Remo, on the other. At Cannes, the scattered villas, boarding-houses, and hotels are spreading along the coast for miles, and running along the precipitous sides of the valleys far into the interior. But, beyond sauntering in the sunshine when there is any, and giving his mind to keeping out of the shrivelling winds, there is nothing in the world for a man to do there. Nice is really a city, and consequently more lively; but the gaieties of Nice, such as they are, distinctly incline its visitors for the peculiar dissipations of Monte Carlo. Mentone, in the deep indentations of its hill-locked bays, is an *al-fresco* hospital where the languid air is never stirred, save by the sweep of some occasional tornado, and in self-defence the robust relatives of invalids must keep their health by frequent changes of scene. At Bordighera and the far more beautiful San Remo existence stagnates after a time, till there is a craving for any form of excitement. By an understanding with the railways of the Riviera, this very natural state of things has been turned to the account of the Companies and the Casino of Monte Carlo. Every facility is offered to the idle and listless for spending a succession of happy days there, or any number of agreeable hours. Quick trains are started at convenient times. You may make a dash at Monte Carlo, and come back to dinner, with such appetite as your gains or losses have left you; or, marvel of marvels, in Continental railway arrangements, after devoting the evening to the feverish pleasures of those halls of dazzling light, you are brought home again by a midnight train to heavy or troubled slumber. Necessarily the Railway Companies reap a rich reward for their spirited enterprise; and the shareholders may congratulate themselves on enjoying a reasonable percentage of the profits of the late M. Blanc's speculation. But the legitimate tourist feels sadly out of place in the mob of smartly or elegantly dressed gamblers. The flippant clerk at the booking-office almost forces a return ticket on him. His luggage may be cared for as a matter of favour by porters who are looking out to carry the hand-bags or overcoats of their regular patrons to the carriages. And, unless he is well forward in the scramble, he will find each corner in the first-class compartments filled, and have to content himself with catching flying glimpses of the scenery between the heads of abstracted fellow-travellers in close consultation over the chances. No wonder that jealous hotel-keepers along the Cornice object to the constant and prolonged absences of the people who ought to be their most profitable customers. No wonder that they have been actively agitating in favour of the great moral movement that would clear away the Monte Carlo hotbed of vice; and the stoppage of what are really so many excursion-trains at the Monte Carlo station is a sight to see. Languid "swells" suddenly drop their normal airs of calm superciliousness; doors are thrown open while the carriages are still in motion; ancient ladies and venerable men, who seem already to have one foot in the grave, place the other on the step in readiness for a descent; and before the growling engine has come to a full stop the passengers, in general forgetfulness of their manners, are precipitating themselves in a surging mob towards the solitary exit. You are inclined to moralize on the morbid greed of gain, which cannot bear to lose even one of the precious minutes so near the doors of the possible El Dorado. But though, doubtless, it is cupidity that indirectly sets your companions hustling each other, they are not altogether so unreasonably impatient as they appear to be. The truth is that there is a steep hill to be toiled up from the station, while the number of places in the carriages and omnibuses in waiting is limited. And, moreover, when the visitors are proposing to settle themselves to a long day of serious play, it is of the last importance to make sure, if possible, of a seat at the tables.

Play at Monte Carlo is indeed a serious business, involving, beyond the anxiety inseparable from games of hazard, great bodily exertion and no small expenditure of temper. In the good old times at the favourite German gaming places, though the fun might grow fast and furious towards the hour of closing, in the daylight things were quiet and decorous almost to dullness. You lounged out of the blazing sunshine into cool and darkened apartments; and when your blinking eyes became accustomed to the dim religious light, you looked round on a scene of peaceful stagnation. Some of the tables were as yet unoccupied and still shrouded in brown holland; the others were surrounded by little social groups who gave something like a silently friendly welcome to each new arrival who came with his contribution of cheerful-

ness. There was every facility for studying the strategy of the campaign, laying down the stakes, and making up the winnings. At the Monte Carlo Casino it is much the reverse. As high noon, and very possibly before it, all the eight tables—there are six roulette tables in an outer hall, and two for *sage-et-rais* in an inner chamber—are doing the very briskest business. There is a hubbub of voices. There is a general sense of ruffle and turmoil. You feel as if you had passed the swing doors of a thriving City bank, and were being crushed up to the counter in a mob of money-getters on a term day. Eager adventurers or gaping onlookers are pressing round each centre of excitement in serried ranks three or four deep; while the comparative few who have been fortunate enough to find chairs seem half stifled under the physical pressure from behind. The duties of the croupiers are no sinecure. They are constantly occupied in placing the stakes for those who, finding it impossible to get near the tables, are screeching contradictory instructions, often in unintelligible French. Literally the ladies and gentlemen who are relegated to the back places in this bear-garden earn their money, when they make any, by the sweat of their brows. Nor are the chances against their winning limited by any means to the odds that are avowedly reserved by the establishment. For, when you have won a stake, you have often to wrangle for it; and we need hardly say that a modest foreigner, abroad in everything but his native speech, is exceedingly likely to be pushed to the wall. In the first place, there is the liability to make honest mistakes when coins are being scattered broadcast over the board by many different persons, and sometimes piled upon each other in inextricable confusion, when there is a rush to back a popular number. In the next place, there are professional harpies who are always on the hover, with the sole idea of preying on the profits of other people; and we need not say that these conscienceless creatures are the loudest and most determined in insisting on their claims. The croupiers are passionately appealed to, and give their decision, which is final. Frequently the decision, though it may be honestly given, is flagrantly unjust. And the victim who has been waiting for the turn of luck that might have materially redressed the balance of his transactions can only resign himself to the robbery. When M. Blanc was building up his princely fortune at Hombourg his servants had orders to deal more liberally. When the parties to a dispute refused to be reconciled, the bank paid both of them, and went on again. But Hombourg was exposed to a lively competition, while Monte Carlo has a monopoly which it seems inclined to abuse; though, in its early days, it perpetuated the Hombourg traditions, and was generous to the victims of runs on the wrong colour. So when a gambler satisfied the administration that he had been fairly cleaned out, it helped him with his hotel bill and advanced him his travelling expenses. Now it is said that all appeals *in forma pauperis* are summarily rejected. The applicant is told metaphorically to go and be hanged; and not unfrequently, it is asserted, the counsel is taken literally. But to judge from the looks and manners of many of the most assiduous frequenters of the tables, we should say that any well-authenticated case of the relief of distress would be an encouragement to innumerable attempts at cunningly devised imposition. A more ill-favoured lot, generally speaking, it would be difficult for the most imaginative of romance-writers to conceive.

Setting the question of morality aside, the existence of the Casino is a decided advantage to the man of the world who makes some stay at Monte Carlo. For a few days, at all events, he finds a constant interest in odd studies of life and observations on objectionable manners. There is a spacious reading-room, fairly well furnished with journals, and an admirable band that plays in a magnificent concert-room. In short, he will always have resources for his evenings, nor will he have any cause to complain of the hotels, their cellars, and their *cuisines*. And the natural beauties of the place are unsurpassed, while the excursions in the romantic neighbourhood are endless. We know nothing more entrancing than the blending of grey cliff and blue sea; the sloping gardens of blooming geranium beds hung on the very crests of the beetling precipices; the grey of the olive groves and the deep green of the orange and lemon gardens, backed up by the sweep of the amphitheatre of rugged hills, breaking the nipping winds that are the scourge of the Riviera. The climate is delicious, though somewhat enervating, and you may possibly be worried by the premature visits of the mosquitos. But, on the whole, if you are on the outlook for the earthly paradise, you may go far further and fare far worse, unless you should push your researches to the islands of the South Seas.

MR. BURGES.

THE unexpected death, at the age of only fifty-three, of Mr. Burges has robbed English art of one of its most brilliant and original standard-bearers. According to party distinctions a Gothicist, and, among Gothicists, an Ecclesiologist, Mr. Burges was, beside and beyond all sectional designations, William Burges, brimful of energy, boldly original at times, and then loyally observant of precedent, acutely sensitive to the dignity and responsibility of his profession, and yet overflowing with the drollest humour and master of the most manifold conceits. He was an architect and he was an artist, but he

began by being an artist before he became an architect. Mr. Burges at one time attained European fame by coming out in 1856 as first prizeman, by the award of judges who were mainly Frenchmen, in alliance with Mr. Clutton, in the international competition for the projected Cathedral at Lille, while Mr. Street followed in the second place, leaving M. Lassus, whom his countrymen had backed as certain winner, to take the third place, behind Englishmen of whose name he had probably never heard. The *Annales Archéologiques*, which then represented the Gothic movement in France, had grimly to confess that this was for France its artistic Waterloo. Yet the victory was barren. The award of the judges was set aside in favour of a *pastiche* of the designs concocted for the advantage of a local architect, so as to smooth down susceptibilities, while we believe that very little of this unsatisfactory work has in the intervening quarter of a century been carried out. Again, in the following year Mr. Burges was named first prizeman for the Memorial Church at Constantinople, and yet he was destined to see the accomplishment of the work pass to another architect. In the meanwhile his reputation grew, and some years later he was selected among the favoured ten who were invited to compete for the New Law Courts. He produced a design of singular dignity, harmonious proportion, and stately detail. But the judges, men of great eminence, but in the selection of whom the scientific knowledge of architecture was not an element of choice, passed it over without a notice. At a still later period the great project for the decoration of St. Paul's was entrusted to Mr. Burges, and all know how far that enterprise has progressed. This is a topic on which we have spoken so often, so fully, so decidedly, and at so many stages of the tedious business, that we shall now confine ourselves to the simple statement that we adhere to every word which we have said upon the merits and the treatment of the great artist who has passed away from the possibility of human reparation.

Of the buildings which Mr. Burges was enabled to execute, the first place must be assigned to that very stately Cathedral at Cork, of stern Early French, with its triple spires, which, even in the agonies of disestablishment, the Anglican communion of Ireland upraised in defiance of those Puritan delusions by which it had too long been beguiled. But at an earlier date Mr. Burges had out of the cold flat room which then served as chapel to Worcester College, Oxford, created a gorgeous temple of religious subtlety. In his hands likewise the severe fragment of a Norman nave, which survived from the mighty Abbey of Waltham, was most cleverly restored for its present more modest attributes of a parish church. A very elaborate church—built in Yorkshire in memory of Mr. Vyner, so brutally murdered by Greek brigands—led to its author being commissioned to carry out that larger and more sumptuous one which Lord Ripon raised in Studley Park. At Cardiff Castle, and at the neighbouring Castell Coch, in Glamorganshire, which Mr. Burges restored and decorated for Lord Bute, he gave full rein to his luxurious fancy. Whether the richness of the fittings, at least in the larger pile, may not be almost oppressive, is a point which could be reasonably argued; but that the work shows exceeding ability in the design is incontestable. He also built the Speech-room at Harrow, a translation into Gothic forms of an ancient theatre, remarkable for its successful acoustics. For many years Mr. Burges lived in picturesque chambers, upstairs, in Buckingham Street, Strand, overlooking the wide bend of the Thames, where the rooms and their furniture, creations of his inexhaustibly sportive imagination, were quite a show for his amused friends. But recently he transferred his abode to what is a true country-house within the circuit of London, standing upon one of the plots carved out of the grounds of what used to be known as Little Holland House, in the street now dubbed Melbury Road. We hope that no vulgar successor will deface a house in which the consistency of the architecture and the manifold resources of the decoration blend in an unique whole of whimsical, yet thoughtful and attractive, piquancy.

It is quite consistent with the most sincere admiration for Mr. Burges's genius to question whether the style in which he worked by preference, though not exclusively, as Sir J. Heathcote Amory's house in Devonshire testifies—the Early French Pointed—may not be too massive and inelastic for the life of our mobile age. Anyhow, he displayed a mastery of it such as no other Englishman could lay claim to; and, by a curious combination of qualities, the missionary of this the most severe type of Pointed architecture was in accessories, in decorations, and in furniture the most exuberantly and fancifully droll of inventors, never sparing either his knowledge of form, his researches into variety of materials, or his mastery of coloration—coloration of good, full hues, boldly contrasted, and never disdaining the support of gilding.

It was this almost bizarre combination of qualities, which at first would have seemed hardly compatible, which created the specialty of the Burgesian style. In fact, Mr. Burges's intense sense of humour was almost a snare to him, against which, it is fair to say, that he manfully struggled whenever duty ordered him to be serious. Akin to it, and proceeding from the same mental conformation, was his good temper and patience under provocation. We do not mean to say that he could not be pettish when he felt himself misunderstood or ill-treated, or that he had not a due sense of his own capacity. But it was just this surface fault which saved him from that rancour and jealousy which is so often the bane of the artistic character. To criticism judiciously offered he was sure, in the long run, to give candid attention.

As may be inferred from what we have been saying, the estimate of Mr. Burges's contributions both to the practice and the theory of art, which should confine itself to recording his characteristics as an architect, would be so thoroughly defective as to be absolutely false. He did not even confine his achievements to large undertakings of mural decoration and painted glass, nor to those studied compositions by way of furniture which are really architecture on a diminutive scale. In all the delicate processes which subdued precious material to the service of art and fancy, the craft of the goldsmith, of the jeweller, of the binder, and of the ivory-carver, Mr. Burges was a proficient, and in their exercise he was wont to seek his recreation from the more onerous labours of his regular profession. It was in this branch of his studies that his freedom from conventionality most clearly asserted itself. Gothicism as he was in his buildings, he sought forms of quaint fancy and serviceable materials from the art of every country and age, and he possessed withal the knack of so combining his selections as to produce a harmonious and reasonable whole. The publications which bore Mr. Burges's name were written for practical objects, the cultivation of a literary style not having been one of the objects of his ambition.

A late recognition of Mr. Burges's artistic merits was accorded by his being elected A.R.A. a very short time before his death. We are glad for the sake of the Royal Academy that it should not have missed numbering him among its illustrations.

ROGUES AND VAGABONDS.

THE death is recorded of George Brine, "King of the Beggars." He had earned his title by having been committed to gaol no less than a hundred times for begging and similar offences; but it was his proud boast that he had never been convicted of larceny or felony in any form. There are few things as to which so much nonsense has been written, or so much ignorance of the real facts of the case displayed, as this same question of beggar confraternities, societies of rogues and vagabonds, and gipsy kingdoms. Writers of fiction have perpetuated the convenient delusion, and from Sir Walter Scott to Major Whyte Melville the organization and mysteries of these lawless guilds have furnished an interesting *motif* for incident or plot. The beggar's calling is undoubtedly a most ancient one, for it is as old as the institution of idleness itself. The right of members of the religious profession to be supported by the voluntary contributions of their fellows was also naturally recognized at an early stage of society, and as naturally produced the class of which jogis, fakirs, and dervishes in the East, and mendicant friars in the West, are types. These certainly have their organization, their initiations, passwords, and signs, but their constitution is founded strictly on the religious basis, while their mendicancy is the accident rather than the final cause of their foundation. In the middle ages, when every calling had its Guild or Corporation, it was only natural that the beggars should form theirs; but these were composed of licensed mendicants—the poor, but highly respectable Bedesman, or the disabled soldier, to whom the Government gave permission to beg in lieu of a pension—and not of "casuals" or "tramps." That most conservative and irrepressible tribe the Gipsies is always credited with the possession of a king or queen to whose sway the rest bear unquestionable allegiance, but we unhesitatingly assert that no such person ever yet existed among them. They have not even a word in their language for king, those of Europe having borrowed the Slavonic word *král* to express the idea. The first bands of "Egyptians" who invaded Europe no doubt put forward some able man of their number to act as their agent, spokesman, or leader, and to conform to the prevalent customs of the time, but the office of "Duke of Egypt" was as mythical and misleading as the origin implied in the name. In the present day the name of king or queen of the Gipsies is often heard, but the circumstances of the monarch's coronation are very simple. When a Gipsy has reached an advanced age, and finds himself or herself the head of an extensive family, he or she occasionally settles down, and is of course visited from time to time by nomad children and grandchildren, with their "sisters and their cousins and their aunts," to say nothing of male relatives. These gatherings excite curiosity in the Gentile mind, which the tribe takes care to cultivate; the patriarch is at once given the royal title, and the offerings of the "gorgios" make a very handsome little income for the ancient one, while the family gatherings are as good as so many additional fairs, with all the impetus which these give to Gipsy trade and roguery. But, were it not that the Gentiles themselves desire a Gipsy king, the idea would never enter into the heads of the "Romany chals," who laugh in their sleeves at "gorgio" gullibility.

The celebrated Bamfylde Moore Carew is a good instance of a pseudo-king of the roads. The son of a clergyman, and coming of a very good stock, he developed an uncontrollable passion for a vagabond life, disgraced his family, and occasioned much scandal by his lawlessness and audacity. His notoriety seems to have attracted to him a number of professional rogues and vagabonds; but his self-assumed title of "King of the Gipsies" was a misnomer; for, to judge by his own accounts of himself, and still more by the vocabulary which he has left behind, his subjects were not Gipsies at all, but mere "mumpers," or tramps, with at best a sprinkling of "posh and posh," or Gipsy half-breeds. The

adventures and tricks of Carew and his companions bear, of course, a great similarity to those of the traditional beggars of antiquity and of the middle ages, as well as to the "dodges" of the beggars of the present day; but it by no means follows that they were handed down from primitive times, or taught by initiatory and mystic rites. The whining appeal for alms, backed up by lies and canting religious phrases; the simulation of deformity, wounds, or disease; the appropriation of any cock that may be met with "crowing promiscuous" in a deserted lane, or the replenishing of the rogue's wardrobe from the linen that hangs on every hedge; these and the like are devices which Nature herself suggests to the idle and unscrupulous "loafer," and need no apprenticeship to learn.

Nevertheless, "the roads" of England do present phases of society, or rather extra-social phases, which are both curious and interesting. The life of the vagabond,

Homeless, ragged, and tanned,
Under the changeful sky,

has, and probably always will have, great charms for many; for it satisfies the restless longing for change and impatience of restraint, it affords an almost certain means of livelihood, often without work, and during the spring, summer, and autumn months is healthy, invigorating, and pleasant. If, in the course of the exercise of begging, or any other of the unlicensed professions, the tramp make the acquaintance of the treadmill, the stone-breaking yard, or the oakum-picking cell, he is only earning experience that will be useful to him in the winter months, which he will most probably spend in voluntary or forced retirement in establishments where these branches of industry are carried on. There are so many varieties of the vagabond that we can only enumerate a few of those most frequently met with. First and foremost is the Gipsy, the most incorrigible, but perhaps the most respectable, of all. With him vagabondage is a normal condition of life, and, like the ancient Scythian or the modern Turkoman, his tent and his waggon constitute his home. His ancestors, as far as his traditions reach back, have lived in the same manner; he has his own language, and he follows his own trades and calling; he has not perhaps the same ideas of honesty and respectability that "house-dwellers" have, but he bears them no ill-will for it, and he certainly does not regard himself in the light of an offender or an outcast. Impressed with a strong nationality, and having a good constitution and a cheerful disposition, he has outlived generations of persecution, and only yields slowly to the influence of the Inclosure Acts, which are in this country gradually crowding him out. Next comes the "posh and posh," or half-bred Gipsies; of these a large number adopt the life and habits of the Gipsies themselves, but maintain certain relations with the civilized and stationary world. They are often well to do, and such an instance as was related to us by one of them of a girl of this class, who had married "a hinddependent gent," is by no means rare. On asking of what this particular independent gentleman's fortune consisted, we were told that he earned "sixteen pound a week brush-hawkin'." Some among them pursue the calling of *mush-fakin*—that is, of repairing umbrellas, with which others combine the tinker and travelling cutlery business. Then there is the tramp proper, the rogue and vagabond *par excellence*, who lives entirely by begging, chicanery, and petty larceny. He may be always known by a bright, unquiet eye, a dissipated, "ne'er-do-weel" air, and a chronic aversion to the sight of a policeman or doing a day's work. Mechanics and labourers "on the tramp" and in search of work are also to be met with; but they do not belong to "the road," and, indeed, are for the most part inexperienced in its ways. The Handwerk's Bursch, or travelling artisan of Germany—who roams as much for change, and because it is the fashion, as to get work, and for whom begging, or, as it is called in his argot, "*fechten*," is prescribed by the etiquette of his class—has no representative in this country. The Handwerk's Bursch does belong to an organization more or less recognized and somewhat of the nature of a workman's guild. Lastly, upon the English "roads" there is the Fern-seller, a race entirely by itself, and unlike any other of the "traveller" class; for he it known that "traveller" is a purely technical word, applied by themselves to designate collectively the various classes to which we have referred. The fern-seller is wretchedly poor, his wardrobe is deplorable, he is more beery and disreputable than any of the mates he meets in the hospitable tramps' lodging-house; but he is of a cheery temperament, displays considerable taste in the arrangement and disposition of his wares, and can tell you the botanical name of every fern in his basket. Why it is we know not, but ferns have a singularly demoralizing effect upon the "traveller"; an acquaintance with the "extra social" classes teaches that horses are not conducive to strict commercial honesty; pigeons are even worse than horses, and may be considered as most immoral birds, leading their "fanciers" into constant temptation through matches and shows; but ferns have some malign influence which is quite inexplicable, and he who once takes to "shelkin gallopers," as the trade of fern-selling is euphoniously called, is a lost "traveller." We have not mentioned the beggars, thieves, and other rogues of the town, as, though having points of contact with the roads, they belong to a different class. The annals of the police courts, also, and the proceedings of what an Eastern friend of ours used to call the "Mendacity" Society, have made them less of an unknown species. A further subdivision of the vagabond, or "traveller," class may be made accord-

ing to the languages spoken on the roads; these, again, are in a descending scale of respectability. First, there is the Romany, or Gipsy tongue proper, a "deep" acquaintance with which is a sign of aristocratic "Egyptian" descent. Then there is *Zemzek*, or "cant," the old-fashioned thieves' slang, with which the half-breeds interlard their discourse, much to the scandal of the Romanies themselves. Again, we have *Minkler's Thery*, or "Tinker's talk," also called *Sticks*, a corrupt form of Gaelic, which is affected chiefly by the lower-class travellers. Last of all comes a dialect which betokens a depth of social degradation to which even ferns seldom lead, and that is Italian. A conversation with an itinerant organ-grinder in that language once almost lost the writer the respect of a "mush-faker" with whom he was on friendly terms, and quite lowered his prestige in Romany circles. The purloins of Leather Lane and Saffron Hill are probably to blame for this evil repute of the soft Tuscan tongue.

The "Tinker's talk" is that which is most used by the real rogue and vagabond, since, being less known than either Romany or Cant, it is less likely to be understood of the common people, and is much safer in the presence or vicinity of the police. "You're readered sobree"—that is to say, "There is a warrant out against you"—is the muttered warning that has caused many a tramp to seek more hospitable and safer spots. For beggars, if they have no regular organization, are bound together by ties of mutual interest and sympathy, and will always impart to each other serviceable information as to pecuniary chances, or constabulary dangers, in certain districts. There is, as is tolerably well known, a recognized system of signs, and happy the householder on whose gates the symbol for "No good trying here," or "Gives yer soup tickets," is marked, for his gate-bell shall be unbroken and his watch-dog rest. The death of King George Brine is no doubt a sad event, but we may console ourselves with the reflection that, if numerous convictions constitute a claim to the title of "King of the Beggars," we shall not have to wait long for his successor.

FRENCH CRITICS AND FRENCH DRAMATISTS.

IT has been said of the modern British drama that its principal *raison d'être*, after the playgoing habit of the British public, is the drama of modern France. Without the second the first could hardly contrive to exist. The London manager who would steer clear of bankruptcy, the London actor who is anxious for opportunities of histrionic adaptation, keep a sharper eye on the doings of M.M. d'Ennery and Sardou than on those of Messrs. Byron and Wills, and are rewarded for their diligence by overflowing houses and material for fresh and profitable impersonations. This being the case, it is disheartening to find that, in the opinion of competent persons, the French drama is, like the English, on its last legs. Critics of several schools are agreed on this point. The lamentations of M. Sarcely, for instance, are loud and prolonged. In the matter of theatrical criticism M. Sarcely is not perhaps the infallible person his friends believe; but he knows what constitutes a play, and his judgments may often be accepted without question or reserve. It is ominous that of late he has found nothing to praise. When he is not reproving M. Perrin for mismanaging the Comédie-Française, he seems to have nothing to do but bewail the poverty of invention, the mean imagination, the lack of insight and energy and skill, which are the distinguishing characteristics of the younger generation of playwrights. According to him, the managers are clamouring for new plays, and new plays there are none. There are no more dramatists, and the stage is going to the dogs. M. Zola, a critic who has scarcely a single opinion in common with M. Sarcely, goes still further. In his new volume, *Le Naturalisme au Théâtre*, he envelops the actual order of things theatrical in an immense and dogmatical disdain. It is his ambition to be considered "a swallower of formulas," as Carlyle used to say; and he has swallowed the French stage at a gulp. Nothing that is, or that has been, contents him. He is equally contemptuous of Barrière and Corneille, of *Hernani* and *Bertrand et Raton*. He visits with disdain both *Le Tour de Neale* of glorious memory and *Chien d'Aveugle*, both *Orphée aux Enfers* and *Les Noces d'Attila*. He is not less angry with D'Ennery than with Jules Verne, with *Les Bourgeois de Pont-Arcy* than with *Jean-Marie*; and it is evident that he prefers *Thérèse Raquin* to *Le Mariage d'Olympe* and *La Contagion*. His talk is all of science, method, analysis, the "human document," the naturalistic formula, "*la crudité superbe de Ben Jonson*," and so forth. In anticipation, he is the Marat of a revolution in the drama, and he will not be satisfied with less than complete anarchy, and the heads of all his contemporaries. His war-cry is that of John Leech's demagogue; nothing is that ought to be, and therefore "Down with everything!" As he makes no single sign which would help us to believe that he knows what makes a play and what a play should be, and as he appears to hold that the drama of the future will be an analogue in action of the novel of the present, as understood by himself and his disciples, his contribution to the literature of the question seems to be not only exasperating to everybody, but of no manner of use to anybody.

On the other hand, writers are not wanting to take a more hopeful view of matters. One of the best and most intelligent is M. Léopold Lacour, whose *Trois Théâtre* is a clever spirited attempt

to describe and define the several talents and achievements of MM. Augier, Sardou, and Dumas. M. Lacour treats all three of his authors as if they were already classic, and his work—with every allowance made for the strain of exaggeration which seems inevitable in a writer's criticism of his contemporaries—is discriminating enough. The essay which is the least deformed in this sense is the one on M. Augier; and it is, in consequence, the best and most workmanlike of the three. M. Lacour's estimate of those master-qualities—of delicacy and force, of observation and imagination, of sober daring and austere and virile refinement, of constructive ability and literary skill—which have set their owner in the front of living writers for the stage, is singularly temperate and just. M. Augier has occupied from the first a position which exposed him to a good deal of adverse criticism. When he began, it was as a representative of that reaction in favour of the classic principle in art which set in when the after of Romanticism had somewhat abated of its violence. Then, he was laughed at as a member of the school of common-sense. Next, he got into difficulties as a preacher of domestic morality, and as one who openly avowed himself the champion of injured husbands. Finally, as the grandson of Pigault-Lebrun, and the friend of Prince Napoleon, he met with scant courtesy at the hands of critics who differ from him in politics. Of the antagonism that it has been his to awaken there are traces here and there in M. Lacour himself. This author writes well of M. Augier; but it is significant that, while prone to enthusiasm and exaggeration, he writes almost dispassionately. Of *Diane*, a very beautiful and touching play, he merely says, after Théophile Gautier, that it is "a pallid copy of *Marion Delorme*"; and of *L'Aventurière*, one of the noblest and most striking of romantic dramas, he hardly deigns to make any mention at all. He admires the master works of the poet a great deal, and discerns in some of them—in *Les Lionnes Pauvres*, for instance—more and greater merit than perhaps they possess; and he makes no difficulty about giving to M. Augier that first place which is his due. But there is a touch of reserve in all he does for the author of *Maître Guérin* which is not felt when he comes to treat of the authors of *Nos Bons Villageois* and *La Princesse Georges*. He has a passion for these writers, and he cares not who knows it. Under his hand their faults grow almost admirable, while their talent takes the hues of genius itself. It is really amusing to hear him dilating on the virtues of M. Dumas. This, for instance, is the way in which he starts upon his examination of that eccentric master and his works:—"Observateur d'une pénétration rare, philosophe aventureux, volontiers mystique, tourmenté sans cesse par deux livres qu'il aspire à mettre d'accord, le Ode et l'Evangile; interprétant, d'ailleurs, l'Evangile et la Bible au gré de ses théories, séduit par les images apocalyptiques, prophète et boulevardier, révolutionnaire et déiste, socialiste et conservateur, M. Dumas fils, au point de sa carrière où nous le trouvons aujourd'hui, nous présente une œuvre extrêmement originale et complexe, toujours séduisante, étincelante d'esprit, d'adresse et d'audace, avec des parties admirables, et, ce qui vaut mieux encore, avec deux ou trois pièces de premier ordre." After this, it is not surprising to find that M. Lacour is penetrated with admiration for that violent, vulgar, and clumsy melodrama, *L'Etrangère*; that he thinks the Cœnobia of *La Femme de Claude* a "figure à la Michel-Ange," and a masterpiece of characterization, and the play itself, which has been described as a nightmare of sensuous mysticism, a very excellent play indeed; and that he is prepared to accept the *dénouement* invented by M. Dumas for the *Supplice d'une Femme* for one of the best in the modern drama. It need hardly be said that he takes the moralist in M. Dumas quite seriously, or that he makes the most that can be made of his author's right, as the poet of Marguerite Gautier and Diane de Lys, to be considered the leader of the realistic revolution effected in art during the last twenty-five or thirty years. As for M. Sardou, the critic discourses of him in terms still more obliging. He labours under an impression that that most brilliant and vivacious of playwrights—"Cette incarnation du théâtre," as Barrière called him—is a great writer, a great moralist, a great satirist, a great dramatist, and a great artist in the presentment of character and emotion. In his enthusiasm he accepts the dashing farce of *L'Oncle Sam* for very literature; he sees in *La Famille Benoiton* a work which, under one of its aspects, may be regarded as a pendant to *Les Femmes Savantes*, while under another it is of the deepest tragic significance. He is inclined to admire the emotional quality in *Les Vieux Garçons* quite as warmly as the incomparable neatness of its construction; and he claims not less than heroic rank for *La Haine* and *Patrie*, which are, assuredly, no more than splendidly clever. He even takes up the cudgels in defence of *Daniel Rochat*, and proves to his own satisfaction that it is not a dramatic futility, but a real play. In fact, he pushes his admiration so far as to awaken a feeling of something like astonishment in his readers that he has refrained from speaking of *Les Femmes Fortes* and *Les Poinçons du Voisin*, as models of their kind.

M. Lacour has nothing to say of what is, or is not, the essential in drama, and he now and then, as has been seen, allows his enthusiasm to get the upper hand of his discretion. But he is useful in his way, and as often as not discourses usefully. His remarks concerning realism are particularly sensible; and his analysis of the influence of Balzac on the later drama—on which the image and superscription of that extraordinary artist are imprinted not less deeply than on the later novel—is extremely good and pertinent. It is worthy of note that, like MM. Sarcey and

Zola, he, too, believes the drama to be even now in a state of transition; and that, when naturalism shall have died the death it deserves, and the *pièces* shall have passed away, and there shall be no more question of the sermon-melodrama, he looks for the advent of a new kind of play, the form and spirit of which shall be altogether poetical.

JOINT-STOCK INVESTMENTS.

IT seems plain that the salutary dread of joint-stock enterprises which has so long weighed upon the English investor has at last been lifted off him. The list of new Companies which has recently been published in the *Times* may represent a good deal more capital than has been subscribed, but it must also represent a good deal which has been subscribed. Promoters do not spend their money in advertising unless the public show some disposition to buy shares, and by the time that a few Companies have asked for money without getting it, many more that have come to the birth have discovered that there is not strength to bring forth. If investments had not been brisk, the list for the three weeks ending the 23rd of April would not have been larger in proportion than that for the three months ending the 25th of March. For some time past everybody who has any spare money has been under the influence of one of two feelings—dislike to losing his principal, and dislike to getting very little interest for it. Unfortunately, the first of these feelings grows less acute as the recollection of former disasters becomes fainter; whereas the second is constantly kept vivid by the practical inconvenience of a diminished income. Every right-thinking mind is disgusted by the prospect of having to think yourself lucky if you can get four per cent. for your money. The faith of the English people in five per cent. as a divinely ordered minimum of interest has been rudely shaken of late; but the germ of the faith is there, and it only waits for a little encouragement to shoot up afresh. The promoter is skillful in marking the least signs which tell that public confidence is reviving. He rejoices to think that prospectuses have become an unknown literature to numbers who were once painfully familiar with them, and that the delusions which have been so often exposed, and the promises which have so often been broken, may once more be reproduced without much fear of detection. Now is the time to launch upon the world his Cabbage Tobacco Company. Hope, that so long seemed dead, has again come to life, and he no longer fears to find deaf ears turned to the grand scheme by which an ingenious public may be induced to buy something which is not tobacco at about the price which it has hitherto paid for something which is. When one scheme has been successfully floated, the way is at once opened to a second. Those who could not make up their minds to write for shares in one Company until the day on which the subscription list was to be closed had come and gone are naturally anxious not to make a similar mistake with a second. They do not wish to be less courageous, and consequently less fortunate, than their neighbours, and as each successive prospectus takes care to improve a little on its predecessors, they are justified in describing their prospects from the undertaking in which they have actually invested as even brighter than those that would have been theirs if they had not let the first undertaking slip. This process is capable of indefinite repetition; and, for however long a time the issue of new Companies may go on, promoters are sure to be forthcoming who will promise to give unto this last even as unto all that went before it.

There are two aspects in which investment in new Companies may be regarded, and neither of them at all justifies the childlike trust which characterizes the investor in prosperous times. The money invested is either put into a business, or lent to those who are going to carry on a business. Consequently, a man who buys shares in a new Company must, if he is commonly prudent, be satisfied of his own knowledge either that the business is promising, or that those who propose to carry it on are trustworthy. It is strange that the mere interposition of the words "Joint-Stock Company, Limited," should exert so magical an effect. Ordinarily speaking, if it were proposed to a man who has saved money to embark in a business of which he knows absolutely nothing, or to lend his capital to persons of whose character and qualifications he is equally ignorant, he would think that he was being made fun of. Dairy farming, hotel management, house-building, mineral water bottling, furniture-selling, and all the hundred other forms of industrial enterprise which are now being launched upon the market need special skill and training. They need this special skill and training just as much when the business is to be carried on by a joint-stock Company as when it is to be carried on by an ordinary partnership. It may be said that even in ordinary partnerships there are sleeping partners, and that an investor in a joint-stock Company is no worse off than a sleeping partner in any other concern. But then a sleeping partner is usually a man who has sufficient confidence in those with whom he is associated to leave his money in their hands. He is not a trader, but a capitalist who has lent money to traders. The wisdom of this course depends entirely on his knowledge of the traders in whom he places this trust, and there is nothing in the position of a shareholder in a joint-stock Company to exempt him from this rule. In so far, and only in so far, as he has good grounds for putting confidence in the management of the Company, is he wise in lending

money to it. To have these good grounds it is not enough that there are names on the direction whom he knows by repute. There are names, indeed, which carry assurance with them, but they are the names of men who have a specific business reputation, and of this the ordinary investor can seldom be a judge. What he means by a good direction is a board which includes a baronet, a general, and a younger son of a peer—an excellent combination possibly for social purposes, but an utterly worthless one from a business point of view. If any one of the three came to the investor and proposed to borrow money of him, he would at once feel this; but when the proposal is that he should lend money, not to a baronet, a general, or a younger son, but to a Company, of which he really knows nothing except that a baronet, a general, and a younger son are among its directors, his hand is at once in his pocket. There is, it is true, a further difference between an ordinary sleeping partner and a shareholder in a joint-stock Company. The liability of the ordinary sleeping partner is unlimited; the liability of the shareholder is, for the most part, limited. If the investor took his total liability into account, and bought no more shares than he could contrive to pay for, supposing all the capital to be called up, this would be a solid distinction. But, as regards the majority of investors in new Companies, it is a distinction which comes to very little. They regulate the amount of their investments, not by the nominal capital, but by the capital it is proposed to raise at once, so that, if the Company is wound up and the whole of the nominal capital has to be provided in order to satisfy its creditors, the shareholders may be ruined quite as effectually as though their liability had been unlimited.

The result of all this is that the general public had better avoid new Companies, and especially small new Companies, one reason for this last caution being that where the nominal capital is very small there is always some ground for surprise that it has been found necessary to come to the general public for it. Men of business are always on the look out for good investments, and when they know of one which promises exceedingly well, and needs no more money than they can themselves command, it is not very obvious why they should be anxious to share the golden opportunity with people of whom they know nothing. Inasmuch, however, as new Companies are increasing in number every week, it is evident that nobody needs this and similar warnings. If they did, there would be very few new Companies.

THE ANGLO-FRENCH COMMERCIAL TREATY.

THE General Tariff Bill, which has so long been under discussion in the French Chambers, has at last been passed, and now awaits only promulgation to become law. Six months after it is promulgated it will come into force, and, consequently, there are only six months within which to negotiate the new commercial treaty between this country and France. If the treaty is not then concluded, the General Tariff will apply to English as well as to other foreign goods imported into France, unless, indeed, our Government in the meantime can induce the French Government and Chambers to prolong the existing treaty for another short period. From one point of view the General Tariff marks a great advance towards Free-trade, though from another it is disappointingly reactionary. The National Convention adopted commercial, as well as civil and political, freedom; but in the long wars which followed, heavy duties had to be imposed, not so much for the sake of the protection they gave as for the revenue they yielded; but they were continued and even increased by the succeeding Governments with the view of giving protection to native industry. At last these duties became absolutely prohibitive in many instances, and in nearly every case were very onerous. The Commercial Treaty negotiated by Mr. Cobden in 1860 was the first breach in this system, and there quickly followed other treaties with the Continental Governments. The General Tariff Bill, which has now been passed, is intended to replace the old tariff which existed before Mr. Cobden's treaty was negotiated—that is to say, the legislative, not the conventional, tariff of recent times. Regarded from this point of view, it marks, as we have said, a great advance. But the experience gained under Mr. Cobden's treaty and those which followed it had proved so clearly the advantages of a liberal *régime* in trade that it was hoped France would adopt the conventional tariffs as a rule henceforth; and this, indeed, was the first idea that prevailed. Five or six years ago, when the question was first submitted to the Superior Council of Commerce, the recommendations made were that the conventional tariffs should be adopted in the case of those countries which did not negotiate special treaties with France, but that for countries entering into treaties further concessions should be made. The Bill, however, which was ultimately introduced in the Chamber of Deputies, proposed duties in most cases higher than those of the treaties, and even those duties have been raised during the passage of the measure through the Chamber of Deputies and the Senate. Roughly, we may say that, as the Bill now stands, the duties have been raised, on an average, about 25 per cent. From this point of view the Bill must be regarded as reactionary. But when it is borne in mind that the tariff is intended to apply to countries, like the United States, which refuse to make any concessions to France or to enter into any treaties with her, and that further concessions can be purchased by countries which will negotiate, it must be acknowledged, after all, to be not very re-

actionary. Of course, it is not a Free-trade tariff. Its fundamental principle is Reciprocity. The French have not yet come to see that the interests of the general consumer are of greater importance than the interests of the small body of producers who provide for the foreign market. And they insist, therefore, that whatever concessions are made to the foreign importer must be bought by him. The general tariff is, therefore, merely the starting-point for negotiation, and it depends upon the willingness and ability of other Governments to purchase concessions whether they shall obtain a large or a small reduction in the duties. In this country we take a different view of the matter. But as we desire the promotion of commercial intercourse between the two countries, it is to our interest, if possible, to induce France to reduce the duties of the General Tariff. In any case, whether we obtain reductions or not, it is important that the new treaty should be negotiated as quickly as may be, and it is to be hoped, therefore, that no time will be lost in pushing on the negotiations. Mr. Kennedy, of the Foreign Office, it is true, has been sent to Paris; but, according to the statement made by Sir Charles Dilke in the House of Commons on Monday evening, the negotiations proper have not yet begun, Mr. Kennedy and the French delegates being engaged as yet only in the examination of the tariff relating to woollen goods.

As we have stated above, there are only six months, according to present arrangements, within which to negotiate the treaty. This is evidently too short a time. The negotiations proper must be preceded by a detailed and minute examination of the duties relating to each particular class of articles, and to make this satisfactorily will be a slow and tedious work. As we have already stated, the first idea in France, five or six years ago, was to take Mr. Cobden's treaty as the starting-point, making reductions in it if this country was willing to grant corresponding advantages to France. This plainly was an admission on the part of the French authorities that the old duties of the commercial treaties were not only protective, but were sufficiently protective, even in the case of countries like the United States which refuse to negotiate with France. It is now said to be the intention of the French Government to propose to ours a reduction in the general tariff of only about 25 per cent.; in other words, to continue the Cobden Treaty practically, or, that is to say, to maintain Protection against us. But, in reality, a rough reduction in the General Tariff of 25 per cent. would not maintain the duties now existing, for in some cases the duties have been raised more than 25 per cent., while in others they have not been raised so much. There would thus be a disturbance of existing duties, and our negotiators would need the assistance of experts to say whether this disturbance would be to our advantage or not, or whether, in fact, it would not in some cases put an end to all trade between the countries. The mere examination of the various duties would, therefore, take up a very large part of the six months, even if there were nothing else to prolong the examination and make it more difficult. But there is very much more. Besides raising the duties generally, the General Tariff Bill substitutes specific for *ad valorem* duties—that is to say, it proposes to tax goods by weight and quality instead of by value. The reason assigned for this is the prevention of frauds and disputes. And no doubt the *ad valorem* system does admit of both frauds and disputes. A dishonest importer, we can well believe, often puts too low a value upon his goods, thus defrauding the French Treasury and his own more honest competitors. A perfectly conscientious man may often make a mistake in the hurry of business. And in any case, whether he is right or wrong, the French Custom House officials may take a different view of the matter, and disputes may arise even with the best intentions on both sides. But the specific system is liable to still greater abuses. It splits up the various kinds of goods into a multitude of categories, so that it is scarcely possible for any importer to know in what category to place his goods. It is thus as liable both to frauds and disputes as the other; while it is much more vexatious to the importer, and quite as troublesome to the Custom House officials. For example, if a bale of goods should be made up of two or three different qualities, the Custom House officials would have to open the bale and test the weight and fineness of each of the two or three pieces. There is thus just as much room for dispute as in the other case, and the opening and handling of the bale are very likely to spoil the goods. The following extract from the letter of a merchant to one of the Manchester papers puts this part of the case so strongly from the practical point of view that we are tempted to quote it:—

The new tariff substitutes no less than 51 categories or separate standards in lieu of the uniform 15 per cent. *ad valorem* rate for every variety of printed cottons—namely, 17 groups in connexion with the grey cloth and three more subdivisions of each group in respect of colours. Thus, a French buyer coming to this market to purchase of export or calico warehouses would, before he could ascertain the suitability of the seller's quotations, entail on the seller the following laborious work. First, the separation of all goods submitted to him into groups in respect of colours—a process of the gravest difficulty in view of "superpositions," and almost impossible to perform in foggy seasons; secondly, after having thus separated the colourings, each piece has to be separately measured for width and length, then weighed, thereafter counted with a magnifying glass to ascertain the number of threads in a square of five millimetres, in order to determine to which of the 17 grey classes each piece may belong.

This, it will be borne in mind, refers only to cotton goods; but the same thing more or less applies to woollen, linen, jute, and, in fact, almost every other kind of commodity. Our manufacturers are most anxious that the proposed substitution of the specific for

and *ad valorem* duties should not be acceded to by our Government, and, if possible, it is desirable that the *ad valorem* duties should be retained. In any case, there will be a strong opposition made to the proposal, and the discussion will lead to a very long and very minute examination. If only six months are allowed, it is scarcely possible that this examination can be conducted satisfactorily; and, therefore, the treaty either will not be concluded in the time, or it will be concluded hurriedly and imperfectly. It is to be hoped, then, that a prolongation of the time allowed for negotiating the treaty may be agreed to. And this is desirable for another reason. A certain time ought to be given to our merchants to prepare for the new régime. As things stand now, they do not know whether at the end of six months the existing duties will be continued, or the duties of the General Tariff will come into force, or new duties will be agreed upon of which they are as yet entirely ignorant. It is impossible, therefore, for them to prepare for the new state of things. And if they are not given a reasonable time for preparation, they will be obliged to suspend their manufacture for the French market altogether. This does not mean merely that a certain portion of the time for which the new treaty runs will be lost; it means that manufacturers and workpeople now engaged in producing goods for the French market will have to stop working altogether, or nearly altogether, and, therefore, to go without their profits and their wages.

Unfortunately, in the negotiations we have very little to offer to France except a reduction of the wine duties. We have frankly adopted the principle of Free-trade, and have thrown our ports open to all the world. When France, therefore, insists that we shall purchase concessions from her, we have nothing with which to make the purchase. It is very improbable, therefore, that we shall be able to induce her to reduce very greatly the duties she now proposes, or to alter her intention to substitute specific for *ad valorem* duties. And there are reasons why she should be unwilling to make very great concessions apart altogether from protectionist prepossessions. During the past few years, as we all know, protectionist ideas have gained ground rapidly upon the Continent. Spain, Italy, Austria, and Germany, one after another have increased their duties. And what France grants to us she will hardly be able to refuse to the countries surrounding her. Perhaps this would not affect her much if she regarded the matter from a commercial standpoint solely. For even now Free-trade principles have gained a considerable foothold in France. But, unfortunately, political prejudices and antipathies come into play. By the Treaty of Frankfurt, which ended the Franco-German War, Germany obtained for herself the privilege of the most favoured nation in all commercial matters, and, resting satisfied with that, she has refused since to negotiate a commercial treaty with France. It follows that whatever concessions France makes to us in the coming treaty she will make to Germany also, without obtaining anything in return from Germany. We need hardly say that France is very unwilling to make any concessions to Germany which she can avoid. We are thus weighted in the negotiations upon which we are about to enter by the fact that we are purchasing concessions for Germany as well as for ourselves. We are also weighted by the unwise advocacy of many of our own merchants and public writers. They cite statistics to show that the Cobden Treaty has been much more favourable to France than to England, which is no doubt true enough for this reason, that we maintain no duty upon French goods except upon wines, whereas France maintains a great many duties upon English goods. But the inferences that are drawn in this country, and are urged upon the attention of Frenchmen, imply that France thereby has gained an advantage, and that she ought to redress the balance; whereas the real truth is, that it is we who have gained the advantage. Our consumers obtain French goods without paying a heavy duty upon them, whereas the French purchasers of English goods have to pay a price for those goods enhanced by all the amount of the duties. Those writers, therefore, confirm the Reciprocity notions of the French, and make them doubt whether English people are, after all, such thorough Free-traders as they profess to be. In another way, too, our advocates injure their own case. Some of the Manchester people, for instance, are advising the Government to refuse to negotiate altogether unless *ad valorem* duties are retained. This is sheer nonsense. And none know that it is so better than the French. If the Government were to refuse to negotiate a treaty, those specific duties which the Manchester people so much dislike would be introduced by the General Tariff, and, in addition, the 25 per cent. which that tariff adds to the existing duty would be imposed. So that, if the Government were to follow the advice of these sapient counsellors, the only result would be an enhancement of the duties, and the introduction of the very specific duties against which the protest is made. What is really desirable is that the Government should lose no time in negotiating some kind of treaty, and should obtain as low duties as it can without sacrificing any principle; but that it should neither make threats which it does not intend to carry out, nor pretend an indifference to a treaty which it does not feel.

THE PICTURE GALLERIES.

WITHOUT any special reference to the wisdom or unwisdom of the system of Hanging Committees, as that system is arranged by the Royal Academy, it is certainly safe to say that all former vagaries of all former Hanging Committees within the

memory of man have been surpassed by the Hanging Committee of this year appointed to arrange those pictures which the Council has decided to have hung on the walls, and to select and arrange for hanging on the walls those pictures the choice of which is left to the Hanging Committee. There would be no new experience in finding a certain number of grossly incompetent works hung in places of conventional honour; for the rules of the Academy are so constituted that a certain number of such works must inevitably be so hung. But it is perhaps almost as novel as it is unfortunate to find so much valuable space given to works which are plainly beneath serious consideration, while pictures of much merit are put in places which are evidently unfit for them. It is, of course, impossible to say anything of those pictures which the Committees have thought fit to reject altogether. But there is no reason why the system, already spoken of, of filling up "the line" with utterly unworthy works should not be dwelt upon both in general and in detail. Of this we may have more to say on future occasions, as we may of the extraordinary blindness or indifference to any rational scheme of colour exhibited by the Hanging Committee of this year in their juxtaposition of pictures. In every room this creates constant offence to the eye, and a constant sense of irritation, due to the feeling that there are certain pictures which it is impossible to judge fairly, merely because their surroundings are so ignorantly placed.

Apart from the freaks and fancies of which we have spoken, it cannot be said that the whole exhibition, so far, at least, as the oil-paintings are concerned, is one of astonishing merit. That it should contain some fine works is, one may hope, for the sake of English art, as inevitable as the prominence given to pictures of mediocre, or less than mediocre, value is clearly avoidable. It may be well, in a first general view, to pick out some of those works which, from one cause or another, seem to compel attention. Gallery No. I. contains an admirable picture by Mr. Briton Rivière, called "Envy, Hatred, and Malice" (2). In this we have a girl standing up with a pet pug on her shoulder, whilst dogs of other kinds surround her with attitudes and expressions that are denoted by the title. The dogs are as true as are well painted as one would expect them to be by Mr. Rivière; while the figure of the girl seems to show a distinct advance in the painter's command of the human figure. The same gallery contains a work by Mr. Yeames, R.A., "Here we go round the Mulberry Bush" (9), a work which can hardly be surpassed for hotness of colour and hardness of treatment, and which is hung on the line. It would be unjust, however, to Mr. Yeames to couple with this another work hung on the line, painted by Mr. W. P. Frith, R.A., and entitled "For Better, for Worse" (14). The glaring faults of this production, of which vulgarity is not perhaps the worst, cannot possibly be conveyed by description. Also on the line is an ambitious work by Mr. Eyre Crowe, A., which purposed to represent the "Explosion of the Cashmere Gate at Delhi, September 14, 1857" (66). The idea of the composition is not altogether without merit, but to the execution it is impossible to give any praise. From these things it is pleasant to turn to such work as Mr. Cecil Lawson's "The Pool" (19), of which the tenderness, truth, and good painting are striking. Mr. Peter Graham's "Mountain Road" (55) is fully worthy of the painter's reputation. It represents a Scotch landscape, with steers sniffing, as only Highland steers can, at an approaching man and dog. A mist hangs lightly, in spite of the bright sunshine, over the mountain's side on the right. The vividness and delicacy of the work can hardly be overpraised. Mr. Woods's "At the foot of the Rialto, Venice" (61) is admirable, alike in composition, drawing, colour, and in the sense of picturesque life which pervades an attractive work. Mr. Logsdail, who seems to have made the subject of Antwerp his own, has in this room an exceedingly good picture called "St. Anne's Almshouses, Antwerp" (25), and close to this hangs a portrait, "Mlle. L. R." (24), by M. Fantin, whose treatment of black drapery is, as usual, masterly. We are sorry to be unable to find any admiration for the President's "Elisha raising the Son of the Shunamite" (49). In Gallery No. II. not the least remarkable and admirable work is a small picture called "A Frightful State of Things" (71), by Signor Chierici. The subject is a child in a high chair, with an empty, or all but empty, bowl of porridge, besieged by geese and poultry of every description. The work is admirably painted and is full of life, movement, and unexaggerated humour. The large work by Mr. Long, which hangs in the place of honour in this room, "Diana or Christ" (97), will inevitably and justly attract a great deal of attention; full inquiry into its merits and shortcomings must be deferred, but for the present we may say that it strikes us as a strongly and beautifully felt piece of work, which, it is hardly necessary to add, has some striking technical merits. Mr. S. E. Waller's "Success" (81) is full of dramatic power, and is admirably painted. Mr. Stacy Marks's "An Episcopal Visitation" (113) is an admirably humorous portrait of some adjunct cranes at whom a bishop is looking. The President's portrait of himself (119), painted for the Uffizi Gallery, seems to us a work of the highest merit. In Gallery No. III., the large room, Mr. Calderon, R.A., exhibits "Flowers of the Earth" (161), an ambitious and highly-coloured attempt in the manner of Veronese. Near this are Mr. Briton Rivière's admirable study of tigers, called "A Roman Holiday" (155), and Mr. Watts's excellent portrait of Mr. Matthew Arnold. Mr. Frank Dicksee's "The Symbol" (175) is remarkable for, among other things, its beauty of colour; and Mr. Frith's "Swift and Vanessa," which is hung on the line, is remarkable for every quality which it ought not to

possess. The President's "Idyl" (197) is as beautiful in colour and feeling as anything that he has lately done; and Mr. Alma Tadema's "Sappho" (269) is an admirable piece of drawing and brilliant colouring, next to which the Hanging Committee have placed Mr. Millais's charming, and quietly coloured "Cinderella," a piece of taste which requires no comment. Mr. Haywood Hardy has struck out a new line with complete success in his "Sidi Ahmed ben Avada and the Holy Lion" (213). Of this, as of Mr. John Collier's powerful "Last Voyage of Henry Hudson" (260)—which has been bought by the Academy under the terms of the Chantrey bequest—we may have more to say in future. We shall also have to return to Mr. Boughton's finely felt and painted "Hester Prynne" (237), and to a picture which will excite a deep and mournful interest—Mr. Millais's admirable portrait of Lord Beaconsfield. Mr. Herbert, R.A., who has a curiously ill-painted picture hung on the line in this room, has in the next a still worse one, also hung on the line, called "The Sword of Herod" (299). In the same room, No. 4, is a fine and strong landscape of "Mountain-tops" (315) standing out from a sea of mist by Mr. McWhirter. Mr. V. Prinsep's "The Young Solomon" (341) is remarkable for its daring and completely successful scheme of colour.

In Gallery No. V. Mr. Herkomer's "Missing" (373) seems to us somewhat disappointing both in conception and execution. Mr. Small's "The Survivors" (385) is a little wanting in the power needed for the treatment of such a subject. Mr. Luke Fildes's "A Venetian" (378) more than makes up for the comparative failure of some pictures of his in a former room which we have not mentioned by name. Mr. Briton Rivière's "Let Sleeping Dogs Lie" (402) is instinct with character and humour. Gallery No. VI. contains a striking landscape, "Golden Prospects" (445), in which Mr. Brett has produced as brilliant and attractive an effect as he did with his celebrated picture of the Channel Islands a few years ago; and "After Rain" (459), one of Mr. Keeley Halsewell's best Thames studies. On the line hang Mr. Archer's "Betrothal of Robert Burns and Highland Mary" (464), which seems to be a study from ugly wax figures; Mr. Cope's "Far-away Thoughts" (510), which is full of an obviously unconscious humour; and a picture by Mr. Clark (477), which is described in the Catalogue, with unintended irony, by two lines from Burns. The work is an attempt, which is not altogether unsuccessful, to follow the style of Mr. Frith. It may be enough to call attention to the fact that Mr. Eyre Crowe's "Sandwiches" (503) is also hung on the line. Next to this hangs Mr. Dicksee's charming picture, called "The Monks' Walk." In Gallery No. VII. a lately-elected Royal Academician exhibits a diploma work, which seems to mark accurately enough his sense of the honour done to him; but, to make up for this, the room contains two very fine sea-pieces by Mr. Shaw (530, 536); a beautiful and tender picture by the President (585); a study of Monks, which is full of humour, by Mr. Sadler (596); and a portrait, by Mr. Millais, of "Captain James, Royal Scots Greys" (604), for which it would be difficult to find anything but praise.

In the Lecture Room the Hanging Committee has perhaps found fuller scope for its jests and japes than elsewhere. M. Fantin's "La Pluie d'Or" (873), Mr. A. Stuart Wortley's portrait of "C. Stuart Wortley, Esq., M.P." (975), Sir Robert Collier's "Glacier of the Rhône" (984), and, to say nothing of other instances, Mr. Browning's "Heresy" (971), are as ill hung as possible. Mrs. Butler's "Defence of Rorke's Drift" (899) will probably disappoint those who remember M. de Neuville's picture. Mr. Bridgman has a fine picture called "The Funeral Rites of a Mummy on the Nile" (906), and Mr. John Collier an admirable portrait of Mr. Edwin Booth in *Richelieu*. The Tenth Gallery contains comparatively little to challenge attention. The President exhibits two charming Studies (1414 and 1417); Mr. Watts has an admirable portrait of Mr. Pepps Cockerell (1391), and Mr. Glindoni a very clever subject-picture of "Prince Henry before Judge Gascoigne" (1353). In this first general sketch of the Academy a large number of works which deserve notice either for their merits or demerits have, of course, been passed over. But the impression produced by a first view cannot be called altogether pleasing.

THE THEATRES.

WE do not know whether Mr. McCullough has chosen to appear in *Virginius* because that is his best part, or because he wishes to avoid direct rivalry with another American tragedian whom we have all had the pleasure of seeing. If the latter is his motive, we can commend it as wise; but from any other point of view his choice was unfortunate. He would have done better to select a piece which helps the actor more to meet the heavy call it makes on his power. The story of *Virginius* and the great scene in the fourth act are so terrible that only the finest acting can render them adequately. The verse of Mr. Sheridan Knowles, again, leaves everything to the actor. There is a feeble evenness of flow about it that becomes utterly wearisome, unless the interpretation be striking. Unfortunately Mr. McCullough fails to elevate the dialogue by any power of acting and shows himself unable to rise to the level of the really great situations. In the earlier scenes of the play he has a

certain homely simplicity of manner, which is in good keeping with the character of Virginius, but in the very first he disappoints, by the want of variety in his voice and acting. He has but one manner for his daughter, Servia, Iollins, or Dentatus. He promises his daughter in marriage with the same voice and bearing with which he discusses the conduct of the Decemvirs. The verse of Sheridan Knowles is extremely commonplace in this passage, the pathos entirely conventional; but, if there had been any genuine emotion in the voice of the actor, that could have been overlooked. But Mr. McCullough's acting only served to point the conventionality of the words. His utterance became mechanically slow and laboured, but was never husky. The working of his eyes only called attention to the absence of tears.

It would, of course, be unjust to judge the actor by his performance in this act, though a failure to avail himself of the opportunities it affords is not a hopeful sign of what is to follow. And in all that does follow the impression produced by him is that he constantly falls far short of excellence. We do not deny that Mr. McCullough has studied his part carefully or that his elocution is generally good. But there is no indication of an intelligent conception of the character, still less of any originality. It is not only that he fails to express emotion. That might be largely due to deficient physical power. There is no sign of original artistic intention. Throughout the one great scene of the fourth act, in which he has such ample opportunities for producing a great effect, his gestures were mechanical and his voice hard. There was none of the terrible wrath with which he should have cowed Caius, or the withering sarcasm to be expected when he taunts Appius Claudius. The trivial wrangle about the word "fashion" between Virginius and the Decemvir is made doubly trivial by Mr. McCullough. But the worst part of his acting was the way in which he kills his daughter. The actor's bearing is ungraceful throughout, but his delivery of the blow was ignoble. It is in keeping with the general absence of thoughtful artistic effort in Mr. McCullough's acting that he has been unable to resist the temptation of being far too fine for his part. With no apparent object, except to enhance his own personal importance, he consistently violates the simplicity of dress and surroundings proper to the position of Virginius. The hero of the Roman legend is a poor freeman, who tills his own land. The Virginius of Mr. McCullough lives in a house too splendid in furniture and size for a wealthy Roman of the time. In the camp he wears a gilded cuirass and purple mantle, gaudy enough for an Imperial legate, and quite out of place on the back of a Republican centurion. All the tragedy of Virginius's part is lost if he is not to represent the poor man suffering from the rich oppressor; but at Drury Lane he is as fine as Appius Claudius.

Mr. Ryder, who played Dentatus, is the only one of the other actors of whom any good can be said. His Dentatus, though stagey, was on the whole satisfactory. If Mr. Ryder was the best of the company, by far the worst was Mr. Harris. His bearing, which was doubtless meant to be manly, was in the worst style of melodrama. Miss Cowell was pretty and sympathetic in the part of Virginia, but she was never anything more. She was equal to her part in the first two acts, but when the play required her to do something more than smile pleasantly, she was found wanting. There was nothing worthy of note in Mrs. Arthur Stirling's Servia, except the clearness of her elocution. The performance, it is only just to say, was loudly applauded. Those who understand the humours of the Drury Lane pit and gallery may perhaps be able to explain why.

The most striking feature of the revival of *The Lady of Lyons* at the St. James's is the acting of Mrs. Kendal. Her Pauline has the fault of being at times a little too lachrymose. When she offers to accompany the husband she is beginning to love and has forgiven for his unworthy trick, her manner might with advantage be a little more proud and resolute. In the fifth act her recital of her story is somewhat too much drawn out. But her impersonation is not the less one of sustained excellence. She was graceful in the coquetry of the earlier love scenes with the supposed Prince; but she was at her best in the trying scene in Claude's cottage. She indicated very finely the first dawning of her understanding of the truth, and passed into a bitter passion of rage and sarcasm without losing for a moment the self-control necessary for a proper artistic rendering of the situation. Equally fine was her acting with the Widow Melnotte. The struggle between Pauline's pride and her innate kindness while she is hesitating how she is to behave to the mother of the man whom she does not know whether she loves or not was indicated in its most delicate variations. The cottage scenes were also Mr. Kendal's strongest point. He represented throughout the passionate, fiery Southern nature of Melnotte with force enough to atone for the extreme incredibility of the character. There was great pathos in his parting from Pauline, and a sort of fierce dignity in his dismissal of Beauséant. The best acting could scarcely save the inflated language of Bulwer Lytton's hero from sounding ridiculous, and Mr. Kendal was accordingly heavy at times. Perhaps he could not help being weighed down by the bombastic rhetoric. He is weakest in the fifth act, when he fails to look sufficiently soldierly. Mr. Hare does the utmost for the smaller part of Colonel Damas. His bearing is at once well-bred and blunt, and he gave the Colonel's well-known soliloquy on women with his usual spirit. Miss Louise Moodie made a very touching piece of acting out of the part of the Widow Melnotte, and acted with a just mixture of simplicity and dignity. Mrs.

Gaston Murray was less satisfactory as Mme. Deschappelles, and the Beauséant of Mr. T. N. Newman was still more indifferent. He contrived to be both too stiff and too noisy in his proposal of love to Pauline.

It would be almost an impertinence to say that Mr. Gilbert's "New and original æsthetic opera" is full of clever rhymes, and has passages of very genuine fun. These things are matters of course in his work. His peculiar ingenuity in contriving unexpected and laughable situations is perhaps as much shown in *Patience* as in any of his other writings, and it needs it all. The spectacle of the zealous satirist energetically killing the giant he has made is liable to grow a little ridiculous. Æsthetic young men and maidens bid fair to become good stock figures for laughter on our stage, and, like other popular types, will survive the original. Already no chorus is complete in any new farce without a pale-faced, long-haired young man, with his hat on the back of his head and a flower as big as a frying-pan in his hand. The author is apparently not without an uneasy sense that his satire is being spent on the empty air. A note on the programme informs us that the "Management considers it advisable to state that the libretto of this opera was completed in November last." Perhaps this is meant to explain certain references to the invincible British uniform; but it may also show that Mr. Gilbert has an uneasy consciousness that the work he has set himself to do has been a little overdone since that date. The æsthetic young man of satire with three theatres and a weekly paper all to himself is threatening to become a nuisance. The remarkable creature has never been seen out of the pages of *Punch* by the audience who laugh at Mr. Grossmith's very funny acting. The "very delectable, highly respectable threepenny-bus young man," who delights in new slang, has every reason to be obliged to Mr. Du Maurier and his dramatic rivals for enlarging his copious vocabulary. They have seriously affected the supremacy of the music-hall.

The artificial satire of *Patience* is, in fact, the weakest side of the piece. The "twenty love-sick maidens" who transfer their affections from Bunthorne to Grosvenor threaten more than once to become tedious, in spite of Mr. Sullivan's pretty music and Mr. Gilbert's clever verse. The audience laughed, as they would at any breakdown, at the excellent fooling of the Duke, Colonel, and Major in their æsthetic dress and "early-English" attitudes. They laughed, too, at Mr. Grossmith when he sang how if "you are anxious for to shine in the high æsthetic line," you must, among other follies, "walk down Piccadilly with a poppy or a lily," with the confidence of people who had a good safe opportunity. They knew all about that lily. But we heard the heartiest laughter at passages which had nothing to do with the "high æsthetic line." The Major's cramp was most effective. The Duke, who suddenly took us all back to the good old beaten road of satire on snobbery, was immensely enjoyed by a house keenly alive to the value of dukes. Messrs. Grossmith and Barrington were most effective when they were burlesquing not Maudie, but the well-worn follies of melodrama. Mr. Grossmith was very funny as Bunthorne, when he threatens to launch a "nephew's curse" on the head of Grosvenor, and was deservedly applauded; but both the author and the audience had lost all sight of the æsthetic craze at that moment. In one passage, where the intention of ridicule was more obvious, it wholly failed of its effect. Reginald Grosvenor, the All-Right, having renounced his artistic affectations, becomes an "every-day young man," and persuades the maidens who adore him to become "every day" in manner and appearance. Their happy change to "prettily pattering, cheerily chattering every-day young girls" is signalized by their entry in dresses of the loudest colours, dancing in a manner which is certainly in marked contrast to their former languor. As a matter of taste they were in a better state while still "love-sick maidens." The heartiest laughter of the evening was not of a kind which can have been pleasing to the friendly critics who are so fond of dwelling on the purity of Mr. Gilbert's work. Nothing delighted the audience more than the scene between Patience and Grosvenor in the second act, with its very perceptible under-current of disagreeable suggestiveness. Lady Jane, too, pleased hugely by her recitative and song at the beginning of the same act. The humour of this passage consists entirely in its smart rhymes on the trumpery scandals of the toilette-table. Throughout the whole piece there are timid approaches, not always of a very skilful character, to the tone of those naughty foreign opéra-bouffes at which Mr. Gilbert's admirers are so shocked. As regards the literary workmanship of the piece, it has undoubted cleverness in many passages; but the trick of saying very ordinary things backwards to produce a start or suggest what the writer does not care to say is becoming an affectation quite as silly and not nearly so pretty as Bunthorne's lily.

The undoubted success of *Patience* is largely due to Mr. Sullivan's music. He must share the credit with the prevailing popular craze that all sensible people are bound to laugh at æstheticism; but even so, enough remains to make a very real success for him. His songs will, it is probable, be sung when the professed motive of the opera has become unintelligible. In the duet between Patience and Grosvenor the beauty of the music is very far above the trivial intention of the verse. There is a genuine melancholy charm in Lady Jane's song, "Silvered is the ra'en hair," of which, as we have already hinted, the words are offensive. The music, though occasionally suggesting repetitions of the composer's own work, and at times imitations of other masters, is always lively. Of the actors we have left ourselves little room to speak. The most strikingly original

performance of the whole was Miss Alice Barnett's "Lady Jane," which was in the best style of farce, very comic, and controlled by fairly good taste. Mr. Grossmith was amply funny, and passed from lackadaisical affectation to most exaggerated melodrama with humorous effect. The attitude and voice he assumed to inflict Patience that he was a "cursed thing" were admirable, so were his tones when assuring her that he was not so bilious as he looked, and had a great deal of "innocent fun in him." Mr. Barrington was less varied as Grosvenor, but he sang the song of the "Silver Churn" with good effect. We may point out that the dance of Grosvenor and Bunthorne in the second act was much too like a certain dance on the deck of *H.M.S. Pinafore*. Miss Braham made a very pretty Patience, and sang with good expression and a fresh voice. The scenery in both acts was charming, and so was the grouping of the chorus. Perhaps the first tableau was also the best.

The 'Arry element is again asserting itself in comic criticism. A contemporary, for whose antecedents we have a deserved respect, devotes much space to Mr. Irving's Doricourt in *The Belle's Stratagem*, and this is what is said of it:—"The business is as stupid as that of Shakespeare's *Taming of the Shrew*," which, because it is the Bard's, must be an excellent comedy." The space devoted to illustration is not sufficient, "it being as much as we can do to get in his legs comfortably." A deserving recognition of artistic merit by a great University is amusingly alluded to, and the suggestion is made that L.L. stands for "Long Lanky," and D for Doricourt. Miss Terry is the "Toost too-too"; and the critic, with a remarkable sense at once of humour and fitness, proceeds to burlesque the dying words of the greatest of England's naval heroes. Yet this is not a journal of the gutter species. But, after all, 'Arry is not the arbiter of public taste, and it is possible that before long there may be a demand for a comic journal.

REVIEWS.

FORNERON'S HISTORY OF PHILIP II.*

EVEN had it been possible for an author of so very marked an idiosyncrasy as that displayed by M. Forneron to take up the broken threads of a narrative begun by another hand, a new history of the reign of Philip II. could hardly have incorporated in itself the late Mr. Prescott's half-accomplished work. Twenty years, or thereabouts, have passed since, with a soul above circumstance, the high-minded American historian produced his unfinished account of a reign which he could still describe as open ground for writers in the English tongue, while neither at home in Spain nor elsewhere had the subject been comprehensively treated in any book of European reputation. In a valuable bibliographical appendix to one of the volumes now before us, M. Forneron speaks of Watson's history, of which Robertson's masterpiece was of course the parent, as sharing with the much earlier Life of Philip by Gregorio Leti the claim to having "contributed most to substitute legends for facts" in connexion with its theme; perhaps a word might have been put in, as regards at least one episode, on behalf of the ingenious Abbé St. Réal. Meanwhile, since Prescott's death, much new material has been discovered or digested in Spain and in other countries, more especially in Belgium; and though it is not to be anticipated that the general verdict of mankind upon Philip II. and his statecraft will undergo any very material alteration, yet history is far from having said its last word concerning many events and characters of his extraordinary reign.

If, however, M. Forneron is right (which we certainly suspect him to be), there is in at least one European country no very general desire to hear the truth told about *Don Felipe el prudente*, however abundantly it may of late have been told there. The Spanish nation

qui s'est incarnée un moment dans Philippe II., ne se plaît pas à entendre juger son prince: avec une admiration ombrageuse, elle pardonne en lui ses propres travers, piété cérémonieuse, fierté silencieuse, patience indolente; elle excuse ce vice de temporisation maniaque que les moralistes contemporains reprochent encore à l'administration espagnole, et ne peut parvenir à regretter que les "choses d'Espagne" soient organisées dans un ordre quelquefois peu logique.

Most undoubtedly Philip might have been characterized in the same words in which one of our later Elizabethans characterizes the Spanish nation, as "proud, and in his pride unsociable": no calamity, no opposition, whether from a Pope or from a people, could affect his belief in the infallibility of his own judgment, or disturb a self-consciousness which the servility of contemporary sovereigns had flattered to the top of its bent. Procrastination, on the other hand, was the bane of his government. The revolt of the Netherlands was due to the continued presence there of the Spanish troops; Philip had undeniably meant to take them away, but his slowness in carrying out his own intentions caused the delay which in the end led to his greatest political loss. The fruits of the most glorious success of his reign, the victory of Lepanto, were forfeited for the same reason. On this occasion jealousy of Don John may have co-operated, but it was quite in the nature of things that Philip and his secretaries should do nothing, while the Turks had a new armada at sea six months

* *Histoire de Philippe II.* Par H. F. Forneron. Tomes i and ii. Paris, 1881.

after their defeat. There are other features in the character and disposition of Philip peculiarly sympathetic to his countrymen—among them one on which we should not have greatly cared to dwell, did it not make itself extremely prominent in M. Forneron's pages. Silent and sombre from his youth up, incapable of friendship or of conjugal devotion, Philip was in wanton amorosness no unfitting ruler of a people which about his time was to see clothed in a literary form the national type of Don Juan Tenorio. A revengeful spirit may have dictated the charge of bigamy brought against him by William of Orange; and the story of the bastards born to him in England while Queen Mary was besieging heaven for the fulfilment of her hopes may be mere scandal. His supposed personal intrigue with the Princess of Eboli has been shown by recent researches (noted at the time in these columns) to be a fiction; and we cannot suppose M. Forneron serious when he all but insinuates that there was something wrong between King Philip and (*horresco referens*) his sister-in-law, our English Elizabeth. But enough remains of well-authenticated infidelities to show that Philip in this respect as greatly resembled his father Charles V. as he differed from him in many others. It is perhaps more of a novelty to find that the servant whose unrelenting cruelty struck even his master as impolitic—the Duke of Alva—was likewise a true Spaniard of his times in his amours. When, nearly sixty years of age, he was starting on his terrible errand for the Netherlands, he was “so much in love with Doña Maria Manrique that he has no hour of repose but when he has seen her, which is as often as possible.”

Our readers will have already perceived that M. Forneron is not one of those historians who scorn the “intimacies” of their study; and, indeed, among the authorities cited by him we are not surprised more than once to come across one often more trustworthy than discreet—the *Sieur de Brantôme*. On this head we must confine ourselves to observing that the genius and learning of Michelet palliate in him indulgence in a tendency which in a lesser writer is apt to offend and finally to disgust. Physiology may be occasionally called in as an aid to historical inquiry; but no reader is bound to submit to a perusal—in a modern tongue too—of the *ordonnances de Monsieur Purgon*. One of the greatest of English scholars said of the greatest of English historians that “a rage for indecency pervades his whole work”; and M. Forneron is welcome to the advantage of a comparison which, from one point of view at least, cannot be said to be out of place.

Though in the rather magniloquent exordium of his proface M. Forneron couples France and Spain as joint apostles and champions of “Latin civilization,” he finds opportunities enough for exhibiting in the course of his narrative a more robust species of sentiment than ethnological affinities usually prove capable of sustaining. A French historian of a period in which the rulers of France cringed before a neighbour whom they could neither wheedle nor thwart may be allowed a few passing reflections on the chances missed by his country in the evil days when all the elements of internal strife combined to weaken and distract it. What a fine opportunity, exclaims M. Forneron, was offered by the jealousies between Lutherans and Calvinists in the Netherlands about the year 1562 for France, “de se rattacher l'Artois et le Hainaut”! And how blind we were, at a still more critical date ten years later (on the eve of the St. Bartholomew), not to understand our complex task, which was briefly this—to “make sure of the goodwill of England, of the alliance of the Lutheran princes of Germany, of the confidence of the French Calvinists, and then to seize the French provinces of the Netherlands, and to partition the others between England and the House of Nassau.” Such patriotic speculations are legitimate, if useless; but we feel bound to protest very strongly against the tone, nothing short of insulting, in which M. Forneron, as if he were composing *chants d'un soldat*, instead of a sober history-book, thinks fit to express his hatred of anything and everything German. On an early page we learn (with qualified satisfaction at the left-handed compliment included in the passage), how, though it was only when seeing them looting St. Quentin that Philip came completely to judge the Germans “in all their moral inferiority,” he had for some time previously been wont to

témoiner l'impression que lui inspirait le contraste entre les âtres grossiers et les Espagnols, au milieu de-quels il avait été élevé. On ne l'entendait que vanter l'Espagne et les Espagnols: ce n'était point étroitesse de l'orgueil national, mais simple sentiment de la supériorité de race; car lorsque bientôt il va se trouver en présence des Anglais, il saura apprécier leurs qualités, chercher leur estime, comprendre les mérites de cette nation, si différents de ceux des peuples méridionaux. Aussi il devint tout à fait odieux aux Allemands, qui se sentirent méprisés.

It may be a purely historical corroboration of this fine impulse of the Spanish blood that Mary Queen of Scots refused the hand of the unlucky Archduke Charles, inspired by the instinct of delicate and noble descent with disgust (imparted at secondhand) *con hombre nacido en Alemania*. But it is as futile in one sense to depreciate the German ideal of chivalry as it is in another to sneer at the ponderousness of German wit, if the reason for all this causticity appears on the surface. By way of additional insult, M. Forneron, in general so far as we have observed a correct writer, blunders with contemptuous indifference so soon as he crosses the Rhine. It is possibly a *façon de parler* (though a misleading one) to count the prosperity of the “signiory of Emden” among the “riches of the Netherlands.” It is certainly a mere calling of names to designate the mother of Don John of Austria

as a “*créature vulgaire*,” though Motley went a step further, in turning her into a washerwoman. But no fiction can progress the discovery of an Elector of Bavaria more than half a century before the creation of a Bavarian electorate, or explain the description of Maurice of Saxony (the father of “*cette Allemande diabolique*,” William of Orange's second wife) as the “*premier champion de la Réforme*”!

In general, however, as we have said, M. Forneron creates the impression of a writer careful of his facts, and we have no disposition to dwell upon one or two other details which we had noted as questionable. His style is terse and incisive, and the arrangement of his book is at least lucid, though at times as abrupt in its transitions from subject to subject as were the piles of State papers through which King Philip imperturbably plodded in the *Resenal*. No section of the two volumes before us—unless it be the sticking one on the Inquisition in Spain under Philip—sheds any very great amount of new light on the story of the reign; but they are certainly successful in giving additional vividness to many of the strange episodes of which they treat, and of which poetry and fiction themselves seem incapable of heightening the pathos or the horror. Such is notably the case with the story of Philip's English consort, the sole happiness of whose life might almost be said to have consisted in its last illusion. M. Forneron has not, we think, misread her character, in which there was assuredly an element of the heroic, not the less so because in her circumstances gave a fanatical turn to her inborn Tudor self-will. The opposition of the Commons hastened her declaration of readiness to marry Philip; and neither the caution of the Emperor nor the apathy of the Pope could prevent her from carrying out her great task of reconciliation with Rome. As she stood firm against the attempt of Wyatt (surely, by the way, it is an exaggeration to say of him that, had he succeeded, history would count few names as illustrious as his!), so her persistence broke through the nets of the intrigues of Noailles. On the authority of Granvelle these intrigues are stated by M. Forneron to have included a device which savours rather of the court of another Mary—the introduction among the Queen's suite of an irresistible Neapolitan, whom, however, the Spanish ambassador contrived to have clapped in prison before he had obtained an interview; whereupon the Italian, a very determined and objectionable personage, believing himself perfectly sure of victory, refused to quit the country, when he was offered his liberty. The connexion between the sinking of Queen Mary's hopes and the resumption of the persecutions in the summer of 1555, noted by Burnet and insisted on by Mr. Froude, cannot, we suppose, be called into question; but, though Mr. Froude is doubtless right in saying that Bishop Bonner neither was, nor deserved to be, singled out for admonition as to want of energy, M. Forneron has assuredly no warrant for attributing the revival of the persecutions to his influence.

The women, however, whom Philip married from motives of policy, or whom he made the playthings of an hour, were not those who exercised a real influence upon him and his actions. As such, M. Forneron justly recognizes the two Queens, Elizabeth of England and Catharine of France, different from one another in many respects, but alike in the youthful experience of humiliations which had extinguished in them all sense of pity for the humiliations they were to inflict in their turn. The most critical stages in the relations between Philip and Elizabeth it remains for M. Forneron's future volumes to narrate, but of Catharine de' Medici, her character and her policy, his present account is remarkably lucid and instructive. Though her policy had no ideal, it had a purpose; and the tenacity of her self-confidence is not less striking than is her cruel, and at times blind, recklessness in the choice of means. As her affection for her offspring was certainly one of the redeeming features in her character, it is not perhaps wonderful that she should have flattered herself with the assurance that she would rule Philip of Spain by means of the child of fourteen, whom she delivered over into the bonds of that Spanish etiquette to which Elizabeth of Valois was almost literally to fall a victim. So far as the relations between France and Spain were concerned the experiment had no material results; but a few years later Catharine was busy, with the aid of the amiable Spanish Queen her daughter, in scheming for the marriage of the sickly Don Carlos—a boy of sixteen—to her second daughter, Margaret—a child of eight. It was the radically unprincipled nature of Catharine's policy which, after it had closely knit the bonds of friendship between Spain and the chief objects of her jealous fears, the Guises (towards whom, as M. Forneron shows, Philip's attitude had at first been hostile), led her into the greatest blunder as well as crime of her career, the Massacre of St. Bartholomew. The account which M. Forneron gives of the origin of the massacre agrees with that now usually accepted as correct; but he shows with special force how not even the Papal Nuncio at Paris was deceived as to the real intentions of the authors of the crime—Catharine and Anjou. “The Pope,” he confidentially observed to the Spanish Ambassador, “has had processions held in honour of what has happened to the Admiral and his adherents, which amazes me; for the rest, it is partly my own fault; for at first I imagined, on seeing the killing of these Huguenots, that the object was to serve the interests of religion; but I have since perceived that the purpose simply was to get rid of inconvenient rivals and to recover a firm seat in the saddle without an adversary remaining in the realm. Of this I have sent tardy information.” As for Philip, he thoroughly agreed with his ambassador that the indignation excited in England by the massacre furnished an excellent opportunity for creating an embroglio between that country and France;

but to Quintana's further advice that this quarrel should be further used for a reconciliation between Spain and England he refused to listen. And yet it was only recently that Elizabeth had courteously proposed to accept the voluntary transfer of Flushing into her hands, in order, if this should be to the advantage and the liking of the King of Spain, to restore it to the Duke of Alva!

Those who like to compare other accounts with the exciting narrative of Mr. Motley, will find it worth their while to read M. Forneron's account of those passages in the great insurrection which connect themselves more immediately with his theme. The primary responsibility for the most sustained excesses of which fanatic obstinacy has ever been guilty is clearly brought home to Alva, the curious story of whose disgrace follows the recital of his misdeeds as a peculiar epilogue. But most readers are so likely to prefer ampler previous relations of the Dutch wars, as indeed of most of the conflicts in arms narrated in those volumes, that they will probably turn with special interest to the chapter—both a long and a full one—in which M. Forneron describes the internal condition of Spain, the manners of its inhabitants, and the religious ideas prevalent among them in the reign of Philip II. The picture here given is evidently no hasty copy, but the result of careful and thoughtful study. Of special interest is the sketch of the relations between that thoroughly popular institution, the Inquisition, and the King. It will doubtless be news to some readers that one of the persecutions conducted by the former, and permitted by the latter, was that of the Order of Jesus. Though there are reasons which make it unlikely that the whole truth concerning this strange struggle will ever be laid bare, M. Forneron has made its origin and significance sufficiently clear. The Spanish Inquisition was and is justly regarded as the typical institution of Philip's reign—the *Spanish* Inquisition, we say, which (as M. Forneron elsewhere points out) was something very different from what had existed of the institution in the Netherlands for more than a generation before Philip. And his most recent historian scarcely says too much when he observes that "Philip's predilection for this instalment of dominion cost him the Netherlands and his chances of France, and dragged him into wars which exhausted the strength of Spain."

HARRY JOSCELYN.*

THE historical or mythical personage who pronounced himself *supra grammaticam* had achieved or attained a position beyond the reach of examiners, if examiners had then existed; and the author of *The Chronicles of Carlingford* can afford in like manner, if it so please her, to dispense with the customary rules of the novelist's craft in perfect indifference to reviewers and their estimate of "marks." Mrs. Oliphant's readers know what is in store for them when they open her volumes, and *Harry Joscelyn* will not disappoint them. They expect domestic interiors, scenes of middle-class life, and personal portraiture drawn with an artist's eye, but not with an artist's tenderness; they know that they will be amused if they can shield themselves behind the *as triplex* of an unsympathizing cynicism, and somewhat pained by a sense of the littleness of life if they cannot. Occasionally they will be allowed a little relief in the exhibition of some character marked by harmless good-nature or simple humour; but no relaxation of this kind has been conceded to them in *Harry Joscelyn*, or, if allowed for a time, it has been suddenly and coldly withdrawn. Mrs. Oliphant presents in these volumes a succession of studies, worked out with great care and evidencing her own peculiar skill; while, having so done her part, she has left them to come together anyhow, and to frame themselves into some sort of combination or consequence which we are sure that she will not expect us to describe as a plot. In our own interest as critics, and in that of other readers, we are bound to warn the increasing multitude of candidates for the novelist's fame that, until they have reached Mrs. Oliphant's excellences, they must not shelter themselves behind her example as an excuse for their defects.

Harry Joscelyn is a younger son who, in the first volume, runs away from home, in consequence of his treatment by an overbearing father; in the second, finds work abroad, and marries the daughter of his employer; and, in the third, is discovered and brought back, after ten years' absence, by his youngest sister, to inherit a fortune bequeathed to him by a deceased great-uncle; after which everybody is reconciled and lives happy always after, chiefly in Westmoreland among the "Fells." This is the whole story, its course and close being obvious from its commencement; and, in itself, is about as simple a drama as could well be imagined. With little more care than would be required to correct the numerous and strange printer's errors with which the book abounds, a reasonable construction might easily have been devised for the materials of the story.

"Uncle Henry," or Mr. Henry Joscelyn, is, as we have said, the great-uncle of the hero, and "had died," as was to be expected, "not very long before" the opening of the third volume, "leaving behind him only an old will, in which everything was left to Harry." There were "executors" of course; and mysteriously, having regard to the nature of the bequest, "trustees" also, which may perhaps be accounted for by the "custom of the

province of York"; but, as Uncle Henry had neither wife nor child, the question whether his death occurred before or after the 31st of December, 1856, does not arise, and the York custom can help us no further. Whether Harry was dead or not was uncertain; the executors advertised for him, and he did not answer; "the family generally had accepted this as a proof that Harry was dead"; but, although "the family generally" were keen on Uncle Henry's money, the executors were cautious, "so that the division and distribution of Uncle Henry's funds had been postponed." The account expressly given of the will, in which no mention is made of Harry's brothers and sisters, is entirely consistent with the earlier circumstances of the story; and the bequest to Harry had thus become, in the event of his having predeceased the testator, a lapsed legacy, with an intestacy as the consequent result. What the executors and "the family generally"—i.e. Harry's brothers and sisters—can have had to do with each other under these conditions, in the very vigorous and demonstrative presence of Ralph Joscelyn, Harry's father, and the sole heir to his uncle's real and personal estate, Mrs. Oliphant has not thought proper to explain, while she has found in the family eagerness for "the division and distribution of the funds" material for some very good work in her own especial line.

When Harry Joscelyn ran away from his father's house, he had at first tried his fortune with Uncle Henry; but, finding that a couple of ten-pound notes represented all that was to be obtained in that quarter, he had determined to seek his fortune abroad, and had turned up by a mere accident at Leghorn. Immediately on landing he had shouted, in a deep English voice, "Let go that girl," and had knocked down a sailor for not "letting go." It proved next morning that the girl was the English Vice-Consul's daughter, and he was thus naturally invited to lunch at the Consulate, and appointed confidential clerk to the Vice-Consul, in whose house he is found living with a wife and four children at the end of the second volume. He had taken his passage in a false name, borrowed from a "hind" of his uncle, one Isaac Oliver, and as Mr. Bonamy, the Vice-Consul, did not know who he was, or where he came from, no difficulty worth mentioning arose when his signature in the marriage register appeared as "Harry Joscelyn Isaac Oliver," although in the third volume certain complications result from the circumstance. Meanwhile, he is safely housed and provided for while the ten years elapse which are necessary to allow the little sister, who as a child at school had scarcely seen Harry, to grow up and so to fulfil her destiny of finding him and bringing him home. "But Mrs. Joscelyn shook her head. She saw the practical difficulties here. Lydia, indeed, had as little prospect of going abroad as any girl could have." For the solution of these difficulties, and generally for the purpose of hooking on the third volume to the second, Mrs. Oliphant has introduced a contrivance consisting of three wooden figures, of which the first comes on the stage as "a new cousin," followed in due time by the other two, a decrepit and drivelling old baronet with his sentimental wife, "Cousin Lionel's" father and mother, in whose society Lydia goes to Italy, to Leghorn, to the Consulate there, and, we are sorry to add, not to bed for two whole nights in succession. The earlier of these vigils she passed in making sure that she had "found Harry"; the later in making sure of a more personal capture in "Cousin Lionel." When at length the "little Liddy" has conveyed the prodigal in safety to the small Westmoreland station, the consistency of probabilities makes it perfectly natural that Rita, otherwise Mrs. Harry, with Benedetta, the nurse, and Paolo, the interpreter, whom the travellers had left on the quay at Leghorn, should alight from the same train. They may easily be supposed to have come over in a balloon; "my father will not find out till Sunday, that is to-morrow, and he will have my telegram first. I said I was going to the villa to the children. There is no harm done." Mr. Bonamy, it should be mentioned, had been possessed throughout Rita's whole life with one fixed idea, that under no circumstances whatever must his daughter go to England, where her delicate Italian mother had died shortly after her birth. But "Rita turned out to be right, as she so often was"; so, at least, Mrs. Oliphant says. Mrs. Harry had deceived and disobeyed both her father and her husband; but, as "no harm was done," we can only infer that here, as in the course of the story generally, the relations between causes and effects had become a little mixed. As long, however, as Mrs. Oliphant continues to draw pictures of life such as that of the family at the White House, she may perhaps venture to frame them in plots modelled from the *Family Herald*, to borrow her minor characters from a Punch and Judy box, or to place her hero for temporary hiding in the moon.

The motive of *Harry Joscelyn* is the exhibition of opposite types of character as combined or separately reproduced in members of the same family. The son of the "Northern Farmer, new style," has "married a bad un" in the "parson's lass," and the old poetic sentiment of strength and tenderness in union, with all its imagery of the oak and the ivy, the elm and the vine, and what not, stands translated into the farmhouse prose of five-and-thirty years afterwards. Ralph Joscelyn, the yeoman farmer, represents an ancient family of fallen fortunes still holding their ruined "Tower" with its immediately adjoining land. Lydia Brotherton, the almost portionless daughter of a curate of whose family an unknown baronet is the head, brings to the "White House" with her girlish beauty and grace the element which in the early years of the present century was described by the epithet "genteel," and which, by its aptitude in middle

* *Harry Joscelyn*. By Mrs. Oliphant, Author of "The Chronicles of Carlingford," &c. 3 vols. London: Hurst & Blackett. 1881.

life to degenerate into feebleness and "fuss," has tempted to bring the complimentary adjective of Hanoverian society into its present contempt. For the convenience and consistency of the story a similar marriage had been introduced two generations earlier; and the neat, precise, self-indulging old bachelor, Uncle Henry, is meant to stand in contrast with his coarse and overbearing nephew, and in somewhat of sympathy with the milder, and anything but independent, nature of Harry, who can work well and faithfully when he is well cared for, but who has no notion of standing alone. The coarser grain of Ralph Joscelyn reappears in two married sons, hard, vulgar, money-loving and money-making, who stand rather in the background, but are not without effect in the picture. They have nothing "of mother in them"; and the timid nervous woman regards them with a silent and bewildered wonder that they can really be her own "boys" at all. But the central figure in the group is that of Joan, the eldest daughter; and upon her Mrs. Oliphant has bestowed great pains with singular success. She has nothing of the heroine about her, either in her physical or mental characteristics; she is simply a notable housewife, plain, homely, and thirty, consigned by the general consent of the household to the limbo of old maidhood, and so honestly accepting the condition that she does not know what to think of it, and is more amused than elated, when the thriving and business-like Philip Selby, half engineer and half farmer, makes his straightforward offer of a home. Joan is as graphically described as the well-to-do childless mistress in her own house as when she is doing more and better work than any servant in her father's; and the strength of Ralph's nature, even to the outbreaks of his domineering temper, which appear from time to time in Joan's household management, and half frighten Philip Selby from his quest, is thoroughly tempered by the pervading gentleness which she has inherited from her mother, like whom, too, she discovers with some perplexity that she is capable, when her feelings are moved, of herself "making a fuss." In Lydia, the younger daughter, who is apparently meant to exhibit the complementary character of the mother's grace and sweetness, strengthened by the father's energy, we doubt whether the author has been as entirely successful. Liddy's performance does not come up to the level of her rather boastful promise, and she loses her head for a time in what should have been the crisis of her effort, after a fashion for which we can find no excuse in any agitation or conflict of feeling arising from another source. The embryo baronet is too evidently wooden, and Liddy's management of her affairs with him too calmly practical, for any allowances which might otherwise be made for such a disturbing influence. Mr. Bonamy and Rita, though they occupy a good deal of space, in the second volume especially, are characters subordinate to the main current of the story, and of them it need only be said that they are sketched gracefully and, except only in the instances already mentioned, without much exaggeration. Of the amiable little Italian, Paolo, we had fully intended to say a good word, but as we read steadily onward we found him a bore, and reluctantly abandoned the design.

In the domestic utterances of an uneducated and angry farmer a good deal may necessarily be left to the reader's imagination; and the Scotchman who gave the brief report of such a manner of discourse by saying that the gentleman "stood in the middle of the road and swore at lairge," should have provided our lady novelists with a very convenient formula. The perpetual reiteration of the words "dashed" and "blanked," which Mrs. Oliphant has substituted for it, is not convenient, and is more than a little wearisome. A more careful attention to the minor details of style and construction would have made *Harry Joscelyn* altogether pleasant reading; and we trust that the author will not grudge the needful labour when she writes her next story.

BUDGE'S HISTORY OF ESARHADDON.

ALL genuine historical records have their value, and no history, be it ever so wearisome, is wholly lacking in interest. Still it is useless to speak of all history as if it had an equal value, or to represent that of the Eastern world generally as repaying the toil of the student not less liberally than the history of the West. The attempt to claim the same importance for the one as for the other has led the students of European history to regard with undue suspicion the readings which are from time to time laid before them from the annals of the great empires of the Eastern world. For the injustice which may thus have been done to them Assyriologists and Egyptologists have partly to blame themselves. It can scarcely be said that they have in all cases observed the laws of proportion in their work, that they have drawn with sufficient clearness the line which separates legitimate inference from vague conjecture, or even that they have realized for themselves and conscientiously discharged the duties of the historian. Students who were reaping the rich harvest presented in the historical literature of Greece or Rome or England were not much impressed by the researches which revealed to Baron Bunsen the era of the polarization of religious consciousness in the primary deposit of Sinian; nor were they much attracted by a chronology which might be taken to pieces at the will of the manipulator and which assigned different dates

and different sequences, not only to individual kings, but to whole dynasties. The extremely hard blows dealt out against Orientalists by Sir Cornwall Lewis are perhaps not likely to be dealt out again, for the simple reason that even in Assyrian and Egyptian history there is a certain amount of contemporary narrative, and that the restorers of that history have for the most part reached this later and surer ground.

But the need of caution has not yet passed away; and without going further the title-page of Mr. Budge's volume seems to justify the remark. Of the objections brought against Canon Rawlinson's Assyrian and Babylonian histories, one of the strongest was that they were in great part the result of assumptions or ingenious conjectures or inferences from perilously slender premises. The date of a monarch who had been dead for perhaps a thousand years was determined by the words of a later sovereign, although the proof of contemporary registration for the vast interval between them was seemingly altogether lacking; and even of the best known kings our knowledge came apparently rather from their successors than from themselves. When, therefore, Mr. Budge describes his book as "The history of Esarhaddon, son of Sennacherib, King of Assyria, translated from the cuneiform inscriptions upon cylinders and tablets in the British Museum collection," we are led to expect that the narrative is drawn chiefly from the words of Esarhaddon himself. We cannot say that the expectation is fully realized.

It is perhaps no exaggeration to say that the chief occupation of Assyrian despots was that of putting down rebellions and of attacking their neighbours. The results which follow these enterprises are often monotonously alike; and in some cases the greatest of them seem to have made but little impression on those who should have had the best cause to remember them. Assyrian tradition ascribes to Semiramis the conquest of Egypt; and Egyptian tradition carries Sesostris in an unbroken career of success to the shores of the Caspian. But the traditions of Egypt and Persia know nothing of these victories of Sesostris or Semiramis, and Sir Cornwall Lewis laid stress on this silence as a strong proof that the supposed facts are really fictions. In so saying he may have carried his doubts too far; but his words must be well weighed if we wish to determine the precise value of the utterances of Assyrian kings when they speak in their own persons and of their own achievements, and not less when they speak of sovereigns as near to them even as their own fathers. Sennacherib, it seems, tells us nothing of the great catastrophe of the Assyrian army recorded in the Books of Kings and of Isaiah; but there is not the least reason for questioning the reality of a great disaster of which he was probably not anxious to perpetuate the memory. The enterprise which thus miscarried was attempted with greater success by his son; but it is strange that of this, the most important event of his reign, our knowledge comes, not from his monuments, but from those of his son and successor Assur-bani-pal. The large and nearly complete cylinder of Esarhaddon, of which Mr. Budge gives a copy transliterated into Roman letters, with a literal English translation, contains no notice of it. The tablet fragments referring to the Egyptian conquests of Esarhaddon, which were assigned by Mr. George Smith to the reign of that sovereign, Mr. Budge attributes to Assur-bani-pal, from whom we have a list of the vassal princes said to have been appointed by Esarhaddon to rule over districts in Egypt. The list may probably be accepted as authentic, and the appearance of several Egyptian names may show the political wisdom of the conqueror. Thus, while Esarhaddon has left us nothing on the subject, we have from his son the definite assertion:—

Esarhaddon, King of the land of Assyria, the father, my begotter, had descended and had marched into the midst of it. The defeat of Tirhakah, King of the land of Ethiopia, he had established and scattered his forces. The country of Egypt and the country of Ethiopia he had captured, and to a countless (extent) spoiled (carried off) its spoil.

But, even without this testimony, the records left by Esarhaddon himself furnish abundant proof that his short reign of only thirteen or fourteen years was rich in incidents, if inroads into neighbouring countries and the suppression of constant rebellions, all leading to nothing or to very little, make up a history much worth preserving. That he was admitted to share the sovereignty during the lifetime of his father is proved by the short document which is called the will of Sennacherib; that, as a king, he was more humane, or at least less cruel, than his predecessor, we may fairly gather from the sentences in which he speaks of himself as sparing the lives of conquered chiefs, and in some instances as restoring them to their territories. With this the narrative of the restoration of Manasseh by his order to the throne of Jerusalem, in the Books of Chronicles, is in complete harmony. From the large cylinder we have also a fully detailed narrative of the incidents following the death of Sennacherib, which in the Jewish records are dismissed in a single sentence. The sons who are there said to have escaped into Armenia did not resign their claims to the throne without a struggle; and the account which Esarhaddon gives of the battle of Khamirabbat, which decided the controversy, may, like Assur-bani-pal's narrative of the overthrow of Tirhakah, be regarded as "full and interesting." In other words, we have a few local and personal details. Esarhaddon tells us that his army marched to the field in spite of snow and storm; and Assur-bani-pal tells us that he was walking in Nineveh when the tidings of Tirhakah's invasion and conquest of Egypt made his

* *The History of Esarhaddon.* By Ernest A. Budge, M.R.A.S. London: Tribner & Co. 1880.

heart grown and smote down his liver. In each case the issue is the rule of the enemy. We rarely, perhaps never, get beyond such pictures; and from Asiatic despots we cannot well expect more. Still, it is something to have an accurate catalogue of their several military enterprises; and from Eashaddon we have such a catalogue of his wars with Nabu-sir-napisti-esir, a son of Merodach-Baladan, and of his expeditions against the Kings of Sidon, Oundi, and Siza, in which his success may have equalled his heart's desire. In the same way, we are told that he ran through with the sword the whole army of the king of the Gimirrai (Kimmerians or Cimmericians), and trampled upon the necks of the Khilaci (Kilikians, Cilicians). With the troublesome mountaineers of Daba he dealt even more trenchantly. He besieged, captured, and spoiled them, threw them down, dug them up, and burned them with fire. In other records Eashaddon tells us of his operations against the revolted vassal king of the Arabian Edom, and against two Median chiefs whom he reduced to complete submission. But while he thus put down his enemies abroad, he was not less active at home, and his prisoners were made useful in the great architectural works which he added to the glories of Nineveh. Among these was his palace of alabaster and cedar wood, adorned with bronze statues of colossal size, ranged in avenues, the doors being covered with white silver and shining copper; and to it he added "a great plantation like that of the land of Amanus, which contained all spices and trees."

Mr. Budge's volume thus completes the history of the three consecutive kings, Sennacherib, Eashaddon, and Assur-bani-pal, the histories of the first and the last of these having been given to the world by Mr. George Smith. That of Eashaddon unquestionably brings before us a ruler of no small energy, and, so far as we can judge, of discretion equal to his energy; and we may fairly say of all of them, that we take the account which they give us of their own achievements as substantially correct. We may also give each king credit for ordinary veracity when he speaks of the exploits of his father. But there still remains the difficulty that the real historians of the world knew little of them or of their doings. Thus the most important event in the career of Eashaddon was, by Canon Rawlinson's admission, "concealed from Herodotus, and not known even by Diodorus"; but with the strange method which seems to characterize Assyriology and Egyptology, the Camden Professor adds that "it was no secret to the more learned Greeks, who probably found an account of the expedition in the great work of Herodotus." It is to such assertions as these that we may ascribe the suspicions which still remain in the minds of those who do not profess to be Assyriologists and Egyptologists, but whose historical work makes them utterly disinclined to admit conclusions reached in this way. We have now, it is true, the cylinders or tablets of Eashaddon and his son; but we may be very sure that these were not seen except in the rarest instances either by learned or unlearned Greeks; and we have the fact that, for all that was known to Herodotus, the memory of Eashaddon's Egyptian conquest had entirely died out in Egypt before his time, and that no mention was made of it in the Persian archives which furnished the materials, we will not say for the history, but for the narrative of Otesias. It is absurd to suppose that that narrative, however worthless it may be in itself, was the creation of his own brain; on the contrary, it is conclusive proof that the Royal parchments of the Persian kings contained a story very different from that which is told by Assyrian or Egyptian sovereigns. The legitimate conclusion is that we should not be too eager to give credit to either the one or the other. Herodotus lived within two centuries of the date of Eashaddon's conquest, and he knows nothing of it; Herodotus lived some centuries later, and Abydenus, who quotes Herodotus, is later still. But, in spite of all drawbacks, researches like those of Mr. Budge and of the late Mr. George Smith are substantial additions to our historical knowledge, and are bringing together a mass of materials which must be subjected to a systematic scrutiny and sifting, when there is reasonable warrant for assuming that the field of Assyrian records has been fully gleaned. When that task is done, it will be found that students whose work has lain in the more fertile region of European history will be ready to weigh the results impartially; but assuredly they will not allow that the credit which may be given to the words of Sennacherib and his successors, when they speak of themselves, can be extended to their opinions about matters which even in their day related to distant ages. They will allow that Eashaddon may have conquered, or re-conquered, Egypt, although Herodotus knows nothing about it; but they will not allow that the date of Ismidagon can be fixed by citing first the words of Sennacherib, who tells us that he brought back from Babylon some images of gods which had been taken from Tiglathpileser more than four centuries earlier, and secondly the words of Tiglathpileser, who speaks of the rebuilding of a temple which, when taken down sixty years before his own reign, had "lasted 641 years from its foundation by Shamasul, son of Ismidagon."

We may add that not the least valuable portion of Mr. Budge's volume is the vocabulary, which gives a grammatical analysis of every word in the text, with explanations of the geographical and mythological names occurring in it.

THE STORY OF A SOLDIER'S LIFE.*

IN these days of circulating libraries people with most slender purses can secure the perusal of the latest published and most fashionable works. All that is required to obtain access to even the glories of *Endymion* is a little forethought, some patience, and an outlay of twopence. Under these circumstances an apologetic preface to a book should count for a good deal. If a disappointed reader have not disbursed a guinea or a half in buying the work, but has compassed its perusal for twopence, he will charitably allow himself to be disarmed by a very modest apology. The gallant and distinguished gentleman who gives to the world in two imposing volumes the *Story of a Soldier's Life* prefaces his gift with not only a modest apology, but with an assurance that the public is not likely to appreciate it. This is an odd sort of introduction to a work of such magnitude, to the compilation of which much time and labour have been given; but it effectually discounts any disappointment which the purchaser with his guinea, or the hirer with his twopence, may subsequently experience. In our opinion, formed after diligent reading, the author possessed excellent material for the making of one entertaining and instructive volume. As the work now stands it is a difficult point for us, not being behind the scenes, to determine whether he is indebted most to the *Court Circular*, to the *Army and Navy Gazette*, or to some wonderful diary of his own, for the abundance of incongruous detail which goes to make the two volumes.

Our author was born in India on 11th June, 1821. He is silent as to the events of his career up to the age of fifteen months, when the future soldier made his first march. It was about that time apparently that the idea, destined to bear such fruitful consequences long after, of keeping a diary first suggested itself to his mind. When eighteen months old he determined on coming home, and "embarked for England, the other passengers being, &c. It would not have been in keeping with the plan of the work had a correct list been omitted of those passengers who accompanied the writer on his first voyage sixty years ago. On arriving in England our author selected Clifton as his place of residence. Indeed "the next year of my life was passed principally at Clifton." When four years and eleven months old he removed to Coventry, where he was duly initiated into the mysteries of the triennial procession of Lady Godiva. This was "the chief attraction" of the place. The general to be repudiated for the honour of the army the notion that that pruriently inquisitive person known as "Peeping Tom" was a soldier, and finds satisfaction in the tradition that he was in all probability a tailor. But we must take at a jump succeeding years, during which preparatory schools were attended, and concerning which many pious minutiae are recorded, and follow the writer to Sandhurst Military College. There is a spirited and amusing account of the establishment as it was in those days. Times have altered, and the bullying and fagging then in vogue are, we are glad to say, now unknown. The rough boy material remains of course what it was, and the boys who smoked while others watched, and watched while others smuggled spirits into college, who broke out of bounds, and got "chevied" by highly moral, but rather stout and short-winded, sergeants, are many of them fathers of boys who are being "chevied" with equal ill success to-day. We get, as we had a right to expect, a long list of officers, professors, and others whom the author was privileged to see, know, or hear of. One professor of that day, M. Cambier, who had taught French for fifty years, having begun his duties just before or after Waterloo, died not long ago. It must be a great trial to any man to hear his own tongue knocked into a thousand formless shapes by successive scholastic tides for a consecutive half-century.

Cadet Ewart passed well out of Sandhurst, and was specially commended for skill in surveying, an accomplishment which he perfected later on when in the senior department, and which was destined to bring him under very favourable notice in the Crimea. He then joined a regiment. Where else but in this book may we hope to find a "correct card" of regimental sports, some of which took place thirty years ago? Not only this, but the names of the winners, their rank, their corps, are religiously set forth with all circumstance. We know who won the long jumps and the high jumps, who tossed the caber best; and beyond this, we are given the names of those athletes who might have won but did not. Private Kiddie is handed down to the admiration of posterity in that he "gained a large cheese placed at the top of a greased pole." Our author himself was less successful on this occasion. "A most irritating and obstinate donkey entered by myself under the name of 'Lucy Long' for a race where "officers rode as jockeys, with ladies' bonnets on," preferred to go exactly in the opposite direction to the goal; and the consequence was that donkey "Neddy Bray" and donkey "Jack Slowboy" came in before "Lucy Long"—thirty years ago. It is, however, when we arrive at reminiscences of war and dinners, that we perceive the full advantages of keeping a compendious diary. After a battle we get a gazette, with roll of killed and wounded; and, that there may be no mistake, a double, and sometimes a treble, list is provided—not, as we perceive, in all cases quite correctly. But, at home as he thoroughly is in a good fight, the general becomes enthusiastic over a good dinner. The handmen who played

* *The Story of a Soldier's Life; or, Peace, War, and Mating.* By Lieut.-General John Alexander Ewart, C.B., Aide-de-Camp to the Queen from 1859 to 1872. 2 vols. London: Sampson Low & Co. 1881.

melodious accompaniments to the popping of champagne corks have mostly laid by their instruments long ago, but the tunes they played are handed down to this generation, and were doubtless sounding in the general's ears, awaking many memories, as he wrote. After the music and champagne the guests are in a mood for mutual admiration, and experience a desire to talk; and some pages of one volume are devoted to their after-dinner orations, the "hear, hear" and "cheers" being duly entered.

There is interesting and amusing matter in the chapters treating of the Crimea and of the struggle which has long been called *per excellence*, as distinct from all other British experiences, "the Mutiny." It seems strange that in the former campaign Captain Ewart (as he then was) should have been taken from his regiment to occupy so prominent a position in the Quartermaster-General's department as the sole officer charged with surveying. No pretence is made of giving a consecutive narrative of the war, in which from first to last, as a staff and then as a regimental field officer, the author was usefully engaged in various capacities and in all most honourably distinguished. He describes well and clearly the operations in which he had a personal share. What is especially pleasing—and eminently worthy of respectful commendation—is the manifest desire, shown throughout the book, to do full justice to the merits of others, even when it is clear that the author's own efforts had been by no means too well rewarded. General Ewart's Crimean notes read more like the summary of an intelligent and disinterested spectator than the version of one who took a side in the events treated of. This is, of course, the way to write history, and history is only valuable, because only true, when it is so written; and we have, therefore, to regret that, instead of loading his pages with matter having as little interest for the people of this planet as for the public of the moon, the General has not written at greater length on those affairs of war about which he is so well qualified to pass judgment. The author has a happy knack of showing up, without a tinge of malice or sarcasm, the characteristic qualities of some of the more prominent Crimean leaders. A few touches here and there give us considerable insight into the character of Sir Colin Campbell, who was evidently a person not to be trifled with; Sir George Brown—as fine a soldier in some ways as ever fought—was nevertheless a man of marvellously cramped and narrow views. Nothing aroused the old General's ire so much as when an officer did not keep his hair and whiskers rigidly within prescribed limits. In Turkey, says the author, "we were constantly exposed to all sorts of weather when working at the fortifications, and a beard would have been a great comfort. Sir George Brown would not, however, even hear of a moustache, and ordered some of the officers to clip their whiskers." Later still, when it was manifestly absurd to insist on men shaving, "we were still ordered to keep close shaved, and it was understood that Sir George Brown was furious at the suggestion to allow the infantry a moustache!" It is difficult to have patience with such paltry whims. Many years later than the Crimean time the Commander-in-Chief of one of our Indian Presidencies suddenly ordered his whole army, native and British, to remove their beards, and, in spite of remonstrances from all quarters, insisted on his point. He then referred the matter home, and was informed that the paragraph in the Queen's Regulations relative to shaving did not apply to India; on which every one grew his beard again as fast as he could. As beards had been long worn in India, it would have been only sensible and considerate on the part of the Chief to have referred home in the first instance.

A graceful anecdote is related of General Canrobert. On their way to the Crimea several French generals with a detachment of troops landed at Malta, and during the manoeuvres of some British regiments undertaken at French request, a desire was expressed to see the British formation for resisting cavalry. Squares were at once formed, and General Canrobert rode into one, the men making way for him to pass. As he did so he took off his cocked hat, saying, with a bow, "It is only by permission that a French officer ever enters a British square." At the first meeting of French and English in Turkey, and when there was immense fraternisation—especially among Highlanders and Zouaves—the bottle was a never-failing rallying point for both parties; and over the bottle the allies would repeat and repeat the one phrase which conveyed the same meaning to each—*Russes no bon*. Through various mishaps, not reflecting much credit on the intelligence of the home authorities, the author did not obtain all the promotion he merited. He was shortly afterwards, however, called to India, where he took a prominent part in the fighting at Cawnpore and Lucknow, and was severely wounded. The story of the awful *melée* in the Secunder-Bagh is vividly narrated. No officer contributed more by valour and conduct to the successful results, or more richly merited the Victoria Cross.

As regards the General's opinions on military matters, he enters a strong and sensible plea for retention of the power to inflict corporal punishment when an army is in the field before the enemy. He considers, and every captain and subaltern is of his way of thinking, that the pay of regimental officers is altogether insufficient under the *régime*, not only of present prices, but of those which prevailed years ago. The General is satisfied of the wisdom, if not necessity, of permitting officers to effect exchanges. The establishment of six-company depôts is advocated. The short service system is considered to be a "grievous mistake." "Men will not at the age of eighteen give up their trades simply for the purpose of serving a few years in the army, with the knowledge that little is to be gained by their so doing, but, on the contrary, much to be lost. How, too, are regiments ever to be kept up to

their proper strength, or to be really efficient, if just when, after great labour and expense, the recruits have been turned into good soldiers, they are to be discharged?" It will startle short-service advocates not a little to learn that General Ewart proposes as the "best plan" that soldiers should be enlisted for a period of twenty-five years—eighteen to be passed in the regular army, seven in the reserve. It would take too much space to follow his argument. The theory that a good pension will stop much desertion has been often debated. A great majority of those who desert are young soldiers, to whom the distant prospect of pension across a long period of service offers but scant attraction. The advantage of having training schools for boys, as in the navy, is insisted on.

Two hundred pages of vol. ii., which tell at what country seats the gallant veteran is a welcome guest, where he has dined, and whom he met at dinner, what was said or sung after dinner, and what very pretty women he has been fortunate enough to come across at every stage of his varied career, might perhaps have been compressed with advantage. We expected a detailed description of Paris, through which the author passed; but he excuses himself from giving it on the ground that "the French capital is now probably the best-known place in the world."

LIFE OF LORD CLYDE.*

FROM Vimiero, a battle fought in 1808, to a peaceful review of twenty thousand Volunteers on the Brighton Downs in 1862, is no small portion of one Life. It is no exaggeration to say that, with the exception of a few brief intervals, those fifty-four years were passed by Colin Campbell in stirring and eventful service. He was present at the battle of Barrosa, and was wounded at San Sebastian; he had a touch of Walcheren fever; he joined his regiment at the close of the war with America in 1814; he was stationed for seven dull years in the West Indies; he served under Sir Hugh Gough in the expedition to China in 1842 and commanded at Ohusan; he was present at the bloody but indecisive battle of Chilianwalla and at the crowning victory of Goojerat in the Sikh war of 1849; how he commanded the Highland Brigade in the Crimea, and how, when chosen as the general equal to the task of putting down the Indian Mutiny, he relieved Lucknow and restored order in Oudh and the Doab of Hindustan, can scarcely be forgotten by a generation which has learnt to look on the Peninsular war as hardly belonging to modern history. It was essentially right that the biography of such a soldier should be written, and few objections can be brought against the manner in which General Shadwell has discharged his task. Himself a soldier of considerable experience, he has been on Sir Colin Campbell's staff in China, the Punjab, and the Crimea; he has been furnished with ample materials in the shape of letters, memoranda, and the recollections of many personal friends and subordinates of the late Commander-in-Chief; and the result is a biography which, if it has too much in Vol. II. of the character of a history of the Sepoy Mutiny, yet brings out without pompous eulogy or unfair detractor all those peculiar characteristics to which Campbell owed his professional success and his well-earned honours. We may add that the style is simple and transparent; we have hardly detected a positive error in any statement of facts or in dates; every engagement of importance is illustrated by a plan, enabling non-military readers to grasp the leading points of attack and defence; the names, rank, honours, and highest positions attained by several of Colin Campbell's trusted comrades and lieutenants are given, with praiseworthy brevity and clearness, in foot-notes; and if General Shadwell does not invite us to discuss involved questions of Anglo-Indian administration, it is simply because the subject of these two volumes was a genuine soldier and little else. Discipline and duty were the watchwords of his whole life. Indirectly the biographer has done a public service by showing to a generation not disinclined to resent wholesome control and authority, that obedience in the lower ranks of the army is an indispensable qualification for ulterior high command. General Shadwell effectively disposes of all idle stories as to Campbell's birth and parentage. His grandfather possessed a small estate in the island of Islay and lost it in the '45. His son, John Mac-liver, married Agnes Campbell, and Colin was one of four children born of this marriage. He received a fair education at the High School at Glasgow and elsewhere, and was introduced to the Duke of York by his maternal uncle, Colonel John Campbell. That young Colin Mac-liver, on obtaining his commission before he was sixteen, was entered in the army list by his mother's name is due to a mere chance remark of the Duke, and to the "cannyness" of the uncle aforesaid, who saw that Campbell would sound better at mess than Mac-liver. There is not the least reason to suppose that the straightforward, manly, young lieutenant was at all abashed of his father's name and trade. We shall leave the various expeditions, sieges, and battles of which these two volumes are mainly made up without any attempt at analysis or abbreviation. We may remark, however, that nearly the whole of the second volume has a much higher claim to be termed a genuine history of the Indian Mutiny than a recent publication of the sort intended to complete Sir John Kaye's unfinished work. We have here no sham heroes and no

* *The Life of Colin Campbell, Lord Clyde; Illustrated by Extracts from his Diary and Correspondence.* By Lieut.-General Shadwell, C.B. 2 vols. With Portrait and Maps. Blackwood & Sons. 1881.

attempt to enhance Campbell's reputation at the expense of others. On the other hand, there is an unaccountable deficiency of personal anecdotes. Campbell had not the fervid pen of Charles Napier, or the racy brogue of Sir Hugh Gough; but there was a great deal of individuality in the man, whether at the head of a regiment, a brigade, or an army in the field; he was known to have a hot temper and a rough tongue that never spared incapacity. He had no sympathy with carpet knights, or with men who did not devote themselves heart and soul to the drudgery of barrack life. When roused to anger his remonstrances partook more of the forcible expletives of one of Goring's troopers than of the pious ejaculations of one of Havelock's saints. Some of his best friends on such occasions thought it desirable to keep at a respectful distance, or were glad to shift on others the imperative duty of bearding the old General in his den; and yet this iron will and this rugged demeanour were compatible with the strictest sense of obedience to high civil authority, and with that tenderness and chivalrous deference to the female sex which it is the fashion to characterize as belonging exclusively to the old school. Like most successful commanders, Campbell had attentively studied the feelings and wishes of the private soldier, and was familiar with the humblest regimental duties. It is impossible to doubt that he was devoted to his profession, and yet we are startled to find in his journal and letters repeated evidence of a desire for a quiet life. Once he applied for a civil appointment at Sierra Leone. Again and again his spirit "is broken by disappointment." To him "success or miscarriage in the struggle of professional life have become empty sounds"; he is getting too old for "the amusements and conversation of youths" at mess; he wants to get home from India, "away from the details of military command, of which I have become very tired, and with which, when neglected by those under me, I find I have no longer the temper or patience to bear as I ought"; and much more to the same effect showing that mere ambition had no place in his creed. There was, we fully believe, no humbug in these jottings of his diary. Well-regulated and frugal, he managed to live on his pay and allowances; he never but once in his life put his name to a bill; extravagance at mess he always discouraged by example and precept; and, when higher emoluments and a pension of 2,000*l.* a year might have tempted him to enjoyment and display, his greatest pleasure was to provide for his surviving sister and to make substantial presents to relatives and friends.

It is tolerably clear from his experiences in the Crimea that, at one time, he was for some reason not very favourably viewed in high quarters. It is still a subject for discussion in military circles whether he was not unjustly superseded by the nomination of Sir William Codrington to the chief command. But, in any case, an offer to a general of his capacity and services in the height of the campaign, that he should leave the post of power and danger and take the command of Malta, can only be characterized as a studied insult. No wonder that, after this offer and his supersession, he was only persuaded to return to his post by a few gracious words from the Queen and the Prince Consort. We wish General Shadwell had given us one or two more sayings like the reply to her Majesty "that he would serve under a corporal, if she wished it." It is evident, as Friar Tuck said to the Black Knight after their carouse, that all men have their enemies; for no one not wishing to injure Campbell could have misrepresented his acquirements to Lord Palmerston, who broke out at a dinner-party, on hearing him address a foreigner correctly, "Why, Sir Colin, they told me you could not speak French." It may be remembered that, in the beginning of the war, much stress had been laid by Lord Raglan's friends on his high-bred manners and his ability to converse with St. Arnaud and Canrobert in their own tongue. Possibly it may have been thought unlikely that a raw Highland lad, sent into the army at sixteen, could know anything of any tongue but broad Scotch, or Lord Palmerston may have been purposely deceived. But the very reverse was the truth. Campbell spoke French fluently and with a good accent. General Vinoy became one of his fast friends. He saw much of General Della Marmora, and made some progress in Italian. Spanish, from early opportunity in the Peninsula, he could both read and talk, and he had acquired some knowledge of German besides. It is interesting, too, to find that a soldier, bred almost entirely in the mess-room and the barrack, could find time after the second Sikh war to write to a clerical friend about the Hydaspes and Alexander the Great, his passage of the river and the defeat of Porus. It must be satisfactory to antiquarians to know that Sir Colin thought he had positively identified a large island which deceived the Macedonian into thinking he had reached the left bank of the Indus, and that English soldiers crossed the river on *musrucks* or inflated skins, crossed it as Greeks had two thousand years before. A biographer might be pardoned for making some capital out of this incident; and, like Macaulay on Warren Hastings, who after Nunkoomar's trial, calmly wrote to Dr. Johnson about Jones's Persian grammar and the history and traditions of India, we might wonder how a tough old general of division should think of Porus and Alexander, when he had recently been pursuing Dost Mahomed and the Afghans in headlong rout to the entrance of the Khyber Pass.

It is not altogether surprising that, in spite of his ingrained habits of obedience and discipline, a determined soldier should find himself now and then in opposition to the civil authority. This actually happened to Campbell, first with Lord Dalhousie and

then with Lord Canning. In 1851, after the general pacification of the Panjab, trouble was repeatedly caused by combinations for aggressive purposes amongst the hill tribes. In a correspondence with the local authority at Peshawar and with the Board of Administration at Lahore, Campbell, who commanded at Peshawar, unfortunately allowed his pen to criticise the propriety of these expeditions from a political point of view. Had he confined himself to the amount of supplies or number of forces requisite to storm passes and reach rebellious villages, or to questions of pure strategy, neither the Board nor the Governor-General would have said a word. But he ought to have remembered that the policy or impolicy of a particular expedition is a question entirely for the Governor-General in Council, in communication with his civil and political functionaries. If the Commander-in-Chief has anything to urge for or against this part of the subject, he must urge it as a member of the Supreme Council and not as Head of the army. General Shadwell does not quote the full text of Lord Dalhousie's celebrated letter, pointing out the vital distinction between a political necessity and a strategic movement. But there is no doubt of the soundness of the rule under which the civil department decides on the necessity for an expedition and the military department states the number of troops essential for its success. That Colin Campbell overstepped the limit of his authority, those who have read the whole correspondence can have no doubt. Indeed, his own letter to Sir Charles Napier, who under the strained relations between himself and the Governor-General was not the most judicious of referees, concedes virtually the whole point at issue. It is not for the Horse Guards, or for any commander of division anywhere, to write about the "cruel injustice" of a punitive expedition against marauders which has been determined on by a Minister of State or a Viceroy. It is satisfactory to note that Lord Dalhousie, in a subsequent despatch, recorded his high sense of Campbell's "ability and sterling soldierly qualities"; and doubtless this warning had not lost its effect when, six years afterwards, the highest civil and military authorities advocated diametrically opposite views. The garrison of Lucknow, it will be remembered, was succoured by Outram and Havelock in September 1857, and finally was brought off in safety by Campbell in the November following. The recovery of the city, before which Outram stood at bay for four months, was reserved for operations on a gigantic scale in March 1858. Campbell, after driving out the rebels from Dilkooahar and the Kuiser Bagh, wanted to reorganize the whole province of Oudh and to let Rohilcund alone for the next four or five months. Lord Canning, with sound political instinct, saw clearly that in Oudh, which had only been annexed some fifteen months before the Mutiny, a little more or less of anarchy was comparatively unimportant, while to leave Rohilcund unassailed would be fatal to our name and supremacy in all Upper India. Rohilcund had been under our peaceful sway for more than fifty years. It contained a large portion of well-affected Hindus who looked to us for early countenance and support. In Oudh, Talookdars and soldiers had been all along against us. Then, too, Bareilly, the capital of Rohilcund, had been the scene of shameful outrages, and Englishmen had been put to death on a mock trial before a native ex-judge, who at that very time was drawing his pension from the local treasury. For ten months after this tragedy the rebels had held undisturbed possession of this garden of Upper India. We are quite positive that Lord Canning's opinion of the ill effects of delay in the Rohilla quarter was shared by every administrator of experience and by the whole Anglo-Indian community. It is creditable to Campbell that he carried out a policy not his own in a loyal spirit, and though his biographer makes a faint attempt to prove him right, from the trouble experienced in dispersing rebels in the Doab, in Goruckpore, in Behar, and in Oudh itself, Lord Canning here acted just as Wellesley or Dalhousie would have done in his place. Success is the true test, and the result of Lord Canning's views, as carried out by Campbell and his able lieutenants over a very wide field, was the complete pacification of the Bengal Presidency by the beginning of 1859, or in ten months after the recapture of Lucknow.

To a subsequent and a more serious emergency Campbell was fully equal. The English soldiers, who had just quelled one mutiny, were very nearly getting up another of their own. When the Government of India was transferred from the East India Company to the Crown, the soldiers of the former conceived themselves entitled to claim a free discharge or a bounty on re-enlistment. Here was a plain question not confused with politics, and Campbell, who thought the claim just, recommended concession. His opinion was overruled, but ultimately, and in a great measure owing to his tact, judicious management, and the publication of a General Order to the troops, the incipient rebellion was quickly put down. But seven thousand men chose to take their discharge, and we well remember how the mere prospect of a "white mutiny" sent a chill to the hearts of administrators whose calm trust in our political supremacy had not been shaken by the loss of Delhi or by the Massacre of Cawnpore. "One false step," remarks General Shadwell, might have produced fearful consequences; but here Campbell, with his strict notions of obedience and justice, was the very man for the crisis. Any want of firmness or any failure of sympathy on the part of the Head of the army might have dissolved that fabric which revolted Sepoys had only been able to shake.

The biographer does not attempt to fix the exact place which Campbell will eventually occupy in the roll of successful generals, but we may just indicate a few traits to guide others to a

conclusion. He has, obviously, no claim to be compared with men who are strategists by nature and whose earliest campaigns are text-books in the art of war. But he had mastered every professional detail; his regiments and his brigades were drilled to the highest point of efficiency; he managed all his combinations with consummate skill, and when he had to move large bodies of troops from different quarters to converge on a given point, nothing was left to uncertainty or chance. Divisions were not allowed to remain inactive, to wait on each other helplessly, or to arrive just a day too late. Though he was nicknamed "Old *Khabardér*" (take care), from his reluctance to move until everything was matured, there was no want of dash or spirit when once the moment for decisive action arrived. His victories over a foe flushed with successes and plunder were attended with very moderate loss on our side, and it is wholly impossible to conceive Colin Campbell ever getting himself, or allowing his subordinates to get, into such humiliating and awkward positions as Maiwand or Majuba. In generalship we should, of course, place him far above Lord Lake or Lord Gough, who, like the Ajax of Homer, were mere fighting captains. For politics Colin Campbell, as we have said, had no turn whatever. In all his despatches and private letters to Lord Canning and others there is little to show that anything but the army and its welfare ever occupied his thoughts. Improved administration, the merits of European *versus* native agency, schemes for reconstructing our Civil rule, and for appeasing native disloyalty or discontent, were little or nothing to him. His accomplished subordinate, Lord Sandhurst, who afterwards filled the same post, would at such a time have been ready with copious minutes on finance, Settlements, communications, public works, amnesties, the punishment of rank traitors, the forgiveness of misguided Talookdars, and the rewards for unshaken fidelity. But this is said in no disparagement of a brave, straightforward, and conscientious soldier. We should be inclined to tell young lieutenants studying their profession, that they can learn much about discipline in the barrack and fighting in the field from Colin Campbell's writings; from his excellent account of Ohilianwalla, from his recommendation to fire while advancing in line, from his sleepless vigilance in the Crimea, from his management of large masses of soldiers in his last Indian campaign. For such services a peerage and a pension, the thanks of Parliament and the approbation of his Sovereign, were rewards not too great. But there is a more valued lesson to be learned from his character. Rough and rugged in some of its features, it was never sullied by equivocation, self-seeking, or rancour. And if Campbell lacked the eagle glance which took in the Mahratta positions and stormed them at Assaye and Argaum, it is not too much to say that his whole career was ennobled by a simple, fearless, and conscientious discharge of duty to the State and the Sovereign which could hardly have been surpassed by Arthur Wellesley himself.

BENT'S GENOA.*

MR. BENT, already known as the author of a work on the little Republic of San Marino—of which State he has the honour to be a citizen—has now turned to the history of another and a more important Italian Republic—that of Genoa. It is a sufficiently stirring and eventful history, comprising as it does the struggles of the young commonwealth against Northman and Saracen; its fierce strife with and triumph over the sister Republic of Pisa, which was to Genoa what Carthage was to Rome; its equally fierce, but in the long run disastrous, contest with the rising power of Venice; the struggles of Guelfs and Ghibelins, of Adorni and Fregosi, Doria and Fieschi; and, in its declining days, the agony of that terrible Austrian and English siege, the horrors of which have been so powerfully described by Dr. Arnold. At the beginning Mr. Bent gives a list of the authorities whom he has consulted, ranging from the early annalists in Muratori to modern writers such as Sismondi, Vincens, and Ciescia. He has not however relied solely on the labours of others, but has himself consulted manuscripts "in archives not generally open to foreigners"; so that his work claims the position of a history written at first hand. It is no blame to Mr. Bent that he should be more at home with Italian authorities than with English ones; still we are surprised to find him unhesitatingly citing the authority of the forged *Ingulph*. That Vincens, writing in 1842, should believe in "*Ingulph*"—whom, by the way, he seems only to have known at secondhand from an eighteenth-century book on *The Origin of Commerce*—was perfectly excusable; but Mr. Bent might be expected to know that historical scholars are now agreed that the history which bears *Ingulph*'s name is a fabrication of later date. "What *Ingulph* tells us" about the Genoese ship which took him from Joppa to Brindisi is some evidence that Genoese ships might be found at Joppa at the date of the fabrication, whether that be the thirteenth or the fourteenth century, but proves nothing as to the state of things thirty-five years before the First Crusade. Nor does Mr. Bent's knowledge of French history appear to be deep, at least if we may judge from his speaking of "the saintly Louis of France, more fitted for a convent than a throne." Louis IX. was a pious man—which some people seem to think is the same thing as being a fool—but he was also, as all who have

studied the history of the thirteenth century know, an able prince, who greatly strengthened both the internal and external power of the French monarchy. These however are by-points which do not much affect Mr. Bent's general treatment of the subject. His style is generally pleasant and easy, though it will not bear minute criticism. "That mass of barbarism which was incident on the fall of the Roman Empire" is awkward. "The Crusades played the part of Mount Ararat, from which all the contents of this ark poured forth its treasures to resuscitate the crushed but purified minds of men," is barely intelligible. "The Genoese were content to be tossed to and fro as an apple of discord between the contending armies of Europe, by way of by-play to their more extended field of action," is not much better; and "a tidy little force" is slangy. As Giovanni Battista Verrina presumably addressed his fellow-conspirators in Italian, we shall not hold him responsible for the language Mr. Bent has put into his mouth:—"If we make ourselves the vile instrument of France, we shall act like the D'Oria are doing now with Spain." "Shakespeare's merchant of Genoa, the unfortunate Antonio," is of course a mere slip; but it is odd that the writer should go on to speak of Antonio's losing "his ship, the *Argosy*," as if *Argosy* was the name of an individual vessel. He must have forgotten Shylock's enumeration of Antonio's ventures:—"He hath an argosy bound to Tripolis, another to the Indies; I understand moreover upon the *Kialto*, he hath a third at Mexico, a fourth for England." We do not wish to pick out more instances for verbal criticism; but we cannot forbear to protest against giving in to the odious practice, the offspring of affectation and laziness, of using French words where English ones would do as well. We admit that there are passages in Mr. Bent's work where the use of a French word can be justified or excused—where it expresses an idea which could not be so well conveyed in English; but *beaux arts*, *sobriquet*, and *cortège* could all have found English equivalents; nor can we see any excuse for the employment of *amour propre* and *par parenthèse* within a single paragraph. "*Recherché* viands" is only permissible to a reporter at a municipal banquet; and *employé* should be left to the assistants in a drapery establishment. Mr. Bent's own pages will supply us with an appropriate rebuke, out of the mouth of a British admiral. As the story is characteristic, we quote it entire, premising that the date is 1814, after the Genoese had risen against the French garrison, and had admitted Lord William Bentinck:—

On the 20th of April, the British fleet, under Vice-Admiral Fellow, entered the port, and a commissary of marines, Giustiniani by name, presented himself to him, and thinking he was Admiral Bentinck, addressed him in courteous French. Forthwith Fellow indignantly responded in Italian, "Who are you? Are you another of those French devils?" "No," replied Giustiniani; "I am a Genoese noble." "Then," answered the British lion, "if you are Italian, why the devil don't you speak your own language?"

From this specimen it may be supposed that Mr. Bent's book is not dull. His method of opening his history errs indeed on the side of the sensational. It is about time that beginnings such as this should be left to the historical novelists, who have the copy-right of them:—

Early in the fourteenth century a ship sailed past the city of Genoa on her way to France; on board was an elderly merchant accompanied by two young boys.

One of these boys being Petrarch, this serves as the introduction to a description of Genoa written by Petrarch "full fifty years after this event." From "Genoa in the Olden Time" Mr. Bent passes to "Genoa at the Crusades"—that is to say, from 1096 to 1291—after which he opens the third chapter by asking "Are we to dive into heathen mythology for the origin of the town of Genoa?" and from Petrarch, Doria, and the Crusaders we find ourselves required to take a leap back to "Janus, the great-grandson of Noah," and Janus the heathen god, whose double-headed semblance at this day adorns the gas-lamps of the city; to the Viking Hasting, and his raid upon Liguria; and to "the Saracenic scourge" of the tenth century, "similar in devastation, and eating up all that the Normans had left." We prefer that historians should stick to the old plan of beginning at the beginning, or at any rate in cases where, as in that of Genoa, the beginning is lost in the haze of tradition, at some definite point chosen on intelligible principles. Altogether, the fault of Mr. Bent's book is that of most histories in the "picturesque" style—it fails to give the reader a clear and distinct idea of the course of events. On the other hand, if it has the faults, it has also the merits, of the class to which it belongs, and it gives a good general idea of the part played by Genoa in the history of Italy and of the world.

In the Crusades, with which Mr. Bent opens his narrative, the part taken by the Genoese was especially that of carriers, whether of troops or provisions. Not but that they fought a good deal too, and in the First Crusade they even produced one hero of romance, Guglielmo Embriaco, the *duce ligure* who is immortalised by his appearance in Tasso's poem. True, however, to the practical character of the Genoese, even in poetry Embriaco is a scientific soldier:—

Infra i più industri ingegni
Ne' meccanic ordigni, uom senza pari.

In Tasso, too, may be read of the chief triumph of Embriaco's engineering skill, as described by early Genoese historians—his wooden tower on wheels, with its battering-ram and movable bridge, made for the assault of Jerusalem. Appropriately enough, the fame of the Embriaco family was afterwards recognised by their being allowed to retain their private tower in Genoa when all others were lowered by order of the commune. Besides giving

* *Genoa; How the Republic Rose and Fell.* By J. Theodore Bent, B.A., Drex., Author of "A Freak of Freedom; or, the Republic of S. Marino." With Eighteen Illustrations. London: C. Kegan Paul & Co. 1881.

an account of the part borne by the Genoese in the Crusades, Mr. Bent also mentions that strange episode of medieval history, the Child's Crusade, which is connected with Genoa by the fact that one of the child-armies marched to that city to demand transports, and there gradually dispersed. He goes on to say that some of these children embarked at Marseilles, and remarks that the Christians in Palestine were "not over well pleased to receive so juvenile a succour." There is however a story given by Albert of Trois-Fontaines, but not here mentioned, that the two Marseilles merchants who undertook the transport of the children disposed of them to Saracen slave-merchants—an infamy beyond anything ever laid to the charge of the Genoese, though there is an unpleasant tale of certain Genoese sea-captains who would have abandoned some penniless Christian refugees had not the infidel rulers of Alexandria stepped in to pay the passage-money.

The interest of Genoese history begins with the great struggle between Genoa and Pisa, which was symbolized in the marble image set up in the hall of the Bank of St. George, and in the device stamped once on the seal of the commune, and now upon the cover of Mr. Bent's book—the griffin of Genoa trampling upon the eagle of the Empire and the fox of Pisa. Below was the boastful legend, still to be read in the hall of the Bank, though the marble figures are gone:—

Gryphus ut has angit,
Sic hostes Janua frangit.

The next great rivalry was with Venice, and at one time it seemed as if the griffin was on the point of adding the winged lion of St. Mark to his conquests. Thanks to Byron, all English readers know the famous threat of the victorious Doria that he and his countrymen would bridle the relentless bronze horses on the Piazza of St. Mark—the threat which Byron conceived to be fulfilled by the Austrian domination—

But is not Doria's menace come to pass?
Are they not bridled?

As far as he and Genoa were concerned, Doria had better have left his splendid boast unuttered. Not a year later four thousand Genoese soldiers stood, prisoners, naked, and loaded with chains, exposed to the mockery of the Venetians on the Piazza of St. Mark. The account of this struggle between Genoa and Venice is one of the most vivid and interesting bits of the book. The Fieschi Conspiracy of 1547 affords another exciting chapter; and the famous siege of 1800 is told in all its ghastly detail; but Mr. Bent confines himself to description, and does not discuss the moral question raised by Dr. Arnold, who made use of the blockade of Genoa to illustrate his views as to amendments required in the law of nations. Neither does Mr. Bent pass any express condemnation upon the subsequent handing over of Genoa to the King of Sardinia, a point on which Mr. Hunt, in his school history, is as eloquently indignant as his limits will allow. With our present author the humiliation of the Doge of Genoa is compensated by the fact that his homage was paid to the dynasty which was "the hope of the Italian future, to whom Genoa was to become the chief corner-stone."

Before parting company with Mr. Bent, we should observe that he gives the letter recently discovered, addressed by Manuelli Fieschi, notary to the Pope at Avignon, to Edward III. of England, asserting that Edward II. had escaped from Berkely Castle, where he was supposed to have been murdered, and had, after various wanderings, died a hermit in the diocese of Pavia. The details have a suspicious look, more especially the incident of another man's heart having been presented to Queen Isabel as that of her husband, which recalls the ballad of Gayferos and the legend of Geneviève of Brabant, though there a dog's heart or tongue is made to do duty as the substitute. But, whatever we may think of the story, the fact of such a letter having been written at all is highly curious.

For purposes of reference the book would be much improved if it had an index, and if the years were entered in the margin. We must say a word as to the woodcuts, which are much above the average. That of the "Gateway in the Piazza di S. Matteo" is remarkable for the solidity and vigour with which the carvings are represented. Good also is the cut at p. 408 from the "Fresco by Pierino del Vaga in the D'Orta Palace, representing the Triumph of Scipio," which ought, one would think, to have been placed earlier, at p. 376, where Andrea Doria's employment of this painter is spoken of. But the "Façade of the Cathedral," which forms the frontispiece, looks out of perspective, as if it had been taken from a bad photograph. The interest of the monument to William Acton in the Church of the Knights Hospitallers would have been much heightened if Mr. Bent had deciphered the inscription for us. He does give a version in English, but does not help us to make out the abbreviated Latin shown in the drawing. On the whole the cuts are worth looking at, which is by no means always the case in English illustrated books.

TWO BLACK LETTER REPRINTS.*

THESE two books, though alike in reproducing works printed in a Gothic letter, with more or less minuteness of care in detail, are not quite equal in the degree in which they appeal to

* *The Popish Kingdoms, or reigns of Antichrist.* Written in Latin Verse by Thomas Naogeorgus, and Englished by Barnabe Googe. Edited by H. C. Hope. London: Satchell & Co. 1880.

The Boks of St. Alban's. With an Introduction by William Blades. London: Elliot Stock. 1881.

the weakness of mere book-lovers. Mr. Hope's foolscap quarto, with its paper boards, its offset edges, and its black and red title, is sufficiently attractive, but it cannot compare with Mr. Blades's book, with its stamped parchment cover, its royal quarto pages of a kind of sublimely blotting paper, rather too definitely yellow in tone to suit our taste, but admirable in texture and margin, and its facsimile of the quaint types of the schoolmaster-printer, whoever he was, who nabered the *Book of St. Alban's* originally into being. The difference of elaborateness is not improper, for an incunabula deserves greater splendour of apparel than a mere sixteenth-century book, and Mr. Hope's volume has outward graces quite sufficient to make it a desirable possession.

Both books have plenty of interest, independent of their mere bibliographic attractions, which are considerable. The *Popish Kingdoms* exists in but one perfect copy, which the Cambridge Library possesses, and in two imperfect ones, which belong to the Bodleian and to a private collector; but its unicity is by no means its only or its chief charm. It was the work of an industrious poet and man of letters who holds an honourable place among the group of students who took up the tradition of Surrey and Wyatt, and handed it on to their greater successors in the later years of Elizabeth. We cannot agree with Mr. Hope that, "of the minor poets of Queen Elizabeth's reign, there is scarcely one of whom so little is known." On the contrary, Mr. Arber, to whose excellent edition of Googe's minor poems Mr. Hope himself refers, was able to collect a good deal of information about the love affairs and the business affairs of their author. He was a "servant" of Burleigh's, by whom he was charged with missions in Ireland and elsewhere, was supported in his wooing of a fair damsel of Kent, and otherwise countenanced. Burleigh's leaning to the Puritan side may or may not account for Googe having selected the *Popish Kingdoms* of Naogeorgus, or Kirchmeyer, to translate, the work being a bitter attack on Romanism. He chose for the purpose the favourite metre of the time, the long, swinging, fourteen-syllable verse, which, with unpardonable slovenliness, some English writers call Alexandrine. It seems to escape these persons that an Alexandrine is not any line longer than ten syllables, but the definite metre of a definite poem, the twelfth-century *Roman d'Alexandre*, and that it would be just as pardonable to call the metre of *Don Juan* a Spenserian stanza as to call the fourteen-syllable verse Alexandrine. However this may be, the metre was, as we have said, a favourite one with the time. It was sometimes printed both then and since in eights and sixes, instead of the continuous fourteen-syllable stretch, and it has the capacities of being doggerel which this subdivision suggests. But at its best it is a metre of considerable merit, and, as used by Googe here when he is at his best, by Warner in *Albion's England*, and by others, it approved itself even before Chapman raised it to its highest possible terms. There is remarkable vigour and art, for instance, in the verses which describe the power of the Mass in the Third Book. Some thirty or forty lines all begin with the word "Mass":—

Masso doth relieue the burnid minde, and sinnes defaceoth quight.
Masso pleaseth him that guides the skies, and giues the heauens bright.
Masso pluckes the sinfull soules from out the Purgatorie fire,
Masso comforteth th' afflicted sort and makes them to aspiere.

So it goes on, with not a little dignity, for several lines, but gradually the tone lowers:—

Masso gets a man a pleasant wife, and gettes the mayde hir mate,
Masso helpes the Captaine in the fildes and furthereth debate.

And at the last it drops into the regular polemical satire of the Reformers:—

Masso useth many slouthfull knaues and lubbers for to feede,
Masso brings in dayly gaiue, as doth the Sowters arte at neede.

An undignified comparison certainly, but it stops a good deal short of the blasphemous ribaldry too common in similar contexts. Still better is a passage in reference to Our Lady:—

Shee pleaseth God, and with hir childe, in armes continually
Delighteth him, and what she askes, he neuer doth deny.
Shee is the Queene of heauen bright, and with a beck can do
Whatsoeuer shee determinde is, and giues hirselfe unto.
Shee is the happier starre on seas, and port of perfitte rest,
And surest ancour for to stay the ship in seas opprest.
Shee is the light of all the world, and mother here of grace,
That doth of God forgiveness get, and doth our sinnes deface.
Shee keepeth those that worship hir in heart continually,
From handes of euery wicked sprite, and deulle tyrainy,
And with hir gowne shee couers Kings, and Popes, and people all,
From wrath of God, and vengeance due, that on their heads would fall.
The gate of heauen eke is shee, and euermlasting life,
The onely life of all the worlde, and ende of all our strife.
Shee is the hope of euery man, and chiefe defendresse here,
Shee shewes us Jesus Christ, when as before hir we appeere.
Shee also in the dreadfull howre of death doth us defende,
Shee bleaseth all the life of man, and fortune good doth sende.

The Fourth Book, which deals with festivals and holydays, contains some exceedingly curious and interesting details of sports and pastimes; but, as it has already been reprinted by Mr. Furnivall, it is less novel than the rest of the volume.

The *Boks of St. Alban's*, though naturally representing a much ruder condition of literary proficiency, and practically anonymous, is for that reason all the more interesting. In the first place, there is the famous attribution of it to "Dam Julyans Barnes," one of the smallest molehills out of which bibliographical ingenuity and imagination have ever made mountains. The fact is simply this, that one part of the *Boks of St. Alban's*, a string of verses on hunting, ends, after the fashion of such things, "explicit Dam Julyans Barnes." This is absolutely all. And to the identity, period, literary proficiency, and social status of the lady thus commemorated in the queer orthography and crabbed type

of the *Boke of St. Alban's* there is not the slightest "light heart," however, which out of the "mystical" Turbidity of the *Chanson de Roland* have made an abbot of Peterborough and a Trouvère, Theroude by name, of whose existence and performances they are quite as certain as of those of Ruteboef or Adenis le Roi, have been fully equal to the occasion. First of all, Dame Julyans has all the three parts of the *Boke of St. Alban's* attributed to her. Then, with the careless generosity usual in such cases, the treatise of "Fishing with an Angle," which Wynkyn de Worde added to the *Boke* later, simply because of its similarity of subject, is also ascribed to her. It then becomes necessary to identify such an important author. The ingenious bibliographer—or rather generaliser of such, for legends of this kind always grow slowly—discovers that Barnes is a variant of Berners, and imagines that Dame implies nobility. Dame Julyans Barnes becomes Dame Juliana Berners, a lady of a noble house, Prioresse of Sopwell, addicted to country sports and the study of the noble science of heraldry, &c. We have a dim notion that somebody or other has written an historical romance with this literary and ecclesiastical Hippolyta for heroine, a romance which certainly cannot be more gratuitous than most of the ordinary literary-history tales about her. It is needless to say that Mr. Blades is not the sort of person to indulge in idle conjectures of this kind. He brushes away all the cobwebs ruthlessly enough, and reduces Dame Juliana Berners, Prioresse of Sopwell and princess of the chase and the Church, to a possible "Mrs. Barnes" of the early fifteenth century, who perhaps wrote, and perhaps only copied, some couplets on hunting. *Sunt lacrymæ rerum*; though, as Dame Juliana never can be said to have had anything but a fictitious life, her extinction need not grieve us very sorely.

The *Boke* deserves attention for plenty of other reasons besides this spurious interest. In the first place, it is one of our earliest printed books, and is not the work of any famous press or printer. The schoolmaster of St. Albans, whoever he was, was a comparatively humble rival or follower of Oaxton. If, or some one else not discernible from him, printed eight books at St. Albans between 1480 and 1486, six of them being theological or scholastic in subject and Latin in language. The seventh was a chronicle slightly enlarged from Oaxton, the eighth our *Boke of St. Alban's*. This is probably an exact reproduction of a manuscript. It is true that the subjects of three treatises composing it—hunting, hawking, and heraldry—were more closely connected in that day than they are now; but the spaces are curiously filled up with miscellaneous and irrelevant matter, such as lists of the English counties, short moral verses, &c. Almost all the later manuscripts of the middle ages have this *omnium-gatherum* character running on from one thing to another, with no more warning than an *explicit* and *incipit*, and sometimes with not even these. This is no doubt the real explanation of the fact (to which Mr. Blades draws attention) that so many early printed works are without title-pages. The time-honoured instruction to printers, "follow copy even if it flies out of the window," would here apply, and the printer, finding no regular title in the particular division of a miscellany manuscript which he was reproducing, would not think it necessary to make one. The *Book of St. Alban's*, therefore, plunges in *medias res*, with the greatest calmness, "Inso much that gentill men and honest persones haue greete delite in haukyng." It is perhaps worth while as a specimen of the folly of bibliographers to mention that, from the accidental use of "inso much" at the beginning of both the *Boke* and the *Chronicle of St. Alban's*, it has been inferred that the anonymous schoolmaster-printer's name was "Inso much." It would follow that Mr. Whereas is the name of one of the most prolific of printers. The Treatise of Hawking is perhaps the most methodical part of the book, and handles the subject gravely, and with not too much conceit, if we except perhaps a queer list at the end of the hawks proper for different estates of men. A peregrine for an earl, a ger-falcon for a king, and so on, are well enough; but an "emperour" is put off with an "egle," or a "bawtere" (vulture), most unhandy fowl one would think for sporting purposes. The Treatise on Hunting, introduced, like the preceding, by a short preface of the printer's, is not in prose, but in verse of strongly alliterative kind. It is not long; and, after the famous "explicit Dame Julyans Barnes in her Boke of Huntynge," the blank leaves are, as has been said, filled with a queer medley of commonplace book-entries. One of these is the often-quoted list of technical terms for different collections of beasts, another the equally often-quoted list of words for carving differing kinds of meat, both flesh and fowl. But the third part (we agree here with Mr. Blades) is perhaps the most interesting. The demonstrations to show that prophets and great religious persons, as well as heroes of old, were gentlemen of coat-armour are extremely curious. Adam bore a spade, which was the first shield in heraldry. There were ten orders of angels wearing coat-armour before Lucifer's revolt. The notion that coat-armour came in at the siege of Troy is dismissed with great contempt. That it came in at the siege of Thebes might be a better and more arguable position; but Æschylus was not much read at the time, though the *roman de Thebes* had laid Statius under contribution. The profound faith in the antiquity of a practice in reality dating so few centuries earlier than the writer is noteworthy enough.

We may repeat at the end what we have said at the beginning, that these books are both interesting in themselves and a credit to English book-workmanship in their get-up.

THE CAMP OF REFUGE.

THIS story, the editor tells us in the introduction, was so popular with a past generation that he has republished it for the benefit of the present one. It seems hardly worth while to have done so; for the story, though it may have been quite up to, or even beyond, the level of historical knowledge expected in such tales a quarter of a century ago, is now far behind the historical primers that are in the hands of all the young people for whom we suppose it is written. The instruction is conveyed after the manner of a certain class of school books in which the most ridiculous mistakes are made in order that the pupil may find out and correct them. This used to be thought the best way of impressing the rules of grammar and spelling on the memory. Nowadays it is condemned as an old-fashioned practice, tending only to a hopeless confusion between right and wrong in the mind of the learner. In the present instance the editor, who is one of the authors of the *Fenland, Past and Present*, has added foot-notes at the bottom of each page, correcting the mistakes in the text. He has had so much to do that the notes would make quite a little volume if they were published separately. Now the young reader is enlightened as to the very uncertain number of States in the so-called Saxon Heptarchy, and again is told that Ely is simply the isle of eels, and has nothing at all to do with "Helig, or Elig," the British name for a willow which the author tries to make out as the derivation. Here and there the editor enters a protest against the deeds assigned to Hereward, the hero of the tale, pointing out that he was not at all of a nature to make a certain pious pilgrimage he is credited with; that it was not he, but a burgher of Dover, who resisted the aggressions of Eustace of Boulogne; and that Hereward had, in all probability, a wife alive in the Netherlands at the time when his heroic deeds were supposed to be inspired by the love of Alfrude, as the author writes Elfrith. Here and there, too, the editor makes the writer a medium for airing his own opinions on matters social and political, as when, to an exhortation on the blessings of unity in the text, he adds:—

This patriotic and eloquent appeal may be very appropriately reiterated at the present day. The sentiment which it inculcates is as essential now as it was when the Saxons were defending the "Camp of Refuge." Is it not consolidation rather than extension which is needed for the well-being of our country? Will not the future greatness of our nation hinge upon the development of the highest principles of humanity—the unity, loyalty, and virtue of its peoples?

And again, when touching on William the Conqueror's game laws—especially the decree that none "should kill so much as a hare," whereat the "rich men bemoaned and the poor men shuddered"—the author complains that "Old England will never be England until these unSaxon laws be gone from us"; the editor adds, "Will what remains of the unSaxon laws yet be repealed or modified in the interest of declining agriculture?"

The outline of the tale is soon given. Hereward and Alfrude are the hero and heroine, but the love passages of another couple flit across the pages, and are at last brought to a happy ending. They are Mildred, the handmaid of Alfrude, and Elfric, a young Englishman, whose exploits come very near rivalling those of Hereward. With one of these seats the story begins. In the first chapter the youth is introduced hastening across the fen country, to bear a warning to the monks of Spalding of an attack directed against them by the Normans under Ivo Taillebois. His warning was scouted, and in the night the attack was made. The inmates—all that were left of them alive—were turned out, and the house taken possession of by the invaders. Elfric, who manages to escape alive, though in sounding the alarm-horn to call the men of Spalding town to the rescue he had made himself a special object of hatred to the Normans, hurries off over the fens again to Ely, to carry thither the news of the loss of the succursal cell of Spalding. He is greeted there with a warmth that in some sort makes amends for the cold reception which he met with on his former errand; and, in recognition of the valour, common sense, and presence of mind which he has already given proofs of, he is chosen as the messenger who shall go over the sea to bring Hereward home to head the little band of patriots who pride themselves on being the only true Englishmen left in England. Here the romantic element first blends in with the story. In defiance of the legend which makes Hereward out the husband of Torfrida, he is represented as being hopelessly in love with Alfrude, heiress of Eye, whose hand and land Ivo Taillebois is intriguing to secure for his brother. Elfric disguises himself as a gleeman, makes his way into the Norman's hall through the waiting-maid, gains the ear of the lady, and gets from her a ring which is to be the talisman to bring Hereward back as her accepted lover. Elfric had not miscalculated its power. Hereward, lured by the love-token, comes back to the help of his countrymen, and arrives at Ely on the eve of Christmas Day. He takes his own manor-house of Brunn by surprise, driving out of it the Normans who are in possession, marries Alfrude, and is then knighted by his uncle, Abbot Brand of Peterborough, defeats the Normans at Cambridge, repels an attack of Ivo Taillebois upon Brunn, and is finally surrounded by the Normans in great force in the camp at Ely. Here provisions grow scarce, and the monks grow discontented, and begin to grumble

* *The Camp of Refuge: a Tale of the Conquest of the Isle of Ely.* Edited, with Notes and Appendix, by Samuel H. Miller, F.R.S. Wiesbeck: Leese and Son. London: Simpkin, Marshall, & Co.

and plot. Hereward has with him a certain Italian called Girolamo, from Salerno, by whose counsel he is mainly guided. He is, in fact, the mainstay of the whole party, for he is crafty and knowing, and can invent schemes to strike terror to the heart of the enemy, which prove more effectual in discomfiting them than the brute force of the dauntless, but rather thick-witted company with whom he has cast in his lot. More especially has Girolamo shown himself invaluable in counteracting the arts of a powerful witch in the Norman camp by setting fire to the fens, and thus burning her and her supporters to death before they can escape. The Salernitan had also driven the abbot of William's appointment and his monks out of Crowland. Taking with him Etric and a few picked men, he hid with them in the cellars, and then, counterfeiting the devils with which tradition had peopled the fenland, scared the newcomers so thoroughly that they ran away. Girolamo's power of raising unearthly flames and smells being the principal agents in the success of the undertaking. His uncanny knowledge makes the monks eye him askance, and at length openly accuse him of witchcraft, and declare that his presence among them will in the end bring ruin to the cause, and in the meantime has brought short commons to the kitchen. To silence their grumbling, Hereward sets out on a raid to bring food and drink to the abbey by plundering Dereham and the adjacent country. Surprised on their return by a body of Normans, they have a hardfight to keep their booty, and in the fray Girolamo is slain. When the news reaches the abbey the discontented party within its walls raise an alarm that Hereward himself is slain, and they make common cause with the Normans, who, aided by the traitors, enter and finally take possession of the camp. The story ends with Hereward quietly settling down on his own lands, and ending his days there in peace and quietness.

Thus it will be seen that the *Camp of Refuge* does not claim to interest the reader by startling incidents or active action, but by painstaking delineation of the fen country and the manners of the fen men. The descriptions of this country are remarkably good, and show an intimate acquaintance with the district. The only poetical license the author has allowed himself is making his characters pass over vast tracts of country with a speed more consistent with seven-league boots than fen-poles. The *Camp of Refuge* has had the advantage of being edited by Mr. Miller, one of the authors of the *Fenland, Past and Present*, who points out in his notes any difference between the text of the story and the authentic history of the period. Here and there he finds the author tripping in the etymology of a name or the distance from one place to another. The oddest mistake he has fallen into is asserting that the one mark of gold, which was William's certainly rather shabby offering to St. Etheldreda's shrine at Ely, "had been in the hands of the Jews, and clipped." The only ground for this statement is that one mark of the seven hundred that William extorted from the monastery was of light weight. But as this and any other poetical license are pointed out by the editor on the same page, it is almost like reading the book with one eye and the review of it with the other.

It is a little difficult to make out by whom the story is supposed to have been written, and the style varies so frequently that it gives us no clue towards finding out. The first two chapters are in a mere ordinary narrative style, with no attempts at archaisms of style or manners. But by the third chapter the narrator declares himself to be a monk of Ely, living in the time of Henry II. This chapter, however, forms a sort of interlude, and contains nothing but a description of Ely, so that it may be intended that it alone came from the monk's pen. It would hardly have been consistent for one of the regular clergy to represent the members of his order as so greedy, slothful, and treacherous as throughout they are made to appear. The eating and drinking of the monks plays a great part in the story, and the author tells with special relish of the great plenty of fish, flesh, and fowl, and good red wine from across the sea, that loaded the board of the Abbot of Ely when the abbey feasted on St. Edmund's Day. He also dwells at length on the extent and abundance of the fisheries attached to the abbey, which were celebrated, as we see from the passage here quoted, for their eels:—

Were there in the world such eels and eel-pouts as were taken in the Ouse and the Cam close under the walls of the abbey? Three thousand eels, by ancient compact, do the monks of Rumsey pay every Lent unto the monks of Peterborough, for leave to quarry stone in a quarry appertaining to Peterborough Abbey; but the house of Ely might have paid ten times three thousand eels, and not have missed them, so plenty were there, and eke so good! The fame of these eels was known in far countries; be sure they were not wanting on this Saint Edmund's day.

The various sorts of game to be found in the marshes round are described with as much gusto as the fish, so that the account of the good cheer eaten at the abbey on this St. Edmund's Day fills up entirely a rather wearisome chapter. No doubt this minuteness of detail is gone into to give colour to the notion that the book is the work of a monkish chronicler. We think the story would have been better if this idea had never been suggested, for it probably is the cause of the introduction of occasional obsolete words or obsolete expressions, that are not at all in harmony with the rest of the text. Thus a cook is always a "coquinarius," a clever maid is a "festy handmaiden," a given time is indicated as "about the space it takes to say a score of aves." We find "maugre" written for in spite of, "castigate" for chastise, "pecunia" for money, and such like. The pages are sprinkled with "I wiss," "withal," "forsooth," "hight," "wight," "twain," "besbrow you," and some other of those

words and phrases still known to authors of historical tales as part of the properties required for the proper mounting of a mediæval tale. Such forms are most inconsistent with the general style of the book, where we find some of the latest coined English. Surely it is somewhat inconsistent to call a gleeman's movements "gyrations," to talk of "fustigating" an "iracund" abbot, and to make a monk of the time of Henry II. write of "our Saxon hagiology," as though the phrase was one commonly understood in his day. Nor can we understand on any grounds why, when the Ouse, the Mersey, the Cam, and many other rivers are spoken of by their names in the forms still commonly in use, the Thames should be called "Thamesis," and Holland, in Lincoln, "Hollandia." Still, there is no doubt the *Camp of Refuge* is very much better than the general run of historical tales, and there is a good deal to be learnt from it of the domestic life in the great monasteries. The topography is generally correct; any slips that the author has made, such as placing Norwich at the mouth of the Yare, or describing Crowland Abbey as being built on piles, are corrected by the editor in the notes. One very trifling point we notice where the editor himself is at fault; in a certain list of names which the author gives as real places, and the editor pronounces in a note to be fictitious. Garboldeaham, at any rate, if not all the others, is a well-known place to this day, not far from Thetford. While the editor takes pains to correct the text on so many points connected with early English history, we wonder why he passes unnoticed the confusion between serfs and churls which runs through the book, the author evidently taking them for one and the same class of persons. It might also be added in yet another note that the Abbot of Ely in the middle of the eleventh century would not have spoken of himself and his compatriots as "Anglo-Saxons," and that it is inconsistent to write the son of Swegen Canute and another Dane of the same name Knut. For the better understanding of the story two maps of the district have been prefixed to it, whilst the appendix contains notes on the several religious houses in the Fenland.

AMERICAN LITERATURE.

A HISTORY of GREECE from the Earliest Times to the Present (1) seems to us a mistake upon the face of it. The better and more clearly the work is done the more palpable appears the error; and it is a compliment to Mr. Timayenis to say that his effort only proves that it ought never to have been undertaken. In truth there is no such thing as a continuous history of any existing nation, the Jews and Chinese excepted, from the eighth century before to the nineteenth century after Christ. In so far as the book may be a success and come to be the received school history, from which the rising generation of America may receive their ideas of Greek history, it will make a false impression, will create a sort of idea of continuity where utter discontinuity is the most absolute and the most significant truth. The contrast between different parts of the story, and the disproportionate space necessarily assigned to different periods, is in itself illustrative of their utter unlikeness, an unlikeness that could hardly exist between different epochs in the history of the same people; and it is not desirable that the impertinent pretension of the present inhabitants of Greece to the inheritance of Themistocles, Pericles, and Philopœmen, should be accepted even in the New World. We cannot but wish, then, that Mr. Timayenis had left his book unwritten, though it affords a convenient summary of periods, which busy students have hardly time to study at large, and of which consequently they are apt to remain too absolutely ignorant. It is well to be able to fill up even in outline the gap which, for all who do not read Gibbon through, intervenes between our knowledge of the pre-Augustan and our knowledge of the later Turco-Russian history of the Eastern peninsula of the Mediterranean.

A Century of Dishonour (2) records a portion of modern history which may perhaps be taken to present the most effective possible contrast with that century which sheds its brilliancy on the work of Mr. Timayenis. As the story of the Rise and Rule of Athens is, perhaps, the most brilliant part of human history, so the tale of American dealing with the aboriginal inhabitants of the United States is that which presents the highest of civilized races in the most odious and contemptible light, which is redeemed by no single act of generosity, no single instance of good faith firmly kept; which represents democracy in the blackest, as Athens exhibited it in the brightest, colours; which shows how selfish, how vile, how cruel, how false a great nation can be. No one can know that history and say that we exaggerate in the least. If the crimes perpetrated against the Indians had been dealt with as similar crimes are treated by the humane laws of the most tolerant of modern nations, if the actors—statesmen and generals, soldiers and civil officers—had been tried even before Italian juries, the execution of some thousands of American citizens as the deliberate torturers and murderers of defenceless women and children, the transportation of ten times that number as thieves and swindlers, would have

(1) *A History of Greece from the Earliest Times to the Present*. By T. Timayenis. 2 vols. Illustrated. New York: Appleton & Co. London: Trübner & Co. 1881.

(2) *A Century of Dishonour: a Sketch of the United States Government's Dealings with some of the North American Tribes*. By H. H., Author of "Verses," "Bits of Travel," &c. London: Chatto & Windus. 1881.

been the only possible consequence. We can hardly recommend this volume to the study of English readers who have not our own painfully acquired familiarity with its truth. We are bound to say that the writer has exaggerated nothing that we know, and that we have no reason to think that where our knowledge does not bear out her statements they are in anywise inaccurate. And let it be remembered that, in the midst of their systematic treachery, falsehood, and cruelty throughout their century of unrivalled dishonour, the American nation and the American Government have had before them a bright example of conduct exactly reversing their own. It is impossible for them to plead necessity; for Canada has steadily kept faith with those towards whom America has steadily broken it; and the result is as decisive on the question of policy as it is conclusive on the point of honour.
